The same skilful style which renders the social and historical works of Mr. W. Hepworth Dixon peculiarly attractive at once arrests attention in the opening chapters of his first novel, *Diana, Lady Lyle* (Hurst and Blackett). Hero and heroine, and the beautiful James river on the banks of which Leonard Lyle falls literally over head and ears in love with Diana Randolph, are admirably delineated in these early chapters, which are full, moreover, of incident and movement. The love-story of Leonard Lyle, romantic in its inception, is chequered from first to last. Son of an English Baronet, he is on a visit to an American senator, Frank Randolph, when his fancy is taken captive by "a girl-like face, a pair of seeking eyes, and coils of hair the colour of Elizabethan gold, towards which his soul goes out as in a dream." This is before the abolition of slavery in the United States; and the doubt which rests on the legitimacy of Diana's birth is the origin of all the troubles and vexations that eventually disturb the even tenour of life at Castle Lyle. There was what society in the States regarded as "a taint" in the blood of her fair mother, whose marriage with her father had been kept secret for seventeen years, but whose union with Frank Randolph was, nevertheless, perfectly legal. The American senator awakes to the necessity of immediately placing the legality of his marriage beyond doubt on noticing the evident regard Leonard Lyle has for his daughter; and Frank Randolph, therefore, accompanies his departing guest as far as Richmond, for the purpose of making the requisite arrangements with his lawyers. But on the homeward journey Frank Randolph meets with a violent death at the hands of Simon Slokk, the villainous overseer of his brother. This Simon possesses himself of the papers which are the proof of Randolph's marriage, takes possession of the estate for his master, turns Diana and her mother out of house and home, and has them removed to the slave quarters, where Mrs. Randolph dies, and whence Diana ultimately escapes with an abolitionist of the John Brown type by the "underground railway" to Niagara and freedom. The enthusiastic Southern girl, crossing the Atlantic, fires the passion of Leonard Lyle again with her beauty and by the fervour with which she sings "My Maryland!" and other patriotic songs of the South. "At length a whisper comes from Leonard's lips, 'Say, darling, you will be my wife!'" The mystery which hangs over her birth causes Diana to hesitate for awhile; but the earnest pleading of Leonard overcomes her scruples, and it is as Lady Lyle she quits England with her husband en route to join his regiment in India. There, as at Niagara and in London, Diana wins all hearts; and the love of husband and wife deepens as they grow to know each other more intimately in the closer communion brought about by a long yachting-trip in distant seas in the steam-yacht Foam. It is not until their Yorkshire haven—Castle Lyle—is gained that a cloud darkens the horizon. Simon Slokk, who has left his country for his country's good, in company with Tab, formerly a slave on the Randolph estate, suddenly appears at Castle Lyle to obtain hush-money from Lady Lyle by the threat of exposing her origin to the world; and it comes about that Sir Leonard Lyle is made to believe in the alleged blot on his escutcheon by the spiteful accusation of the girl Tab, who temporarily closes his heart against Lady Lyle by the revelation of the supposed "taint" in her blood. Lady Lyle and her young son are, accordingly, left by Sir Leonard to the solitary life of Castle Lyle while he sails away in the yacht Foam, with the owners of his family secret, Tab and Slokk, on board as prisoners. The man who rescued Diana from the slavery that threatened her in Virginia is the man who comforts and strengthens her in her time of trial now. The abolitionist has risen to be a General in the Northern Army, and lived to see the enfranchisement of the slaves; and he has his crowning reward in seeing Sir Leonard Lyle return ere long to Castle Lyle with the papers proving the marriage of Diana's father and mother, the proofs having been obtained from the villain Slokk, who jumped overboard, and was drowned. An exciting novel is brought to a close by the reconciliation of Sir Leonard and "Diana, Lady Lyle."

MUSICAL PUBLICATIONS.

Messrs. Ashdown and Parry, of Hanover-square, are now the publishers of all the charming pianoforte music of Stephen Heller, forming a series of exquisite works extending to op. 141, besides many pieces not classed under opus numbers. New editions have recently been issued by the firm, including the three beautiful transcriptions of Mendelssohn's songs forming Heller's op. 72, and the three original pieces by Heller, op. 73; all which are now to be had in separate numbers. The "Improvisata" on Mendelssohn's lied, "On song's bright pinions" (one of Heller's most celebrated pieces), has also just been re-issued.

Mr. Sydney Smith's "Ernan" and "Home, Sweet Home" are brilliant drawing-room fantasias, in which striking and well-known themes are elaborated with some very effective passage-writing. These are also published by Messrs. Ashdown and Parry; as is a highly characteristic "Gavotte" by M. Silas.

"One Word (Only)," by Lovell Phillips (Stanley Lucas, Weber, and Co.), is a very graceful song, with a pleasing and flowing vocal melody, and a well-sustained accompaniment. The composer is the son of one who was favourably known as a song-writer, as well as a practical musician.

BURNING OF AN EGYPTIAN WAR-SHIP.

An illustration of the two vessels of war belonging to the Khedive of Egypt, which had been equipped for the Red Sea service, to co-operate with the land forces under command of Colonel Gordon, for the suppression of the slave trade in Soudan, was given in this Journal a fortnight ago. We then mentioned a rumour, announced to us by telegraph, that one of those vessels had been destroyed by fire in the Red Sea. That report has since been confirmed; and we are told how this Egyptian man-of-war, the *Latif*, a screw-steamer, was burnt at sea, sixty miles from Suez, on the evening of the 10th ult. The vessel had taken Colonel Gordon to Massowah, and was on her return journey to Suez, with 300 soldiers coming back from Abyssinia, a few passengers, and a crew of 160. The chimney was allowed to become overheated, and the woodwork about it caught fire. No effort was made to save the ship; the soldiers and crew broke through all discipline and seized the boats. It was, fortunately, a fine evening, with a calm sea; but the boats were so overcrowded that great loss of life would have ensued if the British India Steam Navigation Company's ship *Agra* had not fortunately come up to their assistance. A second English steamer followed shortly, and all in the boats were taken on board the two vessels. The *Latif* was left to her fate, and the people were taken on to Suez. Thirty, however, were found to be missing, and it is supposed that they were drowned in the confusion and crowding caused by the cowardice and want of discipline on board the *Latif*. The *Latif* was a screw-corvette, of 300-horse power, built in England. She ranked third in the Egyptian

war fleet, which consisted of two frigates, two corvettes, four gun-boats, a despatch-boat, and two sloops of war.

Captain C. H. Hillcoat, commander of the *Agra*, has reported, in a letter to the agents of the British India Steam Navigation Company, the circumstances of this affair. It seems that the officers and crew of the *Agra* deserve high credit for their courageous and unselfish behaviour, in putting their boats alongside of the burning ship and keeping close to her while there were any persons remaining to be saved. The *Latif*, being a wooden vessel, burnt rapidly, and was enveloped in flames from end to end half an hour before the last boat quitted her side. Her guns, being loaded, went off at intervals, and the explosions from time to time were extremely dangerous to the safety of the different boats' crews. Yet there was no shrinking from this service of humanity, although the captain reported some ten to fifteen tons of gunpowder on board near the engine-room. The steamer *Myra* also saved some thirty soldiers, and none would have been lost but for the utter want of discipline among the Egyptian troops. They swamped one boat by jumping into her by dozens, and the men of the *Agra* in the other boats had to use their oars and stretchers to knock them off, or they would have been lost also. The disaster took place several miles from shore. The night was clear, and the sea was smooth.

Our illustration is from a sketch by Mr. Philip H. Foster, third officer of the *Agra*.

THE GREAT WALKING-MATCH.

The match for £1000, or £500 a side, between Edward Payson Weston, of America, and Daniel O'Leary, to walk against each other, at the Agricultural Hall, Islington, during six days of last week, excited great public interest. On each day the spectators might have been counted by thousands, and included persons of all ranks. At one time on Saturday evening there could not have been less than 20,000 people present. O'Leary, though a native of Cork, is a naturalised citizen of the United States. He is thirty-one years of age, stands 5 ft. 8½ in., and at the commencement of last week weighed 10 st. 6 lb. Weston, born at Providence, Rhode Island, U.S., is seven years older than O'Leary, stands a quarter of an inch lower than O'Leary, and weighed 8 lb. less. The men were engaged in a similar match at Chicago in November, 1857, when O'Leary, who did 501 miles, is said to have defeated Weston by fifty miles. There was great dissatisfaction, however, with regard to the distances, and both men were anxious to meet on English soil and have an unprejudiced record taken. This led to the present match; and there can be no doubt that both men have been justly dealt with. They started a few minutes after midnight on Sunday week, and the contest ended last Saturday night, an hour before midnight, with a victory for the Irishman, O'Leary. The affair seems to have been well conducted throughout. Five gentlemen were appointed as judges—Messrs. G. W. Atkinson, J. G. Chambers, C. Conquest, A. G. Payne, and J. Watson. The four first named agreed on the following concise conditions of walking:—

"We, the undersigned, who have been appointed judges in the walking-match between E. P. Weston and D. O'Leary, that commences at the Agricultural Hall on Monday, April 2, 1877, have mutually agreed to consider all walking fair so long as neither of the two competitors has both feet off the ground at the same time. We consider the distinction between running and walking to be that the former is a succession of springs, in which both the feet are off the ground at the same moment; the latter to be a succession of steps, in which it is essential that some part of one foot must always touch the ground.—A. G. Payne, J. G. Chambers, Charles Conquest, Geo. W. Atkinson. March 31, 1877."

Mr. Watson would not sign this document, arguing that a further stipulation ought to be made that the toes of one foot should not leave the ground till the heel of the other was down. There was little fear, however, of either of the competitors departing from the rules of fair walking, as to have done so would have endangered his own chance. There is a great difference between the styles of the two men. O'Leary has a steady, well-balanced style, which quite comes up to an Englishman's idea of what walking should be; while, on the other hand, Weston has a peculiar jerky gait, which is the reverse of graceful. In speed, also, there is no comparison. O'Leary is much faster than his opponent, and has a combination of speed and endurance rarely found in one man. In fairness to Weston, however, it must be stated that he was walking a losing match for the last three days; and the manner in which he walked the last few miles, with the certainty of defeat, completely won the applause of the spectators. On Saturday afternoon, at ten minutes to three o'clock, O'Leary completed 500 miles, in which he had occupied 135 hours. Weston at that time had traversed 478 miles and five "laps" or circuits, of which he had seven to the mile, as he walked on the inside track. O'Leary, being on the outside track, had six laps and a half to the mile. During the afternoon and evening Weston still continued on his way at a pretty brisk pace, spurring from time to time in a marvellous manner, until at a quarter past eight o'clock he had finished 500 miles, having taken 5 h. 26 min. 50 sec. longer time than O'Leary had done in accomplishing the same distance. Sir John Astley, who has been supporting Weston, then intimated to the opposite party that he looked on the match as over, and, if they chose, O'Leary might retire. This he did not do until he had gone nearly three miles further, when he went away for seventeen minutes. After walking a lap in anything but his real style, O'Leary, who was evidently suffering from giddiness, again retired. Weston, when he had walked 504 miles, took one rest of 13 min. 17 sec., and proceeded on his way for the next six miles in a most vigorous style. But, at eleven o'clock in the evening, Weston was obliged to give up the contest, and finally retired, amidst deafening cheers. O'Leary strolled round, led by two of his friends, and was, of course, heartily applauded. The result posted at the finish was—O'Leary, 520 miles; Weston, 510 miles. The times of both men were taken by a chronometer lent by Sir John Bennett. It is said that in no previous match has 520 miles been walked in six days. We give an illustration of "the finish." O'Leary grasped in his hands a pair of bone castanets, while his competitor held a slight cane or switch in the right hand, and sometimes rested the left hand upon his hip, in the attitude styled "akimbo." When O'Leary at last walked over the course, after the withdrawal of Weston, he wore on his breast an American eagle, with the stars and stripes of the United States, and with a figure of himself walking, the gift of some American friends. He is a Roman Catholic, and had strictly observed the diet of Lent immediately before starting in this arduous contest; a priest of his own Church was seated beside the course, with whom he occasionally conversed when he stopped for rest or food.

The *Carlisle Patriot* announces the appointment of Lord Lonsdale to the ancient office of Vice-Admiral of Cumberland and Westmorland, one of the very few vice-admiralties in the United Kingdom.

REMAINS OF AN ANCIENT PYRAMID NEAR ARGOS.

PELASGIC MASONRY AT ARGOS.

PELASGIC MASONRY AT NAUPLIA.

A PILGRIMAGE TO MYCENÆ

(By our Special Artist and Correspondent.)

The interest which has lately been associated with Mycenæ, from Dr. Schliemann's discoveries, will justify a short account of a visit lately made to that place; and, to those who may think of making a journey to see the spot for themselves, it will supply information as to the routes and the means necessary for doing so. From Athens there are two routes to Mycenæ. One is by steamer from the Piræus to Nauplia, at the head of the Gulf of Argos, from which there is a carriage road all the way to Mycenæ, about twelve miles, and a couple of hours at most should cover the distance; but the traveller doing this will have to stay a week, to get the steamer to go back again. The other route is by Corinth, and this will now be described. A steamer leaves the Piræus every Thursday morning about two or three a.m., reaching Kalamaki, at the Isthmus of Corinth, between five and six a.m. From this place the journey has to be done by land to Mycenæ. As there are no hotels and no conveyances, a guide has to be engaged at Athens, who will provide lodging, food, and horses, acting at the same time as guide and interpreter. Two of us started, and our guide was Dionysus Dragonus, who was not too well informed, but very civil, and willing to do what he could for us. At Kalamaki horses were in waiting for our use, as well as for the necessary baggage. When we found that we had to ride on a common pack-saddle, with a rope and a bit of chain for a bridle, we took it as evidence that we were entering into a region which still remained in a simple and primitive condition. We learnt that these nags had come from what Homer calls "horse-pasturing Argos." There was nothing remarkable about them, except that they were small, reminding one of the proportion between the horses and men in the Elgin marbles; and the conclusion was a natural one that they were the descendants of the same breed that had served as models to Phidias. It must be stated that these animals are sadly indifferent to all archaeological and Homeric investigations. Often, when a marble column or a specimen of Pelasgic wall demanded a closer inspection, and a detour from the line of march had to be made, the chances of acquiring knowledge had to be given up, rather than go through the process necessary to make these brutes deviate from following each the tail of his neighbour. Let anyone about to undertake this journey make it a condition with the guide before starting that there will be English saddles and proper bridles, as it will save much bad language on the way.

It is almost unnecessary to mention that nearly every step of the ground about to be travelled over has a classical or sacred interest. As we start across the isthmus, we are told that we are close to Cenchrea, where St. Paul went on leaving Corinth, on account of his vow (see Acts xviii. 18). We had scarcely left the seashore, when an old cutting was pointed out where the attempt had been made to make a canal from the Saronic Gulf to the Gulf of Corinth. The distance is only about three miles and a half, and the attempt to connect the two seas has been made more than once. Pericles, Demetrius Poliorcetes, Julius Cæsar, Caligula, and Herodes Atticus have all had schemes for this water communication. The last was that of Nero, who came to the spot himself to superintend the undertaking, but had to leave the work when only commenced on account of a Gallic war. As yet the true Lesseps of this isthmus has not been found. A little further on the remains of the walls of the ancient "Isthmian Sanctuary" have to be inspected. Here there was a temple of Poseidon, also a theatre and a Stadium, where the great Panhellenic Festivals were celebrated. Many of the stones are yet in their place, and the line of the walls can be traced. This was a very important spot in ancient Greece; Pausanias gives a very detailed description of it. There were statues of the athletes who were victors in the Isthmian games. It was the place called "Isthmus" that gave that name to the narrow neck of land, and hence to this feature of geography in general. There were pitch-trees planted in a line; also statues in the Temple of Neptune, and Amphitrite in a chariot with four horses, all specimens of Chryselephantine art; the horses, he is particular in stating, were all of gold except the hoofs, which were of ivory. From this point our road, or track, was over ground part of which was under cultivation, and the young crops coming up looked fresh in the bright sunlight of the early morning. No one would have supposed that the soil around had ever been anything else than its present condition indicated; but we have of late seen how explorations have exposed to our view long buried cities, how temples long lost have been brought to light again, and the ashes of the dead have been revealed to us after long ages of repose. The spade used by the excavator and explorer is now the chief instrument among archaeologists; and here we had an evidence of it. We noticed some men digging a little distance from the road, and on inquiring what they were about, the answer was that they were "tomb-hunting," and so it turned out. The earth under our feet was a vast burial-ground. These men were busy following this peculiar kind of chase merely to despoil the graves of their ancestors for the sake of any small articles they might find among the dust. Their process of search in quest of a grave below the ground reminded us of truffle-hunting; but the method was different. One of the party went about with a long auger, with which he bored into the earth. As the burials seem to have been in stone or earthenware kists, their exact position could be very minutely ascertained, and then a hole was dug at the proper point for getting at the contents. We found the whole of the ground for a considerable space around had been thus dug into, and it looked like "trous de loup" in front of a fortified position. The law is that people wishing to dig must obtain permission from the Government, and that they must give up the half of the objects they discover; but we were told that these people were doing this sort of thing surreptitiously, and kept all that they found, or rather that they brought everything to Athens and disposed of it to dealers. Some coins and small vases were offered to us for sale, but all archaeological interest ceased as we began to understand the nature of the work which was going on, and we felt that we were among ghouls or vampires, who had systematised a method of turning the dead out of their graves to suck what they could from the mouldering dust. Nearer Corinth we found another party of the same kind at work. This road passes the extensive quarries where the stone was cut with which Corinth was built, and even now, in what seemed the country, peeps could still be got at the corners of ravines, where the rain had washed away the soil, of massive walls, showing that the fields where corn is now growing were once a city. The only thing of the past standing above the earth is a mass of thick wall, whose *opus reticulatum* is clear evidence that it belongs to the Roman period, and is not older than the first centuries of our era. Near it was a rock-cut excavation, in which were columbaria, or pigeon-hole tombs, a Roman form of sepulchre. Our route was to old Corinth, for there is a new town of that name about three or four miles from the other. It is on the sea, and is the port of the locality. Its small trade preserves the semblance of a town, while the original Corinth has dwindled down to something like the dimensions of a

Highland clachan. The great city, celebrated for its magnificence and luxury, is now only a few tumble-down houses. It looks as if a war or a pestilence had passed over it. Those who became familiar with the appearance of the villages between the French and German positions in the sieges of Paris or Metz may easily picture Corinth to themselves. The ruins to be seen are not those of the ancient city, but houses comparatively of yesterday. There is a fragment or two of Roman work, and an amphitheatre, which, having been cut in the rock, is still visible. The only relic of the Greek period is seven Doric columns, supposed to have belonged to the temple of Athena Chalanitis, or Athena the Restrainer, an attribute of the goddess which forms a fertile subject for Mr. Ruskin in "The Queen of the Air." About 700 B.C. is the date which has been given to this temple. Cities are like men, they come and go, but the landscape is more enduring. The view across the gulf of Corinth is still as magnificent as when the city was in all its splendour. Parnassus and Helicon are as beautiful to-day as they were two thousand years ago, and seldom in the past could they have been seen to better advantage. A heavy fall of snow had whitened these mountains far down their steep slopes, clouds played round their tops, hiding them at one moment and revealing them the next. In the opposite direction was the Acro-Corinthus, which stood over the old city like a sentinel. It is now deserted; only a solitary shepherd and his sheep grazing did we find among the ruins left by Turks and Venetians. The old fountain of Pirene, sacred to the muses, still flows, or trickles, for the supply is small, and only admits of a very shallow draught, such as Pope deprecated. The view, however, from the summit of the Acro-Corinthus is worthy of the roughest pilgrimage to see it. It may be said that from its height, and its geographical position, you can see the whole of Greece; you can get a glimpse of almost every region connected with the past history and literature of the land. Let all tourists passing this place arrange so that they may have two or three hours for the ascent.

In the evening, chap. xviii. of the Acts of the Apostles was consulted, and we found some resemblance between our position here and that of St. Paul. This was something, where so much change has taken place. There being, in fact, nothing in the shape of an hotel, or even a wayside hostelry, our guide had to find a private house for us; but this was not the residence of a tent-maker, but of the doctor of the place. The name of this professional gentleman is Theophani Compendino. We remained here, as part of the family, during two days, and the Apostle could not have lived under more primitive circumstances. In some points, the customs here are as old as the time of the Odyssey. The doctor's wife, like other housewives in this region, had a loom in the house, and a web in it, at which she wrought, a practice which at once took us back to the time of Penelope. On a shelf near the loom were the doctor's drugs, which, he was particular to point out, had the names written in Latin. We had a room to sleep in, and the guide brought beds, which were good and clean; so we did not suffer from one of the inconveniences so often complained of in Eastern travel. The next morning it was raining, the rain changed to snow, most unusual in these latitudes, and as late as March too; so we had nothing for it but to spend another day with our host. We watched the loom, inspected the bottles of drugs again, and got more intimate with Cleopatra, the only child of the family, who sat at the fireside watching our movements. During the day I found on a shelf a piece of circular wood engraved with characters, which turned out to be crosses and monograms common in the Greek Church. It was about five inches in diameter; and it was explained to me that on certain days a loaf is baked—for Penelope is also the baker of the household—and this stamp is used to impress the bread with the sacred symbols. A smaller square stamp is also used, which contains the monogram of Christ; and this is applied four times, outside of the larger central impression, so that the four impressions make the figure of the Cross. The loaf is then taken to the church and is cut by the priest, who consecrates a portion of it at the altar, celebrating mass, as I understood, for the head of the family.

On the second morning we got off, and hoped that the weather would keep up. About two inches of snow had fallen, and the roads were slushy and bad. Our line of march was at first westward, by the plain of Corinth, for about two miles, when we turned south among the hills, keeping by the banks of a yellow stream. There is not much to be seen on the road; very few houses, and most of these in ruins. Our slow-moving animals took nearly four hours to get to Cleonæ, where we stopped to breakfast. In Homer's Catalogue of the Ships this place is called "well-built Cleonæ." The words seemed ironical, for at present every house is a wreck; two earthquakes last year—one in June and the other in November—had utterly destroyed this small village. We wondered how breakfast was to be accomplished under such conditions, till one small house was found in a restored state; and here, under some very peculiar arrangements, our wants were supplied. A few stones of an old temple are all that remain of the ancient well-built city of Homer's time. There is a road from this to Nemea, a locality associated with Hercules, where the cavern of the Nemean Lion may be seen, as well as faint vestiges of a stadium and three Doric columns of a temple. Under favourable circumstances, this would be the most interesting route to go to Mycenæ; but there is another, which is shorter by about an hour: distances here are measured by time. During our breakfast the snow had begun to fall again, and it lasted nearly all the way to Mycenæ, which is three hours by the shorter route. This leads over a low pass in the mountains; but I can say little about the scenery, for the snow and mist limited the extent of vision to only a few yards around. Luckily the wind was on our backs, or it would have been a severe undertaking; for even as it was the cold was biting, horse and rider became covered with snow, converting us into white spectres moving in single file along the narrow path. On descending into the plain of Argos and getting out of the clouds the snow ceased, and it was evident that little or none of it had fallen there; the temperature was different, and it felt warmer.

At Mycenæ there is a small modern village called Charvati, about a mile from the old Acropolis; and here, as at Corinth, we had to put up in one of the private houses, which turned out to be the one Dr. and Mrs. Schliemann lived in while the excavations were being carried on. The man to whom it belongs is Anagnostos Christopoulos. The accommodation is not extensive: a wooden screen separates the house into two divisions, one of which was reserved for our eating and sleeping, but the fire in the other had to be our resort when we felt cold; and a picture of it which I send will give an idea of a Mycenæ interior of the present day. The houses are not remarkable for the quantity of furniture: there are small wooden stools to sit upon, and the family sleep on a bed laid on the earthen floor. This being the Lent season, olives and bread seemed to be their only food. The principal wealth seems to be now in flocks of sheep and goats, which pasture on the slopes of the mountains; and strangers have to face in every village the fierce barking, and to shun the angry teeth, of the large shepherd dogs. There were some cows, but not many. Oxen are driven at the plough, and the plough is the same primitive wooden instrument which the traveller will find yet in use all over the East, from the Danube to the Ganges.

The plain of Argos is yet rich and fertile; the soil is very red, and at present the newly ploughed fields contrast finely, in colour with the young green crops. Homer uses the words "fruitful Argos;" and Agamemnon calls it "the udder of the land." Argos is the name now applied only to the town, which is nearer the sea than Mycenæ; but in Homer's time it meant the region. Æschylus never mentions Mycenæ; it is always "Argos;" but Mycenæ being the capital at the date of his tragedies, this city is supposed to be understood by the same word. As there is some uncertainty about the pronunciation of the name Mycenæ, it may be stated that the O or K is usually sounded hard in this part of the world, and our guide, as well as the people at this place, called it "Mykenes." Homer called the Greek people of his time the Argives, and the Achæans, and also the Danaï—this last implying an Egyptian connection. The name of "Apia," which was given to this land, did not, according to the true derivation of the word, indicate, what its sound might suggest, that it was derived from the Apis of the Nile. The meaning, however, of all these names, and the ethnic influences implied by them, are most important as bearing on the objects lately found by Dr. Schliemann, and will, no doubt, become a fertile matter of discussion. I send a sketch of a woman with a water-jar, which will show the common female dress in this part of the world at the present day. The custom of carrying water in an earthen vessel is no doubt as old as the time when Mycenæ was the capital of the Argives. I also send a sketch of a male descendant of the illustrious races of Argolis; but it is necessary to make it a back view, in order to do full justice to the "Ulster" worn in this country. This garment is made of a kind of thick shoddy, with braid, and does not hang, but stands out, giving breadth and importance to the wearer. The use of the square piece of material on the back is as much involved in mystery as many of the objects lately found in the Acropolis of Mycenæ. It may be allowed that, if it is not useful, it is highly ornamental.

Having already sent home sketches and descriptions of the remains of this place, I say nothing further about them in this letter. On leaving Charvati a good road crosses the Argolic plain to Argos. As before stated, a carriage can be easily brought as far as the village, but it would be impossible for it to go over the mountain paths to Corinth. It was reported that there were remains of pyramids about Argos, and we rode out of our road to try and find them, but fruitlessly. One pyramid used to stand between Argos and Nauplia. Traditionally it was the sepulchre of the Argives killed in a battle between Proetus and Acrisius. According to Leake, it was adorned with representations of Argolic shields, in memory of the tradition that, on this occasion, the two Kings and their followers were for the first time armed with those means of defence. On the road which leads from Argos to Tripolitza, by Tzipiana, there are some ancient remains: and among them is that of the lower part of a pyramid, of which I send a sketch. This form of building existing here is very important to put on record while the discussion regarding Mycenæ is going on. The story of Danaus may be mythical, still it points to some early connection with Egypt. Even the name "Agamemnon" is more Egyptian than Greek; and this pyramidal form of building confirms the notion that there must have been a close intimacy at some past period. It will be noticed from the drawing that the masonry is of the Pelasgic type, hence it was not the work of Egyptian masons. Leake, vol. ii., p. 339, gives a plan of this structure, which I copy, as it presents a wide variation in arrangement from the Egyptian model. It will be seen that there is a door in the side, with a passage leading into the sepulchral chamber, which last is divided into two by a partition wall. The masonry is not so old as Tiryns or Mycenæ, but its character does not belong to the latest manner of that kind of building.

At Argos there is very little of the ancient city to be seen. The Byzantine fortress on the top of the hill is much of it built on the old base of Pelasgic stone. The steps cut in the rock at the foot of the hill still tell the position and size of the theatre. Close to it is some massive Roman brickwork, the remains of a temple, also a bit of Pelasgic wall which has been the base of a temple, said to be that of Venus. There is a broad well-made road across the plain, all the way to Nauplia; this passes close to the ancient walls of what Homer calls "well-fortified Tiryns." It was said to have been built by the Cyclops for Proetus; and, as it is one of the most ancient specimens of primitive and massive masonry, the word "Cyclopean" has been generally given to that manner of building. It is now considered more accurate to apply the word "Pelasgic" to the later forms of polygonal work. As this particular kind of masonry is important in its bearing on archaeology, I give a couple of specimens of what is now called Pelasgic. One is from the base of the temple at Argos, just alluded to; another from the old walls of Nauplia. There is not a great difference between the two, but in that of Nauplia the stones are smaller than in the one from Argos. The faces of the stones are smoother, and the fitting of each to the other is more exact. These are all points telling that the wall in Argos existed before the other in Nauplia. Having acquired this bit of experience, compare it with the old wall of Tiryns, of which I send a sketch. It will be seen, in this style, that the stones are still larger than in the other, and that almost no effort has been made to fit the stones into one another, but that large gaps are left, which have been filled up, in some cases, with very small fragments. The stones at Tiryns are ruder blocks, and less carefully fitted than those in the walls of Mycenæ, clearly showing that it is the older of the two. The sketch of the wall represents a doorway and passage: this is on the southern side of the old fortification. It would be difficult to find any illustration in the whole history of architecture of a ruder form of the arch. In fact, it is not an arch; it is one of the earliest experiments in masonry to cover a door, and this was followed by the Greeks wherever they had a dome to erect. The domes in the Treasuries at Mycenæ may be taken as its full development; and the doors there, although they had a lintel, had this form of construction above it. This is almost identical with the Egyptian mode; but this doorway at Tiryns, giving the first rudimentary step, would tend to prove that this particular arrangement had been developed in the country. The walls of Tiryns are about 25 ft. thick, and can be clearly traced all round the low rising ground which they were constructed to defend, and which is supposed to have formed the Acropolis only of the city. The plan of the walls seem to indicate a very primitive condition of military defence. They seem to have trusted to the great thickness of the walls, and not to flanking work. There are some curious galleries in the massive walls—all arched like the doorway in the illustration; but their exact use is uncertain. Excavation would, no doubt, give us additional knowledge.

It is only about two miles from Tiryns to Nauplia, which is a very picturesque place, and worthy of a visit. There are hotels here, but not good ones. The visitor who could put up with their accommodation might sleep here, and could drive or ride to all the places about Argos during the day, returning again at night. The weekly steamer comes in on the Monday evening, and sails again during the night, calling on her way at Spezzia, Hydra, Poros, and Ægina, reaching the Piræus again about three or four o'clock on Tuesday afternoon.

WALKS.

Of all the sights which this year attracted Easter holiday-makers the most memorable was perhaps the match between two professional pedestrians from America, each of whom occupied the week in a walk of over five hundred miles. What a feat this is one may realise when one reflects that there is not one in a hundred of ordinary men who could have kept up with O'Leary for the first ten miles of his tremendous journey—which he accomplished at the rate of a mile in ten minutes! To begin like this, and keep on doggedly—in spite of an attack of illness, and of the awful weariness and actual pain of the latter part of the task—for a whole week of working days, from midnight on Sunday till late on Saturday, is a wonderful, one might almost say a horrible feat. It is difficult to imagine what his thoughts can have been as he plodded along, hour by hour, in the silence he preferred (for he seldom allowed his band to play)—through the day, with thousands staring at him, ignorant of the waves of weariness rolling up every now and then in his mind; through the night, as it grew quieter and colder to those dark hours, when people die, before sunrise—counting how much was done, how much was still to do; watching his opponent, who plodded along more slowly, but strongly and almost without weariness, who might yet outlast him and make the whole week's work a failure instead of the success which itself must sometimes have seemed a hardly adequate reward for his labour.

And that opponent's week must have been a still more trying one; the feeling which he surely must have had, that this race would only be a repetition of former defeats, must, one fancies, have doubled the weariness of every weary hour—unless, indeed, he were sustained, like Bulwer Lytton's Sisyphus, by a constant and unquenchable hope, proof against all signs that victory was impossible. In any case, the pluck of the man—the enormous power of endurance which could keep him going for twenty hours at a stretch—must be something enormous, and must probably be aided by a lack of imagination: of thought, in fact. Indeed, the rumour that each step he takes is a conscious effort seems not an improbable one. A brain thus absorbed might not trouble its owner with torturing anticipations of coming hours of painful labour, very likely to be ended by defeat, which would, as anyone who has ever run even in a mile race knows, entirely destroy that nerve which gives the power of "staying" till the very end of a tough struggle.

But it is useless to attempt to guess from one's own sensations what those of a Weston may be: there is nothing in which men vary more than in their walking—the way they actually walk, the way they think while they are walking, what they see during a walk, how much of it they remember, and what walking is to them. Without contrasting people as opposite as Mr. O'Leary and those beings (many country farmers' daughters, for example) who never walk at all, one may recall the widely-differing classes described in the famous apologue, so dear to Charles Kingsley and his like, called *Eyes and No Eyes*: which shows how, while one rambling urchin ran after every insect and bird he encountered in a lonely country walk, robbing nests and catching inoffensive butterflies without the slightest compunction, his fellow-pupil, a more quiet and philosophic youth, observed men and manners on the highway; and, like many wise ones of old, returned wearied and depressed by the generalisations his contemplative mind had drawn from the frivolities around him.

I am aware that this is not exactly the way in which the author of this story intended it to be given; but there are two sides to every question, and it is only fair to Master No-Eyes that his point of view should be seen. There are two ways—there are twenty ways—of going for a walk, whether in town or country; and it is not fair or true to say that one of these is right, and the other or others entirely wrong. No doubt there is little to be learnt by a dogged plodding on like Weston's—though an approach to it is the way in which some men like to spend their holidays; men whose one ambition is to cover as many miles in the day or week as possible, and who ought logically to like a prepared running-path better than the loveliest scenery in the world—only by good fortune they seldom are logical. Physically, intellectually, morally, there is little to be gained by these feats, and often a good deal to be lost; but it does not follow, because one should not walk along a country-lane as though it were a prison-corridor, that one should turn oneself inside out, like some marvellous animal lined with eyes, and devote oneself merely to the observation of every little fact in natural history encountered in one's walks abroad. To do this is like thinking all through dinner time of the materials and construction of the various dishes, which would certainly be a waste of time to any but a professed cook.

But many men who would take violently the "eyes" side of the question in the old story, would yet be, like the one we have mentioned—Charles Kingsley—most delightful companions. The only danger with them would be, perhaps, that they would, by noticing multitudes of little facts, lose their sense of proportion; many people whose knowledge of isolated facts seems boundless, appear to be unable to see which of them are general, typical truths, and which repetitions of detail which are, except for their special purposes, useless. Thus, we find that even Macaulay's vast knowledge did not make him a really great philosophic historian; and thus—to return to our neglected sheep—it does not follow that the way to make the fullest use of a country walk is to examine every nest in every tree, or go into raptures over every fresh bit of pretty scenery; when a German lady has remarked "Wie schön! wie herrlich!" almost once in every hundred yards of a walk, the freshness of her admiration for a really glorious prospect is to be doubted.

But what a great thing a walk with any great man must be. In the lives of famous people one is always coming across the memories of such things, preserved by the survivors—is it not Dugald Stewart who says that an early morning walk, in the country round Edinburgh, with Burns, impressed him more with the man's true power than any of his writings? Near the end of their stroll, Burns, looking at some cottages, said how the sight of humble cleanly homes always affected him; he felt so deeply the real, earnest goodness that was to be found among them. And Thackeray—does not each of us remember, and envy, "Frank Whitestock's" walk with him, among such different scenes, yet with a "moral" something the same? They passed by pawnbrokers' shops, and felt the stories they had to tell; they noticed little worldly children playing and squabbling in the streets; and then they went to the poor clean little room where a charwoman's children lived—whose history, and that of the two sixpences distributed among them, are they not to be found in the "Sketches and Travels in London"?

Yet, unless one has some such wonderful companion as this, one perhaps enjoys a lonely walk the most of all—there is such perfect liberty to go quickly or slowly, to stay and examine a blade of grass, if one will it, without any particular reason why, and to neglect the most beautiful thing, for which one happens not to be in the mood; and, if it happens to strike one's fancy, to walk one mile in thirteen minutes and

dawdle the next in half an hour. There are some things of which most English natures can only enjoy the beauty alone—things which are quite undefinable, and which one is afraid that one's companion might not feel. Whether, however, they are feelings of this sort which sustain O'Leary and Weston in their enormous solitary journeys is, perhaps, a little doubtful!

CHESS.

TO CORRESPONDENTS.

All communications relating to this department of the paper should be addressed to the Editor, and have the word "Chess" written on the envelope.

J. M.—Both players are evidently tyros. On the seventh move Black loses a piece, and the subsequent attack and defence are of the weakest kind.

H. B.—We refer you to the answer given last week to A. A. and others. In No. 1724, when the B K takes P, the move discovers check to the B at K 8th.

E. H. G. (London).—Your problem cannot be solved in the way you propose if Black plays 2. R takes Kt. In any case, it is too weak for publication.

C. C. (Maidenhead).—Please to compare your problem with our No. 1715. The resemblance in idea, even for a coincidence, is curious.

A. W. (West Hartlepool).—In constructing problems you should aim at giving Black some means of defence. In the position you have sent he has none. We shall be glad to hear from you again.

H. L. (Brompton).—The problem in five moves is declined, with thanks; and that in three moves admits of a second solution, by 1. B to B 4th, 2. Q to R 8th, &c.

C. G. (Sheff. Id).—The game shows promise, but it is not up to publication mark. Thanks for the problem.

R. T. K. (Falmouth).—White can capture the P on pawn in the position described.

T. H. W. (Harrow).—Your question is answered in the note to White's third move in the game given below.

C. A. (Exeter).—You have overlooked, in common with many others, that when the B K takes Q P, that move discovers check, and so nullifies the combination.

L. B. (Pieradilly).—There is afternoon play at the St. George's Chess Club, King-street, St. James's. The usual sub-criticism is, we believe, two games.

E. H. (Leeds).—The King cannot castle after it has been moved. Any elementary treatise will inform you on this and similar points.

CORRECT SOLUTIONS OF PROBLEM No. 1727 received from H. R. J. Williams, Black Knight, Lenora and Leon, S. Western, American, L. S. R. Tippet, Paul's Root, E. Worsley, W. Alton, Simplex, H. Burgher, T. R. Y. Mechanic, W. Nelson, Only Jones, Triton, J. S. W. J. Wootton, L. S. B. Harrobian, W. Lee Longt. p. N. E. D. Little, and Robin Roughed.

CORRECT SOLUTIONS OF PROBLEM No. 1728 received from E. Worsley, Only Jones, R. Roughed, H. Burgher, O. D. W. Nelson, A. G. R. Leonora, and Leon, S. Western, W. Lee, Tippet, Harrobian, Little, R. T. King, J. Williams, B. R. Stone, W. Alton, Tallyho, J. S. W. Mechanic, J. Wootton, L. S. B. Black Knight, Simplex, Queen of Connaught, American, Paul's Root, and H. B.

SOLUTION OF PROBLEM No. 1727.

WHITE.	BLACK.	WHITE.	BLACK.
1. K to R sq.	R takes R*	2. Q to R 5th (ch)	B to B 4th
*The variations are obvious.		3. Q to R 2nd mate.	

PROBLEM No. 1730.

By the Rev. W. LERSON.

BLACK.

WHITE.
White to play, and mate in three moves.

CHESS IN LONDON.

The following interesting game between Mr. MACDONNELL and another AMATEUR was played recently at Simpson's Divan. (King's Gambit declined.)

WHITE (Mr. M.)	BLACK (Mr. A.)	WHITE (Mr. M.)	BLACK (Mr. A.)
1. P to K 4th	P to K 4th	19. Q to K 3rd	R to Q 8 sq
2. P to K B 4th	B to B 4th	20. K takes K P	
3. Kt to K B 3rd			
4. Kt to Q B 3rd, producing a variation of the Q Kt opening, is now considered White's best line of play.			
5. B to B 4th	P to Q 3rd	21. R takes B (ch)	Kt takes R
6. P to Q 3rd	Kt to K B 3rd	22. R takes Kt (ch)	K to B sq
7. Kt to Q B 3rd	Kt to Q B 3rd	23. R to R 7th	
8. P to B 5th	Q to K 2nd		
		24. B to Kt 3rd, Black plays Q takes B, &c.	
9. B to K 5th	P to Q 3rd	25. Q takes R	Q takes R
10. Q to K 2nd	Kt to Q R 4th	26. P to K 5th	Q to B 2nd
11. Castles (Q R)	P to B 3rd	27. P takes B	B takes K
12. P to Q 4th	P to K 4th		
13. P takes P	P to Kt 5th		
14. R P takes Kt	Kt takes B (ch)		
15. R to Q 3rd	P takes P		
	Castles (Q R)

		31. R takes R	B to Q 4th,

and wins.

THE WEST YORKSHIRE CHESS ASSOCIATION.—The twenty-second annual meeting of this association will be held at Leuchter's Restaurant, Bridge-street, Bradford, on Saturday April 28.

OBITUARY OF EMINENT PERSONS.

THE COUNTESS OF LUCAN.

The Right Hon. Anne, Countess of Lucan, died at Richmond, Surrey, on the 2nd inst., aged sixty-seven. Her Ladyship was sister and co-heiress in blood of the late James Thomas, Earl of Cardigan, K.C.B., being youngest daughter of Robert, sixth Earl of Cardigan, by Penelope Anne, his wife, second daughter of George John Cooke, Esq., of Harefield Park, Middlesex. Her marriage to General the Earl of Lucan, G.O.B., took place on June 29, 1829, and the surviving issue are Colonel George, Lord Bingham, the Hon. Richard Bingham, Lieutenant R.N., and Augusta, Baroness Alington.

LIEUTENANT-COLONEL C. H. SPENCER-CHURCHILL.

Lieutenant-Colonel Charles Henry Spencer-Churchill, who died on the 3rd inst., at Villa du Souvenir, near Mentone, was the eldest son of Lord Charles Spencer-Churchill, a Prince of the Holy Roman Empire. He was first cousin to his Grace the Lord Lieutenant of Ireland, and on his mother's side grandson to John Benett, Esq., M.P. for Wilts, of Pythouse, Boyton, and Norton, in the county of Wilts. Colonel Spencer-Churchill was educated at Eton, and at an early age was presented with a commission in the Rifle Brigade by the Duke of Wellington, in recognition of his father's services in that regiment through the Peninsular War. He served at the Cape, in India, and all through the Crimean War, where his gallantry was so conspicuous that he received the thanks of Lord Raglan. After exchanging into the 60th Rifles he proceeded to India, and was at the taking of Delhi. He served also in Canada, but was forced to retire from the Army owing to ill-health, never having recovered entirely from the effects of the hardships he suffered in the Crimean trenches. He married, in 1862, the youngest daughter of the Rev. G. Lowther, a connection of the Earl of Lonsdale, who survives him.

MR. HOWARD BROOKE.

Richard Howard Brooke, Esq., of Castle Howard, in the county of Wicklow, J.P., M.A., barrister-at-law, died on the 6th inst., aged seventy-six. He was sixth son of Sir Henry Brooke, Bart., of Colebrook, in the county of Fermanagh, by Harriet, his wife, daughter of the Hon. John Butler, son of Brinsley, Viscount Lanesborough, and he assumed by Royal license, Jan. 3, 1835, the additional surname and arms of Howard on succeeding to Castle Howard, in the county of Wicklow, and Borkleton, Queen's County. He was at one time High Sheriff of the county of Wicklow. Mr. Howard Brooke married, June 3, 1837, Frances Caroline, sister of the late James Hans Hamilton, Esq., of Abbotstown, M.P., in the county of Dublin, and leaves several children.

MR. HALLIDAY.

Mr. Andrew Halliday died on Tuesday morning at his residence in St. Augustine's-road. His full name was Andrew Halliday Duff, and he was a son of the late Rev. William Duff, of Banffshire. Having completed his education at Marischal College and University, Aberdeen, he came to London, and devoted himself to literature. His first engagement was with the *Morning Chronicle*, and he afterwards wrote for the *Leader* and the *Cornhill Magazine*. He contributed many articles to *All the Year Round*, some of which have been republished in a collected form. One of his best known papers is entitled "My Account with her Majesty," it explains the working of the Post Office Savings Bank system. Of late years Mr. Halliday devoted himself almost exclusively to dramatic literature.

The deaths are also announced of—

Eliza, Lady Taylor, widow of the late General Sir H. G. A. Taylor, G.C.B., on the 1st inst., in her eighty-fourth year.

Lieutenant-Colonel Edward Vere P. Holloway, on the 29th ult., aged seventy-one.

Thomas Schuman Morris, Esq., J.P. and D.L. of the county of Warwick, on the 1st inst., at Stoke, near Coventry.

William Humphrys, Esq., of Ballyhale House, in the county of Cavan, High Sheriff of that county, on the 5th inst., in his fiftieth year.

Mary Primrose, Lady Kennedy, widow of Lieutenant-General Sir James Shaw Kennedy, K.C.B., of Kirkmichael, Ayrshire, on the 2nd inst., in her seventy-fifth year.

William Marmaduke Dixwell Alderton, Esq., of Scalby Lodge, Scarborough, late Captain 77th and 2nd Royal Regiments, on the 2nd inst.

George Wood, Esq., late Deputy-Commissioner of Scinde, India; eldest son of the late William Wood, Esq., of Wingham, Kent, on the 26th ult., aged seventy-seven.

Sir Thomas Tilson, formerly Chairman of the Surrey Sessions, on Monday, at his residence, Clapham Park. He was seventy-three years of age.

Eliza Susanna, Lady Hinrich, widow of Sir Henry Bromley Hinrich, of Court Garden, Marlow, Bucks, Lieutenant Hon. Corps of Gentlemen-at-Arms, on the 1st inst., at The Manor House, Hatherton, aged seventy-seven.

John Mackenzie, Esq., of Glack, in the county of Aberdeen, J.P. and D.L., son and heir of the late Roderick Mackenzie, Esq., of Glack, the descendant of a younger branch of Mackenzie of the Kintail family, on the 30th ult.

Alfred Miller Mundy, Esq., of Shipley Hall, Derbyshire, younger brother and successor of the late Edward Miller Mundy, Esq., M.P., for South Derbyshire, and representative of a younger branch of the very ancient family of Mundy, of Markeaton, at Nice, on the 30th ult., aged sixty-eight.

A Liberal gathering took place at Birmingham on Monday evening, when a testimonial was presented to Mr. Schnadhorst, the secretary of the Liberal Association in that town. Mr. J. S. Wright occupied the chair, and the presentation was made by Mr. Chamberlain, M.P. A letter was read from Mr. Bright, in which he expressed his deep sense of the value of Mr. Schnadhorst's services.

The national teachers of the north of Ireland have concluded a series of meetings at Belfast, at which resolutions were adopted stating that the Act of 1875, owing to its merely permissive character, had failed to improve the condition of the teachers, and urging that such alterations should be made in it as would remedy the grievances complained of. Resolutions were adopted contending that pensions should be granted to the teachers, and also that the Residences Act should be so modified as to enable them to take advantage of its provisions—At a largely-attended public meeting of Roman Catholics held in Belfast, the Rev. Dr. Dorrian, Lord Bishop of the diocese, presiding, resolutions were passed stating that the existing state of University and intermediate education in Ireland is extremely unsatisfactory; that the Catholics, who are the majority of the Irish people, conscientiously object to any system of education not founded on religion; and that the Government affords no facilities for the combined teachings of science and religion in harmony with the teaching of the Catholic Church. A resolution was passed in favour of Mr. Butt's University Bill, and a petition in support of it adopted.

MALVERN COLLEGE.—The SECOND TERM will begin on MONDAY, MAY 7.**F. CH. MEYER'S COMMERCIAL COLLEGE.**At Hanover, Germany.
For Prospectus apply to F. Ch. Meyer, 6, Warmbushcamp, 6.**SMART'S WRITING INSTITUTION,**97a, Quadrant, Regent-street (entrance in Swallow-street).
Open from Ten till Nine daily. Persons of all ages received (privately) and taught at any time during their own convenience. Lessons one hour each. No classes. No extra. Improvement guaranteed in eight to twelve easy lessons. Separate rooms for Ladies.—Apply to Mr. Smart, as above.**BANK OF NEW ZEALAND**(Incorporated by Act of General Assembly, July 28, 1861).
Bankers to the New Zealand Government.

Paid-up Capital, £750,000. Reserve Fund, £250,000.

DIRECTORS.
J. Logan Campbell, Esq., President.

WILLIAM J. VIAN, Secretary.

HOUSE PROPERTY AND INVESTMENT COMPANY (Limited), 92, Cannon-street, London, E.C.(seven doors east of the Cannon-street Station).
Capital One Million, in 40,000 fully paid-up shares of £25 each. For the Purchase and Sale of Productive and Progressive House Property and Improving the Dwellings of the Working Classes on the self-supporting principle. Registered March 15, 1876.**DIRECTORS.**
Henry Arts, Esq., 6, Trinity-square, Tower-hill, and Castle-hill Lodge, Upper Norwood (Chairman London Corn Exchange).
William Macdonald Baden, Esq., 11, Great St. Helen's, and Lloyd's.
William Sutton Gover, Esq., 4, Queen-street-place, E.C., and Haverling House, Blackheath (Member of the London School Board).
Fountain John Hartley, Esq., Adde-street, E.C. (Hon. Secretary London School Union).
William Smith, Esq., Oak Lawn, Bessing-hill, Upper Norwood.
Robert Parker Taylor, Esq., Adelaide-place, London Bridge, (Director Lambeth Baths and Wash-House Company).
Edward East, Esq., Underhill, E.C., L.L.D., Hampstead (Hon. Sec. Baptist Mission Society).
Thomas White, Esq., Upper Thames-street, E.C.
BOLICRON.—Henry Gover, Esq., 40, King William-street, E.C.
SECRETARY.—Mr. W. H. Baden, 92, Cannon-street, E.C.**AUTHORITIES.**—John Thomas Bedford, Esq., 12, King-street, Snow-hill, and Mecklenburgh-square (Chairman West Ham Park Committee); James Clarke, Esq., 1, Cedar-road, Clapham, and 15, Fleet-street, E.C. (Editor and Proprietor of "The Christian World"); Charles Kemp Dyer, Esq., J.P., St. Albans, Herts, and Ldce.**BANKERS.**—London and Westminster Bank, Lothbury.
1. The first issue of 4000 fully paid-up Shares of £25 each has been allotted.
2. Applications are now being received for the second issue of 4000 Shares at £1 per share premium, 2500 of which have been already allotted.
3. Fifty-nine estates have been purchased, at a cost of £151,716, and other purchases are in course of negotiation.
4. After making a full allowance for all rates, repairs, loss of rent, and diminution of income, the income of the estates purchased is expected to amount to nearly 5 per cent, besides profit on re-sales.
5. Shareholders, in addition to 5 per cent interest, will participate in the periodical bonuses, which it is expected, will be declared by the Company from time to time.
6. Owners of eligible House Property, wishing to sell at a moderate price, should send particulars to the secretary.
7. As the estate purchased will give a good profit revenue, it will have to be considered at what premium the third issue will be offered to the public, so as to protect the interest of existing shareholders.
For full information apply to W. H. Baden, Secretary, of whom may be obtained approving notices of the press and an explanatory pamphlet, entitled "Another Five Minutes' Talk about the House Property and Investment Company (Limited)," prospectus, and share application forms.**LIEBIG COMPANY'S EXTRACT OF MEAT.**—Finest Meat-flavouring Stock for Soups, Made Dishes, and Sauces. Contains Genuine ONLY with facsimile of Baron Liebig's Signature across Label.

In consequence of Spurious Imitations of

LEA and PERRINS' SAUCE,

which are calculated to deceive the Public, Lea and Perrins have adopted a NEW LABEL, NEW LABEL, NEW LABEL, "LEA and PERRINS," which signature is placed on every bottle of WORCESTERSHIRE SAUCE, and without which none is genuine. Sold wholesale by the Proprietors, Worcester; Cross and Blackwell, London; and Export Olmen generally. Retail, by Dealers in Sauces throughout the World.

COCKS'S READING SAUCEIs the best and most economical Sauce ever manufactured FOR FISH, ENRICHING SOUPS, GRAVIES, &c.
It only requires a trial to convince the purchaser of its excellence.**CAUTION.**—The genuine is protected by Trade Mark—viz., CHARLES COCKS'S Signature on a white ground across the Reading Arms.**EPPS'S COCOA**

"By a thorough knowledge of the natural laws which govern the operations of digestion and nutrition, and by a careful application of the fine properties of well-selected cocoa, Mr. Epps has provided our breakfast-tables with a delicately flavoured beverage which may save us many heavy doctors' bills. It is by the judicious use of such articles of diet that a constitution may be gradually built up until strong enough to resist every tendency to disease. Hundreds of subtle maladies are floating around us ready to attack and destroy there is a weak point. We may escape many a fatal shaft by keeping ourselves well fortified with pure blood and a properly nourished frame." Civil Service Gazette.

FLORILINE.—For the Teeth and Breath.

Is the best Liquid Dentifrice in the world; it thoroughly cleanses partially-decayed teeth from all parasites or living "animalcules," leaving them pearly white, imparting a delightful fragrance to the breath. Price 2s. 6d. per Bottle. The Fragrant Floriline removes instantly all odours arising from a foul stomach or tobacco smoke, being perfectly composed of honey, soda, and extracts of sweet herbs and plants. It is perfectly harmless and delicious as sherry. Prepared by HENRY O. GALLUP, 488, Oxford-street, London. Retailers everywhere.

THE IMPENDING WAR.

The Proprietors of the ILLUSTRATED LONDON NEWS, for the purpose of promptly supplying its readers with News and Illustrations from both sides in the coming contest, have already dispatched Four Special Artists to the East.

ST. PETERSBURG AS IT IS.

In addition to the Article on Constantinople by Mr. George Augustus Sala given this week, our next Number will contain, from the same lively, chatty pen, an interesting account of St. Petersburg, which city Mr. Sala recently visited.

Office, 198, Strand, W.C.

THE ILLUSTRATED LONDON NEWS FOR FOREIGN PARTS.

Subscribers to the ILLUSTRATED LONDON NEWS who live abroad are particularly desired to order copies of the ordinary stout paper edition, as in those printed on thin paper for foreign postage the appearance of the Engravings is greatly injured on account of the print at the back showing through. The postage of the ILLUSTRATED LONDON NEWS printed on stout paper is double that of the thin paper edition for places abroad.

Office, 198, Strand, W.C.

THE WEATHER.

THE SOCIETY OF PAINTERS IN WATER COLOURS
THE EIGHTY-EIGHTH EXHIBITION WILL OPEN ON MONDAY NEXT, APRIL 23, at 5, Pall-mall East. ALFRED D. FRISSE, Secretary.

ST. JAMES'S HALL, PICCADILLY.

THE MOORE and BURGESS NEW

ENTERTAINMENT.
THE GREAT SUCCESS OF THE SEASON will be repeated EVERY NIGHT at EIGHT, MONDAY, WEDNESDAY, and SATURDAY, at THREE and EIGHT. Fautouls, 5s.; 2nd Stalls, 3s. and 2s.; Gallery, 1s. No fees. Doors open at 2.30 for Day Performances, and at 7.15 for the Evening ditto. Places may be secured, without extra charge, at Austin's Office, St. James's Hall, any day from Nine till Six.

ST. JAMES'S HALL.—Signal Success of the MOORE and BURGESS Easter Burlesque on THE MARVELLOUS GIRARDS, which will be repeated EVERY NIGHT at EIGHT, MONDAY, WEDNESDAY, and SATURDAY, at THREE and EIGHT.

"In a burlesque performance entitled 'The Marvellous Girards,' Messrs. T. Sully, James Moore, and Rene emulated the eccentric gymnastics of the well-known 'Girards' with absolute accuracy in the minutest particulars of action and expression, doing everything that the clever originals do, and as nearly as possible in the very same style and manner. A new 'Interlocutor' appeared for the first time in the person of a gentleman bearing the illustrious name of J. P. Kemble, who, being gifted with a fine voice and a keen sense of humour, is likely to prove an acquisition."

THE DRAWING-ROOM, EGYPTIAN HALL.—BE

MERRY AND WISE.—Mr. Jolly Nash's Pictures by the Way and Mr. F. Clifton's Living Photographs. Two hours of unlimited merriment with the merriest of merry men. THE LECTURE ON LAUGHTER, by Mr. Nash, Daily at Three and Eight prompt. The Silver Cornet-Pistons, with Burlesque of Levy. The Silver Ballad Horn, and the Philosophy of Laughter. Twenty Life Characters and the most Amusing Sketches, daily, at Three and Eight. Admission, 5s., 3s., 2s., and 1s. Ticket-Office open daily from 11 a.m. till Three. The Drawing-Room, Egyptian Hall, Piccadilly. The most successful Humorous Entertainment since the days of Albert Smith. Crowded morning and evening with fashionable audiences.

WAGNER FESTIVAL.—ROYAL ALBERT HALL,

MR. and Mrs. GERMAN REED'S ENTERTAINMENT.
TWO FOSTER BROTHERS, by Gilbert A. Beckett, FIVE O'CLOCK TEA, AND A NIGHT SURPRISE, EVERY EVENING, except Thursday and Saturday, at Eight, every Thursday and Saturday at Three. Admission, 1s., 2s.; Stalls, 3s. and 6s.—ST. GEORGE'S HALL, Langham-place, Oxford-circus.

THE ILLUSTRATED LONDON NEWS.

LONDON: SATURDAY, APRIL 21, 1877.

So certain does it seem to be that within a few days, more or less, War will be declared between Russia and Turkey that the leading Journals are beginning to discuss the probable effect it will have upon the International relations of the Signatory Powers. The work of diplomacy, as far as the preservation of peace is concerned, is generally regarded as at an end. Mr. Gathorne Hardy, it is true, in the course of the discussion on Eastern affairs raised last week by the Marquis of Hartington, said that diplomacy had not yet uttered its last word. But there does not seem to be any sufficient reason for believing that its last word will tell with greater power, whether upon Russia or upon the Porte, than its first. Their preparations for War constitute the staple of political information received from the East. The Russian Embassy at Constantinople and the Consular Agents for Russia in many of the inland towns of the Ottoman Empire are taking steps, under the orders of their Government, with a view to their departure. Russian subjects in Turkey are being placed under German protection. The vessels of the Russian Steam Navigation Company have been warned to quit Constantinople. On the other hand, the Turkish Government is more active in preparing for the defence of their country than ever. The Commander-in-Chief of the Army of the Danube has taken his departure for head-quarters. Nothing remains to prevent immediate hostilities but the state of the roads, which a few days' fine weather may render practicable. Europe, therefore, at the present moment stands upon the very brink of a War the extent and issues of which are incalculable.

We fear there is no reason to expect in the present instance a short and decisive campaign. The difficulties in the way of a rapid advance of Russia in Turkey proper are enormous. Doubtless they have been taken into account at the Russian War Office; but, under any circumstances, they will remain such as can be overcome only by time, by immense effort, and by large sacrifices. The Turkish army is not as it was in 1829. It is thoroughly equipped with all the implements of modern warfare. Its navy in the Black Sea, under the command of Hobart Pasha, is even superior to that of Russia. Both may be expected to put forth all the energy which the solemnity of the crisis demands. Nor is it certain that Russia will be in any haste to precipitate actual collision. Ruinous as will be the cost of the contest in any case, it is just possible that Russia will make the weight of her military power felt, in the first instance, by an immense accumulation of her soldiery on the northern side of the Danube. No doubt, this will give opportunity to the insurrectionary spirit that pervades several of the provinces of the Porte to show itself, and to distract the attention and impede the concentration of the Ottoman Forces. Such speculations as these, however, rest upon no sure foundation. The plans of the War Office at St. Petersburg are not very likely to have been disclosed to furnish information to the newspapers of Europe. It is not by any means unlikely, however, that, in case of the protraction of the war beyond a single campaign, the large superiority of Russian resources beyond those of the Porte would make themselves incontestably felt. The game is an unequal one for the Sultan and his advisers. They have staked their last counter, and the odds are that they are doomed to succumb.

What is England to do in reference to this unhappy conflict? It is perfectly understood that her Majesty's Government intend to maintain a strict neutrality. It may be that they will be able to give effect to this policy—a policy which unquestionably the country approves. But English interests are believed to be involved, to some extent; and it is impossible to foresee with any confident prescience what may be the eventualities which, in the course of the struggle, may determine the action of this country. We are not going to back the Porte against her foe, nor are we going to throw material obstructions in the way of the executive work which Russia has undertaken, ostensibly, on behalf of Europe. Much, of course, will depend upon the adhesion of Russia to the programme she professes to have adopted. The better government of the discontented provinces of Turkey, the reorganisation of Herzegovina, Bosnia, and Bulgaria upon the basis of an autonomous administration, and such an occupation of Bulgaria as might suffice to this end, can certainly be effected without disturbing English interests, or, at any rate, such as are worth consideration in the light of a crisis like this. There is some talk about the eventual probability of our seizing Constantinople and occupying it as Trustee for Europe, also of the propriety of taking possession, in certain contingencies, of the Island of Crete. These, however, are fancies which, amusing as they may be to journalism, may be safely reserved for discussion until the time comes when circumstances shall force them to the front. They lie within the limit of possibility, as, indeed, almost any conceivable enterprise may be thought

to do, on the eve of a war for the settlement of the Eastern Question. But the discussion of them just now can hardly be characterised as opportune. It may be fairly hoped that such violent intervention on our part will never be provoked, and that pauses in the war between the Czar and the Sultan may open out a prospect of successful mediation between the combatants.

Nor is there any present likelihood of armed interference between them by any other European State. Neither Germany nor France is disposed to take active part in the settlement of the Eastern Question, for the present, at all events. Prince Bismarck has gone to spend his four months' holiday in retirement, and the Duc Decazes labours most energetically in counteraction of whatever tendencies there may be towards European War. Austria is on the watch with keen anxiety to keep herself free from dangerous complications; and Italy, although disposed to cherish some ambitions, will do nothing to favour a general mêlée of the Powers. We do not entertain much apprehension of Russian designs. She is in no mood to facilitate the constitution of a great Slavonic Empire. The reins will be in her hands, and, as the Czar said with dignity the other day, "if he goes into Bulgaria he will know how to quit it." On the whole, the oft-predicted hurly-burly of nations in consequence of the opening of the Eastern Question does not seem likely to be realised, and the war between the Russian and Ottoman Empires will be confined, we trust, to themselves.

THE COURT.

The Queen received Admiral the Hon. Sir James Drummond at Osborne House yesterday week, on his return to England from commanding the Mediterranean fleet. Saturday last being the birthday of Princess Beatrice, her Majesty's ship Hector, guardship at Cowes, Captain Simpson, fired a Royal salute, and at Windsor the day was observed with due honours. In the evening, Mr. and Mrs. Alfred Wigan, assisted by the Hon. Alexander Yorke, gave some costume recitals from "The School for Scandal" and "The Rivals" before the Queen and the Royal family at Osborne House. Between the pieces Mr. J. Bontein sang some Scottish, French, and English airs. Mrs. and Miss Bontein, and Mr. Shelley Bontein received invitations, and the ladies and gentlemen in waiting and the Royal household were present. Her Majesty, Princess Beatrice, and Prince Leopold attended Divine service on Sunday, performed at Osborne by the Rev. George Connor, Vicar of Newport. The Queen has entertained at dinner the Hon. Mrs. Edward Villiers, the Right Hon. Sir Michael Hicks-Beach, the Rev. George Connor, Mr. Baillie Cochrane, and Commander Fullerton. The Dean of Westminster has been on a visit to her Majesty.

Her Majesty has consented that her name shall head the list of patrons of the Caxton celebration.

Colonel the Hon. Henry Byng has left Osborne, and Colonel Lynedoch Gardiner has arrived as Equerry in Waiting to her Majesty. The Hon. Alexander Yorke has left Osborne, and Mr. Collins has arrived in attendance on Prince Leopold.

The Prince of Wales arrived at Cannes on Monday. His Royal Highness, when in Paris, received visits from Marshal MacMahon and various persons of distinction; he also received several official personages connected with the approaching Paris Exhibition. Princesses Louise Victoria and Maud of Wales have arrived at Sandringham from Marlborough House.

The Duke and Duchess of Edinburgh arrived yesterday week in H.M.S. Sultan at Villa Franche, and proceeded thence to Nice.

Princess Christian has consented to become patroness of the annual ball in aid of the funds of University College Hospital, to be held at Willis's Rooms on Thursday, June 7.

Princess Louise of Lorne and the Marquis of Lorne visited the exhibition of pictures by artists of the Continental schools at the French Gallery, Pall-mall, on Saturday last.

The Duke of Connaught has been the guest of the Lord Lieutenant of Ireland and the Duchess of Marlborough at the Viceroyal Lodge, Dublin, during the Punchestown race week.

The Duke of Cambridge and the Duke of Teck were present at the annual dinner of the Institution of Civil Engineers, at Willis's Rooms, on Wednesday.

The Duke and Duchess of Teck visited the Covent-garden Show of Fruit, Plants, and Flowers, held on Wednesday at the Horticultural Gardens, South Kensington.

The Empress Eugénie has gone to Madrid. The Prince Imperial has returned to Camden Place, Chiselmhurst.

His Excellency Count Münster has returned to the German Embassy, Carlton House-terrace, from Berlin.

His Excellency the Marquis d'Harcourt has returned to the French Embassy, Albert-gate, from Paris.

The Duke of Westminster has arrived at Grosvenor House from Eaton Hall. The Duchess has gone to Cliveden.

The Duke of Buccleuch has arrived at Montagu House, Whitehall, from Scotland.

The Right Hon. the Speaker gave his sixth Parliamentary full-dress dinner on Wednesday, after which the Hon. Mrs. Brand had an evening party at the New Palace, Westminster.

FASHIONABLE MARRIAGES.

The marriage of Annette Fountayne Puleston, eldest daughter of Sir Richard Puleston, Bart., of Emral, to Philip, eldest son of Mr. Simon Yorke, of Erddig Park, Denbighshire, took place on Thursday week at St. George's, Hanover-square. The ceremony was performed by the Rev. Theophilus H. G. Puleston, uncle of the bride, assisted by the Ven. Archdeacon Cust, cousin of the bridegroom.

Miss Agnes Mary Cecilia Northcote (the eldest daughter of Sir Stafford and Lady Northcote) was married on Tuesday to Mr. Reginald M'Leod (of M'Leod), at Westminster Abbey. The Hon. and Rev. F. Polham, the Rev. Flood Jones, and the Dean of Westminster officiated. Sir Stafford Northcote gave away the bride. Mr. A. J. Balfour, M.P., acted as best man. The bridesmaids were Miss Margaret Northcote (sister of the bride), Lady Susan Fortescue, Miss Isham, Miss Helen Farrer, and the two Misses Heathcote. The bride wore a white satin dress trimmed with Honiton lace: upon her head-dress were diamonds and pearls, and she had also a necklace of pearls, diamond locket, pearl earrings, and carried a bunch of orange-blossoms. The bridesmaids wore white silk skirts, with cashmere tunics and princess robes, trimmed with gold braid and juniper berries, and had tulle caps also trimmed with juniper berries. The service was choral. The presents numbered between two

and three hundred. The Queen gave an Indian shawl. The marriage register was signed in the Jerusalem Chamber by Princess Louise, the Duke and Duchess of Teck, and Sir Stafford Northcote. The breakfast took place at the official residence of the First Lord of the Treasury. Mr. and Mrs. M'Leod subsequently left for Merevale Hall, Warwickshire.

The marriage of Mr. Walter Farquhar and Miss Bateson, which was fixed for the 24th inst., is postponed, owing to Lady Bateson's severe accident.

The marriage of Captain Frederic Loraine, R.A., son of the late Sir John Lambton Loraine, and Miss Barrett Lennard, daughter of Sir Thomas Barrett Lennard, Bart., will take place early in June at Bellbus, in Essex.

Marriages are arranged between Mr. Mordaunt Boyle, 60th Rifles, eldest son of Charles Boyle, Esq., and Miss Charlotte Boyle, youngest daughter of the late Lieutenant-Colonel the Hon. Robert Edward Boyle, Coldstream Guards; and between Mr. Grisewood, only son of the late Mr. Harman Grisewood, of Daylesford House, and Miss Concetta Mesina, youngest daughter of the late Count Mesina, of Naples.

METROPOLITAN NEWS.

A dinner was given on Wednesday evening by the Fishmongers' Company to about 140 guests. Mr. T. C. Watson, the Senior Warden, presided. Amongst the speakers were Lord Hatherley and the American Minister.

At the annual dinner of the Institution of Civil Engineers given on Wednesday evening in Willis's Rooms, the Duke of Cambridge, the Duke of Teck, the Earl of Carnarvon, Mr. Hardy, and Mr. Lowe spoke.

At a meeting of the Royal Botanic Society last Saturday Professor Bently called the attention of the Fellows to a plant of *Eucalyptus globulus*, now in flower at the gardens for the first time.

Last week 2654 births and 1714 deaths were registered in London, the former being 197 and the latter 133 above the average. There was a considerable decrease in the fatality of smallpox, the recorded cases being 60 as against 86 and 78 of the two preceding weeks.

The medals offered to artists by the directors of the Crystal Palace were awarded on Wednesday. The special gold medal for the best picture exhibited without regard to school, style, or subject, by a living artist, was given to E. Ducker, "Landscape with Cattle—Evening."

The anniversary dinner of the London Coffee-House and Eating-House Keepers' Benevolent Association was held on Wednesday evening at the City Terminus Hotel, under the presidency of Mr. Sheriff East. Subscriptions amounting to about £232 were announced.

At the sale of the Shandon collection on Tuesday an old clock in case of bleu-de-roi Sèvres was knocked down for 2000 guineas. The highest sum given on Wednesday was 245 guineas for an old French four-leaved screen, fitted with panels of Gobelins tapestry. The sale up to Wednesday evening realised £29,380.

The return of metropolitan pauperism for last week again shows an increase over the numbers of paupers in the corresponding week of last year. The total number at the end of last week was 83,351. The number of vagrants relieved on the last day of the week was 701, of whom 480 were men, 181 women, and 40 children under sixteen.

A special meeting of the Charity Organisation Society was held on Tuesday, at which a paper dealing with the subject of Metropolitan Medical Relief was read by Sir Charles Trevelyan, and a resolution was adopted advocating the conversion of free dispensaries into provident dispensaries, and the establishment of new institutions of the last-mentioned description in proportion to the wants of the population.

The sixty-fourth anniversary festival of the London Orphan Asylum was celebrated yesterday week at the Albion Tavern—under the presidency of Mr. Philip Twells, M.P. About one hundred gentlemen sat down to dinner, and subscriptions amounting to £3800 were announced.—A dinner was given the same evening at Willis's Rooms, St. James's, in aid of the funds of the Great Northern Hospital. The Duke of St. Albans presided, and about one hundred ladies and gentlemen were present. The subscriptions were close on £800.

A new board school in Leipsic-road, Camberwell, having accommodation for 747 children, was opened on Tuesday evening, under the presidency of the Rev. J. Rogers. The Rev. G. M. Murphy, Sir John Bennett, the Hon. L. Stanley, the Rev. Mr. Tugwell, and others spoke.—A school at Bellenden-road, Peckham, has also been opened. It was begun a year ago in a spot where there were then fields on either side, but the opening of the schools found the fields covered with inhabited houses. This school gives accommodation for upwards of 800 children.

Although the biting north-east wind may have prevented some few of the usual visitors to the Gardens of the Royal Botanic Society enjoying the beauties of the exhibition of spring flowers on Wednesday, a very large company filled the conservatory. The weather, however, had no effect on the exhibition itself, a much larger number of plants being entered for prizes than is usual at this time of the year.—On the same day a show of choice flowers and fruits was held at the Gardens of the Royal Horticultural Society. It was entirely of a professional character, none but growers and middlemen being allowed to compete.

A public meeting in favour of the cause of the Tichborne Claimant, attended by several thousand persons, was held on Tuesday evening upon the north bank of the Serpentine. Amongst the speakers were Mr. John de Morgan, Mr. Skipworth, Mr. Kiley, of Macclesfield, and Mr. Hutchinson, of Manchester. A resolution, declaring the condemnation of the Claimant to have been an infraction of the law was passed. A second meeting was held in Trafalgar-square, from which a deputation, consisting of ten persons, was dispatched to the House of Commons. They had an interview in the tea-room with Mr. Whalley. Mr. De Morgan has not reached the bar of the House of Commons, but he has been allowed to state his case at considerable length to Mr. Cross. On Wednesday the Home Secretary received at the Home Office a deputation of the Claimant's sympathisers who had taken part in the demonstration on the previous night. The objects of the deputation were, at Mr. Cross's suggestion, submitted in writing, and were in effect, requests for facilities for an examination of the Treasury accounts in regard to the expenses of the Tichborne trial, and for the Home Secretary's support of the petition for the release of the prisoner to be presented by Mr. De Morgan at the bar of the House of Commons. In his reply, Mr. Cross explained at some length that the accounts in question had all been exhaustively audited in due course; and, in regard to the proposed presentation of the petition by Mr. De Morgan, that it was a matter for the House to deal with, and that he himself should certainly oppose such a proceeding.

ILLUSTRATIONS OF GREECE.

Our Special Artist's sketches of the scenery about the Isthmus of Corinth, which he described so well in the letter we published last week, narrating "A Pilgrimage to Mycenæ," have gained additional interest from the visit of the Princess of Wales to her brother, the King of Greece. It was mentioned that King George met her Royal Highness at the landing-place on the western shore, and accompanied her across the Isthmus to embark in his Majesty's steam-yacht for the port of Athens. The subjects of our present illustrations are the Acro-Corinthus, or great rock of the ancient citadel at Corinth, which commands an amazing view of the Greek coasts, bays, and islands, extending from Boeotia and Attica all round to the Spartan and Argolic valleys in the Peloponnese; the classic heights of Parnassus and Helicon, which are proverbially associated with the genius of poetry; a party of native labourers digging among the tombs of the deceased Greeks for such relics of antiquity as now find a ready sale to museums or private collections; and, lastly, the interior of an ordinary Greek rustic household in the village near the ruins of Mycenæ. For our Artist's commentary upon these subjects the reader must again peruse Mr. Simpson's interesting letter of last week.

We would, moreover, take this opportunity of commending to the reader, for ampler descriptions of the present aspects and the actual condition of Greece, two small books very lately published, the one by Professor J. P. Mahaffy, of Dublin University, "Rambles and Studies in Greece" (Macmillan and Co., publishers); the other, called "Five Weeks in Greece," by Mr. James Foster Young, of Brasenose College, Oxford (Sampson Low and Co.). Both these volumes will be found quite worthy of attention, especially at a time when intelligent curiosity about the remains of Greek art, and the memorials of Greek history, is revived by Dr. Schliemann's enterprising researches in that famous land.

It will be remembered that among the Illustrations contributed by Mr. Simpson to our last Number was one of some ruins near Argos, which he calls "the remains of an ancient pyramid," and that he gives his reasons for coming to such a conclusion. A respected correspondent, who signs himself "An Old Student-Traveller in Greece, T. L. D.," thinks, however, that they are the remains of an old Greek detached outpost, fort, or watch-tower. He proceeds as follows:—"One sees the reason your correspondent has for calling it a pyramid, from inclination of the walling of the erection, an almost solitary instance throughout Greece, that I know of. Having gone through the country he describes some fifty-five years ago, I was particularly struck by the peculiarity of this monument, and made a sketch of it. A pyramid proper, as in Egypt, and that of Calus Sestius at Rome, rises from its square base unbroken up to its apex. Each face is carried right through without a break, and the entrance, generally concealed and not obvious, is in the centre of one of the faces. In this instance the entrance is recessed at the side, where there is a passage set back from the front, and producing a break, as shown upon the plan, and thus rendering the entrance more difficult to the assailants. This is an arrangement adopted in the smaller entrances to the fortified cities of the Greeks in the Peloponnese, as now existing in the town of Megalopolis, a few miles distant from Argos."

RESCUE OF ENTOMBED COLLIERIES.

A dreadful accident happened on Wednesday week at Troedyrriw Colliery, situated in the Greater Rhonda Valley, and at the entrance into the Ferndale Valley, the scene of a terrible explosion some years ago. As the miners were leaving work, a sound of rushing water was heard. Most of them made their escape, but it was soon discovered that fourteen men and boys were missing. There were plenty of brave volunteers, and many descended the shaft, which is ninety-two yards deep. They quickly discovered that all the workings of the bottom of the shaft were filled with water to the roof, and no hope was entertained that any one would be found alive. While the explorers were consulting what should be done, faint knockings were heard on the other side of the coal, at a distance, it was conjectured, of a dozen yards. After long and laborious exertions, the rock was bored; but no sooner was a pick struck through than the air rushed out with terrific force, hurling one of the imprisoned men violently against the face of the coal, and causing such injuries that he died. The other four were delivered into the hands of their friends on the pit-bank amidst the wildest demonstrations of delight, though bitter disappointment was experienced when it was found that there were still nine men in the pit. Early on Sunday two divers from Lambeth penetrated 500 ft. into the drift, but were unable to go further. They were then within 270 ft. of the men. The courage displayed by the two divers, Frank Davies and Thomas Purvis, has created quite a sensation. After reaching the bottom of the drift, they travelled some distance along the level until they were stopped by floating timber and other materials that had been carried by the rushing torrent. Pumping went on incessantly, both in Troedyrriw Pit and in Haines Pit, from the old workings of which the water came. At half-past three in the afternoon the knockings of the imprisoned men were again distinctly heard. The exploring parties were persuaded that they heard the clink of the tools of the imprisoned men busily at work, and their exertions were strenuously renewed. A signal was made on Tuesday by striking on the coal with a heavy hammer, and was distinctly answered by some of the captives. After knock signals had been exchanged between the rescue party and the imprisoned men on Wednesday evening, the former gave a hearty shout of congratulation, and the poor fellows on the other side shouted in answer. Presently the voice of George Jenkins was heard to say, "The hole is nearly through; cut a little to the right." This was done, although at the time of going to press with our early edition we had received no telegram announcing the actual release of the men, they were virtually free on Thursday morning. Tubes had been inserted in the wall of coal, and light soup conveyed to them. The parties talked to one another. Five men are alive. They state that they lived on candles and the water in the pit. It is feared that four men in other parts of the working are lost.

Messrs. Bacon have issued a new Ethnographical Map of Europe, showing clearly the distribution of races, of special interest at the present time.

The revisers of the authorised version of the New Testament met on Tuesday in the Jerusalem Chamber for their sixtieth session, and carried on their revision to the middle of the eighteenth chapter of the book of Revelation.

The Archbishop of Canterbury has arrived at Lambeth Palace for the season.—His Grace has invited the London clergy to a Conference at Lambeth Palace on Monday next, the 23rd inst., to consider the question of the reform of charitable relief in the metropolis.—The Archbishop laid the foundation, last Saturday, of a new church at Pasley, adjacent to the Caterham Junction Railway Station.

TOMB-HUNTERS, ISTHMUS OF CORINTH.

INTERIOR AT MYCENÆ.

VISIT OF THE PRINCESS OF WALES TO GREECE.

THE ACRO-CORINTHUS, CORINTH.
FROM A SKETCH BY OUR SPECIAL ARTIST.

PARNASSUS AND HELICON, WITH THE GULF OF CORINTH.

FOREIGN AND COLONIAL NEWS.

FRANCE.

Khalil Pasha, the new Turkish Ambassador, had a formal audience of Marshal MacMahon on Wednesday to present his credentials. There were no speeches, but Khalil Pasha took occasion to remind the Marshal that he had the honour of first making his acquaintance in the Crimea.

The French Academy has concluded a work at which it has been labouring for several academic generations. It has completed the new edition of its Dictionary with the word "Zigzag," signifying a man whose facial muscles are so organised as to produce a permanent grin.

The Duc d'Audiffret Pasquier has announced himself a candidate for the vacant chair in the Academy.

M. Thiers reached his eightieth year last Sunday.

Molière's "Amphytrion" has been revived at the Théâtre Français with great success.

SPAIN.

The King, accompanied by the Princess of the Asturias and the Austrian Archduke Regnier, left Madrid on Thursday to spend three days at Toledo and Aranjuez.

ITALY.

It is officially announced that the Treaty of Commerce concluded between Italy and England on Aug. 6, 1863, which was to have expired on April 30, 1877, has been prolonged until Dec. 31, 1877.

The Pope gave audience to a number of foreign pilgrims in the Hall of the Consistory on the 13th inst. His Holiness was able to walk with ease through the double line formed by the pilgrims in his passage, as they knelt to receive the Papal benediction.

HOLLAND.

The International Horticultural Exhibition and Congress were opened on the 12th inst., at the Palais d'Industrie, in the presence of the King and Queen, the Royal family, the civic authorities, and other distinguished personages.

GERMANY.

The proposed marriage between Prince Bernhard of Saxe-Meiningen and Prince Charlotte of Prussia, a granddaughter of Queen Victoria, is to be solemnised next year. The Prince and Princess will, after their marriage, reside at Potsdam, in the mansion recently occupied by the late Princess of Liegnitz. The Prince will, it is announced, be promoted to the command of a battalion of the first regiment of Prussian Foot Guards.

The Hereditary Grand Duke of Mecklenburg-Strelitz will marry the Princess of Anhalt-Dessau on the 17th inst. Several members of the German Imperial family will attend the ceremony at Dessau. Being the grandson of the Duchess of Cambridge, her Majesty Queen Victoria has conferred upon the bridegroom the Grand Cross of the Bath on the occasion of his marriage. He will wear it the first time on his wedding-day.

A Berlin telegram of Tuesday's date explains that the order recently issued to the German recruits residing abroad to join their respective regiments is only the usual annual summons issued to them to attend the military exercises, and has no reference to the present state of political affairs.

AMERICA.

The Russian Grand Dukes Constantine and Alexis have paid a visit to President Hayes, and a diplomatic dinner in their honour has been given.

A caucus of members of Mr. Packard's Senate and House of Representatives was held at New Orleans on Wednesday, at which eighty-three members were present. The proposal of the Democratic Legislature to constitute a single House was unanimously rejected, and it was resolved to stand by Mr. Packard to the last.

The South Carolina Republican officials having declined to comply with Governor Wade Hampton's request that they should turn over their offices to their successors, the Governor has directed that their offices shall be closed pending the decision of the Supreme Court.

Only twelve persons are known to have lost their lives in the fire at the Southern Hotel, St. Louis.

On Monday 1000 lately hostile Indians surrendered, with their arms and horses, to General Crook.

Mr. John A. Kasson, ex-member of Congress for Iowa, has been appointed United States Minister for Spain.

CANADA.

The Dominion House of Commons discussed on the 12th inst. a proposed prohibitory liquor law. An amendment declaring that it was inexpedient to pass such a law at present was carried by 103 votes to 59. In the sitting on the 13th, after a long and acrimonious debate, an amendment proposing that the partial amnesty granted to Keil and Lepine for their connection with the Red River disturbances should be extended to O'Donoghue was defeated by 105 votes to 60. A bill was introduced by Mr. Blake, the Minister of Justice on the 14th, removing all difficulties arising from irregularities in the use of the Nova Scotian Great Seal.

JAPAN.

A despatch from Japan of Tuesday's date, received at the Japanese Embassy, announces the defeat of the insurgents and their flight in the direction of Hionga. The Japanese headquarters have been transferred to Kumamoto. The insurrection was regarded as nearly at an end.

THE CAPE COLONIES.

The Transvaal Legislature has, under pressure from Sir T. Shepstone, adopted the scheme of reform proposed by President Burgers, and has passed a law making it high treason to memorialise a foreign Government to take over the country.

The Freshwater Canal, connecting Cairo with the Suez Canal at Lake Timsah, was formally opened on Sunday. It will not be opened for navigation, however, until Aug. 15.

We have received congratulatory odes, composed in pure Persian, by H. H. Fakhroddoulah, Nawab and Ruler of Loharoo, in honour of the assumption by Queen Victoria of the title of Kaiser-i-Hind; and an address in Persian poetry by his Highness to the Viceroy. Both copies are lithographed in gold. Loharoo is a feudal dependency, subject to the Lieutenant-Governor of the North-West Provinces.

A handsome stained-glass window, the gift to the Corporation of London of Mr. Alderman Cotton, M.P., the late Lord Mayor, was inserted in the Guildhall on Tuesday. It consists of four divisions, the upper two of which depict the presentation of an address to the Prince of Wales by the Lord Mayor and Sheriffs last year congratulating him on his safe return from his Indian tour; and the lower two illustrating the presentation of the loving cup by the Lord Mayor to the Princess of Wales in the course of the banquet given in the Guildhall on that occasion. The openings are surmounted with canopies consisting of emblematical designs in ornamental ribbon-work. The window, which was designed and executed by Mr. William Ramsey, replaces one presented in 1873 by the same Alderman, the subject of which was Cotton, from its sowing to its weaving. This will be given to the Kew Gardens.

The Extra Supplement.

MAP OF THE OTTOMAN EMPIRE.

The Empire of the Ottoman or Osmanli Turkish nation, ruled over by Sultan Abdul Hamid II., extends over 1,812,000 square miles in Europe, Asia, and Africa, and has a reputed total population of nearly thirty million souls. It reaches from the coast of the Adriatic Sea to that of the Persian Gulf, and its shores are washed also by the Mediterranean, the Aegean, the Sea of Marmora, the Black Sea, and the Red Sea. It comprises, in Europe, the territories of Roumelia (anciently Thrace), including Constantinople and Adrianople, the former of which was the seat of the Eastern Roman Empire; Bulgaria, on both sides of the Balkan range of mountains, extending to the left bank of the Danube; the countries known of yore as Thessaly and Macedonia, on the shores of the Aegean and Gulf of Salonica; the provinces of Albania and Epirus, on the shores of the Adriatic; and those of Bosnia, with Herzegovina, in the north-west corner, bordering on the Austrian dominions. Many also of the Greek islands, Crete or Candia, Cyprus, Rhodes, and others along the coast of Asia Minor, are still retained by the Turkish conqueror. The Danubian principalities of Moldavia and Wallachia have been formed into the State of Roumania, which is practically independent; and that of Servia enjoys a similar degree of freedom. In Asia, the Sultan's empire covers the whole great peninsula of Asia Minor, of which the part confronting Europe is called Anatolia or the Levant; also the province of Armenia, towards the Russian frontier, south and east of the Black Sea; the wild region of Kurdistan, around the highland sources of the Tigris; the alluvial plains of Mesopotamia, to the outlet of the Euphrates; the different parts of Syria, including Palestine; and the Arabian peninsula, stretching far down to the Indian Ocean. The eastern frontiers of Turkey adjoin the Persian empire. On the north coast of Africa, the principalities of Tripoli and Tunis may still be regarded as subject to Turkey; but Egypt, under its hereditary Khedive, has a political position almost of independence, without the power of declaring war apart from the Sultan.

The population of the Turkish Empire is composed of less than thirteen million Turks, of whom only about two are in the European province of Roumelia; four million Slavonic subjects, four or five million Bulgarians, two million Greeks, a million and a half of Albanians, two million Armenians, about one million of Arabs, and smaller numbers of Jews, native Syrians, Druses, Turkomans, Kurds, Tartars, and Gipsies. In Europe, it must be remarked, there is a large portion of the non-Turkish inhabitants, especially in Bosnia, Herzegovina, and Albania, professing the Mohammedan religion. The proportion of Mussulman to Christian people in European Turkey is perhaps nearly one third, certainly more than one fourth; and it is the same in the island of Crete. In Asiatic Turkey, on the other hand, the Christians, who are mostly Armenians and Greeks, form less than a quarter of the whole population. The Mussulmans here are all of the "Sunnite" party, recognising the Sultan as successor to the Caliphs, and their supreme head; whereas those of Persia and India belong to the "Shiite" sect, owning him no religious allegiance. The Koran of Mohammed is esteemed not only the book of revelation, but the code of law and charter of civil rights, for Turks and other believers in the Prophet. Its interpretation or exposition is intrusted to the Mollahs, or religious teachers, and the Muftis, or doctors of the law, both together constituting the clergy, or Ulema, under their presiding head, the Sheikh-ul-Islam. They enjoy valuable privileges and immunities, being exempt from paying taxes, and from other burdens. The Greek, Armenian, and other Christians, are allowed the free exercise of their religion, but their chief bishops and patriarchs must be appointed by the Sultan. They are forbidden to carry arms, and, of course, are excluded from military service.

The Sultan now reigning is the thirty-fifth in male descent of the House of Othman, the founder of the Empire in Asia, and the twenty-eighth since Mohammed II., who conquered Constantinople and most of European Turkey in 1453. The crown is inherited, according to seniority, by the male descendants of Othman born in the Imperial Harem, whether children of free women or of slaves. The Sultan is succeeded by his eldest son only in case there are no brothers or cousins of the Sultan older than his son; the Sultan's daughters cannot transmit the Royal title to their children. The Government is managed by departmental Ministers, under the Grand Vizier, who is President of the Divan or Council of State. The whole of the Empire is divided into administrative regions, called Vilayets, with an officer styled the Vali, usually a Pasha, to govern each of these; but the Vilayet is further subdivided into Sandjaks, and there are smaller districts termed Kazas, ruled by the Beys or Agas. There is no aristocracy of birth in Turkey, but courtiers and official jobbers have so much power that even for Mussulman people of the middle and lower classes law and justice are hard to obtain. What is the oppressed condition of the Sultan's Christian subjects we have lately heard and seen; and it seems almost hopeless to expect their deliverance from intolerable cruelty by any other means than a foreign military power.

We present also in the ordinary Supplement to this week's Number of our Journal, a few Illustrations of the habits, manners, and dress of various classes of the people in the city of Constantinople. That renowned Eastern city is described with vivid force by Mr. G. A. Sala in the article which fills three pages of our Supplement. The accompanying sketches are principally furnished by our Special Artist there, Mr. Melton Prior, who has again returned to the Turkish capital, and will, aided by several other Special Artists, continue to supply our Illustrations of the impending war. The large Engraving which occupies the two middle pages of this Number represents Sultan Abdul Hamid II. setting forth on horseback from his Imperial Palace to proceed to the Mosque for religious worship, attended by the courtiers and servants in his train. "Reading War Placards in Stamboul" is quite a scene of the present crisis. Another sketch is that of Turks, Greeks, and Armenians sitting in a café, and eagerly discussing the chances of war or peace. The trivial incidents of hiring a caique or passenger-boat, at the wharf in the quarter of Cassim Pasha, adjacent to Pera, on the north shore of the Golden Horn, and that of riding in a tramway car, as in Paris or London, do not require any comment. For the variety of single figures and groups of the town population, represented on another page, we are indebted to a series of photographs by Abdullah Brothers, and others by Basile Kargopoulo, both of Constantinople.

Messrs. Meux and Co., the brewers, who have been engaged for some time in sinking a well at their brewery in Tottenham-court-road, on Saturday last struck the greensand at a depth of 1001 feet and obtained water. Sinking three feet more, an ample supply was obtained for their own purposes; and the engineers believe there is in the greensand an ample supply for the whole of the wants of London.

TURKEY AND RUSSIA.

At the hour of writing this notice, on Thursday evening, it seems probable that the Governments of the Czar and the Sultan will be at open war, though perhaps without a formal declaration of war, by the end of the week. The Emperor Alexander, on arriving at Kischeneff, in Bessarabia, the headquarters of Russian military operations towards the Danube, would issue a proclamation to his Army. He would not, it was expected, travel from St. Petersburg to that place by way of Moscow, but would very speedily return from the Southern frontier to Moscow, and would there issue his declaration of war. It was said that the Emperor would be accompanied by General Ignatieff. He has signed, at St. Petersburg, an ukase to decree the mobilisation of the whole Russian army, but this has not been published by the Russian newspapers. Prince Charles of Hohenzollern, the ruling Prince of Roumania, is to send his Minister of Foreign Affairs to meet the Czar at Kischeneff, and will proceed to Kalafat, on the Danube, opposite the Turkish fortress of Widdin. The Roumanian troops are collected there, to prevent the Turks crossing the river into Wallachia, as they would perhaps attempt to do whenever the Russians cross the Pruth from Bessarabia into Moldavia.

The negotiations for peace between Turkey and Montenegro having been completely broken off, the Montenegrin delegates have left Constantinople, and the Grand Vizier has written to Prince Nicholas, notifying the expiration of the armistice, and informing him that it will not be renewed or prolonged. The Turkish commander in Herzegovina has already contrived to give fresh supplies to the beleaguered garrison of Niksich. But in the frontier district of Albania south of Montenegro, the Miridites, a Roman Catholic population, have risen against Turkish rule, and several conflicts have taken place.

The Russian Chargé d'Affaires at Constantinople, M. Nelidoff, has been recalled, and the protection of Russian subjects in Turkey is intrusted to the German Legation. Mr. A. H. Layard, the newly appointed British Ambassador, was to arrive in Constantinople yesterday. The Turkish Government has continued its preparations for war by land and by sea. There are rumours of a quarrel between Turkey and Persia, and of the intended alliance of Persia with the Russian invasion of Turkey. Captain Burnaby, author of the "Ride to Khiva," has returned to England this week from a tour on the frontier of the Turkish Empire in Asia Minor. From what he says, it is not unlikely that the Russians will soon attack the port of Batoum, the fortress of Kars, Trebizond, and Erzerum, which the Turks are scarcely in a position to defend. It is feared that the savage Kurds, inspired by Mussulman fanaticism, will slaughter the Armenians and other Christians of those remote Eastern provinces.

MUSIC.

ROYAL ITALIAN OPERA.

The return of Mdlle. Marimon—announced for Thursday week, as Norina in "Don Pasquale"—was postponed in consequence of her indisposition, and Mdlle. Smeroschi appeared instead. This lady sang and acted with much spirit and vivacity, and proved a very serviceable substitute in the emergency of the occasion. M. Capoul, as Ernesto, appeared to more advantage than in his previous performance as Fra Diavolo, having been applauded in several instances and encored in the serenade, "Com'è gentil." The cast in other respects was as in former seasons, having comprised Signor Ciampi as Don Pasquale, and Signor Cotogni as Doctor Malatesta. Signor Bevilacqua conducted.

On Saturday Signor Gayarré made his third appearance here, the opera having been "Les Huguenots," with the character of Raoul di Nangis sustained by that gentleman for the first time in England. The success already gained by Signor Gayarré in his two performances as Fernando, in "La Favorita," was quite equalled on Saturday, when he sang with great effect, particularly in the duet-septet and in the great duet with Valentina at the close of the third act. Signor Gayarré was well received and much applauded throughout the opera. The cast was otherwise as on previous occasions—including Mdlle. d'Angeri as Valentina, Mdlle. Bianchi as Margherita di Valois, Madame Scalchi as the Page, and Signori Bagaglio, Cotogni, Capponi, and Sabater, respectively, as Marcello, Di Nevers, San Bris, and the Huguenot Soldier. Signor Vianesi conducted.

The four performances of this week opened, on Monday, with "La Favorita," which was given with a new Leonora in the person of Madame Ricca, who made her first appearance on the stage in England. Her best effects were produced in the duet with Alfonso in the second act (the latter part of which was encored), and in Leonora's aria "O mio Fernando." Of the merits and capabilities of the debutante, however, we must await further opportunity for judgment. The cast otherwise was the same as that of last week.

On Tuesday, Mdlle. Bianchi essayed a character which was new to her—that of Rosina in "Il Barbiere di Siviglia;" a somewhat ambitious effort, considering how this part has been associated with some of the greatest singers of the past and the present. Mdlle. Bianchi sang and acted with much grace and vivacity, and was particularly successful in the opening cavatina, "Una voce;" in Rosina's share of the duet with Figaro, "Dunque io son," and in the introduced aria in the lesson-scene; a "Tarantella," by Ardit, which was encored and replied to by singing "The Last Rose of Summer." M. Capoul, as Almaviva, sang with much artistic taste, especially in the Count's air, "Ecco ridente." The cast included, as on former occasions, Signor Cotogni as Figaro, Signor Ciampi as Bartolo, and Signor Sclara as Basilio. Signor Vianesi conducted on both the occasions just referred to.

The first appearance of Mdlle. Marimon this season—postponed from last week on account of indisposition—was announced for Thursday last, as Margherita di Valois in "Les Huguenots." This (Saturday) evening "Guglielmo Tell" is to be repeated. "Faust" is to be given next Monday, with the reappearance of M. Maurel as Méphistofele; and on Saturday next Mdlle. Albani is to make her first appearance this season as Elvira in "I Puritani."

Last Saturday's Crystal Palace Concert introduced Verdi's string quartet, one of the most recent of this composer's productions. It was given by all the stringed instruments of the orchestra, and its excellent performance afforded good proof of the skill of the executants. The work consists of four movements—an "Allegro," an "Andantino," a "Prestissimo," and a "Scherzo fuga," in each of which there is something to admire, particularly in the first and second portions. We shall doubtless, however, have further opportunity of judging of its merits in a hearing of it by single instruments, according to its original intention. At the concert referred to Herr Pauer gave a spirited rendering of Hummel's pianoforte concerto in A flat, besides playing two unaccompanied solos. The overtures were Spohr's to "Jessonda," and Beethoven's second to "Leonora." Madame Lemmens-Sherrington and Mr. Bywater were the vocalists, the gentleman a first appearance. At this

week's Saturday concert the selection will be entirely from the works of Rubinstein, who will conduct all the pieces except his pianoforte concerto (No. 2), in which he will be the pianist.

The first New Philharmonic Concert of the twenty-sixth season—which took place at St. James's Hall on Saturday afternoon—included the first performance here of Joachim Raff's "Ode au Printemps," for piano and orchestra—a dry, laboured, and uninteresting production, unworthy of the composer. Mrs. Beesley played the pianoforte part admirably, her skilful execution having afterwards been far more worthily employed in Schumann's fine concerto in A minor. Beethoven's Pastoral Symphony, the prelude to Wagner's opera, "Die Meistersinger von Nürnberg," and his "Huldigungsmarsch" were the other instrumental pieces. Mlle. Chiomi—who recently made her first appearance in England at the Royal Albert Hall—created a marked impression by the display of a fine soprano voice and cultivated style in Liszt's setting of Dumas's "Jeanne d'Arc au bûcher" and the "Jewel Song" from "Faust." Dr. Wyld and Mr. Ganz divided the duties of conductor.

A specialty at the fourth concert of the Philharmonic Society, on Monday evening, was Brahms's new symphony in C minor, which was first performed in England by the Cambridge University Musical Society when Herr Joachim took his degree as Doctor of Music, on March 8. The work was given at the Crystal Palace concert of March 31, on which occasion we spoke of its merits and characteristics. We need now, therefore, merely record its repetition and its favourable reception on Monday. A great feature at the Philharmonic concert referred to was the splendid violin playing of M. Paul Viardot, a very young artist, whose performances have recently attracted much notice in Paris, where his studies have been pursued. M. Viardot is a son of Madame Viardot-Garcia, the eminent singer. In every high quality of a violinist—tone, mechanism, and style—this gentleman's performance of Mendelssohn's concerto was of an exceptional kind, and his admirable rendering of this great work produced a genuine sensation. Beethoven's third "Leonora" overture, and that by Spohr to "Der Alchymist," with vocal pieces contributed by Mlle. Thekla Friedländer and Mr. Shakespeare, completed the programme. Mr. Cousins conducted.

The Musical Union—directed by Mr. John Ella—began its thirty-third season on Tuesday afternoon, at St. James's Hall. The programme included Schumann's string quartet in A minor, and that by Mendelssohn in E flat, op. 12; and Raff's pianoforte quintet in A minor, with Signor Bretnier as pianist. Signor Papini was the leading violinist, M. Holländer second violin, M. van Wafaelghem sustained the viola part, and M. Lasserre that of the violoncello.

A series of four promenade concerts is to begin this (Saturday) evening at the Royal Aquarium, under the direction of M. Riviere.

Sir Michael Costa's favourite oratorio, "Eli," will be performed by the Sacred Harmonic Society next Friday, when Mr. Santley will make his reappearance as an oratorio singer; Madame Lemmens-Sherrington, Madame Patey, Mr. Vernon Rigby, and Mr. Lewis Thomas being the other principal vocalists. The oratorio will, of course, be conducted by its composer.

The seventeenth series of Mr. Charles Hallé's Pianoforte Recitals is to be inaugurated on May 4, and to be continued in the seven following weeks.

The 139th anniversary of the Royal Society of Musicians took place on Wednesday evening at the Freemasons' Tavern. Lord Skelmersdale presided. The total amount of subscriptions was over £1400, including a donation of £100 from the Earl of Dudley and £50 from the chairman. A great feature of the evening's proceedings was, naturally, the musical performances, in which the following vocalists took part:—Miss Robertson, Miss Samuel (Parepa-Rosa Scholar), Miss Orridge (prize gold medallist), and Mr. W. H. Cummings. Mrs. Beesley presided at the pianoforte, Mr. J. T. Carrodus at the violin, and M. Oluf Svendsen at the flute.

THEATRES.

Of all our modern actors Mr. Hermann Vezin has been the most progressive. With a limited physique, but an expanding intelligence, Mr. Vezin has patiently worked his way on the stage and manfully bided his time, until he could demonstrate that he possessed extraordinary powers, which only needed opportunity to secure admiration. Such an opportunity was afforded him on Saturday at the St. James's Theatre, when he was permitted to appear as Sir Giles Overreach in Massinger's masterpiece, "A New Way to Pay Old Debts." This effective play has commanded the services of our greatest actors in more than one part. Mr. Vezin approached the character cautiously, reserving himself in the earlier scenes, though indicating the intellectual lines which he meant to travel, and begetting an increasing interest in the indicated result. A definite conception was apparent, to which the greater emphasis was given in each succeeding scene. At length it culminated in an effort of transcendent power, which compelled the house to recognise the triumph of the artist, as well in the actor as in the poet. The accessory parts were signally well sustained. Mr. Clifford Cooper as Justice Greedy, Mr. Flockton as Macall, and Miss Kate Pattison as Margaret, left nothing to be desired.

An afternoon performance at the Gaiety of the late Morris Barnett's "Serious Family" was well attended on Saturday. Mr. J. H. Barnes as Charles Torrens, and Mr. Maclean as Captain Murphy Maguire, were successful. Mr. Toole as Aminadab Sleek was exceedingly droll. The ladies, too, shone demurely in the puritanical rôles of Lady Sowerby Creamy (Mrs. Leigh), Mrs. Torrens (Miss Hazelton), and Emma (Miss Abington). Miss Marie Litton was charmingly lively as Mrs. Ormsby Delmaine. We are promised at this theatre a repetition of "Mammon" on Wednesday afternoon.

The "Irrational" Amateur Dramatic Club give their last performance this season next Saturday afternoon, the 28th inst., at the Opera Comique, in aid of the Ladies' Work Society. The performance will be under the patronage of Princess Louise (Marchioness of Lorne), who will be present.

Two subjects of urgent importance to London and the Home Counties are discussed with much ability by Lieutenant Francis Ingram Palmer, R.N., who is now a civil engineer, in a publication under one cover, which Mr. E. Stanford has just issued. These "two pressing questions of the day" have been studied by him, as we should think, to very good purpose. They are, first, the best means of preventing floods in the Thames valley; and, secondly, the best form of a proposed bridge, not to interfere with the navigation, crossing the river at Little Tower-hill and Horselydown-stairs. This double pamphlet, illustrated with plans, diagrams, and pictorial woodcuts, is a valuable contribution to those useful projects.

ROYAL INSTITUTION LECTURES.

SPECTRUM ANALYSIS.

Dr. J. H. Gladstone, F.R.S., President of the Chemical Society, on Tuesday week began a course of five lectures on the Chemistry of the Heavenly Bodies with an historical sketch, illustrated by a series of interesting experiments. After stating that, although astronomy is about the oldest of the sciences, we had no correct idea of the chemical composition of the heavenly bodies till within the last twenty years, Dr. Gladstone proceeded to show that our present knowledge has been entirely obtained by spectrum analysis of their light, supported by the chemical analysis of meteoric stones. The composite character of the rays of the sun was exhibited by Newton in 1675; and Wollaston first observed the dark lines or spaces in a spectrum obtained by means of a narrow slit in 1802. Great progress was made by Fraunhofer, who, in 1814, marked 576 of these dark lines, and since then many thousands of them have been mapped by Brewster and others, including Dr. Gladstone himself. Some of these, it was stated, are caused by the vapour of water in our atmosphere; but the great majority have been proved to originate in the sun itself, since many correspond in position exactly with the bright coloured rays given off by several substances on the earth. It having been discovered that a strongly heated vapour absorbs the same kind of rays which it emits, Kirchhoff in 1851 put forth a theory, now well established, that the sun consists of a central nucleus, emitting rays of all degrees of refrangibility, surrounded by an atmosphere composed of the vapours of iron, sodium, magnesium, and other metals. Dr. Gladstone then explained how the chemical character of the red flames, the extensive hydrogen atmosphere, and other solar environments, had been ascertained by Janssen, Lockyer, Huggins, Secchi, Young, and other observers, especially during three total eclipses, by the use of spectroscopes, telespectroscopes, and other delicate apparatus. These researches have shown that the most brilliant fixed stars are analogous to our sun in their composition; that the planetary nebulae consist of a small central nucleus, surrounded by incandescent gases, apparently hydrogen and nitrogen; and that the brilliancy of the heads of comets is probably due to the light of carbon. Some knowledge of the nature of variable or coloured stars has also been gained; and photography has been of great advantage in recording observations. The experiments of the lecture included the refraction, dispersion, and absorption of light; the method of spectrum analysis; the light and spectra of lime, carbon, sodium, lithium, silver, and other metals; the absorption of light by sodium vapour, showing the reversal of sodium lines, and the comparison of this with the solar spectrum. Pictures of solar flames, and a diagram of the atmospheric lines of Brewster and Gladstone, were exhibited.

GENERATION OF HEAT.

Professor Tyndall, D.C.L., F.R.S., gave the first of a course of eight lectures on Heat on Thursday week. After some introductory remarks on the progress made by the modern doctrine of heat since the delivery of his first course on the subject in 1862, through the researches of British and foreign philosophers, the Professor exhibited and commented on various methods of producing fire adopted by the ancients, and by savages and others. These included the concentration of the rays of the electric lamp (instead of the sun), the friction of wood by the "stick and groove machine," by the bent cane of the Gaucho of the Pampas, by the "bit and brace" and by the twirling-stick of the Australian and Tasmanian. Smoke was produced by rapidly rotating a peg of wood; water was boiled by the centre-bit arrangement; sulphuric ether was boiled by the friction of a hand and glove; sparks were produced by friction on the miner's mill, his only light before the invention of the safety-lamp; and an inflammable mixture was ignited by the percussion of a hammer on an anvil. The Professor then explained the construction and action of the thermo-electric pile, based upon the discoveries of Seebeck and greatly improved by Melloni and others. This apparatus consists of bars of bismuth and antimony soldered together in the form of a V, the free ends being connected by a wire: a number of these (WV) form a pile. When the place of junction is heated or chilled, an electric current is generated; and if the wire is connected with a galvanometer the magnetic needle moves in one direction for heat and the reverse for cold, and is a valuable indicator of very slight variations of temperature. The Professor then performed Peltier's interesting experiment, which showed that when the electric current passed from antimony to bismuth heat was generated at the place of junction, and that cold was produced when the current passed from bismuth to antimony. Some thermal effects produced by air were next exhibited. An iron box was charged with air by fifty strokes of a syringe and discharged against a thermopile. The first puffs of air produced heat, the later puffs cold, as shown by the galvanometer. These facts were explained in accordance with the doctrine of the conservation or correlation of force, that heat is generated by the expenditure of some other force, mechanical or otherwise, and that mechanical force is produced by the expenditure of heat or some other force. Thus the later puffs lost their heat through doing the work of driving forward the first puffs. The lecture concluded by placing a thermopile in the receiver of an air-pump. When the air was exhausted the rarefaction produced cold, when the air was readmitted heat was generated—both results being made evident by the galvanometer.

EXPERIMENTS WITH A GREAT INDUCTION COIL.

Mr. William Spottiswoode, LL.D., Treasurer R.S. and Secretary R.I., reopened the Friday evening meetings after Easter, on the 13th inst., with a discourse on a magnificent induction coil recently constructed for him by Mr. Apps. He thus described the principle involved in the coil. When two conductors—say, a primary and secondary—are near to each other, but electrically separate, at the moment when an electric current is set up in the primary, a current is also set up or induced in the secondary. This secondary current has two peculiarities—1, it is transient, and ceases as soon as the primary current is fairly established; 2, its direction is opposite to that of the primary. This secondary is termed the "make" current. When the primary current is broken a secondary transient current is induced in the secondary conductor, and is termed the "break" current, its direction being the same as that of the primary. A conductor in which a current is either made or broken induces a current also in itself. If the conductor be wound in a spiral or coil, like thread on a reel, each convolution acts on the next as an independent conductor; so that, at the instant of making contact, the current is weakened by the self-induced "make" secondary; and also, at the instant of breaking, the effects of breaking are weakened by the self-induced "break" secondary. This is Faraday's "extra" current. A current passing through a coil of insulated wire containing a soft iron core renders the core magnetic; and, conversely, a core on being magnetised and demagnetised, induces a current in the coil; in the first case similar, in the second opposite, to that which would have produced the actual magnetism. The use of the contact-breaker, as well as of the condenser, the object of which is to neutralise the extra current and increase the spark, were

also described. The strength of the induced current depends upon the number of convolutions in the secondary coil and the strength of the primary current; and the electromotive force depends upon the rapidity with which the primary current is broken. These principles were illustrated by a series of experiments—first with a small coil, and then with the large coil, with a battery of thirty Grove's cells. Fine effects were given by a battery of Leyden jars, one of which was broken by the discharge; and specimens of blocks of glass (one of which was nearly 3 in. thick) perforated by sparks from the coil were also exhibited. Mr. Spottiswoode next proceeded to show the effects of these discharges upon rarefied gases in vacuum tubes which had been as thoroughly exhausted as possible. The discharge which at atmospheric pressure usually takes the form of a bright spark, was shown to thicken as the pressure decreased. As the exhaustion continued, this thickened discharge became broken into a column of flakes or striae, gradually more and more separated, and at the same time a dark space appeared, separating the head of the column of striae from a kind of glow or halo surrounding the further terminal. In order to ascertain the condition of the striae at each instant of time from the beginning to the end of the discharge the tubes were examined by means of a revolving mirror, and some of the beautiful effects produced by making the tubes revolve were exhibited. Among these were blurring, rippling, and cloudy striae, and the contraction of the dark spaces, which were explained to be due to peculiarities in the tension of the electric currents. The great coil is furnished with two primaries, the one used for giving long sparks consists of 660 yards of insulated copper wire, containing 1344 turns, and weighs 55 lbs., its core of iron wire weighing 67 lbs. The second primary coil, for short sparks, is a helix of 504 yards, weighing 84 lbs.; its core, 92 lbs. The secondary coil is 280 miles long, making 341,850 turns, and, with 30 quart Grove's cells, has given a spark 42 inches long, capable of piercing a slab of flint glass six inches thick. Further information may be found in the *Philosophical Magazine* for January last, and the *Proceedings of the Royal Society* for 1876, contain engravings of some of the striae. The Chinese Ambassador and attendants were present.

CHOPIN AND HIS MUSIC.

Mr. Edward Dannreuther gave the first of two lectures on Chopin and Liszt on Saturday last, his object being to show what manner of men they were, their mental food, what they felt or believed, loved or hated, their method in their work, and how, under their hands, the technical treatment of the pianoforte was developed to the very verge of possibility. In 1835 Robert Schumann truly said that Chopin was the boldest and proudest poetic spirit of his time; but this was not then believed. He was considered to be a gifted, romantic person, who happened to play on the pianoforte; but his powers as a melodist, harmonist, and inventor of rhythmical novelties were not recognised. Till the recent publication of an excellent biography, with many letters, little was known of him, and many erroneous statements were accepted, now corrected. His father, Nicolas Chopin, a native of Nancy, in Lorraine, then ruled by Stanislas Leszczynski, ex-King of Poland, went to Warsaw as a private tutor when about seventeen years old, and eventually became professor at the Lycée and other institutions. His son, Francis Frederic, was born March 1, 1809, at a village six miles from Warsaw, his mother being Justine Krzyanowska, from whom he derived his peculiar sensitive Slavonic temperament, which he ever retained. In 1818 he was able to play a concerto in public, and he had a sound musical education, especially under Joseph Elsner, a devoted student of Bach. At the age of eighteen he started for England, but stopped at Paris. Here, at the instigation of his friend Liszt, he became acquainted with Madame Dudevant (or George Sand). She took him to Majorca in 1838, nursed him during a severe illness, and, after eight years of sentimental bickerings, left him to his cough and his piano. Excepting short visits to England and Scotland just before his death in 1849, he lived, at Paris, a retired but not quiet life, giving lessons, practising and composing at intervals, the spoilt child of a circle of sympathising admirers, the most eminent persons of the day. His style of playing was described as veiled, graduated, accentuated, and evanescent; the harmonic notes vaguely blending, yet the transitions of chords being clearly traceable, such as no single instrument, except the piano, can produce, and that only by the skilful use of the pedals. Upon these Mr. Dannreuther specially dilated, pointing out that Chopin's pianoforte pieces are more subtle in rhythmic and melodic accent, and more refined in the shades of harmonic colour, than anything preceding them. Chopin's figure was slim and well proportioned, his head oval, with pronounced yet delicate features and dreamy hazel eyes, and long flowing flaxen hair; his complexion pale and transparent, and his wrists and fingers slender and supple. He was self-absorbed, shy, and retiring, his mind being much tinged with the strange social twilight of the Paris of Balzac, from 1830 to 1845. Chopin read only for amusement, his favourite authors being Rousseau and George Sand; and he remained throughout his life devoted to Polish literature. He studiously avoided everything likely to disturb his equanimity, yet he was not cold. His emotional nature was volcanic, but music absorbed his power, and he set the best part of himself to music. After pointing out Chopin's superiority to Hummel, especially in regard to the extreme originality of his compositions, Mr. Dannreuther gave a series of characteristic pieces upon the pianoforte, including a scherzo, nocturne, ballade, several mazurkas, a larghetto, and a valse, concluding with a grand polonaise.

Dr. John Rae, on Friday next, the 27th inst., will give a discourse on Arctic Life; the discourse of Lieutenant-General R. Strachey, on the Physical Causes of Indian Famines, being deferred to May 18.

The Austrian Government has placed £100 at the disposal of the Board of Trade, for the benefit of the inhabitants of the island of St. Kilda, in recognition of their kindness to the Austrian crew recently shipwrecked on the island.

Mr. J. W. Malcolm, captain of the "Scottish Eight," has named the following gentlemen to represent Scotland in the ensuing international rifle-match at Wimbledon, Messrs. Boyd, Clews, Dunlop, Ferguson, M'Vittie, Mitchell, E. Ross, and Whitelaw.

The Irish Church Synod has passed a bill modernising the language of the Marriage Service, and has carried over the second reading other bills defining the doctrines of the Eucharist and Ordination, in what the Bishop of Meath called a Protestant, Catholic, and tolerant sense.

The subject of a lecture given to the Society for the Promotion of the Fine Arts on the 12th inst., by Mr. Alfred Gilbert, the hon. musical director of this society, was Franz Schubert. The lecturer prefaced his remarks by alluding to the sterling qualities of the artist, and afterwards gave vocal and instrumental illustrations from his works—Madame Gilbert and other artists of note assisting him. Last Thursday Mr. J. T. Wood, F.S.A., was the lecturer.

THE SULTAN OF TURKEY LEAVING

HIS PALACE TO GO TO THE MOSQUE.

PARLIAMENT.

LORDS.

Lord Derby made a brief but pregnant statement respecting the critical state of affairs in the East on the reassembling of the House yesterday week, after the Easter recess. The Foreign Secretary, in answer to Earl Granville, said, with characteristic directness, that the reply of the Porte to the Protocol "does not appear to me to be a very satisfactory one, nor does it hold out any assurance that there is a prospect of a peaceful solution of the question." This important expression of opinion, Earl Granville's announcement of an amendment adverse to the Burials Bill of the Government, and the second reading of the Supreme Court of Judicature Bill, were the only noteworthy occurrences of the sitting.

On Monday yet another debate on the Eastern Question took place, after the Duke of Richmond had postponed the second reading of the Burials Bill to Thursday next. Earl Granville called attention to the meagreness of the information given by the voluminous Parliamentary papers on Turkey, minutely criticised the Government policy, which he insisted was inconsistent, and defended the action of the Opposition. "The noble Earl laid stress on the fact that 'whereas the noble Marquis at Constantinople insisted on certain guarantees for reform, those guarantees have entirely disappeared from this Protocol.'" Earl Granville urged this further objection to the late negotiations, that, "Even if Turkey were most anxious to receive the Protocol and to receive the declaration of Russia, her Majesty Government did give a hint by this declaration that it rested entirely with Turkey to break up the whole understanding of Europe on this matter." Concluding with a defence of the course recommended by the Opposition, he said "I believe that anything like a serious and firm attitude, which it may now be too late to assume, would have prevented the state of matters we must all now deplore." Lord Derby was entirely retrospective in his reply, and explained that the Government had yielded to the request of Russia and signed the London Protocol in order to preserve the peace of Europe. He would have no objection to produce the original draught of the Protocol, but the Russian Ambassador thought his Government would not favour the idea of presenting it to Parliament. Moreover, the original draught had been altered so many times that there were probably five or more draughts in existence. As for there being no mention of guarantees in the Protocol, the noble Earl argued that the fact of Turkey not having been favourable to its recommendations, mild as they were, sufficiently justified the omission. His Lordship, answering another criticism, said the Protocol had no resemblance to the Berlin Memorandum, which the Government had refused to sanction because its "effacious measures" doubtless meant a military occupation of the disturbed districts of Turkey. Finally, the noble Earl justified the declaration which he had added to the Protocol, and said,

We were bound, when the Russian Government came and told us that they wanted an excuse for disarmament, to an expression of opinion, and it was obviously our duty to help them by removing any obstacles in the way of peace. If, on the other hand—I put it forward as an hypothesis—if, from the beginning, there had been no *casus belli* against Turkey, then I say on that hypothesis our best course was to do that which we did, because in the event of our refusing to take that course it is quite certain that the whole responsibility would have been laid upon this country.

The debate was continued by the Marquis of Lansdowne and the Earl of Dudley (both of whom censured the policy of the Government), and then collapsed.

Drier matter occupied the attention of the Lords on Tuesday. The scandals which are not uncommon in the Bankruptcy Court may be said to have justified Lord Hatherley in pointing out a defect of the Bankruptcy Bill, which was, nevertheless, allowed to pass through Committee pro forma. The second reading of the Inns of Court Bill enabled the law Lords to air their eloquence; the General School of Law Bill was likewise read the second time; and the Supreme Court of Judicature Bill the third time and passed.

On Thursday Lord Stratheden drew attention to the recent circumstances of the Eastern Question, and asked for copies of all Imperial decrees, capitulations, and conventions of any kind which entitle Great Britain to intervene against abuses in the Government of the Porte, and in favour of the races subject to it, without reference to the treaties formed after the Crimean War for upholding the independence and integrity of the Ottoman Empire. While recognising the elements of war, he thought that peace ought not to be despaired of, and that the influence of Great Britain and St. Petersburg ought to be used to avert the calamity. If, however, war should break out, it was very desirable that there should be no ambiguity with regard to the obligation of this country. The Earl of Rosebery wished to know the views of the Government with regard to the obligations of the Tripartite Treaty, and whether there had been any arrangement to free the country from engagements which appeared to be a most absolute guarantee by the Three Powers of the independence and integrity of the Ottoman Empire. Lord Houghton declared that Turkey had never been unwilling to permit the interference of the Christian Powers, except where Russia was concerned, from whom she was in continual fear of aggression. Lord Waverley suggested that, in the event of the commerce of the Mediterranean being threatened, England should call upon the other maritime Powers to assist her in its protection. The Earl of Derby stated that care was taken to frame the Protocol in such a manner that it should not require the signature or consent of the Porte, in order to avoid controversial correspondence, and he considered it unfortunate that the Ottoman Government had not contented itself with passing it over or simply protesting against it. As to the views of the Government regarding the Treaty of April, 1856, no obligations were incurred towards the Porte by that instrument, and there was not the slightest probability of the French or Austrian Governments calling upon us to fulfil our obligations under that treaty. Treaties were framed with reference to existing circumstances, and nothing was more common than to recognise, without any imputation of bad faith, that, by the course of certain circumstances, treaties had become obsolete. He did not like to encourage sanguine expectations, and he spoke under the gravest sense of responsibility when he assured their Lordships that, if the Government saw any prospect or any hope that diplomatic intervention might still be successful in averting war, no effort would be spared to secure that result. The opinion, however, of those throughout Europe best acquainted with the diplomatic situation was not such as to justify the indulgence of any sanguine hope that it would be possible to avert that great European calamity. Their Lordships would not expect him to make a declaration as to what the Government would do in the event of war. He had repeatedly warned the Porte that it must not count upon material assistance from England; but, while the Government did not desire to interfere in this unhappy war—if war it were to be—they reserved to themselves, as they were bound to do, the right of protecting British interests, if they considered those interests imperilled. The motion was then withdrawn.

COMMONS.

The Marquis of Hartington, rising into earnestness at times, but almost sinking into incoherence at others, yesterday

week delivered a speech which from its severity might have served to introduce a motion censuring the Ministry for their Eastern policy. He complained, with characteristic gravity, of the scant information afforded by the "voluminous" papers with which the House had been "deluged;" he censured the Government roundly for not maintaining the position taken up by Lord Salisbury in Constantinople, and said the Protocol either implied ultimate coercion of the Porte or it meant nothing; he was of opinion that there was only one way to save the honour of Russia and Turkey, and that was to make the Eastern Question a European Question—and the noble Lord moved for further papers to elucidate the history of the Protocol. The House was full, and members on both sides were excited; and the animated scene was plainly a source of interest to Prince Christian and the Chinese Ambassadors, who were conspicuous in the gallery. Mr. Gathorne Hardy, who, from the rapidity of his utterance and the bellicose nature of his post, may not inaptly be termed the mitrailleuse of the Treasury Bench, rattled out a vigorous defence of the Government, his short, sharp sentences being frequently greeted with volleys of lusty "Hear, hears!" from Conservative members, who were in a mood to be to the faults of Turkey a little blind, and to its virtues very kind. Perhaps the one statement of Mr. Hardy which gave the House most satisfaction was that "even yet the last word has not been spoken." Sir William Harcourt sent hon. members to dinner with an elephantine oration, which became quite sepulchral at its close; and the thread of the discourse was taken up by Mr. Ashley and Sir W. Fraser, who elicited sympathetic cheers from the Conservative benches when he intoned these lines as a tribute to the courage of Turkey:—

If we must perish, we thy will obey;
But let us perish in the face of day.

Dr. Kenealy, Mr. Roebuck, and Mr. Hanbury supported the Government; but Sir Charles Dilke considered the Ministry merited a vote of censure. Mr. Butler-Johnstone delivered himself of a spasmodic valedictory address, preparatory to taking his departure for Turkey, where Sir Charles Dilke hoped he might be chosen Grand Vizier; and when Mr. Goschen had, amid much interruption, relieved himself of his ideas on the East, the Chancellor of the Exchequer summed up the case for the Government, and challenged the Opposition to divide. This the Marquis of Hartington declined to do, and the discussion closed.

On Monday, questions of various kinds having been disposed of, the Mutiny Bill and Marine Mutiny Bill passed through Committee, in spite of Mr. Parnell's obstructions; Sir Stafford Northcote, in opposing Captain Nolan's fruitless motion for exemptions in the income tax, fell into error in asserting that to balance an egg upon its end was "an impossible thing;" Mr. Dillwyn's endeavour to reduce the vote for game-preserving in Richmond Park by £155 was defeated; and the settled Estates Bill and other measures were advanced certain stages.

On Tuesday hon. members were agog in the expectation that the usual monotony of Parliamentary proceedings would be relieved by the latest eccentricity of the one-ideaed persons who share Mr. Whalley's delusion that Arthur Orton is Sir Roger Tichborne. But a Mr. De Morgan, who was to have come down to the House with battalions of Tichborneites, "a hundred thousand strong," to demand the release of the "Claimant," appeared in the lobby with only a few supporters, and they became the guests of Mr. Whalley in the tea-room. The hon. member for Peterborough had previously inflicted on the House a further series of his well-worn comments on the Tichborne Case. But the principal subject of discussion at Tuesday's sitting was Mr. Knatchbull-Hugessen's motion praying that the recommendations of the Select Committee on the Railway Passenger Duty should receive the early attention of the Government. Opposed by the Chancellor of the Exchequer (radiant from his daughter's wedding breakfast), the motion and a verbal amendment by Earl Percy were withdrawn. Mr. Meldon took up the cudgels, or, rather, vainly wielded the shillelagh on behalf of the pensioners of the Irish Constabulary; and the hon. member was equally unsuccessful in advocating the cause of Irish national teachers. Mr. Cross brought in a bill to lighten the punishments which magistrates have it in their power to inflict, and one or two Irish and Scotch measures were advanced a stage before the House adjourned.

The Territorial Waters Jurisdiction Bill, introduced by Mr. Gorst on Wednesday, proposed to give full powers for the administration of justice in any case of dispute happening within the three-mile belt of sea surrounding any of her Majesty's dominions. Necessity for legislation on the subject arose, Mr. Gorst said, from the fact that, although the captain of the German ship *Franconia* was found guilty of manslaughter, and so made responsible for the life lost in the running down of the *Strathclyde* a couple of miles from Dover, yet he escaped scot-free because the Court of Crown Cases Reserved decided, by a majority of one, that the Central Criminal Court had not jurisdiction in the matter. Members generally thought it was a case which the Government ought to deal with; and, on the Attorney-General stating that the point was under the consideration of the Ministry, Mr. Gorst withdrew his motion. Mr. Anderson's bill for giving married women in Scotland greater power over their private property was read the second time; and a few bills were advanced a stage.

On Thursday Mr. Whalley presented a petition from Mr. De Morgan praying to be heard at the bar of the House on behalf of the man yclept Orton, stating that he is the real Tichborne, and that in his case there has been a cruel miscarriage of justice. He also gave notice that on Friday he would call attention to the said petition, and ask the Government for a return of all the public moneys expended upon and in connection with the prosecution of the Claimant. In answer to a question from Mr. D. Jenkins, Mr. Bourke stated that there were treaties by which, in the event of war in the Black Sea between Turkey and Russia, protection would be secured to British subjects. By the Treaty of Paris two light-vessels were stationed in the Danube in connection with the Danubian Commission. One of them has been sent to Constantinople recently, but he was not aware whether it had yet returned. By the Treaty of 1841 a light-armed despatch vessel could be sent up to Constantinople. The same hon. gentleman informed Mr. Richards that a despatch on the condition of the Armenian subjects of the Porte had been received from the Consul at Erzeroum, and it would be laid on the table. Mr. Gladstone interrogated the Government as to the precise time they intended to submit their resolution respecting the cattle plague. He did not object to the appointment of the Committee on the subject, but he thought that to extend the inquiry to the probable effect of the importation of live cattle might raise an important discussion as being likely to interfere with one of the first Free Trade measures of Sir R. Peel as early as 1812. The Chancellor of the Exchequer said the Government were extremely anxious to submit their resolution to the House as soon as possible, but in consequence of the pressure of urgent business he was not as yet able to fix a day for the consideration of the subject. The two Mutiny Bills occupied the remainder of the evening.

NATIONAL SPORTS.

It cannot be said that the Newmarket Craven Meeting commenced very auspiciously on Tuesday last, and there does not appear much prospect of any sensational race before the conclusion of the fixture. With upwards of a thousand horses in training on the spot, every meeting ought to produce really good sport, even without the assistance of a single "stranger;" but we suppose that the Newmarket trainers know too much of each others' animals, and the consequence is that scarcely a day passes without one or more walks over. Old Ecosais, who has lately quite fulfilled his great two-year-old promise, commenced proceedings on Tuesday by running away from the useful Cannon Ball over five furlongs, and he appears likely to be "Prince of the T.Y.C." during the present season. King Clovis, in spite of being a bad roarer, just managed to compass the easy Ditch Mile successfully in a Post Sweepstakes; and then Polly Perkins, who did not seem to have grown or improved in the smallest degree since last season, won the Bushes Handicap, over the same course. The Newmarket Biennial, always an interesting contest, brought out a far larger field than usual, no less than a dozen facing the starter. Silvio and Warren Hastings were the only ones supported with any spirit; but both were beaten at the Bushes, and the finish was fought out between a pair of dark horses—The Grey Friar, by Blue Mantle—Recluse, and Masaniello, by Macaroni—Reginella, the former winning rather cleverly by half a length. The result was a genuine surprise, for Silvio had won a good trial from several of Lord Falmouth's cracks; and Warren Hastings has been backed for so much money for the City and Suburban that it was only fair to presume that he had wintered well. As, however, the long price of 50 to 1 was offered against The Grey Friar for the Derby, even after his success, it is evident that people generally do not believe the race to be a truly run one. Cœruleus (9 st. 6 lb.), who won the Bretby Plate last year, again essayed success in the same race. His heavy weight, however, stopped him halfway up the hill, and Breechloader (8 st.) just got home in front of Kaleidoscope.

One of the few items of interest on Wednesday was the meeting of Coomassie and Sugarloaf across the flat. The mare attempted to concede 24 lb., and at one time appeared likely to succeed in doing so; but she is not yet quite up to the mark, and, tiring dreadfully at the hill, was beaten by a neck. Mr. Sanford secured a T.Y.C. Plate with Donna, a grand-looking filly by Baywood—Dot, and we trust that a prosperous season is in store for the plucky American. The absence of Plunger from the Sale Stakes was a great disappointment to many who had come to Newmarket solely to see the big colt do a gallop, and it left the race at the mercy of Hidalgo, who followed up his victory by securing the Newmarket Handicap with 5 st. 11 lb. on his back. Cheetah (5 st. 10 lb.) was second, and naturally receded in the City and Suburban quotations, for which race, however, his prospects must not be considered to be altogether extinguished, as Hidalgo may be a far better colt than is generally imagined.

At a meeting of the Jockey Club on Wednesday Mr. Alexander's motion for the reduction of the minimum weight in handicaps from 5 st. 7 lb. to 4 st. 7 lb. was passed.

"WAITING AN ANSWER."

This youth, whom Mr. Dicksee has cleverly depicted standing in a rather impatient attitude beside the open window of a Tudor hall, seems to be the "pretty page" of some knight or nobleman in the England of the sixteenth century, and has probably been sent with a letter of devoted homage from his master to the lady inhabiting this stately mansion. It is never amiss to think of an example from Shakespeare in contemplating subjects of the kind; and we are soon reminded of a scene in the comedy of "Twelfth Night," which might naturally follow the present "Waiting for an Answer." For let us suppose, as we may if we please, that the Lady Olivia, instead of writing a letter in reply to the one delivered, summons the bearer to her tapestry bower or to her summer seat in the garden. Seeing him there, to all appearance a gentle and well-educated boy, like many pages then maintained by persons of rank, the son of parents in no mean or vulgar condition, and trained in the fashionable courtesies of that age, it is conceivable that she may treat him more kindly than she would his master; and the following dialogue will, perhaps, be overheard between them:—

Lady. Give me your hand, Sir!
Page. My duty, Madam, and most humble service.
Lady. What is your name?
Page. Cesario is your servant's name, fair princess.
Lady. Cesario is your servant's name, fair princess.
Page. My servant, Sir? 'Twas never merry world, Since lowly feigning was called compliment.
You are servant to the Count Orsino, youth.
Page. And he is yours, and his must needs be yours;
Your servant's servant is your servant, Madam.
Lady. For him, I think not of him; for his thoughts, Would they were blank, rather than filled with me!
Page. Madam, I come to wet your gentle thoughts On his behalf—
Lady. Oh, by your leave, I pray you— I bade you never speak of him again.

But we need not, in the instance here before us, proceed to note down the Lady Olivia's rash confession of a sudden fond fancy, which the sight of the so-called young Cesario has stirred within her bosom. Nor shall we pursue the train of Shakespeare's plot to the fantastic notion of supposing this pretty page to be a girl in disguise, a young person whose proper name is Viola, and who has been parted from her brother in a shipwreck on the coast of Illyria. The young gentleman in Mr. Dicksee's picture, though scarcely in his sixteenth year, already shows promise of manhood. He is bravely dressed, as such privileged minions of chivalry were apt to be, in an embroidered vest and mantle of rich velvet, silken hose with lace ruffles at the knees, rosettes in his shoes, and a feather in his broad hat, altogether looking smart and gay. This picture was in the last exhibition at Mr. Wallis's French Gallery in Pall-mall.

Mr. Newton H. Nixon, on the staff of the School Board for London, has been appointed secretary of University College Hospital. There were 184 candidates.

An ironclad man of war for Japan, built by Messrs. Samuda, at Poplar, from the designs of Mr. Reed, M.P., was launched last Saturday. The Japanese Minister was present, and the ship was named, by Madame Wooyeno, his wife, the *Foo-So*, after the well-known mountain of Japan. The vessel, which has nine inches of armour and a ram, is 220 ft. in length, and will, it is estimated, have a speed of thirteen knots an hour. The Chinese Minister was present, and he proposed the toast of "Success to the Navy of Japan," adding that he hoped it would never fire a shot except as an ally of China.—The composite corvette *Kongo*, for the Japanese Government, was launched on Tuesday by Earle's Shipbuilding Company at Hull, the Japanese Ambassador and others being present. She is about 2000 tons and 2500-horse power. She will carry nine Krupp guns, and have other armaments. A sister ship is being built by the Milford Haven Shipbuilding Company.

THE NOVEL OF THE SEASON.

GEORGE MANVILLE FENN'S

NEW NOVEL.

A LITTLE WORLD.

SOME OPINIONS OF THE PRESS.

VANITY FAIR.

"Mr. Fenn must be congratulated on a most successful and interesting story. We do not attempt to give an outline of the plot, for the book is one which well deserves to be read."

MORNING POST.

"There is plenty of incident, and that of the most exciting nature, without any exaggeration or straining after effect; the language is pure and terse, the description, both humorous and pathetic, is extremely spontaneous, and the several characters are well and distinctly drawn."

DAILY NEWS.

"His chapters are excellent in themselves, his touches of character show keen observation, and he can interest you in his hero and heroine."

QUEEN.

"The author is good and well told; the parts of the plot work well together, there is plenty of life and motion in it, and the characters enlist our sympathies."

ATHENÆUM.

"The author takes for the most part a kindly view of human nature, and his book will be read with interest."

THE RUSSIAN SQUADRON PASSING UP NEW YORK HARBOUR.

"WAITING AN ANSWER." BY J. DICKSEE.

THE RUSSIAN SQUADRON AT NEW YORK.

A squadron or part of the Russian fleet, sent to winter on the coast of the United States, put in at Norfolk, Virginia, several weeks ago, but left that port on March 20 for New York, and reached Sandy Hook early on the morning of the 23rd. We give an illustration of its arrival, on that day, in New York harbour. At half-past eleven o'clock the vessels crossed the bar and passed up the bay, saluting Castle William and Forts Hamilton and Wadsworth, and the United States steamer Powhattan, to which Vice-Admiral Rowan's flag had been transferred. The frigate *Svetlana*, of which the Grand Duke Alexis is captain, led the squadron, and was followed by the corvettes *Aakold*, *Captain Tyrtow*, and *Bogatir*, Captain Schaffron. All the salutes were returned as the vessels passed up the North River, the flagship casting anchor at Twenty-third street, the *Bogatir* further up, near the New York shore, and the *Askold* further down, abreast of Castle Point, Hoboken. This squadron is under the command of Rear-Admiral Boutakoff. Owing to a death in the family of the Czarewitch, it is thought the Grand Dukes Alexis and Constantine will not appear so much in New York society as when the former paid his first visit to that city.

THE LATE MR. ANDREW HALLIDAY.

We have mentioned the death of this well-known essayist and dramatist, which took place at his residence in London on Tuesday week. His full name was Andrew Halliday Duff; he was a son of the Rev. William Duff, of Grange, Banffshire, in Scotland, and was born in 1830.

THE LATE MR. ANDREW HALLIDAY.

Having been educated at Marischal College, Aberdeen, he came to London in his nineteenth year, and found employment on the *Morning Chronicle*. Sixteen years ago he became a member of the active literary staff Mr. Charles Dickens collected round him for his weekly publication *All the Year Round*, and the essays Mr. Halliday contributed to that periodical have since been extensively reprinted. In connection with the late Mr. Frederick Lawrence, Mr. Halliday produced the burlesque called "*Kenilworth*," which was brought out at the Strand Theatre in December, 1858. Conjointly with the late Mr. William Brough, he wrote a number of popular farces for the Adelphi, among which may be named "*The Area Belle*," "*The Pretty Horsebreaker*," and "*The Mudborough Election*." Mr. Halliday's drama of "*The Great City*," produced at Drury Lane on Easter Monday, 1867, ran more than one hundred nights; and since then, besides a series of adaptations for the stage of the novels of Scott, Dickens, Victor Hugo, and Harrison Ainsworth, he has written several original dramas. His last dramatic work was an adaptation of "*Nicholas Nickleby*," brought out at the Adelphi Theatre in March, 1875. Mr. Halliday has left a widow, but no family.

The portrait is from a photograph by the London Stereoscopic Company.

At a meeting of the committee formed at Kidderminster to erect a memorial in memory of Sir Rowland Hill, the introducer of the penny postage system, it was announced that a gentleman living in the locality had offered £1000 towards the purchase of the site. The fund now amounts to £1700.

CHURCH OF ENGLAND INCUMBENTS' SUBSTITUTION FUND.—A PUBLIC MEETING in BEHALF of this FUND will (by kind permission) be held in the Large Room at the NATIONAL SOCIETY'S DEPOSITORY, Broad Sanctuary, Westminster, on WEDNESDAY, APRIL 25, at Three o'clock.

The Lord Archbishop of YORK will preside.

The Marquis of Lorne, the Earl of Carnarvon, the Lord Bishop of Exeter, Lord Selborne, the Prolocutor (Dean of Lichfield), Mr. J. G. Talbot, M.P., and others are expected to address the Meeting. No tickets required.

No. 4, Dean's-yard, S.W., April 12, 1877.

MALVERN COLLEGE.—The SECOND TERM will begin on MONDAY, MAY 7.

SMART'S WRITING INSTITUTION, 77a, Quadrant, Regent-street (entrance in Swallow-street). Open from Ten till Nine daily. Persons of all ages received (privately), and taught at any time suiting their own convenience. Lessons one hour each. No classes. No extras. Improvement guaranteed in eight to twelve lessons. Separate rooms for Ladies.—Apply to Mr. Smart, as above.

NATIONAL INSTITUTION FOR DISEASES OF THE SKIN. Gray's-inn-road, King's-cross, London, W.C. Established 1861. Physician, Dr. Henry Meadows, 47, Victoria-street, S.W. Free to the necessitous. Payment required from other applicants.

SPA PYRMONT.—Station of the Hanover-Altenbecker Railway. Season from May 15 to Oct. 10. Pyrmont is the only watering-place where rich saline springs are found, besides world-renowned ferruginous waters, moor, pine-needle, and vapour baths. Wherry Arrangements perfect and comfortable in every respect, charming environs, hunting, fishing, rusecourse; concerts in the morning, afternoon, and evening; theatre, &c. Frequented in 1876 by 12,965 visitors. THE KUR-VEREIN.

HOUSE PROPERTY AND INVESTMENT COMPANY (Limited), 92, Cannon-street, London, E.C. (seven doors east of the Cannon-street Station). Capital One Million, in 40,000 fully paid-up shares of £25 each. For the Purchase and Sale of Productive and Progressive House Property and Improving the Dwellings of the Working Classes on the self-supporting principle. Registered March 15, 1876.

Henry Aste, Esq., 3, Trinity-square, Tower-hill, and Castle-hill Lodge, Upper Norwood (Chairman London Corn Exchange). **William Macdonald Baden, Esq.,** 11, Great St. Helen's, and Lloyd's. **William Sutton Gayer, Esq.,** 4, Queen-street-place, E.C., and Haverling House, Blackheath (Member of the London School Board).

Fountain John Hartley, Esq., Adle-street, E.C. (Hon. Secretary London Sunday School Union). **William Smith, Esq.,** Oak Lawn, Benah-hill, Upper Norwood. **Robert Parker, Esq.,** Adelaide-place, London Bridge. (Director Lambeth Baths and Wash-House Company). **Edward Bean Underhill, Esq.,** L.L.D., Hampstead (Hon. Sec. Baptist Missionary Society).

Thomas White, Esq., Upper Thames-street, E.C. **Solicitor.**—**Henry Gayer, Esq.,** 40, King William-street, E.C. **Secretary.**—**W. H. Baden, Esq.,** 92, Cannon-street, E.C. **Auditors.**—**John Thomas Beilford, Esq.,** 12, King street, Snow-hill, and Mecklenburgh-square (Chairman West Ham Park Committee); **James Clarke, Esq.,** 1, Cedar-road, Clapham, and 15, Fleet-street, E.C. (Editor and Proprietor of "The Christian World"); **Charles Kemp Dyer, Esq.,** J.P., St. Albans, Hertford, and Lloyd's.

BANKERS.—London and Westminster Bank, Lombard-street. 1. The first issue of 400 fully paid-up shares of £25 each has been allotted.

2. Applications are now being received for the second issue of 4000 shares at £1 per share premium, 2800 of which have been already allotted.

3. Sixty estates have been purchased, at a cost of £122,708, and other purchases are in course of negotiation.

4. After making a full allowance for rates, repairs, loss of rent, and diminution of term in case of leaseholds, the income from the estate already purchased is expected to amount to nearly 4 per cent, besides profit on re-sales.

5. Shareholders, in addition to 5 per cent interest, will participate in the periodical bonuses, which, it is expected, will be declared by the Company from time to time.

6. Owners of eligible House Property, wishing to sell at a moderate price, should send particulars to the secretary.

7. As the estate purchased will give a good profit revenue, it will have to be considered at what premium the third issue shall be offered to the public, so as to protect the interest of existing shareholders.

For full information apply to W. H. Baden, Secretary, of whom may be obtained approving notices of the press and an explanatory pamphlet, entitled "Another Five Minutes' Talk about the House Property and Investment Company (Limited), prospectus, and share application forms.

KINAHAN'S LL WHISKY.

RECOMMENDED BY THE MEDICAL PROFESSION. A pure old spirit, mild, mellow, delicious, and most wholesome. EPPS'S COCOA.

GRATEFUL-COMFORTING. "By a thorough knowledge of the natural laws which govern the operation of digestion and nutrition, and by a careful application of the fine properties of well-selected cocoa, Mr. Epps has provided our breakfast-tables with a delicately flavoured beverage which may save us many heavy doctors' bills. It is by the judicious use of such articles of diet that a constitution may be gradually built up until strong enough to resist every tendency to disease. Hundreds of subtle maladies are floating around us ready to attack wherever there is a weak point. We may escape many a fatal shaft by keeping ourselves well fortified with pure blood and a properly nourished frame."—Civil Service Gazette.

BENHAM and SONS, WIGMORE-STREET, LONDON, W.

BENHAM and SONS' VENTILATING GLOBE LIGHTS. The following are some of the advantages of this mode of lighting:—
1. It carries off all the heat and foul air from the burner.
2. It also ventilates the apartment by removing the heated and vitiated air.
3. It introduces a constant supply of external fresh air.
4. The flame is powerful, steady, and cannot be affected by draughts.
5. No smoke escaping, the ceiling is not blackened.

BENHAM and SONS' SHOW-ROOMS FOR CHIMNEY-PIECES.

BENHAM and SONS' SHOW-ROOMS FOR FENDERS.

BENHAM and SONS' STOVES FOR DRAWING-ROOMS.

BENHAM and SONS' STOVES FOR DINING-ROOMS.

BENHAM and SONS' STOVES FOR LIBRARIES.

BENHAM and SONS' STOVES FOR ENTRANCE-HALLS.

BENHAM and SONS' STOVES FOR BED-ROOMS.

BENHAM and SONS' DOG STOVES AND DOGS.

BENHAM and SONS' CHINA TILE STOVES.

BENHAM and SONS' TILE HEARTHES.

BENHAM and SONS' GERMAN PORCELAIN STOVE may be seen in operation. Keeps alight for twelve hours. Consumes only 14 lb. coal in twenty-four hours.—52, 54, Wigmore-street, W.

BENHAM and SONS' PATENT COAL-ECONOMISING GRATES. This grate in its construction is exactly the reverse of an ordinary Register Stove; instead of being recessed in the mantel, all the heating surface stands out prominently in the room.—52, 54, Wigmore-street, W.

BENHAM and SONS' PATENT SLOW-COMBUSTION GRATES keep alight for several hours and save more than half the fuel.—52, 54, Wigmore-street.

BENHAM and SONS' COOKING APPARATUS.—For cooking purposes, Benham and Sons have various patented arrangements adapted to the various requirements of hotels, club-houses, hospitals, asylums, prisons, workhouses, schools, colleges.—52, 54, Wigmore-street.

BENHAM and SONS' KITCHEN RANGES.

BENHAM and SONS' COOKING APPARATUS.

BENHAM and SONS' LAUNDRY APPARATUS.

BENHAM and SONS' HEATING APPARATUS.

BENHAM and SONS' HOT-WATER APPARATUS.

BENHAM and SONS' STEAM-ENGINES.

BENHAM and SONS' LAUNDRY DRYING-CLOSETS.

BENHAM and SONS are also prepared to undertake ENGINEERS' WORK of every description for Asylums, Workhouses, and other large establishments, comprising the following:—viz., Steam Engines and Boilers; Heating Apparatus, by means of hot water, hot air, or steam; Hot and Cold Water Tanks and Services; Pumps, &c.; Baths, Lavatories, Urinals and Water-closets; Laundry Wash-houses, and Drying Closets; Gas-works and Gas-fittings; Hoists for Lifts; for Diners, Canteens, &c.—Wigmore-street, London, W.; Factory, 61, Wigmore-street.

BENHAM and SONS' LIFTS (or HOISTS), to work by Hand or Steam or Hydraulic Power.—Wigmore-st., W.

BENHAM and SONS' GAS-WORKS, GAS FITTINGS, and GAS COOKING APPARATUS.—52, 54, and 54, Wigmore-street.

BENHAM and SONS' PATENT VENTILATING KITCHENER. It requires no brick-work to fix it. It roasts, bakes, boils, and steams with one fire, and supplies a bath if required. It carries off the heat and smell of the kitchen. It can be fixed in its place in a few hours, after the fire-place is cleared out and prepared for it, and by local workmen if preferred.—50, Wigmore-st.

BENHAM and SONS' PATENT COAL CELLARETTE, or "Londonderry," is specially adapted for use in clubs, banking-houses, hotels, railway stations, Government offices, hospitals, steam-packets, noblemen's mansions, and private houses, &c. One Londonderry placed in a corridor or landing will supply fuel for a whole suite of rooms.—52, 54, Wigmore-street.

 DETERGENT.—Antiseptic, Detergent, Disinfectant.
 The most healthful, agreeable, and refreshing TOILET SOAP in
 the world. By its daily use, freedom from infectious diseases is
 secured; the complexion improved; pimples, blotches, and
 roughness removed; and the skin made clear, smooth, and
 lustrous.
 "In our hands it has proved most effective in skin diseases."
 The Lancet.
 "It is the only true antiseptic soap."—British Medical Journal.
 In Tablets, 6d. and 1s. each, of all Chemists.
W. V. WRIGHT and CO., Southwark-street, London.
 Caution.—Beware of Spurious Imitations.

**KEATING'S PERSIAN INSECT-
 DESTROYING POWDER.**—Bugs, Fleas, Moths, Beetles,
 and all other insects are destroyed by this Powder, which is quite
 harmless to domestic animals. Sold in Tins, 1s. and 2s. 6d., by
THOMAS KEATING, St. Paul's-churchyard, London, and all
Chemists.

IMPORTANT TO ALL.

As a HEALTH-GIVING, RE-
 FRESHING, COOLING, and IN-
 VIGORATING BEVERAGE, or as
 a GENTLE LAXATIVE and TONIC
 in the VARIOUS FORMS OF INDI-
 GESTION, use

ENO'S FRUIT SALT

(prepared from Sound Ripe Fruit).

It is the best preventive and cure
 for all FUNCTIONAL DERANGE-
 MENTS of the LIVER, TEM-
 PORARY CONGESTION arising
 from ALCOHOLIC BEVERAGES,
 BILIOUSNESS, SICK HEAD-
 ACHES, SKIN ERUPTIONS, IM-
 PURE BLOOD, PIMPLES ON
 THE FACE, GIDDINESS, FEVER-
 FISHES, or FEVERISH COLDS,
 MENTAL DEPRESSION, WANT
 OF APPETITE, CONSTIPATION,
 VOMITING, SEA SICKNESS,
 THIRST, &c., and to remove the
 Effects of ERRORS of EATING
 and DRINKING; also, GOUTY or
 RHEUMATIC POISONS from the
 BLOOD, the neglect of which often
 results in Apoplexy, Heart Disease,
 and Sudden Death.

Notwithstanding its medicinal val-
 ue, the FRUIT SALT must be looked
 upon as essential as breathing fresh
 air, or as a simple and safe beverage
 under all circumstances, and may be
 taken as a sparkling and refreshing
 draught in the same way as lemon-
 ade, soda-water, potash-water, &c.,
 only it is much cheaper and better
 in every sense of the term, to an un-
 limited extent. Being a genuine
 product of nature, it is a true or
 natural way of restoring or pre-
 serving health.

On that account it is impossible to
 overstate its value; and, if its great
 value in keeping the body in health
 were universally known, no family
 would be without it.

TO EUROPEANS who propose visiting or
 residing in HOT CLIMATES, I consider the
 FRUIT SALT to be an indispensable necessary,
 for by its use the system is relieved of all poi-
 sonous matter, the result of eating to nearly the
 same extent, and of too rich food, as they do in a
 colder country, while so much heat-making food
 is not required in the warm climate. By keep-
 ing the system clear, the Fruit Salt takes away
 the groundwork of malarious diseases and all
 liver complaints, and neutralises poisonous mat-
 ter. Out of a large number of Testimonials, we
 select the following:—

ENO'S FRUIT SALT.
 A Gentleman writes:—"I feel quite certain, if
 your FRUIT SALT was known in INDIA and the
 COLONIES, that the sale would not be limited
 to thousands of bottles per annum, but MANY
 MILLIONS. India alone would use more than
 all England."

ENO'S FRUIT SALT.
 A M.D. (EDINB.) and M.R.C.S., L.A.C.,
 London, writes:—"I am much pleased with your
 Fruit Salt, having tried it on myself. Your
 theory and remarks are most reasonable. Having
 nearly died of Typhoid, when studying at College,
 being the only one out of sixteen who recovered,
 I mean to go in well for purifying the blood.
 Though I am sixty-three, I have not the least
 doubt it will be very serviceable to me."

ENO'S FRUIT SALT.
 A gentleman states:—"In cases of bilious head-
 aches, followed by severe attacks of fever, Eno's
 Fruit Salt has acted like a charm, when all other
 treatment failed. The day is not distant when a
 neglect of its use in all fevers and diseases result-
 ing from poisoned blood will be considered as
 criminal." See "The Stomach and its Trials"
 (Tenth Edition), for fourteen stamps, post-free
J. C. ENO, Newcastle-on-Tyne.

ENO'S FRUIT SALT.
 A lady writes:—"Everything, medicine or
 food, ceased to act properly for at least three
 months before I commenced taking it: the little
 food I could take generally punished me or re-
 turned. My life was one of great suffering, so that
 I must have succumbed before long. To me and
 our family it has been a great earthly blessing. I
 feel I cannot say too much for it. The least I can
 do is to do my best to make the Fruit Salt known
 to other sufferers. I am getting better rapidly,
 and expect to totally recover, after spending
 hundreds of pounds and travelling about for
 twelve years."

ENO'S FRUIT SALT.
 Messrs. GIBSON and SON, Chemists, of Hexham,
 say:—"Since we introduced your Fruit Salt at
 Hexham, a few months ago, we have sold upwards
 of 1000 bottles, and it gives general satisfaction,
 as customers who get it almost always recommend
 it to their friends. We have had numerous
 instances of its great efficacy in the cure of bilious
 headaches, indigestion, or stomach complaints,
 &c."

ENO'S FRUIT SALT.
 "18, Rue de la Paix, Paris, Jan. 16, 1877.

"A gentleman called in yesterday. He is a
 constant sufferer from chronic dyspepsia, and has
 taken all sorts of mineral waters. I recommended
 him to give your Salt a trial, which he did, and
 received great benefit. He says he never knew
 what it was to be without pain until he tried
 your Salt, and for the future shall never be with-
 out it in the house."
M. BERAL.

With each Bottle of FRUIT SALT is wrapped a LARGE ILLU-
 STRATED SHEET, showing the best means of stamping out
 infectious diseases, Fevers, and BLOOD POISONS, &c. If this
 INVALUABLE INFORMATION was universally carried out, many
 forms of disease now producing such havoc would cease to exist,
 as Plague, Leprosy, &c., have done, when the true cause has
 become known.

Prepared only by **J. C. ENO, Fruit-Salt Works,**
 Newcastle-on-Tyne. Sold by all Chemists.

AGENTS.—BOMBAY, BYCULLA, and POONA, Treacher and Co.;
 CALCUTTA, Batigata and Co.; AUCKLAND, NEW ZEALAND,
 Kimbrough, Prosser, and Co.; DUNEDIN, NEW ZEALAND,
 Kimbrough, Prosser, and Co.; MELBOURNE, Felton, Grimwale,
 and Co.; SYDNEY, NEW SOUTH WALES, Elliott Brothers, 112,
 Pitt-street; MONTREAL, Kerry, Watson, and Co.; CAPE OF GOOD
 HOPE, PORT ELIZABETH, G. B. Lennon and Co.

TAMAR INDIEN.—Owing to the marked
 success of this fruit-lozenge—so agreeable to take and
 universally prescribed by the Faculty, for constipation, head-
 ache, bile, hemorrhoids, &c.—Base imitations containing drastic
 irritants are being foisted on the public. The genuine op-
 eration bears the title "Tamar Indien." Price 2s. 6d. per Box.

SCHWEPPE'S MALVERN SELTZER.
 As there are now many spurious imitations of this celebrated
 Water, consumers are requested to see that every bottle bears
 labels with Name and Trade-Mark—"A FOUNTAIN."

KOUMISS, the celebrated nourishing,
 effervescent Milk-Wine, is now widely recommended by
 the Faculty as a specific remedy for Consumption, Dyspepsia,
 Heart Liver, and other Affections, &c. Medical Testimonials
 of the highest order at **CHAPMAN and CO.'S**, 10, Duke-street,
 Portland-place, W. Dose: 2 Quarts, 2s.; Pints, 1s. The Extract,
 2s., for Export.

TO CIGARETTE SMOKERS.—The
 celebrated Cigarettes manufactured by Messrs. J. F. ALLEN
 and CO., of Richmond, Virginia, for whom we are Agents, are
 manufactured from the choicest VIRGINIA NATURAL LEAF,
 and are entirely free from stems, dust, flavouring, or adulter-
 ation of any kind. Their improved manner of curing largely
 reduces the percentage of nicotine, so they can be smoked with-
 out fear of heartburn, dizziness in the head, or blistering the
 tongue which so frequently follows the use of tobacco flavoured
 with essential oils, tongue beans, or chemical substances and
 other adulterations.

Their purity, aroma, natural flavour, and taste recommend
 them to Cigarette smokers as the choicest and purest Tobacco
 that can be used. It is from the various grades of the delicately
 flavoured Virginia Gold Leaf and Sun-Cured Tobacco our
 Cigarettes are produced. Their delightful aroma and rare
 fragrance have made them prime favourites. In their manu-
 facture the tasteless French rice-paper only is used. To facilitate
 their introduction in this country, 50 and upwards
 will be supplied upon wholesale terms if sent direct to us.
 A Sample Package of 20 CIGARETTES will be sent free per
 post on receipt of one shilling in stamps. Circular and Price-
 List upon request. Address, **J. M. RICHARDS and CO.,** Great
 Russell-street-buildings (corner of Charlotte and Great Russell
 Streets), London, W.C.

DIGESTIVE LOZENGES

Manufactured from the Salts extracted from the Mineral
 Waters.

The Vichy Lozenges should be taken by those persons whose
 digestion is difficult, painful, or laborious.
 In cases of slow or difficult digestion, a few of the Lozenges
 should be taken before each repast.

The Lozenges are flavoured with peppermint, lemon, vanilla,
 rose, orange-flowers, or anisette.

All these preparations are guaranteed by the French
 Government.
 Sold by all respectable Chemists.

FRAMPTON'S PILL OF HEALTH.

This excellent Family Medicine is the most effective remedy
 for indigestion, bilious and liver complaints, loss of appetite,
 drowsiness, giddiness, spasms, and all disorders of the stomach
 and bowels; or where an aperient is required nothing can be better
 adapted.

For FEMALES these Pills are truly excellent, removing the
 distressing headache so very prevalent, depression of spirits,
 dullness of sight, nervous affections, blotches, pimples, and mal-
 lowness of the skin, and give a healthy bloom to the com-
 plexion.

Sold by all Chemists, at 1s. 1 1/2d. and 2s. 6d. per Box.

LAXORA.—The most pleasant Remedy for

Constipation.

APRIL 27, 1877.

CONSTANTINOPLE

AS IT IS

BY GEORGE AUGUSTUS SALA.

SUPPLEMENT TO THE ILLUSTRATED LONDON NEWS, APRIL 21, 1877.

DISCUSSING "WAR OR PEACE" IN A CAFÉ AT CONSTANTINOPLE.

CONSTANTINOPLE AS IT IS.

BY GEORGE AUGUSTUS SALA.

On the Seventh of October, 1802, two adventurous Englishmen, whose names, unfortunately, have not been preserved in any history of aerostation that I have read, ascended in a balloon from the plain of Dolma-Baghtché, literally the "filled up garden," the second of the many beautiful villages (the first being Fondookly) which sparkle like a rosary of rare gems on the European shore of the Bosphorus. Dolma-Baghtché is at present the site of the Winter Palace of the Sultan; and it was there, on a memorable Sunday afternoon last December, that the Commander of the Faithful granted his first audience to the Marquis of Salisbury and the *personnel* of the Extraordinary Embassy accredited to the Sublime Porte in the vain hope of unravelling a web in comparison with which the Gordian Knot was a mere "Dundreary" necktie. But, seventy-five years ago, Dolma-Baghtché was a very quiet and unfrequented hamlet indeed, whose inhabitants mainly devoted themselves to the cultivation of broad beans. The two unhappily anonymous Britons made but a very brief aerial voyage. They opened the valve of their balloon too soon, and allowed too much gas to escape; thus, after some twenty minutes' stay in the Empyrean, they were fain to descend in the suburb of Galata, the *faubourg* immediately adjoining Tophané, even as Tophané immediately adjoins Fondookly. The simple-minded Turks were, however, thrown into a state of intense excitement by the exploit of the two Giaours, although this was not the first balloon ascent which had taken place at Constantinople. So far back as 1786—only three years, indeed, after the discovery of aerostation by the Brothers Montgolfier, when the Ottoman throne was occupied by the unfortunate Sultan Abd-ul-Hamid (I hope that his namesake, the existing A. H., will have better luck with the "Moscovs" than his predecessor had), a balloon ascent had been made in the City of the Sultan, not from the outskirts thereof, but from the august Stamboul itself. The aeronaut was a Persian physician. Of his name I am ignorant; but if it did not begin with "Mirza" and end with "Khan"—the *prænomena* and *cognomina* of nine out of every ten Persians that I ever met with—I retract and apologise. The physician took with him a couple of *bostangis* as ballast—heavers and valve-string-pullers; and, making his ascent from the gardens of the Old Seraglio, he sailed boldly across the mouth of the Bosphorus to Scutari, on the Asiatic side; and, the wind carrying the balloon whither it—the wind—listed, a descent was ultimately made on the plains of Haider Pasha, a few miles inland. The expedition did not end happily; for, although the aerial travellers reached the earth in safety, and the two *bostangis* were able a few days afterwards, in a somewhat dilapidated condition, to make their way back to Stamboul, nothing was ever subsequently heard of the Persian physician. Perhaps he returned to his own country by the way of Kars and Erzeroum. Possibly he was knocked on the head by the villagers around Haider Pasha, who were orthodox Mussulmans; whereas the Persian was a schismatic of the sect of Ali. It is certain, at any rate, that the orthodox rustics tore the physician's balloon to shreds; and for aught the historian can tell the aeronaut shared the fate of his machine.

The two adventurous Britons of the year 1802 experienced a better fortune. Galata, a suburb which at present closely resembles our own Wapping, was, even three generations since, almost as densely peopled with Europeans as Pera; and the Turks of Galata forbore from maltreating the Giaours who had been courageous enough to emulate the aerial equipose ascribed by the traditions of Islam to the coffin of the Prophet. The reigning Sultan was then Selim III., a very amiable Sovereign, actuated by the best intentions, and who was virtually the first of Turkish reformers. He tried hard during his troubled reign to develop the fine arts among his subjects. He set up several printing presses in the capital; he established cloth factories and cotton-mills, and he laboured assiduously to persuade his Janissaries to wear tight trousers, *à la Franque*, in lieu of the baggy galligaskins which had been the traditional garb of the "children of Hadji-Bektach" ever since the days of the sanctified dervish their founder. We all know what the end of Sultan Selim was. The Old Turkish or True-Blue Conservative party first deposed and then strangled him. It is a way they have on the Propontis. In 1802, however, Sultan Selim had six more years of life before him. He sent for the two adventurous Englishmen, congratulated them on the bravery which they had displayed, and was inquisitive to know what impression their trip through the sky had made upon them. It is said that their reply was to the effect that never before had they beheld so ravishing a spectacle, and that "Constantinople was the most heavenly looking city on the face of the earth." I am entirely of the opinion of these two anonymous Britons. Constantinople is undeniably, from afar off, the most enchantingly beautiful city in the world; but the farther off you are from it the lovelier it looks. The modern Greeks have a saying, "*Oraia alla kaki*." The same qualification may be applied to Constantinople. She does not improve upon close acquaintance. She is Beautiful but Bad.

Can there be any circumstances, I wonder, in which an author is justified in publicly quoting from his own works? I have done in my time so many things which the severer among literary critics would qualify as unjustifiable that the question I have asked may be deemed, in my own particular case, practically superfluous. "Prepare for rhyme:—I'll publish right or wrong;" thus did Byron confidently conclude his exordium to "English Bards and Scotch Reviewers." Fools were his Lordship's theme, and satire was appropriately his song; but my theme is only CONSTANTINOPLE AS IT IS; and the quotation on which, without more apology, I am about to venture, will be couched in the very baldest prose:—

"I don't exactly envy, but I sigh for the lot of those who possess imagination, for I have none. If I had I should be contented with the ideal and imaginative garments of a city, without meddling with those coarser, plainer habiliments,

which to dull realist eyes they wear. I should be content with the cities that poets sing, that painters limn, that rapturous tourists describe, but for this infusion of realism in the nectar of ideality, which shows them to be very different and changed.

"Let me take a city—Constantinople. What a holiday dress she wears in Mr. Thomas Allom's pictures, in the pages of Byron and Hope, in Mr. Lewis's lithographs, in the eyes even of the expectant tourist on board the Peninsular and Oriental Company's steamer, who, disappointed with Naples, Malta, and Athens, opens wide his eyes with wonder, admiration, and delight when he first surveys the City of the Sultan from the Golden Horn, when he sees glittering against the blue sky the thousand minarets, the fairy-like kiosques, the solemn dome of Saint Sophia, the shining cupola of the Mosque of Achmet, the Seraglio, the arsenal, the palaces of the pashas, the grove of masts of all nations, the sparkling shoals of caiques, with the gaily-dressed boatmen. Let us enter into the tourist for a moment. He is a native, we will say, of Clapham; Stockwell was his *alma mater*; Camberwell resounds with the fame of his erudition. He is well read in that curious repertory of books that go to make up in England the usual course of reading of a young man in the middle classes of society. He is decidedly imaginative, passably prejudiced and opinionated, after the manner of freeborn Englishmen, and is the hope and joy of a wholesale house in the Manchester line, and in Bread-street, Cheapside. We will call him Moole.

"A few moments," cries Mr. Moole, 'a few trifling formalities at the Custom House, and I shall land in the city of Constantine, the Stamboul of the Muslim, the Istambol to which the noble Childe fled, leaving behind him at Athens his heart and soul in the care of the Maid of Athens—now Mrs. Black. I shall pass by the gates of the Seraglio, where the heads of rebellious pashas scorch in the noontide sun; where fierce eunuchs guard the sacred approaches: but all their glittering blades will not prevent me from revelling in imagination amidst the fragrant gardens of the Seraglio, in the soul-entrancing glances of the gazelle-eyed Gulbeyaz, Dudus, Gulnares, and other lights of the harem. I shall listen to the dulcet notes of the mandolin, hear the pattering fall of perfumed waters, catch heavenly glimpses of dark-eyed beauties behind lattices, puffing lazily at the aromatic chibouque, or perchance become an unwilling witness of some dark and terrible tragedy—the impalement of a Grand Vizier, or the sack-and-salt-watering of some inconstant houri of the Padiasha. A few moments,' this enthusiast from the Surrey Hills continues, 'and I shall pace by the sacred mosques; and, entering them, gaze at the fretted roofs, and the outspread carpets checkered with worshippers, with their faces turned towards Mecca. I shall see the stately Moslem career by on his Arab Barb, wrapped in his furred pelisse, his brows bound with his snow-white turban, his glittering *handjar* by his side, his embroidered *papouches* on his feet. I shall stroll through the crowded Bezesteen, where the rich and varied wares of the Oriental world are displayed. Courtly Armenian merchants, with coal-black beards, will invite me into their cushioned warerooms, present me with coffee and pipes, and show me gorgeous wares and intoxicating perfumes. Anon, the clamour of military music heralds the passage of a legion of Janissaries, clad in 'barbaric pearl and gold.' Anon, I stroll into a coffee-house, where a Greek storyteller is relating the legend of the 'Fisherman and the Geni' to the Capitan Basha, the Kislar Aga, the Bostangi-bashi, and the Sheikh-ul-Islam. Now, a horde of dancing dervishes whirl fiercely by; now, a band of Almé dancers remind me, in their graceful poses, of Herodias, Esmeralda, and Mdlle. Cerrito. Now, a black slave invites me to the splendid mansion of a venerable Barmecide close by, who—after making believe to eat, pretending to wash his hands, and to get drunk with visionary wine—entertains me with a banquet of pilaffs, and stewed kid, stuffed with pistachio nuts, washed down by wine of Cyprus, and sherbet, cooled with snow. And now, oh! joy of joys, I espy a pair of black eyes circled with henna, fixed on me with a glance of tender meaning, through the folds of a silken veil. I see a little fairy foot peeping from loose Turkish trousers: the vision disappears—but an old woman (the universal messenger of love in the East) accosts me mysteriously, and presents me with a bouquet composed of dandelions, bachelors' buttons, and the fragrant flower known as 'cherry pie,' all of which say as plainly as the language of flowers (known at Stamboul as at Stockwell) can speak: 'Meet me at eight this evening at the secret gate opposite the third kiosque past Seraglio point.' What tales I shall have to tell when I get back to Clapham.

"Land, if you like, at Pera, the European suburb. Plenty of plain clothes here. A mangy hill spotted with leprous houses and infested by scurvy dogs. The English Embassy, looking like an hospital; the Russian ditto, looking like a gaol. A circus for horse-riders, and one or two ramshackle hotels, claiming decided kindred, in the way of accommodation and general aspect, with the fifteenth-rate foreign houses in the back settlements of Leicester-square; and in respect to prices, with the Clarendon or Mivart's. A population strongly resembling that of London, when Doctor Johnson affirmed it to be the "common sewer of Paris and of Rome." Dirt, dead dogs, oyster-shells, dust; no pavement, no lamps, no gutters, no sewers. Houses that would have rejoiced the heart of that Chinese sage who invented roast pig, for they are delightfully easy to be burnt down, and are being burnt continually. Such are the plain clothes of Pera. Land at Galata, Mr. Moole; you come across more dogs, live and dead, more dirt, oyster-shells, dust, and leprous houses. Land at Scutari, and ask for sewers, lamps, or gutters, and you shall find none. Instead of them you shall find unwholesome streets; or, rather, alleys resembling the worst parts of Church-lane, St. Giles's, dovetailed on to the Rue aux Fèves in Paris, and the Coom in Dublin. Ask for horrible smells, infected hovels—where the great adjuster of the population, the plague, hides from year to year, every now and then leaping from his hole to take the census with a sword: ask for these and they will start up by hundreds. Ask for the stately Moslem, and you shall

be shown a fat man with a sleepy expression of countenance, and looking remarkably uncomfortable in an ill-made European coat and a red skull-cap. Ask for the Bezesteen, and you shall elbow your way through a labyrinth of covered lanes, giving not a bad idea of Rag Fair, the Temple in Paris, and the Soho Bazaar, squeezed into Newgate Market. Ask for the dancing Dervishes, you shall see a set of dirty old ragamuffins executing lewd gambadoes for copper paras. Ask for Saint Sophia, and you will be enabled to speculate on the whitewashed mosaics, and the tawdry gimcrack lamps and carpets, and eggs strung on strings. Ask for the lights of the harem, and you shall meet a succession of black silk pillow-cases, capped with white ditto, shod with yellow shoes down at heel, shuffling through the lanes, or jolting about in crazy carts drawn by bullocks. Ask for the Janissaries, and you will be told that they were all massacred on the plain of the Atmeidan more than thirty years ago, and in their stead are slouching louts of peasants in uncouth and mongrel European costume. Peep slyly into a harem (which you will not succeed in doing, my friend), and you will see fat women, with coarse features, lolling wearily on carpets, in rooms with bare walls, and the principal furniture of which is composed of French clocks. Ask for Stamboul the romantic, the beautiful, the glorious, the Constantinople of the last of the Paleologi, the Byzantium of the Greeks, the Istambol of Bejazet and Mohammed the Conqueror, and you shall be told that this dirty, swarming, break-neck city is Stamboul. You are a young man of a strongly imaginative temperament, Mr. Moole, I therefore advise you to go on board the Peninsular and Oriental Company's steamer again as fast as you can; from whose deck you may again survey the enchanting and superb prospect of the city, and solace yourself with engravings after Messrs. Allom and Lewis. These will be a great consolation to you when you are frying in quarantine on your road home, and you may conjure up quite a splendid court-suit for Constantinople, and forget all about its plain clothes."

It has not been, believe me, through any paucity of materials for the task before me, or through any desire to save myself trouble, that I have disinterred from an old volume of my perpetration the preceding sketch of the City of the Sultan, which forms part of an essay called "Cities in Plain Clothes," one of a series of papers bearing the title of "Looking at Life." This particular essay originally appeared in *Household Words*, just five-and-twenty years ago; and its solitary claim to resuscitation, now, lies in the fact that in the year 1852 I had never set eyes upon Constantinople. I hoped to go there some day; but the days, and the months, and the years rolled on without my being able to fulfil my desire, until in the second week of November, 1876, I was dispatched at six hours' notice to Stamboul, via St. Petersburg and Odessa. I abode during two most exciting but most unpleasant months in the metropolis of the Ottoman Empire; and I assure you, in all seriousness and all sincerity, that I can perceive but very little material difference between the Constantinople which I saw in my mind's eye a quarter of a century since and the Constantinople which I beheld with my own corporeal organs of vision last winter. Substitute typhus and cholera for the plague, eliminate the allusions to the annoyances of quarantine, and modify the acerbity of the remarks touching the ramshackle hotels and the dogs (which last I found on intimate acquaintance to be very good fellows), and the imaginary picture which I limned in '52 might be almost convertible for the real draught which I am striving to make in '77. Perhaps it had been my fate in a previous and forgotten state of existence to flounder, for my sins, in the mud of Pera, to be bitten by the fleas of Galata, to be cozened by the hack-drivers of Scutari, and to encounter the smells of Stamboul. Perhaps, always for my sins, Fate sent me back again, after the evolution of innumerable ages, to the same mud, the same hungry insects, the same extortioners, and the same evil odours.

It is necessary for your proper comprehension, esteemed reader, of the wondrous city panoramically unfolded before you that I should be briefly historical and topographical touching Constantinople, which was founded A.D. 330 by Constantine the Great, partly on the site of the ancient Byzantium. The astonishing metropolis awakens, with the single exception of Rome, more interesting associations than does any other city on the surface of the globe. She dominates three seas: the Euxine, the Propontis, and the Mediterranean—for mariners make no account of the *Ægean* or the Sea of Marmora, and in a strictly nautical sense the southern side of the promontory on which Constantinople proper stands is washed by the waters of the *Mægoeios*. The City has three names—Byzantium, Constantinople, and Stamboul—names conferred by the Greeks, the Romans, and the Turks respectively, and it has three distinct and startling histories. That of the antique Byzantium is, it may be frankly confessed, sufficiently mythical. Antiquity, so I believe a certain Livy has cogently remarked, has always been desirous to blend the affairs of mortals with the actions of the gods, in order to give an appearance more venerable and more august to the origins of Empires. Thus fables and legends—that is to say, fables—may enter very largely into the early history of Byzantium; but I suppose that, from a gazetteer's point of view, it may be allowable to assume that the city was founded B.C. 656, by a Megarian colony, led by a certain Byzas, who having been, in American parlance, "prospecting for an eligible location" round about Greece, consulted the oracle of Delphi on the subject. The priestess of Apollo was good enough (doubtless for a consideration) to inform Byzas that Fate had decreed that he should build him a city on the shore over against the "Country of the Blind Men." The "tip" was not a very "straight" one; but to the mind of the mythical Byzas it seemed clear enough that the "Country of the Blind Men" was Chalcedon, once an important city on the Asiatic shore, but now a miserable little hamlet called Kadikoi or Cadi-keuy (the village of the Judge), to the south of the suburb of Scutari. The Chalcedonians had been derisively dubbed blind men by the Pythoness because they had not had the discernment to perceive that, not Chal-

cedon, but the triangular promontory, with its base resting on Europe, with its apex facing Asia, and its sides bounded to the North by the Golden Horn, and to the South by the Sea of Marmora, was precisely and above all others where a city which was to play a great part in the world's history should be built. That promontory, dotted, like Rome, with Seven Hills of no great altitude, is now Stamboul, the home of the Sublime Porte and the seat of government; but, unless I have been grossly misinformed, there are just now quite as many Blind Men in the triangle whose base rests on Europe as there were in the Chalcedon of old. The Golden Horn, that *cul de sac sublime*, as the enthusiast French tourist called it, plays the same part with regard to Constantinople as the East River plays to New York; while the Bosphorus, with no great peril in tracing the parallel, may be compared with the Hudson. Indeed, I scarcely know which is the most enchanting:—the canal of the sea once threaded by Jason in his quest for the Golden Fleece—there is a legendary reminiscence of his expedition in the mythical city of Chrysopolis, the opposite neighbour of Byzantium—or the sparkling stream immortalised by memories of Dolph Heyliger and Rip Van Winkle. Nor, perhaps, should I quarrel with an American who, on the whole, preferred a residence at Kaatakill or West Point to one at Therapia or Buyukderé.

The Golden Horn (*chrysokeras*: cornucopia) is a creek which forms the port of Constantinople, and one of the most picturesque harbours in the world. Its waters, of course, are salt; but the Cydaris, the Lycus, and other fresh-water streams flow into it, thus attracting shoals of fish, for the most part small in size, but in their succulence fully bearing out the proverb that "Little fishes eat sweet." It seems to be the "thing" for a well-to-do Mussulman to walk about the lanes of Stamboul just before sunset with a bundle of freshly-caught fish, no bigger than sprats, hanging by a string to one of his wrists. It impresses his neighbours with the conviction that he is going to have something nice for supper after evening prayers; and, for aught we can tell, Jason and his Argonauts may have acted in a similar manner in the mythical ages some centuries before the arrival of Byzas and his Megarians. It was at Anadolu Hisar, I believe, on the Asiatic shore of the Bosphorus, that Pollux administered that historic thrashing to Amycus, King of Bithynia; and it was also on this side of the sea canal that King Phineas lived—the guilty yet unfortunate Phineas who was so fearfully tormented by the Harpies. During the months of December and January last I met innumerable Harpies both on the European and the Asiatic banks of the Bosphorus; but they were of the male sex. They wore fez caps and black frock coats with stand-up collars, and some of them were called Pashas and others Beys. They were perpetually demanding what in the Harpy language is termed *bakshiah*. Before I take a final farewell of the mythical Byzas I may just mention the tradition that ere he could establish his infant settlement his territorial rights were contested by a Barbarian chief whose name was—well, I cannot precisely remember it; but it was neither Romanof nor Ignatief. The Barbarian was a Scythian, who with his savage hordes had crossed the Danube to see what he could find in the way of "loot" in Macedonia and Thrace; and so, you see, the celebrated Eastern Question is not by any means an affair of the day before yesterday. Last November, while inspecting the marvels of the Palace of the Hermitage at St. Petersburg, I was shown, in the museum of precious rarities brought from Kertch in the Crimea, a wondrous vase in gold repoussé work, found in the sepulchre of the ancient Kings of Scythia. In the bas-reliefs covering the surface of this vase there were numerous little figures of bearded Scythian warriors plundering, burning, destroying, and cutting peoples' throats in the liveliest possible manner. Where, I wondered, had I last seen the twin brethren, as it seemed, of those bearded warriors. Why, in the streets of St. Petersburg and Moscow, and in the log huts of Russian villages. The Scythian warrior shaved, washed—not very much washed—and tightly girt and strapped up in a military uniform, presents no marked dissimilarity to any other soldier on the continent of Europe; but suffer him to grow his beard again, allow him to resume his fur cap and his sheepskin *touloupe*, and he once more becomes the twin brother to the warrior on the vase in the Kertch museum. Touching the legend, I think that it runs to the effect that Byzas encountered the Scythian Chief in single combat, and slew him: a good omen for the Osmanli in the struggle which politicians declare to be impending; only omens, save when they occur after the event, have a sad knack of disappointing people.

I decline (in the interests of my readers) to say anything more about Byzas, or about the designs of Philip of Macedon on the Dardanelles and the Hellespont, or even about the siege of Byzantium by Septimius Severus A.D. 196. Nor will you be able, I should say, to suppress a soft sigh of satisfaction when I hint that, my business being with Constantinople as it is, I have not the slightest intention to enter into any discussions concerning the Emperor Justinian or the Empress Theodora, or to irritate you with any allusions to Leo the Isaurian or Isaac Comnenus. I have Ducange on my shelves; I have got the fourteen mighty volumes of the learned Von Hammer; and a walk of two minutes and a half would take me to Great Russell-street, Bloomsbury, where, in the Museum reading-room, I could consult Le Beau's enormous "History of the Lower Empire," Tillemont's colossal compilations, and, indeed, whole Pelions upon Ossas of dryasdust literature pertaining to the history of Constantinople. I mean to spare you these inflections; nay, so tender am I of your patience that I commenced as I intend to terminate this task, without any resort to Murray's admirable and generally accurate Guide-Book. I may at the same time be permitted incidentally to notice an historical curiosity of the oddest kind in connection with the city on which I am discoursing—namely, that it was through the merest

accident that Constantine the Great when he had determined to remove the seat of Empire from the shores of the Tiber fixed upon Constantinople as the new capital of Rome and of the world. In Rome itself twenty Emperors had been assassinated in less than fourscore years. Constantine was of opinion that the list of victims might appropriately close with Probus, and had no ambition to be the twenty-first. Where was the younger and innocent sister of old and blood-stained Rome to be found? Byzantium was suggested to his Majesty; but Constantine, a very long-headed Prince, would not, in the first instance, hear of Byzas' old colony on the Propontis, which was then, as it still is, in a chronic state of peril of being attacked by the Dacians and the Pannonians (they at present reside in Moldavia and Wallachia), by the Sarmatians and the Scythians (their modern address is in Russia and Poland), by the Visigoths and the Vandals, who were hanging about the shores of the Black Sea, by the Goths, who held the peninsula of the Chersonese, and by the Herulæ, who were getting somewhat tired of damp quarters in the marshes surrounding Lake Mæotis; to say nothing of the Bulgarians, who were quite as troublesome in 330 as they are in 1877. To tell truth, there was beginning to blow from the Thracian Bosphorus that very ugly sirocco of Barbaric invasion which ere long was destined to burst into an uncontrollable tempest of invasion against the moles of Tarentum, of Brindisi, and of Ostia, and to carry the whirlwind of desolation to the very gates of Rome herself. Constantine dismissed the notion of Byzantium from his imperial mind, and fixed as his future capital on the rich and smiling city of Arles in Narbonne Gaul. Arles seemed in the outset to be everything that could be wished. Situated on two beautiful rivers, with a delta like that of the Nile, communicating, by means of the Rhône, with the sea, and with the provinces of the interior as far as Lyons and the country of the Allobroges, and even with the far-distant district whose vineyards are bathed by the Arar, the calm and limpid river so still in its loveliness that Tacitus remarks of it *nesciunt unde fluit*—Arles, with its fertile champaign and its exquisite climate, and with the stately cities of Nîmes and Orange in its near neighbourhood, would have made a magnificent Rome the Second. The Emperor marked down the Provençal city at once for his new capital; and the architects and sculptors who had built and decorated—not in the very best taste, it must be owned—the Arch of Constantine at Rome were dispatched post-haste to Arles to fit it for the occupation of the Master of the World. Temples, basilicæ, amphitheatres, circuses, quays, were rising on every side, and the Emperor undertook in the year 329 a trip to Arles to see how the works which he had decreed were progressing. Unhappily for the immediate prosperity of the Arlesians and the future peace of the world, it was in the month of March that Cæsar paid his decisive visit to the Narbonne. Hitherto he had only been in this part of Gaul in midwinter; and those of my readers who have spent the cruel months of November, December, and January in genial Cannes, in sunny Nice, or in mellow Mentone, know what winter in the south of France is like. Now, Arles in March is, to a foreigner, next door to uninhabitable. There blows wellnigh without cessation a dreadful north-west wind, ten times more terrific than the *mistral* of the Riviera di Levante. That eminent geographer Strabo had visited Arles before the time of Constantine, and had placed on record some horrifying stories relative to this north-west wind, which he named the *Bis*. He accused the *Bis* of uprooting trees, of sending chariots and horses flying through the air and blowing foot-passengers into the Rhine, of tearing the teeth from the gums of elderly senators and fluttering in a most unmannerly manner the *stole* of the ladies. I have heard in my time that eminent geographers are not always exempt from a weakness for exaggeration; and Strabo was a Greek, one of a people notorious from time immemorial for their addictiveness to amplifying things. The modern Greeks devote no less than seven lines in their standard lexicon to the definition of the *ezupodeterion*, which is merely a bootjack. Thus, Strabo may have painted the *Bis* in somewhat too gloomy hues; but at the same time it is certain that Constantine was so unmercifully treated by a nor' wester during his stay at Arles that he abandoned the idea of elevating the city to the rank of a metropolis. How he found the winds on the Yorkshire wolds history has not told us. Eventually he reverted to the Thracian Bosphorus project, and Byzantium became Constantinople. It is, I have always thought, a sad pity that this Roman Yorkshireman did not fix on York itself, or on London, as the site for his capital. Had he done so the Roman Empire might have remained extant to this day; a sensible Roman sedility would have maintained through the ages, the embankment of both shores of the Thames, and Lambeth and Battersea would not be flooded at each recurring spring tide. Roman good taste would have prevented the erection of such architectural monstrosities as the National Gallery and the Duke of York's Column; and, to crown all the advantages accruing from the shifting of the Imperial scene from the Bosphorus to the Thames, there would never have been a city of Constantinople—Byzantium would probably have been comfortably knocked to pieces by the barbarians as Antioch and Alexandria had been, and there would never, consequently, have been an Eastern Question. How much rapine and bloodshed, how many dreary Parliamentary debates and tortuous diplomatic despatches, how many windy leading articles and gushing special correspondents' letters the world might have been spared, if Constantine the Great had remained in England, or had the North-Western *Bis* blown with a little less asperity at Arles.

Looked at on the map, the promontory on which Stamboul proper stands at once strikes the spectator as bearing a curiously close resemblance to the head of an ox. There is no need to enter into the vexed question of the etymology of Bosphorus, but there, with his head pointing to the channel between the two seas, is *Bos* or *Bons* sure enough, in sharply

angular profile. The animal's muzzle is obviously at the kiosque, of marble, just below Seraglio Point; the gardens of the Winter Harem forms the nostril; the eye is at the mosque of Selim I.; the ear is at Egri Kapu, by the ancient palace of the Blachernæ; the curve of the mouth terminates with the gardens of Vianga Bostani; and the point of the dewlap is at the ruinous mole of Jedd Kule Burun. Deem not the simile which I have traced to be farfetched. If Stamboul be not shaped like the head of an ox, the Italian peninsula is not shaped like a boot.

On the principle hinted at by Shakespeare of clouds which are dragonish, and of vapours which assume the forms of bears or lions, it would be easy to liken the outline of the Asian shore, opposite Stamboul, to the profile of the countenance of a somewhat chubby female with a sharp nose and a double chin, and wearing a precious diadem on her hair in the shape of the suburb of Scutari. And in like manner, Pera, with the plain of Cassim Pasha uppermost, and Galata at the rounded point, will present an unmistakable similitude to a heart. These topographical accidents will scarcely fail to be impressed on your attention should you have the good fortune to be enabled to survey the city of the Sultan from the car of a balloon. There are, it is true, half-a-dozen points of vantage in the capital whence you may obtain views of a more or less bird's-eye nature. Conspicuous among these is the gallery at the top of the Genoese Tower at Galata. The summit of the Tower of the Serrakierat, or War Office, in Stamboul is another very excellent point of espial; and the best distant prospect of the city and its surroundings is undeniably from the Hill of Boogoorloo, which crowns the heights behind Scutari, and whence a wondrous panorama is stretched out, embracing not only Stamboul and Pera, with both shores of the Bosphorus, but likewise the Sea of Marmora, to the spectator's left, and the Black Sea to his right. You must take the statement as to the Euxine upon trust. I am very short-sighted; and when I surveyed Constantinople from the Hill of Boogoorloo I confess that I could no more distinguish the Black Sea in the extreme distance than when I am in England I can see Stoke Pogis churchyard from the Paddington terminus. But Costi Fenerli, my very honest, intelligent, and faithful Greek dragoman (you may hear of him at the Hotel de Byzance, in the Grande Rue de Pera) assured me that the Black Sea was visible to the naked eye *là giù*—"over there;" and so I daresay that it was, somewhere in the *ewigkeit*.

But the Balloon is, after all, the thing. Believe the expert. The only difficulty lies in procuring an eligible aerial machine from which to inspect the marvels of the Ottoman metropolis. An indiarubber bath, a camera obscura and portable dark room, and an harmonium are, nowadays, by no means uncommon items in the *impedimenta* of a tourist; but a balloon, even when uninflated, is perhaps somewhat too bulky an article to be carried about as personal baggage; while, on the other hand, there is no Aeronautical Society in Stamboul, and the city is rarely visited by wandering Nadars or Coxwells. An ingenious traveller might, at a pinch, perhaps, construct an aerial makeshift by sewing some waterproof sheets together to form the bag, and using his bath as the car of an improvised balloon; but, pending the completion of such an arrangement, we must be content with an imaginary "Nassau" or "Cremorne." From the car, then, of this ideal machine, look down upon the peerless city, or rather on the three cities of Stamboul, Pera (with Galata), and Scutari, separated from each other by the blue Propontis and the glittering Chrysokeras. Look down upon the history of a world—a history full of wars, seditions, insurrections, rebellions, conflagrations, massacres: so many of the last, indeed, that I should not wonder if, in the end, the dazed eyes of your memory "saw red," even as the "Fille Elisa" saw red in M. de Goncourt's latest and most hideous novel, and if, to your mind the blue Propontis and the glittering Golden Horn seemed to be running only gore, of a dull purple. And for all its dreadful record the Beautiful, Bad old place—as fair as Theodora and as wicked—looks so peaceful and smiles so innocently in the midst of her gardens full of cypresses and almond trees! She seems to be calmly conscious that, naughty and even depraved as she has been, the world cannot do without her yet awhile. Still she remains the Caravanserai of the East, and the object of the envious greed of the Northern and the Western nations. Every European Power would like to possess Constantinople. Every Power is equally aware that the exclusive possession of the city is an impossibility; and so the Powers content themselves with mutually snarling and showing their teeth, and in saying to each other, "You shan't have it." Not long since, in Constantinople itself, the gist of the entire Eastern Question was, to my thinking, compressed within the compass of a nutshell by an intelligent American gentleman with whom I was conversing. "You have seen"—thus he put it—"three or four dogs fighting together for a bone." I replied that I had more than once beheld such a spectacle. "Did you ever see the bone fight?" he continued. I answered that the phenomenon of a pugnacious bone was unknown to me. "Well," he concluded, "*Turkey's a bone that fights*."

Look down from your balloon and acknowledge that in comparison with this Empress City Palmyra, Ephesus, Nineveh, Babylon even, were but very "one-horse" places, and that Venice herself—all Queen of the Adriatic as she is proudly hailed—is, side by side with Byzantium, only to be ranked as some pert little chambermaid in one of Goldoni's comedies by the side of Ristori, grandiose and terrible in Medea. Look towards the Propontis from the Tower of Belisarius to the Kiosque of Seraglio Point. Between the boundaries formed by that angle you shall behold, bristling with minarets and studded with cupolas, the mosques of Mahomet II., of Soliman the Magnificent, of Achmet, and of that Bayazid whom we call Bajazet. You shall behold the ancient Hippodrome, now the Turkish At-Meidan, where, what with the slaughter in the seditions between the green and blue factions of the circus under the Lower Empire—

what with religious tumults and the periodical insurrections and ultimate extermination of the Janissaries, enough human blood has been shed to float ten times the number of ironclads that Hobart Paasha is manoeuvring just now in the Euxine. Look, there is the Agia Sofia, the erst Christian fane, the now Turkish mosque, hard by the Palace of the Cæsars. Irony of fate! The Palace of the Cæsars has become the Old Seraglio, which you see yonder, with its sombre courtyards, its jealously-latticed pavilions, its gardens thick planted with mysterious thickets and gloomy groves of cypress, and its huge gaps and desert places caused by terrific conflagrations, the ruins caused by which have never been removed by the apathetic Osmanlis. The Old Seraglio, they reason, perchance, will last their time. Meanwhile, peering down on the dusky domes once tenanted by the Grand Turk, his splendid Court, and his innumerable sultanas, but now mainly deserted, and on the masses of crumbling ruins, given up to be "a habitation for bats and dragons," you may, if your fancy take a gloomy turn, picture to yourself all these cupolas and pavilions as hung around with impaled human bodies, as being corniced with severed human heads. Could your eye dive into the old halls of audience you might imagine the cushioned divans to be covered with the skins of slain Grand Viziers and stuffed with the ensanguined tresses of murdered Odalques. You might hear agonised lamentations and shrieks in vain for mercy among the tufted cypresses and the bushy thickets of roses and almonds. Don't think that I am launching into fine writing. Nor our Smithfield nor our Tower-hill, nor the Champ de Mars nor the Place de la Concorde in Paris, can match with the old Seraglio as a human *abattoir*. It has been the grandest, the most historical, and the most horrible slaughter-house in Europe. The modern Turk is, no doubt, the nicest of nice gentlemen. He roars as mildly as a sucking dove; he has abolished decapitation, the bowstring, the pale, and the bastinado; and it was from a balcony of one of the bureaux of the Sublime Porte, looking towards the gardens of the old Seraglio, and the blackened ruins of the last conflagration, which took place in Abdul Medjid's time, that I heard, one pouring wet afternoon last January, the Grand Vizier, Midhat Paasha, proclaim, with all imaginable pomp and ceremony, a brand new and essentially liberal Constitution for the Ottoman Empire. It was the Old Turk who was a barbarian and a butcher. The new or Constitutional Turk is a very sweet youth—so sweet, indeed, as to make me fearful that he will melt, some of these fine mornings, in Somebody's mouth.

From Seraglio Point your eye should follow the long curve of the glittering Golden Horn, fringed on the Stamboul side by mosques and palaces, and on the opposite shore by the prodigious premises of the dockyard and arsenal, by the Naval Hospital and the Buildings of the Admiralty, by the village of Haakeny, and which extends to the rounded summit of the creek where, a little inland, stands the Mosque of Eyoub or Job, where each new Sultan is girt with the sword of Othman, and access to which is rigorously forbidden to Giaours. The Jewish quarter of Constantinople is on the dockyard side; the old Greek quarter, the famous Phanar, sometimes called Fanal, is on the Stamboul shore. There remains still the palace of the Greek Patriarch; and here, over against the palace aforesaid, Gregory the Greek Patriarch was hanged by order of Sultan Mahmoud II., more than fifty years ago. During the troublous time of the Hellenic struggle for independence, many thousands of the Phanariote Greeks were murdered by the Turks; and the Phanar has been since that period rather a deserted and ghostly-looking quarter, the richer Greeks now preferring to live in Pera and to have their country houses on the Bosphorus. I should say that house-rent in the dim lanes of the haunted Phanar was cheap. In every other quarter of Constantinople it is extortionately dear. Behind the mosque of Eyoub you can make out green hills, cemeteries thickly planted with cypresses, amid the deep masses of which gleam the white marble headstones of defunct True Believers—headstones the tops of which are carved into the images of pumpkin-shaped turbans. Then allow your eye (not yet wearied, I trust) to pursue the dockyard line of the Golden Horn until it reaches the swarming and noisy maritime suburb of Galata. Ere you reach this, you have passed the Port of War, where there are training-ships, and barracks, and cadet schools, and where lie the Sultan's splendid fleet of ironclads, when they are not at anchorage in the Bosphorus or cruising in the Black Sea. You have passed the Port of Commerce—a forest of masts and funnels—full of merchant-ships and steamers from any harbour upon earth, and the crews of which (somewhat too apt, as they are, to land at Galata, and to get tipsy at the thousand-and-one grog-shops of that unsavoury suburb) sometimes give the consular courts of their respective nations a vast amount of trouble. For it is one of the anomalies with which, as thick as pease, Constantinople—and, indeed, all Turkey—is sown, that Franks or Europeans, not being Ottoman subjects, are amenable, in virtue of certain medieval treaties known as the "Capitulations," not to the laws of Turkey, but to those of the country of which they are natives. We maintain, for example, a British Consular Court and a Consular Judge at Constantinople, exercising, under Acts of Parliament and Orders in Council, wellnigh plenary powers. The Judge of this tribunal, which is situated at Galata, deals with civil as well as criminal cases. You can get a divorce or a judicial separation, you can have a will proved or a company wound up, and you may go through the purifying process of bankruptcy in this most accommodating court; and moreover, if you be a sailor who has taken too much *raki*, his Honour the Judge is empowered to reprimand or to fine you. If you have deserted your ship, he can send you to gaol—the Consular prison is conveniently close at hand—nay, in graver cases, say of burglary, or forgery, or murder, he can sentence you to a long term of penal servitude, and even to death. The first-named punishment may be undergone in the Consular gaol, a carefully and humanely conducted place of confinement, but badly constructed, and in winter-time cruelly cold. I have seen a forger working at the crank there; but capital sentences on British subjects are not

carried out at Constantinople. The culprit is sent to Malta to be hanged.

Rounding the point of heart-shaped Galata, in the rear of which loom the heights of Pera, you come to the colossal Artillery barracks and Ordnance establishment of Tophané, the buildings of which follow the east curve of the peninsula, where the Bosphorus begins. There is an enormous cannon foundry at Tophané, several yards for caïque or boat-building, a pipe-bowl manufactory, and several other objects of interest. Here, too, should you prefer a lightly dancing and elegant but somewhat "risky" caïque to a crowded, malodorous, but tolerably safe steamer, you may hire a barque to convey you to Scutari, the Chrysopolis or Golden City of the ancients. It is somewhat irritating, if one happens to be a holder of "Turks," to be reminded of the number of places in and about Constantinople that bear an auriferous sound. There is the Golden City or Chrysopolis; there is the Golden Horn or Chrysokeras; there are the Dardanelles or Hellespont, which the fair Hellè is supposed to have forded on her golden-fleeced ram; and at the northern *embouchure* of the Bosphorus there are the Symplegades or Cyanean rocks, among which Admiral Jason, cruising in search of profitable adventures, was so nearly coming to grief. There are Golden Gates and Golden Towers galore in Stamboul; but, alack! all the precious metal in its substantial form seems to belong to the mythical age. Turkish *caimis* or "shin-plasters" are a very poor substitute for King Croesus's shining dross.

Leander's Tower stands, like a sentinel, in front of Scutari, which has been poetically called the "Peristyle of Asia," for from here the Government Tartars or couriers journeying into Persia are accustomed to start, and here the Sultans of old used to hold a final review of their troops ere they commenced their expeditions to the Euphrates or the Taurus. Sultans, in old times, went very far indeed from home. There is, at the same time, something very fascinating to the imagination in the contemplation of this suburb of Scutari, which possesses, moreover, a melancholy interest to all Britons as being the site of the English burial-ground, a beautifully planted and admirably kept cemetery, close to that hospital made famous to all time by the labours of FLORENCE NIGHTINGALE, and which has been celebrated in Longfellow's exquisite verses. Few can read, I think, with dry eyes the noble couplets telling of the "Lady with the Lamp" who will stand in the Great History of the Land, and of the sick and wounded Soldiers who raised themselves on their pallets to kiss her shadow on the wall as she passed. The bodies of some eight thousand Englishmen moulder peacefully in this graveyard. I fancy that the remembrance of their deaths might moderate the frenzy of the politicians who seem bent on hounding England on to a fresh war with Russia. Surely those politicians must be mainly young men, or they must have very short memories. I remember the episodes of the Crimean War as though they had happened yesterday, for then, as now, I was earning my daily bread by literature and journalism; and the war brought me every day fresh materials for my pen. I was within an ace in 1856 of going to Sebastopol; but I went to Russia instead. Can you not recall, you who are middle aged, and whose memories are good, those two miserable years between the fight at the Alma and the fall of the Malakoff? Do you remember the Ghost's Derby Day of 1855? Do you remember when, on the Cliff at Brighton and the Marina at St. Leonard's, you could scarcely walk ten paces without meeting groups of ladies and children clad in deepest mourning for their fathers, husbands, brothers, sweethearts, slain in that wretched Chersonese, or who had sickened and died in the cheerless wards of the Scutari Hospital? Are we to have those years of private agony and bereavement, of public blundering and mismanagement, over again? I suppose so. Glory is a very fine thing. I am only a *pékin*, a civilian, and I know nothing about Glory; but I confess that my blood runs cold, and that my heart sickens, when I hear politicians pertly prating about the "arbitrament of the sword," and "war clearing the atmosphere," and so forth. I never met Glory yet, and I don't know what he or she is like; but I have met War face to face half a dozen times in as many countries. I have looked into the whites, or rather the crimsons, of his eyes, and I have gazed upon the Sisters who follow him wheresoever he goes. They are Three Sisters, and their names are Rapine, and Disease, and Death. This is, of course, a miserably craven and spiritless way of looking at War. I cannot help it. I have seen only War's madness and wickedness, its foulness and squalor. To me it has represented nothing but robbery and profligacy, but famine and slaughter; and I can but think that if the warlike politicians were to witness just half an hour of actual warfare as I have witnessed it, in America, in Italy, in Mexico, in France, in Spain, their martial ardour would cool down a little, and they would not be quite so prompt to blow the bellicose trumpet. It is pleasant, meanwhile, for me to consider Scutari as the "Peristyle of Asia." From it branch many roads well known, you may rest assured, to the Tartar couriers. Whither tend those roads? To places the names of which should make your ears tingle with delight. To Bagdad and Ispahan, to Damascus and to Bassora. Scutari is something more than the peristyle of Asia. It is the threshold to the palace of the Good Caliph Haroun Alraachid. It is the opening page of the Arabian Nights.

But it is time that we descended from our balloon to the firm earth again. Assuming that you have made the descent in safety, say on the plain of Cassim Pasha, and that no orthodox villagers have manifested a desire to tear either you or your balloon to pieces, it were best, perhaps, ere you commenced a round of sight-seeing, to muster a few facts bearing on the constitution of Constantinople as it is, and how the Turks and the Franks contrive to live in pretty close neighbourhood with one another, and in tolerable peace and amity. This desirable consummation is principally due to the circumstances, first, that the Turks, when not maddened by political or religious excitement, are an exceedingly placable

and easy-going people, mild in their manners and courteous in their demeanour, and apt to look upon the Giaours just as they look upon the vagrant dogs in the streets, as unclean but harmless animals, who are accursed, but who must be treated with kindness by the followers of the Prophet; and next, that Moslems and Franks do, to all intents and purposes, inhabit two distinct quarters of Constantinople separated from each other by the Golden Horn, which is spanned by two bridges, one at Galata, a rotten old structure of planks laid on boats, the other, much further up the Horn, a comelier and more commodious bridge, supported by iron pontoons. A third bridge, wholly of iron, and very elegant in appearance, was erected long since close to the Galata crossing; but there have been a succession of difficulties supervening to prevent the opening of the *Pont de Fer* to traffic. It exhibits a huge chasm in the middle, due, so they say, to a Turkish man-of-war having knocked her head against the bridge one dark night; and since then the Government have never been able to come to terms for its repair with the English company to whom the iron bridge belongs. For the passage of the timber one a toll of a few paras is demanded, and as much as a quarter of a Medjidié for a wheeled vehicle; and I have heard that so much as five hundred Turkish pounds a day (a Turkish pound is worth about eighteen shillings) are taken in tolls on the wooden bridge, which is much the more frequented of the two which cross the Horn. There is a dismally tragical story connected with this bridge. At the beginning of the year 1837 there was a desperate agitation in Stamboul, caused by the reforms carried with so high a hand by Mahmoud II., the Sultan who had exterminated the Janissaries. In January Riza Effendi, the Director of the Imperial Mint, was stabbed in the Mosque of St. Sophia by one of his own slaves, who, while driving his dagger into his master's breast, reproached him with his "impious love for the innovations of Frangistan." A month afterwards, Sultan Mahmoud, surrounded by his body-guards, was crossing on horseback the Galata bridge, when he was publicly apostrophised in the most insulting manner by an old dervish much venerated in consequence of his reputed piety, his rage, and his dirt, named Sheikh Satchli, or "the Hairy." "Giaour Padishah," cried the Hairy One, "art thou not yet satiated with abominations? Thou shalt give an account to Allah for thy impiety. Thou hast destroyed the institutions of thy forefathers. Islamism is crumbling to pieces before thee; and on our heads and thine the vengeance of the Prophet will fall." The Sultan, with affected indifference, remarked that the dervish was mad; but, as he continued to yell and to prophesy uncomfortable things, the body-guard were fain to take him into custody, and Sheikh Satchli got strangled in the process. His remains were forthwith committed to earth; but Orthodox Conservatives declared that for some weeks following his demise a particularly bright light was seen flashing by night over the Hairy One's grave.

Pera, as is almost universally known, is the European suburb of Constantinople. It adjoins and is in the rear of Galata. Formerly the only communication between the two suburbs was by means of a series of street staircases somewhat resembling "Nix Mangiare Stairs" at Malta, or the "Caeina" lanes at Genoa, horribly muddy in winter, and desperately uncomfortable at all times. Of late years, however, a more commodious road has been made, in the shape of a railway running through a tunnel which, starting from an angle of the Grand Rue de Pera just where that Grande Rue turns to descend the Hill of Galata, pierces a disused graveyard, called by the Perotes the *Petit Champ des Morts*, and finds a lowermost terminus in the High-street of Galata, a thoroughfare which presents a queer mixture of Turkish and European costumes, manners, and vices. It is full of cafés, dramshops, low music-halls, ship chandlers, ship broker's counting-houses, bakers, butchers, and slopellers. It is densely crowded throughout the day and during most part of the night by soldiers, sailors—the uniform of a British marine from some gun-boat in harbour being by no means a rarity—cake, fruit, sweetstuff, and sour-cream sellers, beggars, merchants, clerks, and pickpockets. In the small hours more dangerous robbers prowl about Galata—ruffians who would prefer to murder as well as rob you, if both courses of procedure could be indulged in with impunity; and it is as well, if you are belated in Galata, to walk in the middle of the roadway, with a revolver at full cock in one hand, if you wish to avoid a blow from a knuckleduster or a stiletto from a gentleman lurking up a dark entry, and to whom you have not previously been formally introduced. Galata High-street may without injustice be described as being a little dirtier and a little more drunken than our own Ratcliffe-highway; but from the tumble-down condition of its houses and the diversified costumes of its population it presents a wondrously picturesque appearance. It is getting civilised, however; and is traversed by a tramway, the cars on which will convey you to Dolma-Baghtché if you have a mind to inspect the exterior of the Sultan's Winter Palace, a splendid but tawdry edifice in the Italian Renaissance style.

There is no word, so I am informed, in Turkish for a railway tunnel; and even the modern Greeks have been compelled to manufacture a term defining so eminently a modern contrivance. They call a tunnel *upozeios diados*—literally, an underground passage. The Turkish term is much more poetical and much more expressive. They have named the Pera and Galata tunnel "The Mouse's Hole." Up trains and down trains run from early in the morning until late at night through this subterranean passage, which debouches, at its western extremity, hard by the Galata Branch of the Maritime and Commercial Club, a handsomely appointed and admirably conducted establishment, where strangers from Europe, properly introduced, are treated with great courtesy and hospitality. The Club has another mansion in the Grande Rue de Pera, where there is yet another club, the Cercle du Sport Oriental, principally frequented by wealthy Greeks and with a by no means inconsiderable proportion of Turkish Beys and Effendis among its members. High play is the rule here; while there is a good deal of whist and

Speaking at the annual meeting of the Yorkshire College of Science, at Leeds, on Monday, Lord F. Cavendish, M.P. commended the study of literature and the classics, and pointed out that, if the college was to maintain its position against such rivals as Owens in Manchester, it would be necessary to add these subjects to its curriculum. It was subsequently resolved to appoint a professor of literature and the classics. Donations amounting to over £51,000 have been promised. The Clothworkers' Company of London have made the college a grant of £10,000 for the textile department.

branches at Swansea, Bristol, Exeter, and Plymouth, on the 7th inst. within a few weeks of his 91st year.

The will, dated Oct. 20, 1862, of Mr. Edward Thomas Whitaker, late of No. 12, Lincoln's-inn-fields, and of Hinton Lodge, Hurst, Berks, who died on Feb. 6 last, was proved on the 14th ult. by Francis Whitaker, Edward Thomas Whitaker, and Alfred Whitaker, the sons, the executors, the personal estate being sworn under £10,000.

Robert Morris, Esq., formerly of Batavia, island of Java, merchant, for over forty years agent of the Bank of England branches at Swansea, Bristol, Exeter, and Plymouth, on the 7th inst., within a few weeks of his 91st year.

SPECIAL NOTICE.—ORETONNES.
OETZMANN and CO. beg to announce that they have now received all their New Designs in FRENCH CRETTONNES for the present season, amongst which are some beautiful specimens of artistic design and colouring. An early inspection solicited.—OETZMANN and CO., COMPLETE HOUSE FURNISHERS, 67 to 79, HAMPSTEAD-ROAD (NEAR TOTTENHAM-COURT-ROAD).

FURNISH THROUGHOUT.

OETZMANN & CO.,
67, 69, 71, 73, 77 & 79,
HAMPSTEAD-ROAD,
NEAR TOTTENHAM-COURT-ROAD.

FURNISH THROUGHOUT.—OETZMANN
and CO., 67, 69, 71, 73, 77 and 79, Hampstead-road, near Tottenham-court-road. Bedding, Carpets, Furniture, Upholstery, Drapery, Furnishings, Ironmongery, China, Glass, Pictures, Bronzes, Clocks, &c., and every other requisite for completely furnishing a house throughout. OETZMANN and CO. are enabled to offer special advantages to Country Customers in delivery of Goods by their own large PATENT IRON VAN, and fixing in position by competent persons. Descriptive Catalogue, the best Furnishing Guide extant, post-free. OETZMANN and CO.

PAINTINGS, OLEOS, CHROMOS,
PHOTOS, and ENGRAVINGS.—A choice assortment, in handsome frames. The paintings are by well-known artists, and the names guaranteed. Also, a large assortment of Bronzes, Statuettes, Vases, Clocks, and other articles of art and decorative furniture. A Catalogue of Art Department post-free. OETZMANN and CO.

CABINET and UPHOLSTERY
DEPARTMENT.—Best Plate Chimney-Glasses, in double-gilt frames, rich Mahogany pattern, large size, 2s. 6d.; magnificent ditto, from 5s. 6d. to 20s. 6d. Handsome Walnut Chequer-board, shaped front, and richly-carved mountings, 4ft. 3in. Noble Mahogany Sideboards, 5ft. 6in. to 6ft. 6in. from 5s. 6d. upwards. Easy-Chairs, from 14s. 6d. upwards. Drawing and Dining Room Chairs, from 10s. 6d. each.—OETZMANN and CO.

STANLEY DINING-ROOM SUITE in solid carved Spanish Mahogany, upholstered in best maroon leather, comprising a noble Couch, two Easy-Chairs, and six Chairs; price 14s. Quality guaranteed. A variety of other patterns on sale from 5s. 6d. upwards. Massive Mahogany Telescope Dining Table, 5ft. by 4ft., patent metallic screw, 24 1/2s. OETZMANN and CO.

DRAWING-ROOM SUITES.
OETZMANN and CO., Elegant Drawing-Room Suite, richly-carved Italian Walnut Wood, upholstered very soft and comfortable, in best Rep., consisting of a Couch, two Easy-Chairs, and six Chairs, price 15s.; ditto, very handsome design, upholstered in rich "Fekindie" made and finished in superior style, 20s.; ditto, very elegant design, richly upholstered in finest Rep., and finished in the best possible manner, 33s.; also a variety of other Drawing-Room Suites, in black and gold, Early English, and other designs.

BEDDING DEPARTMENT.—Handsome
2ft. 6in. Mahogany Chest of Drawers, with deep bottom drawer, 2s. 6d.; Spanish Mahogany Wardrobe, from 5s. 6d. upwards. VALUABLE DISCOVERY for the HAIR.

If your hair is turning grey or white, or falling off, use **THE MEXICAN HAIR RENEWER**; for it will positively restore, in every case, grey or white hair to its original colour, without leaving the disagreeable smell of most "Restorers." It makes the hair beautiful, and grows as well as promoting the growth of the hair on bald spots, where the glands are not decayed. This preparation has never been known to fail in restoring the hair to its natural colour and gloss in from eight to twelve days. It promotes growth, and prevents the hair falling out, eradicating dandruff, and leaving the scalp in a clean, healthy condition. It imparts peculiar vitality to the roots of the hair, restoring it to its youthful freshness and vigour. Daily applications of this preparation for a week or two will surely restore faded, grey, or white hair to its natural colour and richness. It is not a dye, nor does it contain any colouring matter or offensive substance whatever. Hence it does not soil the hands, the scalp, or even the linen, but procures the colour within the substance of the hair. It may be had of any respectable Chemist, Perfumer, or Dealer in Toilet Articles in the Kingdom, at 3s. 6d. per bottle. In case the dealer has not "The Mexican Hair Renewer" in stock and will not procure it for you, it will be sent direct by rail, carriage paid, on receipt of 4s. 11d. in stamps, to any part of England.—Prepared by HENRY C. GALLUP, 483, Oxford-street, London.

THE MEXICAN HAIR RENEWER.

WHAT WILL RESTORE THE HAIR?

What will restore the human hair, And make it look as fresh and fair As when it was before its hue Was changed so sadly in the view? The very best Restorer is, In all essential points, why, this—**THE MEXICAN HAIR RENEWER!**

How beautiful the hair it makes! And admiration, too, awakes. It gives luxuriance, richness, grace, And other points we prize and trace. What strengthens it, but never harms? What adds to beauty's dowry—charms? **THE MEXICAN HAIR RENEWER!**

For either sex it will impart Abundant hair by matchless art. If baldness should, with stealthy power, Arrest its growth in evil hour, Why, what will that annoyance spare, And crown the head with glossy hair? **THE MEXICAN HAIR RENEWER!**

Thousands of proofs from every side All guarantee its use with pride. It never fails to please the mass, Of every rank and social class. The very best Restorer is, In all essential points, why, this—**THE MEXICAN HAIR RENEWER!**

THE MEXICAN HAIR RENEWER.

It has gained for itself the highest reputation, and a decided preference over all other "Restorers," as evinced from certificates and testimonials from the most respectable sources. Being compounded with the greatest care—combining, as it does, all the most desirable qualities of the best hair preparations of the day, without the objectionable ones—it may be relied on as the very best known to chemistry for restoring the natural colour to the hair, and causing new hair to grow on bald spots, unless the hair glands are decayed; for, if the glands are decayed and gone no stimulant can restore them; but if, as is often the case, the glands are only torpid, **THE MEXICAN HAIR RENEWER** will restore their vitality, and a new growth of hair will follow. Read the following Testimonial:

From Messrs. Wm. Hayes and Co., Chemists, 12, Grafton-street, Dublin:—"We are recommending **THE MEXICAN HAIR RENEWER** to all our customers as the best of the kind, as we have been told by several of our friends who tried it, that it has a wonderful effect in restoring and strengthening their hair."

THE MEXICAN HAIR RENEWER.

Ask your Chemist for it.

WHAT GIVES A GLOSS TO THE HAIR?

What gives the hair a charming gloss, And makes it look as soft as down? What gives luxuriance to each tress? Why, all the world with truth confess That nothing really restores the hair, And ranks so justly and so high, As **THE MEXICAN HAIR RENEWER!**

What gives the hair an impulse great, And brings it from each known retreat? Why **GALLUP'S FAMED RENEWER** stands, And universal praise commands; Whilst all acknowledge with delight That nothing makes it half so bright As **THE MEXICAN HAIR RENEWER!**

All other preparations made It sinks into oblivion's shade; It has the praise of thousands gained, Celebrity likewise obtained; And, what is of importance more, It will the Human Hair restore! **THE MEXICAN HAIR RENEWER!**

The natural colour, by its use, Like magic does its powers produce. 'Tis harmless, and of compounds rare, Selected with especial care. And thus it is so ranks so high, Whilst one and all may now rely On **THE MEXICAN HAIR RENEWER!**

THE MEXICAN HAIR RENEWER.

The constitution of the person and the condition of the scalp have much to do with the length of time it requires for new hair to grow; also thin or thick hair will depend much upon the vital force remaining in the hair glands. New hairs are first seen to start around the margin of the bald spot, and then permanent hair, and extending upwards until the spots are covered more or less thickly with fine short hair. Excessive brushing should be guarded against as soon as the small hairs make their appearance; but the scalp may be sponged with rain water to advantage, keeping the head cool, and free from dandruff, which causes new hairs to grow, unless the hair-glands are entirely decayed. **THE MEXICAN HAIR RENEWER** makes the hair soft, glossy, and luxuriant. Sold by Chemists and Perfumers, at 3s. 6d.; or sent direct from our receipt of 4s. 11d. in stamps. HENRY C. GALLUP, Proprietor, 483, Oxford-street, London.

THE MEXICAN HAIR RENEWER.

WHAT ADDS A CHARM TO FEMALE BEAUTY?

What adds a charm to beauty rare, And what's a crown of glory? Why, 'tis a splendid head of hair, As we have read in story. And all who would its growth promote, Why, nothing can be truer Than this—it is accomplished by **THE MEXICAN HAIR RENEWER.**

What adds a charm to beauty rare? Why, bright and lovely tresses; For nothing makes them look so well, Nor leads to such successes. The hair's a crowning point with all, There's nothing can be truer; And hence it is that all admire **THE MEXICAN HAIR RENEWER.**

What adds a charm to beauty rare? Why, hair of bright appearance; This famed renewer keeps it clean—Of dandruff gives a clearance; And if it's faded—grey or white—And hairs grow short and fewer, What will restore its colour and colour of **THE MEXICAN HAIR RENEWER.**

What adds a charm to beauty rare, When in the hall-room whirling? Why, ringlets light, both free and bright, In graceful curls curling. What makes them fresh and beautiful, And what says each reviewer? Why, nothing can compare with this, **THE MEXICAN HAIR RENEWER.**

THE WORDS "THE MEXICAN HAIR RENEWER."

RENEWER are a Trade Mark; and the public will please see the words are on every case surrounding the Bottle, and the name H. C. GALLUP is blown in the bottle. The Mexican Hair Renewer. Price 3s. 6d. Directions in German, French, and Spanish. Prepared by H. C. Gallup, 483, Oxford-street, London.

May be had of most respectable Dealers in all parts of the world:—M. Swann, 12, Rue Castiglione, Paris; W. Kingston, Malta; Bathgate and Co., Calcutta; B. G. Lennon, Port Elizabeth; Cape of Good Hope; H. C. Kingston, Jamaica; T. Plimmer, Bridgetown, Barbadoes; Rowe and Co., Rangoon; Treas and Co., Bombay; J. Vandervelde, 40, Rue de la Klotz, Brussels; G. Baker, Chemist, Geneva; Blackford and Sons, Adelaide; J. Elton, Grimshaw, and Co., Melbourne; Elliott Brothers, Sydney; Hazdon and Lewis, Lannocaton, Tasmania; J. O. Sharland, Auckland, New Zealand; and Chemists everywhere.

WHY DO OUR TEETH DECAY?—Who

has ever travelled among the Indians of North America that has not been struck with the superior whiteness and soundness of the Indians' teeth? Many have wondered how those dusky savages could preserve such a full row of ivory, even to the greatest age, whilst the teeth of the whites decay with the rule with the whites. What once was a mystery is no longer one. The extracts from plants which the Indians have for ages chewed have been concentrated into a liquid called **FRAGRANT FLORILINE**, a few drops of which on a wet toothbrush cause a sort of foam in the month, which penetrates every crevice, and cleanses the teeth from all impurities, hardens the gums, and prevents tartar. The "Fragrant Floriline" should be used in all cases of bad breath, and particularly by gentlemen after smoking. The Floriline combines, in a concentrated form, the most desirable cleansing and astringent properties. At the same time, it contains nothing which can possibly injure the most sensitive and delicate organization. It beautifies the teeth and gums. It arrests the decay of the teeth. It acts as a detergent after smoking. It renders the gums hard and healthy. It neutralises the offensive secretions of the month. It imparts to the breath a fragrance purely aromatic and pleasant. Put up in large bottles (only one size) and in elegant toilet-cases, complete, at 2s. 6d. Sold by all Chemists and Perfumers. Prepared only by HENRY C. GALLUP, 483, Oxford-st., London.

FLORILINE.

For the TEETH and BREATH.

Sweet as the ambrosial air, With its perfume rich and rare; Sweet as violets at the morning dew, Which the emerald nooks adorn; Sweet as rosebuds bursting forth, From the richly-laden earth, Is the "FRAGRANT FLORILINE."

The teeth it makes a pearly white, So pure and lovely to the sight; And from the gums it drives away Tartar, and all its train of woe. The breath is sweet as violets blue; While scented as the flowers of May, Which cast their sweetness from each spray, Is the "FRAGRANT FLORILINE."

Sure, some fairy with its hand Cast around its mystic wand, And from the airy's bowers Scented perfumes from each flower; For in this liquid gem we trace—All that can beauty add and grace—Such is the "FRAGRANT FLORILINE."

FLORILINE.

For the TEETH and BREATH.

Is the best liquid dentifrice in the world, it thoroughly cleanses partially decayed teeth from all parasites or living "animalcules," leaving them pearly white, imparting a delightful fragrance to the breath. Price 2s. 6d. per bottle. The Fragrant Floriline removes instantly all odours arising from a foul stomach or tobacco-smoke.

For children and adults whose teeth show marks of decay its advantages are paramount. The "Floriline" should be thoroughly brushed into all the cavities; no one need fear using it too often or too much at a time. Among the ingredients being soda, honey, spirit of wine, borax, and extracts from sweet herbs and plants, it forms not only the very best dentifrice for cleansing ever discovered, but one that is perfectly delicious to the taste and as harmless as sherry. The taste is so pleasing that, instead of taking up the toothbrush with dislike, as is often the case, children will on no account omit to use the "Floriline" regularly each morning if only left to their own choice. Children cannot be taught the use of the toothbrush too young; early neglect invariably produces premature decay of the teeth. "Floriline" is prepared only by HENRY C. GALLUP, 483, Oxford-street, London; and sold by all Chemists and Perfumers throughout the world at 2s. 6d. per bottle. "Floriline" Powder, put up in large glass jars, price 1s.

FLORILINE.

For the TEETH and BREATH.

I have heard a strange statement, dear Fanny, to-day, That the reason that teeth do decay Is traced to some objects that form in the gums, And eat them in time quite away. Animalcules, they say, are engendered—'tis true, If the mouth is not wholesome and clean; And I also have heard to preserve them the best Is the fragrant, the sweet "FLORILINE!"

Oh, yes! it is true that secretions will cause Living objects to form on your teeth, And certainly and certainly they gnaw on In cavities made underneath. But a certain preservative GALLUP has found, To keep your mouth wholesome and clean; And you're perfectly right, for your teeth to preserve, There's nothing like the sweet "FLORILINE!"

'Tis nice and refreshing, and pleasant to use, And no danger it can attend; For clever physicians and dentists as well Their uniform praise now blend. They say it's the best preparation that's known, And evident proofs have they seen. That nothing can equal the virtues that dwell In the fragrant, the sweet "FLORILINE!"

FLORILINE.

For the TEETH and BREATH.

It may or may not be generally known that microscopic examinations have proved that animal or vegetable parasites gather, unobserved by the naked eye, upon the teeth and gums of at least nine persons in every ten; any individual may easily satisfy himself in this matter by placing a powerful microscope over a partially decayed tooth, when the living animalcules will be found to resemble a partially-decayed cheese more than anything else we can compare it to. We may also state that the FRAGRANT FLORILINE is the only remedy yet discovered able perfectly to free the teeth and gums from these parasites without the slightest injury to the teeth or the most tender gums.

Read this.—From the "Weekly Times," March 28, 1871:—"There are so many toilet articles which obtain all their celebrity from being constantly and extensively advertised, that it makes it necessary when anything new and good is introduced to the public that special attention should be called to it. The most delightful and effective toilet article for cleansing and beautifying the teeth that we in a long experience have ever used is the new Fragrant Floriline. It is quite a pleasure to use it, and its properties of imparting a fragrance to the breath and giving a pearly whiteness to the teeth make it still more valuable. Of all the numerous nostrums for cleaning the teeth which from time to time have been fashionable and popular, nothing to be compared with the FRAGRANT FLORILINE has hitherto been produced, whether considered as a beautifier or a valuable cleanser and preserver of the teeth and gums."

The Fragrant Floriline is put up in elegant toilet cases, and sold by all Perfumers and Dealers in Toilet Articles in the Kingdom, and is perfectly preserved in its original purity. Prepared by HENRY C. GALLUP, 483, Oxford-street.

FLORILINE.

For the TEETH and BREATH.

What charm does FLORILINE possess, That it should rank so high, And round the globe that magic name Like lightning swiftly fly? What is it? Why its excellence, Which day by day is seen, And now no toilet is complete Without there's FLORILINE.

What charm does FLORILINE possess? The breath it renders sweet; The teeth it makes as white as snow, With pearly tint complete. The mouth it makes so fresh and pure, And healthy, too, and clean; And those are charms which all admit Arise from FLORILINE.

What charm does FLORILINE possess? It cleanses well the mouth, And makes it as ambrosial as; Preservatives of pearly teeth, From tartar keeps them clean; And thus it has a special charm, The fragrant FLORILINE.

FLORILINE.

For the TEETH and BREATH.

The "Christian World," of March 17, 1871, says, with respect to Floriline:—"Floriline bids fair to become a household word in England, and one of peculiarly pleasant meaning. It would be difficult to conceive a more efficacious and agreeable preparation for the teeth. Those who once begin to use it will certainly never willingly give it up."

Mr. Bakell, the celebrated dentist, 14, York-place, Portman-square, London, writes as follows:—"April 15, 1871.—I have tried your Floriline, and find it not only a great assistance in my practice in cleansing the teeth and sweetening the breath, but it gives entire satisfaction. I recommend it to all my patients, and I believe hundreds of them. I have tried it, and find it would be much benefited by the use of your Floriline."

May be had of most respectable Dealers in all parts of the world:—M. Swann, 12, Rue Castiglione, Paris; W. Kingston, Malta; Bathgate and Co., Calcutta; B. G. Lennon, Port Elizabeth; Cape of Good Hope; H. C. Kingston, Jamaica; T. Plimmer, Bridgetown, Barbadoes; Rowe and Co., Rangoon; Treas and Co., Bombay; J. Vandervelde, 40, Rue de la Klotz, Brussels; G. Baker, Chemist, Geneva; Blackford and Sons, Adelaide; J. Elton, Grimshaw, and Co., Melbourne; Elliott Brothers, Sydney; Hazdon and Lewis, Lannocaton, Tasmania; J. O. Sharland, Auckland, New Zealand; and Chemists everywhere.

MRS. S. A. ALLEN'S

WORLD'S HAIR RESTORER.

AMONG THE CULTIVATED AND REFINED THROUGHOUT THE WORLD, THIS RENOWNED PREPARATION IS THE ACKNOWLEDGED FAVOURITE WITH BOTH SEXES.

MRS. S. A. ALLEN'S

WORLD'S HAIR RESTORER.

IT CANNOT FAIL TO RESTORE

GREY HAIR TO ITS YOUTHFUL COLOUR, GLOSS, AND BEAUTY. WHEN THE HAIR TURNS GREY, LOSES ITS LUSTER, AND FALLS OUT, IT IMPERIOUSLY REQUIRES NOURISHMENT. MRS. S. A. ALLEN'S WORLD'S HAIR RESTORER, BY ITS GENTLE TONIC ACTION, STRENGTHENS AND INVIGORATES THE HAIR, AND, BY THE OPERATION OF NATURAL CAUSES, GREY OR WHITE HAIR IS QUICKLY RESTORED TO ITS YOUTHFUL COLOUR, GLOSS, AND BEAUTY. IT WILL STOP ITS FALLING, AND INDUCE A HEALTHY AND MOST LUXURIOUS GROWTH. USE NO OTHER PREPARATION WITH IT. NOT EVEN OIL OR POMADE, OR ZYLO-BALSAMUM.

CAUTION!—The Genuine only in Pink Wrappers. Sold by all Chemists, Perfumers, and Dealers in Toilet Articles.

Mrs. S. A. ALLEN manufactures two entirely distinct Preparations for the Hair. One or the other is suited to every condition of the Human Hair. Both are never required at one time. For details as to each preparation, kindly read above and below this paragraph. Readers can easily determine which of the two they require. These preparations have a world-wide reputation. Enormous and increasing sale through forty years. Every Chemist and Dealer in Toilet Articles has both preparations.

MRS. S. A. ALLEN'S

ZYLO-BALSAMUM.

For the Growth and Preservation of the Hair. A cooling transparent liquid, entirely vegetable, without sediment.

A SIMPLE TONIC AND DRESSING

OF INESTIMABLE VALUE TO BOTH SEXES. THE FAVOURITE WITH THE YOUNG AND ALL THOSE WHO HAVE NO GREY HAIR. ZYLO-BALSAMUM MAY BE USED BY THE MOST YOUTHFUL AND THE MOST ELDERLY, NEVER FAILING TO ESTABLISH ITSELF IN GREAT FAVOUR WITH EACH. IT WILL NOT CHANGE THE COLOUR OF THE HAIR, BUT BY EARLY USE IT WILL PREVENT THE HAIR FROM TURNING GREY OR FALLING OUT. IT CLEANSSES THE HAIR, GIVES TO IT A HEALTHY VIGOUR AND GROWTH, REMOVES ALL DANDRUFF, AND IMPARTS A MOST DELIGHTFUL FRAGRANCE. USE NO OIL OR POMADE.

CAUTION!—The Genuine only in Blush Grey Wrappers. Sold by all Chemists, Perfumers, and Dealers in Toilet Articles.

GLYCERINE JELLY.—PIESSE and LUBIN.—A white and delicate hand is the first attribute of beauty and civility. "The hand," says Sir Charles Bell, in the "Bridge-water Treatise," "distinguishes man from the brute. Be careful of it, for in polite society it is an index not only of the body, but of the mind." Too much cannot be said in favour of Glycerine Jelly for rendering the face white, soft, and fair. Sold in Jars, 2s. 6d., New Bond-street, W.

TOM-BOY!—PIESSE and LUBIN'S

NEW PERFUME.—A New Bond-street. "Tom-Boy! Girls will be boys!"—Punch. Kiss her gently, but be shy. Kiss her when there's no one by. Steal your kiss, for then 'tis sweetest—Stolen kisses are the sweetest. Sold in Flasks, 2s. 6d., 3s.; Cut Bottles, 2s. Copyright.

TURKISH PASTILS.—PIESSE and LUBIN.

LUBIN.—"Through all my travels few things astonished me more than seeing the beauties of the harem smoking Narghile at Stombeau. After smoking, a sweet, aromatic lozenge or pastil is used by them, which is said to impart an odour of flowers to the breath. I have never seen these beautiful lozenges but once in Europe, and that was at PIESSE & LUBIN'S shop in New Bond-street."—Lady W. Montague. In Boxes, 2s.; by post, 3s. 6d.

BREIDENBACH'S WOOD VIOLET

PERFUME, fresh as morning-glories, 2s. 6d., 3s. 6d., 5s. 6d. per Bottle. Breidenbach's MACASSARINE, invaluable for preserving the Growth of the Hair, 1s. 6d., 2s. 6d. per Bottle. Of all Chemists, and the Makers, 157, New Bond-street, W.

JOHN GOSNELL and CO.'S CHERRY

TOOTH PASTE gives a beautiful Set of Teeth, makes the Teeth of pearly-like whiteness, and protects the enamel from decay.—Of all Chemists and Perfumers, at 1s. 6d. per pot.

ROWLANDS' ODONTO

has been proved, by its unparalleled success of fifty years, to be the best Dentifrice for preserving the White and Sound Teeth, Healthy Gums, and Fragrant Breath, being perfectly free from all deleterious and acid compounds, which give a temporary whiteness to the teeth, but ultimately ruin the enamel. Sold by Chemists and Perfumers. Price 2s. 6d. Take no Odonto but Rowlands'.

WHISKERS, MOUSTACHIOS,

BALDNESS.—Renale's World-famed WHISKERINE produces Hair in rapid bushy luxuriance, quick, clean, harmless. Never disappoints, as over 50,000 in Army, Constabulary, Clerks, Workmen, &c., gratefully testify. Full Packets, ready for use, 12 stamps, post-free. Test one. Marvellously successful in obstinate cases.

TO DESTROY SUPERFLUOUS HAIR

on Face, Arms, &c., without injuring skin.—Renale's World-famed DESTRUCTOINE instantly effectual. One Lady writes:—"I am enthusiastic in recommending it; it always succeeds." Full Packets, plain envelope, post-free 12 stamps. J. RENNIE, Laboratory, 12, Anglesea-street, Dublin.

TAYLOR'S WHITE FULLER'S EARTH

is the only reliable and thoroughly harmless Skin Powder. Recommended by the most eminent dermatologists, and prepared by an experienced chemist. It is the best dusting powder for infants. Used in the nurseries of the Princess of Wales, the Duchess of Edinburgh, the Duchess of Teck, and most of the aristocracy. Recommended by the Faculty. Post-free, send 10 or 21 stamps. The eminent Physician Dr. South says:—"I feel I cannot too highly recommend it." Prepared only by JOHN TAYLOR, Chemist, 13, Baker-street, London, W.

LYCEUM THEATRE.—Seventy-Second and Last Time but Twelve of SHAKESPEARE'S KING RICHARD III.—EVERY EVENING at 7.45. KING RICHARD III.—Richard, Duke of Gloucester, Mr. Henry Irving; Queen Margaret, Miss Bateman; Lady Anne, Miss Isobel Bateman. Scenery by Hawes Craven. Music by R. Stoepel. Preceded, at Seven, by THE LOTTERY TICKET. A Morning Performance will be given Every Saturday at Two p.m. On Saturday Morning next, May 5, "King Richard III."

OLYMPIC.—THE SCUTTLED SHIP. By CHARLES READE. EVERY EVENING at 7.15. Powerful Company and Effects. Box-office hours Eleven to Five. No booking fees.

ST. JAMES'S HALL, PICCADILLY.
THE MOORE and BURGESS NEW ENTERTAINMENT.

THE GREAT SUCCESS OF THE SEASON will be repeated EVERY NIGHT at EIGHT. MONDAY, WEDNESDAY, and SATURDAY at THREE and EIGHT. Fautouille, 5s.; Sofa Stalls, 3s. and 2s.; Gallery, 1s. No fees. Doors open at 2.30 for Day Performances, and at 7.15 for the Evening ditto. Places may be secured, without extra charge, at Austin's Office, St. James's Hall, any day from Nine till Six.

ST. JAMES'S HALL.—Signal Success of the MOORE and BURGESS Easter Burlesque on THE MARVELLOUS GIBBARDS, which will be repeated EVERY NIGHT at EIGHT; MONDAY, WEDNESDAY, and SATURDAY at THREE and EIGHT.
Vide extract from the "Morning Post," April 3:—
"In a burlesque performance entitled 'The Marvellous Gibbards,' Messrs. T. Sully, James Moore, and Rene emulated the eccentric gymnastics of the well-known Gibbards with absolute accuracy in the minutest particulars of action and expression, doing everything that the clever originals do, and as nearly as possible in the very same style and manner. A new 'Interlocutor' appeared for the first time in the person of a gentleman bearing the illustrious name of J. P. Kemble, who, being gifted with a fine voice and a keen sense of humour, is likely to prove an acquisition."

ST. JAMES'S HALL.—On TUESDAY AFTERNOON, MAY 1, at Three o'clock, an Extra Day Performance will be given by the MOORE and BURGESS MINSTRELS in aid of the FUNDS of the ROYAL DRAMATIC COLLEGE, when a programme of the most attractive character will be presented. The co-operation and support of the public is most earnestly entreated on this occasion, as funds are sorely needed for the support of the inmates of this admirable institution. The whole of the proceeds of this entertainment will be handed over to the treasurer of the Royal Dramatic College. Tickets and places may be secured at Austin's Ticket-Office, St. James's Hall, or of any of the attendants in the hall.

MR. and Mrs. GERMAN REED'S ENTERTAINMENT.
TWO FOSTER BROTHERS, by Gilbert A. Beckett. Last Week of FIVE O'CLOCK TEA, and A NIGHT SURPRISE, EVERY EVENING, except Thursday and Saturday, at Eight; every Thursday and Saturday at Three. Admission, 1s., 2s.; Stalls, 3s. and 5s.—ST. GEORGE'S HALL, Langham-place, Oxford-circus.

ROYAL SOCIETY OF MUSICIANS OF GREAT BRITAIN.—The ANNUAL PERFORMANCE of Handel's MESSIAH, at ST. JAMES'S HALL, on FRIDAY EVENING, MAY 4, Eight o'clock. Mrs. Osmond, Miss Butterworth, Madame Patey, Mr. W. H. Cummings, and Mr. Lewis Thomas. Principal Violin, Mr. T. W. G. Cusins. Stalls, 10s. 6d.; Unreserved, 5s. and 2s. 6d.

PHILHARMONIC SOCIETY.—Conductor, Mr. W. G. Cusins. MONDAY, APRIL 30, Half-past Eight. ST. JAMES'S HALL. Piano-forte, Mr. Beesley; Violoncello, Herr Hausmann. Symphony (M.S.) by Süss, 5s., and 2s. 6d.

MUSICAL UNION.—TUESDAY, MAY 1.—Quarter past Three. Quartet, No. 1 in G. Mozart; Trio, B flat, Rubinstein; Quintet, B flat, Mendelssohn. Solo, Piano-forte, various. Pianist, Breitner (pupil of Rubinstein). With Pepini, Hollander, Wafelghem, Haven, and Lasserre. Tickets, 7s. 6d. each, to be had of Lucas and Co., and Olivier, Bond-street; and at St. James's Hall. Visitors can pay at the Regent-street entrance.

WAGNER FESTIVAL.—ROYAL ALBERT HALL, MAY 7, 9, 12, 14, 16, 18. Wagner, Conductor. Wilhelm, Leader of Orchestra. Danneberg, Rehearsal. Conductors, Materna, Hill, Unger, and other singers from Bayreuth. Prices of Admission to each Concert.—Private Boxes, from 5s.; Amphitheatre Stalls, 1 guinea; Arena Stalls, 1s.; Balcony (first three rows), 1s.; other rows, 10s. 6d.; Orchestra, 5s.; Organ Gallery, 5s.; Gallery, 2s. 6d. (1st gallery, and all information may now be had at the Royal Albert Hall; of the usual Agents; and of HODGE and ESKIN, Directors. Chief Ticket-Office, 6 and 7, Abchurch-lane, Regent-street, London, W.

RIVIERE'S PROMENADE CONCERTS.
Record of the Series, SATURDAY EVENING, APRIL 2.—Madame Rose Horree, Miss Liss, Madame Enriquez, Signor Garcia. Grand Orchestra, Chorus, and the Band of the Scud Guarini. One Hundred Performers. Conductor, M. Riviere.—ROYAL AQUARIUM.

RIVIERE'S PROMENADE CONCERTS.
Third of the Series, SATURDAY EVENING, MAY 5.—Vocalists—Madame Antichette Sterling, Madame Osman Goldste, and Mr. McGuckin.—Malama ROYAL AQUARIUM.—Admission, One shilling.

SOCIETY OF LADY ARTISTS.—Gallery, 48, Great Marlborough-street. WILL CLOSE on SATURDAY, APRIL 28: REOPENING on WEDNESDAY, MAY 2 till MAY 5, with a rearrangement, when pictures purchased during the exhibition will be ready for removal. Admission, 1s. Catalogue, 6d. Free to Art-Union Prizeholders.

INSTITUTE OF PAINTERS IN WATER-COLOURS.
The FORTY-THIRD ANNUAL EXHIBITION is NOW OPEN, from Nine till dusk, each day till 22nd, with "Dream of Pilate's Wife," "Christian Martyrs," &c., at the DOBE GALLERY, 35, New Bond-street. Daily, Ten to six. 1s.

THE SOCIETY OF PAINTERS IN WATER COLOURS.
The EIGHTY-EIGHTH EXHIBITION is NOW OPEN, 5, Pall-Mall East, from Nine till seven. Admission, 1s.; Catalogue, 6d.

CRYSTAL PALACE PICTURE-GALLERY.—Open all the year round for the Reception and Sale of Pictures by the British and Foreign Schools. For particulars, apply to Mr. C. W. Wase, Crystal Palace.

ELIJAH WALTON.—EXHIBITION OF WATER-COLOUR DRAWINGS—EGYPT, NUBIA, and THE NILE, with a number of fine ALPINE and other Works—NOW OPEN, BURLINGTON GALLERY, 191, Piccadilly. Ten to six. Admission (including Catalogue), 1s.

DORE'S GREAT WORKS, "CHRIST LEAVING THE PRÆTORIUM" and "CHRIST ENTERING THE TEMPLE" (the latter just completed), each by 22 ft. with "Dream of Pilate's Wife," "Christian Martyrs," &c., at the DOBE GALLERY, 35, New Bond-street. Daily, Ten to six. 1s.

THE ILLUSTRATED LONDON NEWS.

LONDON: SATURDAY, APRIL 28, 1877.

All uncertainty is now at an end. The die is cast. The Czar of Russia, after having reviewed his troops destined for the Danubian campaign, has issued a Manifesto concluding with an order to cross the Turkish Frontier. The Russian Embassy has left Constantinople, and a Circular Note has been addressed by Prince Gortschakoff to the Russian Ambassadors in Berlin, Paris, London, and Rome, referring to the fact and indicating its necessity. He has also addressed a Note to Taufek Bey, the Turkish Chargé-d'Affaires, announcing to him the rupture of the diplomatic relations of the two countries and informing him that Ottoman subjects living in Russia will, if desirous, be at liberty to leave the country unmolested, while those who prefer to remain may feel themselves assured of the full protection of the laws. The Russian advanced guard crossed the Pruth at various points early on Tuesday. The troops of Roumania, after formally protesting against the invasion of that Province, fell back, in order to avoid any conflict with an overwhelmingly superior military force. War, therefore, it may be said, between Russia and Turkey has virtually begun. The "insoluble problem" of which Lord Derby spoke in the House of Peers on Tuesday afternoon has been moved beyond the reach of pacific negotiations, and will now have to be determined by the sword.

Not since Waterloo, it has been justly said, has a

more momentous era opened for Europe. The War just begun is one likely to become the most destructive of the present century. It is partly a struggle of races who entertain profound reciprocal antipathies. It is partly also one animated by religious fanaticism on both sides. Irreconcilable forces are arrayed one against another, and it is impossible to foresee over what extent of territory the fierce antagonism will be carried. The instruments of modern warfare will render the shock of armies very different from what it used to be between Eastern and Western civilisation. The War is undertaken by Russia ostensibly on behalf of the Christian subjects of the Porte, who have been systematically maltreated, robbed, and outraged by the Osmanli Government and population for a long period of time, but who, like the Jews in Egypt, have multiplied under oppression, and are now regarded as superior in numbers, as well as in intelligence, to the conquering race. The Emperor Alexander in his Manifesto declares that during the deplorable events which occurred in Herzegovina, Bosnia, and Bulgaria, the object, above all, of his Government was to effect an amelioration of the position of the Christians in the East by means of pacific negotiations, and in concert with the great European Powers. Those efforts have been defeated, he tells the world, "by the haughty obstinacy of the Porte." We could wish that the Manifesto of the Czar and the Circular Note of his Chancellor had been more emphatic in declaring the better government of the Christian populations subject to Turkey to be the sole end aimed at by Russia in the declaration of war against the Ottoman Empire. So much no doubt is implied by the general tenour of these respective documents, and perhaps the relations of each of the great Powers to Russia and to Turkey will greatly limit the peril of any enlargement of the professed scope of his designs by the invader. But Europe would have been better pleased if all ambitious intentions relating to the conquest of territory had been again disclaimed. The honour of Russia may be said to be already bound to confine her operations to the work which she has undertaken to perform, and she may think that too repeated protestations of her sincerity would be incompatible with her dignity. But it is open to consideration whether the slightest suspicion on this head may not largely increase the difficulty of localising the war, and inflame over a large portion of the globe religious passions which the eventualities of actual conflict in Turkey may render uncontrollable.

How far the war will benefit the present generation of Christians in Turkey, especially in the provinces about to be occupied by Foreign Troops, it would be rash indeed to predict. It is never very safe to come between the hammer and the anvil. Those parts of Turkey that will constitute the area of active hostilities between the two Empires will in all likelihood be devastated, while no security for life, much less for liberty, will be obtained. Europe seems to have gone back to a state of opinion which it was once supposed had been erased from her maxims of public action. There is less disposition to wait the issue of natural causes than prematurely to try that of violent ones. The solecism of Turkish misrule may prove to be as incurable by arms as it has been by diplomacy. We seldom better fit men for self-government by anticipating on their behalf the time when they have proved themselves qualified for it. It may chance, therefore, that the occupation of Bulgaria by Russia may lead to crises quite unforeseen and anything but desirable. These topics, however, are now put beyond the range of serious speculation. The Pruth has been crossed. The war will go on. Blood will be poured upon the ground like water. All the kindly impulses of humanity will be trampled under foot. The wildest and direst passions will have comparatively free license to indulge themselves, and, perhaps, the very end sought to be achieved by Russian impetuosity will be rather retarded than advanced by the blow she is aiming at her antagonist.

Possibly the war may take a very different turn to that which Europe seems to expect. It is not at all certain that Turkey, should she meet with early reverses, will not speedily give way. It may even prove to her easier to restrict Mohammedan fanaticism by letting it feel the blows of its adversary than by running in the teeth of its pride. Opportunities for offering mediation will not be wanting in a contest of this kind; and England, we hope, will be vigilant to seize them, and prompt to make the offer. For the present, and perhaps for some time to come, English interests are not likely to be formidably menaced, and she will be free to interpose her good offices at any available stage of the struggle. But it will be generally admitted that, war once begun, it may be impolitic to patch up an insincere peace. The Ottoman Empire must be placed upon a totally different footing from that which it now occupies. The régime of the Pashas is utterly incompatible with even the barest elements of righteous government. Europe must not be exposed to another twenty years of uncertainty on account of the misgovernment of Turkey. Diplomacy will have to go to the root of the question, and perhaps the hostilities now about to ensue may force affairs sooner than has been expected into a position which will admit of the consummation so devoutly to be wished—a final settlement of the long unfathomable Eastern Question.

THE COURT.

The Queen gave audience to the Duke of Richmond and Gordon at Osborne House on Thursday week; the Duke, with Captain Frank Thompson, commanding the Royal yacht Victoria and Albert, dined with her Majesty. The Queen and Princess Beatrice drove the next day to Newport.

Her Majesty, with Princess Beatrice and Prince Leopold, left Osborne on Saturday last for Windsor Castle. Princess Christian visited the Queen. The Earl of Beaconsfield had an audience of her Majesty.

The Queen and Princess Beatrice attended Divine service on Sunday in the private chapel of the castle. The Rev. Canon Barry, D.D., Principal of King's College, London, officiated. The Dean of Windsor and the Hon. Mrs. Wellesley dined with her Majesty.

Prince Albert and Princesses Victoria and Louise of Schleswig-Holstein visited the Queen on Monday. The Duchess of Sutherland, Lieutenant-General Sir Francis Seymour, Bart., K.O.B., and Lady Seymour and Count Seckendorff dined with her Majesty. Princess Christian visited the Queen on Tuesday, and remained to luncheon. The Duchess of Edinburgh, with Prince Alfred and Princesses Marie and Victoria Melita of Edinburgh, arrived at the castle at eleven p.m., on her return from Malta. Colonel Wynedoch Gardiner (Esquerry in Waiting) received the Duchess at Folkestone and attended her Royal Highness to Windsor. Princess Beatrice and Prince Leopold met the Duchess at the railway station in Windsor, and accompanied her to the castle. The Queen, attended by the ladies and gentlemen in waiting, received the Duchess at the entrance of the castle.

Wednesday was the thirty-fourth anniversary of the birthday of Princess Louis of Hesse (Princess Alice of Great Britain).

The Countess of Caledon has succeeded the Marchioness Dowager of Ely as Lady in Waiting. The Marchioness remained at the castle. The Hon. Flora Macdonald has arrived at and the Hon. Harriet Phipps has left the castle. Lord Bagot and Mr. Donald Cameron of Lochiel have succeeded Lord Elphinstone and Colonel the Hon. Augustus Liddell as Lord and Groom in Waiting.

The Queen will hold Drawingrooms at Buckingham Palace on Tuesday and on Thursday next.—N.B. The Knights of the several orders are to appear in their collars at the Drawing-room on May 1, being a collar day. Her Majesty will visit the gardens of the Horticultural Society, South Kensington, on Thursday next, to inspect "The First Great Summer Show, 1877." This will be the first public visit of the Queen since the death of the Prince Consort.

The Prince of Wales will, by command of the Queen, hold Levies at St. James's Palace, on behalf of her Majesty, on Monday, May 7, and Tuesday, June 5, instead of Saturday, June 2, as previously announced.

Her Majesty's birthday will be kept on Saturday, June 2.

The Prince of Wales paid a visit on Saturday last to Villefranche, on his way to embark in the Sultan. The inhabitants assembled en masse to await his arrival. Salutes were fired and the rigging manned as the Prince went aboard. He was then visited by Admiral Jaureguiberry and Rear-Admiral Warden, of the American Squadron, and their visits were returned by the Prince and the Duke of Edinburgh. The Admirals, with the principal authorities of Nice, were entertained at a dinner on board the Sultan. The Prince arrived at Naples on board the Sultan on Tuesday, and went on shore, accompanied by the Duke of Edinburgh, to visit Prince Humbert and Princess Margherita. Prince Humbert afterwards went on board the Sultan to return the visit. The Prince, with the Duke of Edinburgh, went to Caserta on Wednesday, and were entertained by the Prince and Princess of Piedmont at luncheon, to which the Prussian Princes were invited. Their Royal Highnesses leave Naples to-day (Saturday).

Princess Louise of Lorne and the Marquis of Lorne, with the Duke and Duchess of Teck, inspected the exhibition of the Society of Painters in Water Colours, previous to its being opened to the public on Monday last. The Princess and the Marquis attended a service on Monday night, at St. George's Church, Campden-hill, held in commemoration of the patron saint of England, when Mendelssohn's "Fest-Gesang" was sung. Her Royal Highness and the Marquis dined with the Secretary of State for War and Mrs. Gathorne Hardy on Wednesday, and were present at Mrs. Hardy's reception.

FASHIONABLE MARRIAGES.

The marriage of Mr. Henry Vincent Higgins (1st Life Guards) with Lady Hilda Jane Sophia Finch-Hatton, youngest daughter of the Earl of Winchelsea and Nottingham, was solemnised, according to the rites of the Roman Catholic Church, at St. Mary's, Cadogan-terrace, on Monday. The bridegroom was accompanied, as best man, by Captain John E. P. Spicer (1st Life Guards). The bride was given away by her father. The Rev. Canon Macmullen, B.D., officiated. None but the immediate relatives of both families were present. The breakfast was at the Earl and Countess of Winchelsea's residence in Victoria-street, after which Mr. and Lady Hilda Higgins left for Apethorpe Hall, the Earl of Westmorland's seat in Northamptonshire, where they pass the honeymoon.

The marriage of Mr. Ralph William Payne-Gallwey, eldest son of Sir William Payne-Gallwey, Bart., M.P., and Lady Payne-Gallwey, of Thirkley Park, Yorkshire, with Edith Alice, youngest daughter of Mr. Thomas M. Osborne, of Clifton, Blackrock, in the county of Cork, took place on Wednesday, at St. Andrew's Church, Westminster. The rite was performed by the Right Rev. Robert Gregg, D.D., Bishop of Ossory, assisted by the Rev. Canon Lloyd and the Rev. Henry Salway, M.A., Incumbent. The bride, who was given away by her father, was attired in a princess dress of white satin, trimmed with point d'Alençon, wreath of orange-blossoms, and lace veil. Her ornaments were diamonds and rubies, the gift of Sir William and Lady Payne-Gallwey. The bridesmaids were the two Misses Payne-Gallwey, Misses Florence and Edith Moore, and Miss Margaret Osborne. They wore dresses of ivory silk and cashmere, trimmed with cardinal, and ivory silk caps trimmed with the same colour. Each wore a locket with the monograms of the bride and bridegroom, presented by the bridegroom. Mr. Llewellyn Wynne was best man. The wedding breakfast was given at the Buckingham Palace Hotel, Buckingham-gate, by Mr. and Mrs. Osborne. The bride and bridegroom left for Folkestone, en route for the Continent. The wedding presents, which were numerous and costly, included a pair of massive silver candlesticks and centrepiece, the gift of the tenantry on the Thirkley Park estate, and a piece of plate from the cottagers.

A marriage is arranged and will shortly take place between Mr. Alexander Cosby Jackson (late 23rd Royal Welsh Fusiliers) and the Hon. Susan Frances Hotham, only sister of John, fifth Lord Hotham, and daughter of the late Admiral the Hon. George Frederic and Lady Susan M. Hotham.

THE RESCUE OF THE WELSH COLLIERS.

The release, finally effected yesterday week, of the five survivors, four men and a boy, who had remained nine whole days and nights entombed alive, with no food but a little candle-grease, in the recesses of a flooded coal-pit, has been hailed all over the country with equal wonder and gratification. Some account of this extraordinary affair, though its happy result in their complete deliverance could only be anticipated, was given in the last Number of our Journal. The illustrations now furnished by our Special Artist, and by one of the medical gentlemen in attendance at the colliery, Dr. E. W. S. Davis, will be acceptable for the sake of the warm sympathy that is felt with those Welsh colliers, both the rescued party and their brave deliverers. Her Majesty the Queen has been graciously pleased to intimate her intention of bestowing the Albert Medal, which was instituted for the reward of "acts of gallantry in saving life at sea," upon these humble men who hazarded their own lives in cutting through the coal to extricate their starving comrades.

The Tynewydd Pit belongs to the Troedyrhiw Colliery, in the Rhondda Valley, near Pontypridd, Glamorganshire. The Troedyrhiw Colliery is owned by a Company of that unpronounceable name. It was here that an irruption of water from an old working near at hand occurred on the night of Wednesday, the 11th inst. The day's work was over, and the men were already beginning to make their way towards the shaft to be raised to the surface, when a loud roar as of rushing water was heard. The narrow roadways of the pit had suddenly become roaring streams, the water surging in, as one of the escaped men has said, like a rough sea dashing on a stony beach. Many of the men had to force their way to the bottom of the shaft through this flood, which seems to have come upon them from all sides at once. When they had been raised to the surface, and the muster roll told, it was found that fourteen persons, men and boys, had failed to find their way to the shaft. An exploring party immediately descended, and found that, though the shaft itself was clear, all the workings round it were full. Every roadway leading from that central point to the remotest parts of the pit was full of water to the crown of the arch. It was at once concluded that all those who had not escaped were drowned; but while the exploring party were consulting as to the course to be taken to clear the pit and recover the dead, some faint knockings were heard, and it was conjectured that the men, who were thus proved to be alive, were behind a wall of coal some thirty feet thick. A vigorous effort was at once begun to cut through the wall, and was seconded by the imprisoned men themselves. The work was energetically continued all night, and early in the morning the two parties were near enough to hear each other's voices. A hole was made into the stall or heading in which the men had been shut up. The men inside were eagerly pressing forward; but such was the density of the air in their prison, forced in as it was by the pressure of the water behind, that as soon as the rock was pierced it broke out with an explosion, thrusting one of the men, William Morgan, into the hole through which he was about to escape, and inflicting such injuries that he died. The other four men were speedily rescued and brought to bank; but there were still nine missing besides the one killed.

The rescue of these men naturally suggested the hope that the others might have been preserved in the same manner, by the water imprisoning with them the air they could breathe. Anxious search and listening, however, revealed no sign of them till the afternoon of the second day, when a faint knocking was heard. This knocking was at a much greater distance than that heard the first day, and it was estimated that between the immured colliers and the farthest point which it was possible for the explorers to reach there were three hundred yards of narrow archway filled with water to the crown. In a direct line, through the solid, it was about forty yards; but nothing was done at first to cut through this barrier, because it was known that these men were, as the first five were, shut up in a sort of diving bell; a headway in which the air kept out the water which was pressing it with great force from beneath and behind. The first effort made was therefore to pump out the water, and powerful engines were set to work both in the Tynewydd pit and in an old neighbouring pit out of which the flood had come. Pumping for several days, though one of the engines raised some 13,000 gallons a day, had but little effect on the water. An attempt was then made to reach the poor fellows by divers; but the long distance they had to go under water seems to have frustrated their efforts, and it is difficult to say what they could have done, except to keep up the spirits of the men or convey them some slight refreshment, had they been able to reach the spot where the poor fellows were shut up. The resolution to cut through the coal was taken on the Monday afternoon. A number of picked men then began working their way through the intervening coal, and accomplished about a yard in an hour. The danger then was that the imprisoned air might be forced out and injure the rescuers, while the water rushed in and overwhelmed those whom they were endeavouring to save. Happily, it has been proved in this case, as in so many before it, that English workmen do not regard their own safety when they are working for the rescue of their fellows. The work of cutting through the coal was continued till Friday afternoon, when the two brave men who were the last to cut the coal were Abraham Todd ("Happy Todd") and Isaac Pride. The latter actually struck the hole through the last blow by which the poor men were liberated. Todd, without hesitation, jumped in, and, the size of the hole having been increased, Pride got in and joined his comrade. Their account of the release of the five men is interesting and pathetic. Three of the famishing men were standing, but the two others, John Thomas and David Jenkins, were sitting on some coal. Todd first called out, saying he was coming, so that, as he added, he should not frighten them by his sudden entrance. George Jenkins, he says, replied, "All right, Todd." To give the narrative in his own words:—

"Then I asked them, 'Where are you?' for I had no light, the managers having refused to give us lamps. George Jenkins then came on to me and caught hold of me, and I then felt his arms around my neck, and he kissed me repeatedly. When he left me, Moses Powell did the same. I asked where the other men were, and they replied, 'Behind.' I then called my buddy, Isaac Pride, to come in, which he did. I then went to where John Thomas was, and I caught hold of him. He was sitting down on a lump of coal, apparently lifeless, with his head hanging down. I said to him, 'John, don't you know me?' and he said 'Yes;' and that was all I heard them speak."

In answer to questions put to them by medical gentlemen, the imprisoned men said that all they had during their long incarceration was a small quantity of dirty water, and a little grease which dropped from a box containing the candles. As may be imagined, the poor fellows had not exactly measured the time they had been in their dreary solitude: one said they had only been in the place seven days. Upon the little boy being got out, the first thing he asked was whether his father and brother were alive, and he was informed that they were all right. This however, was a kindly deception, as both were among the victims of the sad accident.

The five persons rescued from the pit on Friday week, the ninth day of their dismal captivity, were George Jenkins, a widower with three children, David Jenkins, who has a wife and one child, Moses Powell and John Thomas, single men, and the boy, David Hughes. They are all recovering, under most attentive medical care, from the bodily prostration to which they had been reduced. A subscription has been opened, for the twofold purpose of providing for them and their families and of rewarding the men who toiled so hard, and risked their own lives so bravely, to effect the rescue. The Lord Mayor of London receives contributions at the Mansion House. It was among the members of the House of Commons, at its sitting on the Friday evening, that the subscription began, immediately upon the arrival of news that the men had been safely got out. The news was posted up by the Home Secretary at the door of the House. Her Majesty the Queen had telegraphed from Osborne a special message of anxious inquiry, which was read by Mr. Wales, the Inspector of Collieries, to the assembled multitude at the pit's mouth, just when the last of the rescued colliers was brought up.

The physicians and surgeons who were several days in attendance at the colliery, waiting and preparing for the opportunity of administering to the poor fellows in their extreme state of exhaustion, were Dr. Henry Naunton Davies, of Cymmer; his brother, Dr. B. Davies, of Mountain Ash; Dr. Edward W. S. Davis; Dr. Hopkins, of Pontypridd; Drs. Jones and Pritchard, of Pand; Dr. Lloyd, of Caestella; and Dr. Parry, of Ferndale. One of these gentlemen, Dr. E. W. S. Davis, who descended into the pit, has furnished the sketches for the engravings which fill our Extra Supplement. The other sketches were taken by our Special Artist. We are indebted to the special correspondent of the *New York Herald*, Mr. Michael Boyton, for a Plan of the interior of the Tynewydd Pit, with its three different "levels," situated nearly parallel to one another in the inclined stratum of coal. This Plan shows the exact place where the poor fellows were confined from Wednesday, the 11th, to Friday, the 20th, and the space, filled with solid coal, which was cut through for their release. It also shows where Morgan and the four others were shut up during many hours of the first and second day, and where Morgan was killed. The last deaths ascertained were those of a man and a boy, Edward Williams and Robert Rogers, who were found on Saturday in one of the lower workings, crushed beneath large masses of stone, which had been covered by the water. An inquest has been held on their bodies.

The sketches by our Special Artist comprise a view of the colliery head-quarters at Pontypridd; a scene near the mouth of the Tynewydd Pit, where crowds of anxious lookers-on had assembled; the bringing up of "one of the rescued," and lifting him from the cage at the top of the shaft; and the hut in which they were at first laid for restorative treatment. Dr. E. W. S. Davis's sketches, in our Extra Supplement, show parts of the interior of the coal-mine, with the apparatus used for condensing air, and the holes through which men had to creep; he gives also portraits of the medical gentlemen there.

THE PALACE AND GARDENS, ATHENS.

The Royal Palace at Athens, which is a comparatively new building, stands on the high ground of the ridge between the Acropolis and Lycabettus. It overlooks the modern town, and has a splendid view away to the Piræus and over the Gulf of Ægina, with Salamis and the mountains of Argolis in the distance. The view given in our Illustration represents the southern side of the palace, which has most architectural pretensions, and here are the rooms occupied by the Royal family. This side looks to the south over the gardens, and commands a fine view of the Acropolis. From the windows some very interesting points connected with Old Athens can be seen. The fine Corinthian columns of the Temple of Jupiter Olympius appear not far beyond the garden inclosure; the Arch of Hadrian is also seen; and over the Ilissus is the hollow of the Old Stadium. Away to the left is Hymettus, and in the distant south is the open Mediterranean, with some of the Isles of Greece visible in the blue haze of the horizon. Such are among the objects which the Princess of Wales can look out upon from her windows while she remains in the capital of Ancient Attica and of Modern Greece. Just now the climate is delightful in that part of the world; the fields are bright green with the young crops, and the ground is covered everywhere with a multitude of flowers, making the drives to the places around very enjoyable.

Viscount Anson has been gazetted as a Deputy Lieutenant for the county of Stafford.

At a meeting in the City Hall, Glasgow, yesterday week, the Rev. Josiah Henson, "Uncle Tom," was presented with £750 and a gold watch and chain.

The patients of Dr. William Barr Brown, of Ascot, have presented him with a thousand guineas, as an expression of their esteem and regard for him.

Several Reviews of Books, Notices of the Exhibitions of the Society and the Institute of Painters in Water Colours, Reports of Royal Institution Lectures, a column of Curious Wills, and other articles, are unavoidably deferred.

The Conservatives have retained the seat for Salford. The result of the poll on the 19th was as follows:—Colonel Walker (Conservative), 8642; Mr. Kay, Q.C. (Liberal), 8372. The number of votes polled was unusually large, being 17,145 out of a total on the register of 22,000.

The charter for the incorporation of the borough of Taunton was received by the acting Town Clerk on the 19th inst. Provision is made for the election of six aldermen, eighteen councillors, and a mayor. The first election is fixed for June 10, and the first meeting of the new council for the 26th.

In the general synod of the Irish Church yesterday week a bill providing that the clergy might read a portion of the burial service over the bodies of unbaptised infants was discussed. One hundred and ninety-five laity voted for the bill and fifteen against it, one hundred clergymen voted for it and fifty-six against it; but, as this came short of a two-thirds majority of both orders, the bill was rejected. Dr. Alexander, the Bishop of Derry, has withdrawn for the present from the synod with a solemn protest against its doctrinal decisions. On Tuesday a bill was carried in repudiation of auricular confession and priestly absolution.

A handsome gold lever watch, a gift from the Emperor of Germany, has been presented by the Liverpool Local Marine Board to Captain Robert Ramsey, formerly chief officer of the English steamer Rubens. The present was a recognition of services on the part of Captain Ramsey in commanding a boat of the Rubens during a terrific gale in December, 1875, and rescuing fourteen of the crew of the German barque Heron. Some money presents were to be awarded to the crew of the steamer; but these could not be found, and his Majesty directed that 300 marks should be given to the National Life-Boat Institution instead. The captain of the rescuing steamer had previously received a gift for his services.

THE COLLIERY ACCIDENT IN SOUTH WALES: SKETCHES BY OUR SPECIAL ARTIST AT THE TRONDYRNIW COLLIERY.

THE PRINCESS OF WALES AT ATHENS: THE PALACE AND GARDENS, THE ACROPOLIS IN THE DISTANCE.

THE RUSSIAN PEASANTRY.

When we speak of "the Russian people" we are apt to forget that there are almost, if not quite, as many varieties of race and religion among the subjects of the Czar as among those under the rule of our own Sovereign. In selecting any particular set of people, therefore, for the purpose of illustrating the customs or the costumes of the Russian peasantry, we must bear in mind that we leave out of account a vast number of other folk whose modes and manners are wholly different, yet who have as much right to be called Russians. We have only to look through the pages of a pictorial volume published in the early part of this century to see what a wonderful "fancy dress ball," so to speak, is formed by the collective "Costumes of the Russian Empire." Indeed, those in search of something novel and picturesque to "go in" to a "bal masqué" might do worse than employ an ingenious costumier to transform them into the semblance, so far as apparel is concerned, of a Tcheremissian, a Tchouvashian, a Mordvine, a Yakouti, an Aleutian, or a Koriak. Impersonating any one of these strangely named people, the masquerader would look very little like a Russian as conventionally represented, yet would be dressed as a Russian all the same. In respect to quaintness of design, brilliancy of colour, and the lavish use of ornament, with strict adherence to good taste, the dresses of these "outlandish" races will hold their own against the costumes of any nation on the face of the earth. The Russian proper—that is, the native usually to be met with by those travellers who do not go out of the beaten track—is not nearly so picturesque as his more remote fellow-subjects. Nevertheless, even he is not without his enthusiastic admirers. For instance, "The Englishwoman in Russia" writes in her lively volume, published some years ago, "There is something quite classic in the Russian dress. The straight, half-moon shaped head-dress of the girls is almost a copy of that on Diana's brow; the narrow band confining the hair of the men could find its counterpart on many antique heads; the closely-setting folds of the women's 'sarafane' are very like those in Greek paintings and on Etruscan vases; the loose shirts, tied round the waist, worn by the men, look very like the figures on the friezes of the Athenian temples." But with the ordinary attire of the Russian peasant or "moujik" we are almost as familiar as with the frieze coat of the Irishman, or the kilt of the Highlander. Every traveller must know that heavy, stolid-looking boor, with the bushy beard, the long hair cut straight across the forehead, and equally straight round the neck; with his coarse calico shirt, or sheepskin—"the woolly side in," as "Brian O'Lynn" used to wear it, and the loose baggy trousers tucked into the big boots reaching up to the calf. Occasionally his attire is varied by the substitution of leggings and shoes, tied round and across like those of the Italian "pifferari," in place of the high boots, and thus swaddled, he seems to be perpetually suffering from gout in both feet. As for the women, it is difficult to distinguish them from the men in winter, for they, too, then wear the warm but malodorous sheepskin, or "tooloop," while their nether garments, being of a very similar character to those of their male friends, would not raise a blush even on the cheek of the most particular Lord Chamberlain. In summer, however, the female Russian peasants are much more sightly objects. The "sarafane," or "katsavaykas," their principal garment, is, indeed, a very graceful and becoming robe; and their head-dresses are remarkable for their showiness and fantastic forms. But the prevailing defect of Russian fashion is the habit which the women have of jealously concealing their hair. Covered with gaudy turbans or handkerchiefs, not the least part of their treasures is allowed to be seen. In this respect they seem to resemble the negroes of Cuba, who hide their hair in public, believing the exposure of their woolly locks to be an indication of their enslaved condition. Possibly, the Russian fashion we have alluded to may be traceable to a like motive, and may be a relic of the serfdom now abolished. Young girls, however, wear their hair sometimes in long plaited tails, called "kossas," like the Swiss and some German nations. In the matter of shoes and stockings the Russian peasant-woman is not particular. She has none of the care of the French-woman for being "bien chaussée." In point of fact, when the severity of winter does not compel her to wear masculine boots, she does not at all object to go barefoot. As for the costume of her children, there is very little to be said about it, as there is very little of it. Take a Russian child, and put him or her into a coarse calico shirt or chemise, and he or she is "dressed" for all practical purposes.

With regard to house accommodation, the ideas of Russians in the agricultural districts are singularly unanimous and by no means exacting. You very rarely find any scattered homesteads or farms in Russia, as in other countries; but the people crowd together in closely-built villages, as though for warmth; and as they build their own dwellings they are, no doubt, well satisfied with their quarters. Yet the Russian peasant's "isba," or cottage, is an exceedingly primitive affair. It is constructed almost entirely of wood. Its foundations consist of four large stones, or as many roots of trees. On these are superimposed layers of deal logs, laid one over the other horizontally, and firmly secured at the corners, where the timbers cross, the interstices being filled up with moss, clay, or tow. These huts are roofed with boards, guttered tiles, sheet iron or thatch; but the last is most in vogue. There is usually an open space all round the floor of the cottage, which lets in ventilation in summer; but in the winter the peasants close this aperture—earthing themselves up, as it were, like celery. The windows are usually cut into the walls after the house is finished. Not much attempt at architectural decoration is made, though the superior class of peasants sometimes border their roofs with open woodwork of an ornamental kind, like that to be seen on Swiss chalets, and some of them "go in" for pretty balconies. Inside the cottage one apartment usually suffices for "parlour, kitchen, and hall," and bed-room as well. In summer, and when the weather is fine, the peasant throws himself down and sleeps simply "anywhere," even in the open air; but in winter the common roosting-place of the whole family is on the top of the "peech," or stove, which warms the whole house, and is kept burning day and night. As we have already said, the Russian peasants build their own dwellings; and, indeed, the Moujik is a marvellously self-helping fellow. With the hatchet, which he invariably carries at his waist-belt, he can make almost anything; and not only his log-hut, but his tables and chairs, and all the rest of his scanty furniture, owe their birth to that handy implement. Similarly the people are made to depend on themselves for many other things. Their water-supply is simply furnished by obtaining the precious fluid from wells or streams and carrying it to the house in buckets attached to poles. Such buckets are among the articles which every householder is bound by law to provide himself with in the event of fire; and, indeed, upon each cottage is to be seen a rough painting of some implement which the owner of the dwelling is expected to have ready for such a contingency, one bearing the sign of an axe, another of a ladder, a third of a long pole with a hook attached, wherewith to pull down burning thatch, and so forth. A vast deal more might be written about the domestic economy of the Russian agricultural class, but we have said enough to show how primitive the mode of

life of these people still remains, notwithstanding the abolition of serfdom among them. One of these days, when Russia has a Parliament and local railways, we may find the Moujik exchanging his caftan for a "chimney-pot" hat, putting a stucco front to his log hut, and becoming generally discontented with his lot, to which he seems at present most stupidly resigned.

Our illustrations of the figures of some of the Russian peasantry were drawn by Mr. Walter Goodman, to whom we are indebted also for the preceding descriptive remarks.

FOREIGN AND COLONIAL NEWS.

FRANCE.

The Emperor and Empress of Brazil arrived at Paris on the 19th inst. The Marquis d'Absac, representing the President of the Republic, received them. They are occupying the largest set of apartments in the Grand Hôtel. The Emperor shortly after his arrival visited the President of the Republic at the Elysée. The Prince de Joinville called on the Emperor in the afternoon.

The *Journal Officiel* publishes the regulations for an exhibition of national portraits to take place at the Palace in the Champ de Mars in 1878. It is to be placed in the first of the grand galleries devoted to the fine arts.

M. Paul de Cassagnac, the Bonapartist writer, has been sentenced to two months' imprisonment and a fine of 2000*fr.* for publishing articles in the *Pays* newspaper exciting to hatred and contempt of the Government.

A new railway and steam-packet station was opened on the Quai Bonaparte, Boulogne, on Monday.

ITALY.

There was a long debate in the Chamber of Deputies last Tuesday upon the attitude of Italy towards the Eastern Question. The replies made by the Prime Minister and the Minister of War were couched in cautious terms. Both assured the Chamber, however, that the Government meant to preserve neutrality, and that they do not foresee any necessity for military measures.

Cardinal Howard took his titular throne in the Church of St. John and St. Paul, on the Coelian Hill, on Sunday. After a speech in Italian, he delivered an address in English, which lasted a quarter of an hour. Cardinal Vannicelli Casoni died last Saturday, at the age of seventy-seven.

SPAIN.

King Alfonso opened the Cortes on Wednesday. His Majesty referred with satisfaction to the country being at peace, and promised the speedy pacification of Cuba. There was an enormous deficiency, owing to the war expenses, and it was necessary to reorganise the finances.

An official notification has been published granting an amnesty to all soldiers and officers of every grade who have served the Carlist or Cantonalist cause if they surrender to the authorities within thirty days from Saturday last.

HOLLAND.

A bill was yesterday week introduced by the Government in the Chamber of Deputies for reclaiming the southern portion of the Zuyder Sea to the extent of 15,700 hectares, at the expense of the State. The estimated cost of the undertaking is given as 116,000,000 *fl.*, which the Government proposes to cover by loans. It is intended also to construct a canal to unite Amsterdam with the Rhenish Provinces.

GERMANY.

The Emperor William left Berlin last Saturday evening for Wiesbaden. He is expected at Strasburg on May 1. The Crown Prince, Crown Princess, and Prince William of Prussia have arrived at Kiel. Prince Henry of Prussia, the second son of the Crown Prince, has joined his Majesty's ship Niobe at Kiel, as a cadet.

Count Moltke took part in a debate in the German Parliament on Tuesday respecting the War Estimates, which he defended on the ground that the circumstances of the time did not permit him to hope for a long period of peace. He expressed great distrust of France, and alleged that unusually large masses of troops were at present placed between Paris and the German frontier. The arguments of the Count seem, by a division which was taken on a motion to establish a number of new captaincies, to have had much weight with the deputies. Speaking in the Reichstag on Thursday, however, he spoke of the good relations at present existing between Germany and France.

Yesterday week his Excellency Singo Aoki, the Japanese Minister at the German Court, was married in a Protestant church at Bremen to Fraulein von Rhaden. The Envoy is a Buddhist who has had the education of a German gentleman.

AUSTRO-HUNGARY.

Bills relating to the compromise with Austria were on Monday introduced in the Lower House of the Hungarian Diet, when the President of the Council stated that, while the compromise effected might be expected to produce a substantial improvement in the financial position of Hungary, the rights of Hungary had not in any way been surrendered.

SWEDEN.

The Government bill relative to the organisation of the army has been approved by the First Chamber of the Riksdag as modified by the committee, but it has been rejected by the Second Chamber.

AMERICA.

It having been decided by the President to withdraw the troops from the Louisiana State House, the Republican Legislature broke up quietly last Saturday and went over to Mr. Nicholls, the Democratic Governor. The *Times* correspondent at Philadelphia says that the removal of the troops has caused general rejoicing in New Orleans, and also generally throughout the South. Mr. Packard surrendered the State House to Mr. Nicholls on Wednesday.

The South Carolina Senate, which previously supported Mr. Chamberlain, the Republican claimant to the governorship, has accepted Mr. Simpson, the Democratic Lieutenant-Governor as its presiding officer, thus completing the political settlement in South Carolina.

The American war-steamers Despatch was to sail this week for Constantinople to reinforce the American Fleet. She will be under the immediate orders of the American Minister at Constantinople. The Declaration of War leaves several Russian merchant-vessels in the harbours of New York, Philadelphia, and Baltimore unable to obtain charters.

Mr. George A. Schneider, Chicago, has been appointed Chargé-d'Affaires in Switzerland.

CANADA.

In a sitting of the Dominion House of Commons on the 20th inst. several members objected to the discontinuance of the grant for the defrayal of the expenses of the Canadian rifle team to Wimbledon. Mr. Mackenzie, the Premier, replied that the Government would further consider the question of continuing the grant. On the 25th inst. a resolution declaring that the House disapproves of the policy and course of the

Government respecting the Canada and Pacific Railway was defeated by 105 votes to 59.

Navigation to Quebec has been opened.

THE CAPE OF GOOD HOPE.

In a summary of Cape Town news to March 27 we read that the despatch from Lord Carnarvon notifying the appointment of Sir Bartle Frere as Governor of the Cape had been published in the colony. Lord Carnarvon expresses his personal satisfaction at conveying to Sir Henry Barkly the thanks of her Majesty's Government for the ability which has characterised his administration at the Cape, as well as in other parts of the empire. Sir Henry and Lady Barkly were to be entertained at a public banquet on April 3, and to leave for England on the following day.

By later intelligence from Cape Town we learn that Sir Bartle Frere, the new Governor of Cape Colony, arrived out on March 31. The Hon. J. C. Molteno, the Colonial Secretary, and his Ministerial colleagues boarded the steamer on her arrival and cordially welcomed his Excellency, afterwards escorting him to Government House, where the new Governor took the oaths of office.

Secoceni has reopened hostilities in the Lydenburg district, and the volunteers have been driven back by the natives.

THE WAR.

The Emperor of Russia has declared war against Turkey, and his armies have entered Roumania and Armenia. His Majesty, as was anticipated in our last week's notice of these affairs, came to the military headquarters at Kischineff, in Bessarabia, accompanied by the Czarevitch. He reviewed some of the troops on Sunday, and others on Tuesday, before their departure to cross the frontier. He told them, "if they should encounter the enemy," to show themselves brave soldiers, but did not mention that they were to fight the Turks. On the second occasion, the Emperor said:—"I felt grief at sending you to the field of battle, and therefore delayed action as long as possible, hesitating to shed your blood. But, now that the honour of Russia is attacked, I am convinced that you will all, to the last man, know how to vindicate it. May God be with you! I wish you complete success. Farewell until your return!" Still, in these speeches of his Majesty, there was not a word of his intended attack upon Turkey. But at St. Petersburg, on Tuesday, his Imperial proclamation was issued, declaring that he is obliged to go to war because the Turkish Government has refused to adhere to the international resolutions of the Protocol, and has rejected the conclusions of the late Conference at Constantinople, still refusing to give any effective guarantee for the security of its Christian subjects. The Emperor's manifesto, bearing date at Kischineff, April 12 (old style), which is the 23rd inst. of our Calendar, concludes as follows:—"The Porte did not defer to this unanimous wish of Christian Europe. Having exhausted our pacific efforts, we are compelled by the haughty obstinacy of the Porte to proceed to more decisive acts. A feeling of equity and of our own dignity enjoins it. By her refusal Turkey places us under the necessity of having recourse to arms. Profoundly convinced of the justice of our cause, and humbly committing ourselves to the grace and help of the Most High, we make known to our faithful subjects that the moment foreseen when we pronounced words to which all Russia responded with such complete unanimity has now arrived. We expressed the intention to act independently when we deemed it necessary, and when Russia's honour should demand it. In now invoking the blessing of God upon our valiant armies, we give them the order to cross the Turkish frontier.—ALEXANDER."

A diplomatic circular has also been issued by Prince Gortchakoff, the Russian Prime Minister or Chancellor of State, expounding the motives of Russia in going to war. The Turkish Government has replied to this with a document of similar form, imputing to Russia all the blame for the conflict about to begin; and especially pointing out that, by the Treaty of Paris in 1856, if any one of the Powers has a dispute with the Porte upon these questions it ought to invoke the mediation of the other Powers.

On Tuesday, however, the Russian troops crossed the frontier at three points—namely, Ungheni, Betschman, and Betschamak, opposite Kubej. The same evening they reached Jassy, Leow, and Galatz, and occupied the Barboza bridge on the Seret, which flows into the Danube above Galatz. They have also crossed the Asiatic frontier at five points. The Grand Duke Nicholas commands the Russian army in Roumania, while the Grand Duke Michael is commander of the army in Georgia, which has marched to invade the Turkish province of Armenia, and to besiege Kars and Erzeroum.

The Turks, on their part, have made great preparations to oppose the Russian passage of the Danube. The Turks themselves are said to have crossed that river on Wednesday last, and occupied Kalafat, just opposite their own fortress of Widdin.

Mr. Layard, the new British Ambassador at Constantinople, has had interviews with the Grand Vizier and the Minister for Foreign Affairs; he is reported to have censured the terms of Turkey's reply to the Protocol, and to have given the Porte to understand that it must not count on receiving any support from England.

The Roumanian Chambers were opened on Thursday. Prince Charles in the Speech from the Throne said, as the Powers declined to guarantee the neutrality of Roumania or to assist her, they could only rely upon themselves and upon their own exertions to prevent Roumanian territory being made the theatre of war. For this purpose the nation would make every sacrifice. The Prince concluded his speech by saying that he would put himself at the head of the army.

Satisfactory news has been received of the survey of Palestine from Lieutenant Kitchener, in command.

A revolution has broken out in Paraguay, and the President and his brother have been assassinated.

The English cricketers in Australia played a drawn match against the Adelaide team on the 18th inst.

Mr. Pope Hennessy, the new Governor of Hong-Kong, landed there on Sunday last.

A telegram from Teheran states that the plague is spreading, and that sanitary measures are being taken.

The correspondent of the *Daily News* at Alexandria reports that news has been received there that her Majesty's ship Fawn stopped a dhow near Massowah, and, finding slaves on board, seized the captain and took away the slaves, entering them on the ship's books.

The Newfoundland Legislature has passed a tariff bill imposing a 20 per cent duty on ready-made clothing manufactured of wool, and an ad valorem duty of 13 per cent on articles generally not subject to a specific duty. A 5 per cent bounty is allowed on the original cost of hemp, flax, cotton, and wool when imported in the form of manufactured merchandise.

FINE ARTS.

The collection of works, 289 in number, forming the eighty-eighth exhibition of the Society of Painters in Water Colours, was opened to the public on Monday last. The gallery, as a whole, though not presenting many instances of exceptional excellence, well maintains the general high average attaching to the gatherings of this body of artists, in the numerous and characteristic examples now shown of the aim and style of its respective members, all of whom, with the exception of Messrs. Bartholomew, W. Evans, Holman Hunt, and Nash, appear as contributors. Detailed criticism is unavoidably reserved until next week.—A notice of the Institute's exhibition, numbering 231 works, is also deferred.

The sale of the first portion of the Shandon collection was concluded yesterday week by Messrs. Christie, Manson, and Woods, and the total amount received during the nine days over which the proceedings extended was £31,342. The second portion of this collection will be sold in May, commencing on the 14th, and will occupy five days. The third and fourth portions will be sold in June.

A gallery of historical portraits of rather unusual interest, belonging to the late Mr. Robert Vernon, whose name is so well known as the liberal donor of the many modern pictures in the National Gallery, was sold last Saturday by Messrs. Christie, Manson, and Woods. There were, besides twenty miniatures of various historical personages, about one hundred portraits, most of which were life size. These, with some paintings, realised £7095.

One of the most important picture sales of the season is that fixed for Friday and Saturday this week at the gallery of Messrs. Christie, Manson, and Woods. The paintings to be submitted to public competition are those collected by Mr. Albert Grant for the decoration of Kensington House.

In connection with art-sales it may be noticed that Messrs. Agnew have opened handsome galleries in Old Bond-street, having removed there from the premises in Waterloo-place.

Miss Thompson's new picture, "The Return from Inker-mann," is on view at the galleries of the Fine-Art Society, 148, New Bond-street; where also are to be seen the artist's other works, "The Roll Call," "Quatre Bras," and "Balacava."

Last Saturday evening the sixty-eighth anniversary dinner of the Artists' Benevolent Fund took place at the Freemasons' Tavern—Viscount Bury in the chair. The subscriptions amounted to £600, including 100 guineas from the Queen.

A proposal for the institution of a comprehensive gallery of casts of Greek sculpture, to illustrate the complete development of Greek art, is expounded in the *Spectator* of last week by Dr. W. C. Perry, who has devoted several months of study, in the principal museums and galleries of Europe, to the furtherance of this object. It seems well deserving of public consideration.

Lord Houghton presided at the annual meeting of the Art-Union of London on Tuesday. The report showed that the annual subscriptions had amounted to £15,586. The sum allotted for prizes last year was £7810. The prizes next year will consist of 182 works of the value of £10 and upwards, five of £100, three of £150, and two of £200. To these prizes will be added bronze and porcelain statuettes, china tazas, paintings in pottery, &c. Mr. Godwin seconded the motion for the adoption of the report, which was unanimously carried. On the motion of Mr. Bennoch, seconded by Sir W. Stirling, votes of thanks were passed to the secretaries, Mr. Lewis Pocock, Mr. E. Antrobus, and Mr. Watson. The following are some of the principal prize-winners:—C. W. Garrod (Wells), painting, "Joseph and Mary," valued at £400; Thomas Young (South Australia), prize valued at £200; and J. Long (Colchester), prize valued at £200.

Artists, as a rule, are not celebrated for taking much care of the future. They are too apt to let to-morrow take care of itself, satisfied with the Bohemian enjoyment of to-day. Occasionally, however, efforts have been made to lay by a provision for a rainy day, and it is a thousand pities success should not crown such efforts when they are made. There is a society called the Artists' Amicable Fund, which has been in existence about half a century. It has hitherto held on its course, sustained by the subscriptions of its members alone; but the majority of them are now growing old, and it is found that the outgoings are more than the income. The object of the society is to ensure an allowance to its members in case of their being incapacitated by sickness from following their profession, or a sum of money in case of death; but the premium was originally fixed at too low a rate, and the claims on the society have become so heavy that it is threatened with dissolution unless help is obtained. In compliance with the new Friendly Societies' Act, a valuation of the liabilities of the Artists' Amicable Fund has been made by an eminent actuary, and it is found that the society is worse off by several thousand pounds than it ought to be. This it is impossible for the members to make up from their narrow incomes; and if the society be dissolved a large number of deserving artists will be brought in their old age to misery and want, while they have for many years been laying by, as they thought, a sufficient provision for the time when they could no longer work. This state of things is in no way the result of mismanagement, but has been brought about solely by the premiums having been fixed at too low a rate, according to the calculations of modern actuaries. It is proposed to raise a guarantee fund to avert the dissolution of the society; and subscriptions will be received by Messrs. Ransome, Bouverie, and Co., 1, Pall-mall East.

MUSIC.

ROYAL ITALIAN OPERA.

There is not much to notice in our present record of the proceedings at this establishment. The reappearance of Mdlle. Marimon, postponed to Thursday week, has been again deferred, and was to take place on Thursday last, in "Don Pasquale." The performances of Thursday week and Saturday consisted respectively of repetitions of "Les Huguenots" and "Guglielmo Tell," cast as recently noticed, except the transference of the part of Mathilde, in the last-named opera, to Mdlle. Smereschi. On Monday "Faust" was given, and was to have included the reappearance of M. Maurel as Méphistophele. The indisposition of the singer, however, caused the substitution of Signor Bagagiolo in the part; the cast in other respects also having been as on former occasions. On Tuesday "Les Huguenots" was repeated. This (Saturday) evening Mdlle. Albani is to make her first appearance this season, as Elvira, in "I Puritani."

As previously announced, Her Majesty's Theatre, in the Haymarket, is to open this (Saturday) evening, under the leadership of Mr. Mapleson. "Norma" is to be given on the occasion, with Mdlle. Titiens in the principal character.

Last Saturday's Crystal Palace Concert was entirely appropriated to the performance of a selection from the works of

Anton Rubinstein, who was present, and co-operated in the double capacity of conductor and pianist. The selection opened with the symphony entitled "Ocean," the second, and perhaps the finest, of the composer's five works in that form. It had already been heard in London, at one of a series of concerts given some years ago at the Hanover-square Rooms, Herr Klindworth having conducted the performance. It now consists of an "Allegro maestoso," an "Adagio," an "Allegro," an "Adagio non tanto," a "Scherzo," and an "Allegro con fuoco," preceded by an introductory "Adagio." The "Adagio" which follows the first movement and the "Scherzo" are recent additions. In each division of the symphony there is much characteristic writing, with less of those inequalities and that tendency to diffuseness of treatment that are observable in most of Herr Rubinstein's larger compositions. The work altogether produced a marked effect, particularly the "Scherzo." The symphony was followed by an arioso and duet (finale to the second act of the opera of "The Maccabees"). So far as could be judged in the absence of the requisite accessories of scenic action there is much dramatic power in this music. Miss Thekla Friedländer and Miss Helene Armin were the vocalists. Herr Rubinstein's rare powers as a pianist were displayed in the execution of his second concerto (in F), the great difficulties of which were executed with that facility and energy which are among his well-known characteristics. The pianist's other performances were in three unaccompanied pieces—"Nocturne," "Scherzo" (from Sonata No. 3), and "Caprice." A declamatory song, entitled "Tragodie," was effectively rendered by Miss Friedländer. The selection concluded with the overture to Herr Rubinstein's Russian opera, "Dimitri Donskoi," which has already been noticed in reference to its performance at a previous Crystal Palace concert. The concerto was conducted by Mr. Manns, Herr Rubinstein having directed the other pieces in which the orchestra was concerned.

A series of four promenade concerts was begun on Saturday last at the Royal Aquarium, under the direction of M. Rivière, who conducted the performances. Various orchestral pieces were given with great effect by a capital band of about seventy instrumentalists, occasionally reinforced by the band of the Scots Guards. Vocal music was interspersed by Madame Antoinette Sterling, Signor Foli, and others. There was a very large audience.

Herr Richter, the conductor of last year's Bayreuth festival, has arrived in London from Vienna, and conducted a full rehearsal last week at the Albert Hall, which was in every respect satisfactory. The excellent quality of the orchestra was cordially recognised by Herr Richter, who, at the conclusion of the rehearsal, was much applauded by the performers.

The second concert (and last this season) of the Bach choir took place this week, the programme having included, among other interesting features, Bach's motet "Ein feste Burg," and Gade's cantata "Comala." Of the performances we must speak next week.

Mr. James Francis, of the Mohawk Minstrels, had his fifth annual benefit at the Agricultural Hall, Islington, on Wednesday. There was a good programme provided.

The second pianoforte recital of Miss Madelena Cronin, the eminent pianist, was given in the new concert-room, Royal Academy of Music, Tenterden-street, on Thursday evening.

A notice of the Sacred Harmonic Society's performance on Friday of "Eli," the first of the two grand oratorios composed by the conductor of the society's concerts, Sir Michael Costa, must be deferred till next week.

Herr Rubinstein's series of pianoforte recitals is to begin at St. James's Hall next Monday afternoon.

Herr Heinrich Leopold's first evening concert will be held next Wednesday at the Royal Academy of Music.

The Italian journalists speak highly of an operetta performed at the Teatro Nuovo of Naples, entitled "La Suocera," or "The Mother-in-law," of which both words and music were composed by an English lady, Mrs. Steward. She is a sister of Mr. J. Hilary Skinner, the well-known Special War Correspondent of the *Daily News*; and her genius as a musical composer has been commended by Verdi in the highest terms.

THEATRES.

A change has become expedient at the Haymarket. The little comedy of "Fame" has given way to Mr. Gilbert's two fairy dramas of "Pygmalion and Galatea" and "The Palace of Truth." The latter was represented on Saturday, and is announced for a continuance. The part of King Phanor is sustained by Mr. Buckstone with that abundance of humour which he has always at command. Mr. Howe, as Aristæus, the bluff courtier who condemns so unpromisingly his monarch's poetry, performed with force and discrimination. The vain Philamir was discreetly characterised by Mr. W. Herbert. The ladies did their parts charmingly. Mrs. Chippendale as Queen Altire, Miss Caroline Hill as Mirza, and Miss Marion Terry as Zeolide were careful and elegant exponents of their rôles.

At the Adelphi, a revival also was successfully performed. The popularity of "Peep o' Day" is undiminished, and on Saturday attracted a very large audience. Mr. Falconer himself played Barney O'Toole with his usual felicity, and Mr. H. Sinclair in Harry Kavanagh found a character exactly adapted to his talents. Stephen Purcell fell to the lot of Mr. J. G. Shore, who gave to the part its requisite emphasis. Mr. Emery was suited with that of the Rev. W. O'Cleary, and Mr. W. McIntyre impersonated Black Mullens with skill and power. Miss E. Stuart as Kathleen, Miss Hudspeth as Mary Grace, and Mrs. J. Lovell as Shelah, were all suitably employed. The other parts were equally well sustained. The children's pantomime satisfactorily concluded the evening's entertainment.

Owing to the great demand for seats for the amateur dramatic performance to be held at Bridgewater House on May 14, for the benefit of the Convalescent Home in connection with King's College Hospital, a second performance will be given on the following evening, Tuesday, May 15. Mr. H. J. Byron's comedy of "Cyril's Success" will be represented, the characters being sustained by the Hon. Lady Sebright, the Hon. Mrs. Wrottesley, Miss M. Helmore, Mrs. Monckton, the Earl of Ellesmere, the Hon. A. Erskine, Captain Fitz-George, Captain Gooch, Mr. W. S. Gilbert, Mr. Francis W. Maclean, Mr. Dundas Gardener, Mr. Barrington Foote, and others. Tickets may be obtained at the secretary's office, King's College Hospital.

Prosperity does not damp the ardour of the management of Mr. and Mrs. German Reed's agreeable Entertainment at St. George's Hall. Two alterations in the programme are announced for the 7th of next month. Mr. Corney Grain withdraws his new edition of "Five o'Clock Tea" for a musical sketch called "Edwin and Angelina;" and a new second part, of a very humorous character, under the quaint title of "No. 204," by Mr. F. C. Burnand, with the music by Mr. German Reed, will also be produced.

The members of the Artisans' Institute, which is estab-

lished in Castle-street, St. Martin's-lane, are to give an amateur performance at St. George's Hall this evening (Saturday), under the patronage of the Duke and Duchess of Westminster. The play to be represented is a new one, "Gonzaga," by the Rev. Henry Solly, secretary to the Artisans' Institute. Its subject is an incident of Florentine history in the fourteenth century. Mr. Edgar, late of the Lyceum Theatre, lends his assistance as stage manager, and Miss Jessie Warner takes the leading female part.

The annual Shakespeare Festival of the Urban Club was held on Monday evening—Dr. Westland Marston in the chair. Mr. Fawcett and Dr. Schliemann were among the speakers.

The first stone of the Shakespeare Memorial Building at Stratford-on-Avon was laid on Monday, with full Masonic ceremonial, by Lord Leigh, Lord Lieutenant and Provincial Grand Master of Warwickshire, in conjunction with Lieutenant-Colonel J. Machen, Deputy Provincial Grand Master. The memorial embraces a theatre, a library, and a picture-gallery. About 500 Freemasons took part in the ceremony. They walked in procession to the site of the memorial, where they were received by the Mayor and Corporation and the chairman and council of the Memorial Association. Lord Leigh and Mr. Creswick, the actor, spoke briefly, pleading earnestly for national support to such a school of art. After the ceremony a luncheon took place, presided over by the Mayor. About eighteen hundred persons were present; and speeches were made by Sir J. E. Eardley Wilmot, Bart., M.P., Mr. Tom Taylor, Mr. Theodore Martin, and others.

NATIONAL SPORTS.

The Thursday at Newmarket last week should always be remembered as "Archer's day," for the favourite jockey performed the extraordinary feat of winning six races out of seven, and, in the seventh, he had no mount. This remarkable performance was about the only feature of the afternoon, as the sport was of a very uninteresting nature, though Skylark showed himself possessed of unsuspected stamina by twice successfully compassing the severe D.I. Neither Coltness nor Twine the Plaiden could fairly extend him, and, as he has always been a very consistent performer, he will prove invaluable in trying Lord Falmouth's three-year-olds. On the Friday, Chamant had a walk-over for the Benington Stakes, and the only race of the day which produced a really good field was the Newmarket International Handicap, for which ten ran. Tassel (6 st. 10 lb.) has so often disappointed his admirers that, on this occasion, he had very few friends, and, as so often happens in similar cases, he won very easily indeed.

The recent Epsom Spring Meeting was, perhaps, the most successful ever held; and the summer-like weather on Tuesday tempted an immense number of people to the Downs, the ring especially presenting quite a Derby Day appearance. When the whole of the ten coloured on the card started for the Trial Stakes it was evident that, as usual, large fields would be the order of the meeting. Hellenist secured an easy win, as even an easy mile is quite beyond the compass of such a bad roarer as Farnese; and The Grey Friar, despite his Biennial victory last week, could not be expected to defeat Sir George Chetwynd's horse at only 6 lb. for the year. Birdie, an own sister to Polly Perkins, and, like her, a small but very smart and speedy filly, had no trouble in crediting Lord Lonsdale with the Maiden Plate; and then came the great race, for which there were twenty-eight runners. The rumour of the scratching of Julius Caesar (7 st. 10 lb.), which gained such universal credence on the previous day, proved to be a disgraceful hoax, and it is to be hoped that the perpetrators of it may be discovered and punished, and also that some more stringent rule may be adopted with regard to the declaration of scratchings. Up to the fall of the flag Touchet (6 st.) maintained the position of first favourite, though there was little to choose in the quotations between him, Balbriggan (6 st. 7 lb.), Julius Caesar, and Chaplet (7 st. 13 lb.). After about a dozen false starts, which caused a delay of nearly half an hour at the post, they got away pretty well together, Julius Caesar being right in front, while Balbriggan and The Cheeta (5 st. 10 lb.) had the worst of it. Tassel (7 st. 4 lb.), who made most of the running, was done with before getting into the straight, and, rounding Tattenham Corner, Touchet and The Snail (7 st. 11 lb.) were carrying Lord Rosebery's colours well to the fore. About three hundred yards from the finish, Hesper (7 st. 10 lb.) looked very formidable; but, directly Archer called upon Julius Caesar, he shot away from the rest, and won in a canter by half a dozen lengths. Touchet defeated Balbriggan by nearly a length for second place, and then, close up, came The Snail, Hesper, and John Day, in the order named. Julius Caesar, though he had not won a race for exactly two years, was a most consistent performer last season, invariably obtaining a place in the great three-year-old contests; still, unless he has made wonderful improvement, he cannot be regarded as a first-class colt; and it is clear that none of the three-year-olds which finished behind him can have the smallest chance for the Derby. Hudibras, the winner of the Althorp Park Stakes at Northampton, cut up very badly in the Westminster Stakes, for which Birdie again ran well, but was beaten by Grace, a fine half-sister to Actæon, by Scottish Chief—Virtue.

An unfavourable change in the weather did not prevent a very large attendance on Wednesday, when the racing was again of an interesting nature, and very large fields contested almost every event. The Great Metropolitan proved an exception to the rule, as there were only six runners, of whom the wonderful old Lilian (7 st. 12 lb.) looked so well that she was made a hot favourite. In company with John Day (7 st. 5 lb.) she made most of the running, but was beaten at the distance, and left the latter to defeat Norwich (5 st. 7 lb.), who was far too much for his jockey, by a couple of lengths. The scratching of Julius Caesar, who met with a slight accident in the City and Suburban, left the Prince of Wales's Stakes at the mercy of Balbriggan (7 st. 2 lb.); and Peck, whose stable was quite irresistible during the meeting, won the Hyde Park Plate with La Merveille, a daughter of Blair Athol and Cauldron.

A MONTENEGRIN.

This characteristic figure of a chieftain of the warlike foes of Islam, on the north-west frontier of the Sultan's Empire, in the highlands that rise abruptly from the Adriatic shore, has just now a certain political importance. It is the failure of the peace negotiations between the Turkish Government and Prince Nicholas of Montenegro, that has combined, with the rejection of the diplomatic Protocol, or joint resolution of the European Powers, to give the Emperor of Russia a pretext for declaring war against Turkey. But we have, during the past year and a half, found much occasion for discussing or describing the situation of Montenegro, as well as of the adjacent provinces, Herzegovina and Bosnia, which are still under Turkish rule. The picture represented by our Engraving is one which Mr. Carl Haag contributed to the last Winter Exhibition of the Society of Painters in Water Colours.

"A MONTENEGRIN." BY CARL HAAG.
FROM THE WINTER EXHIBITION OF THE SOCIETY OF PAINTERS IN WATER COLOURS.

SCENE FROM "THE SCUTTLED SHIP," AT THE OLYMPIC THEATRE.

PARLIAMENT.

LORDS.

The Czar's declaration of war against Turkey and the collateral issues of the Eastern Difficulty have absorbed the attention of the Upper House. The reinstatement of Hobart Pasha, Lord High Admiral of the Turkish fleet, on the retired list of the British Navy, was yesterday week censured by the Earl of Camperdown and Earl Granville, but defended by Lord Derby, on the ground that Captain Hobart had received sufficient punishment in having his name suspended from the Navy List for seven years, and because there were the precedents to guide the Government in the course they had adopted. Lord Derby, answering Earl Granville on Monday, said Mr. Layard had telegraphed that the Russian Chargé-d'Affaires at Constantinople had received instructions to bring the diplomatic relations of Russia with Turkey to an end, and that Colonel Mansfield had telegraphed from Bucharest the arrival there of four Russian detachments on Monday morning. The same evening the Earl of Carnarvon obtained the second reading of the South African Bill, which is essentially a permissive measure, giving the framework of a future constitution for a confederation of the South African States, leaving the details to be settled by the Imperial and local Governments.

The Foreign Secretary volunteered on Tuesday the grave information that he had that afternoon learnt that 17,000 Russian troops had crossed the frontier at Bolgrad and Jassy, and that the Roumanian forces had left Galatz. His Lordship added that he had also "received from the Russian Ambassador the Circular of the Russian Government, in which it is stated that orders have been given to the troops to cross the frontier." Replying to Earl Grey, who thought that a Turkish protocol published in the *Daily Telegraph* contained precisely the arrangement that ought to have been adopted, Lord Derby knew nothing of the protocol in question, though he paid a marked compliment to the *Pera* correspondent who telegraphed it. The noble Earl further said that the Government had done everything in their power to bring about an understanding between Russia and Turkey, but believed that in their endeavours to maintain peace between the two countries under the conditions which actually existed they were engaged in the solution of an impossible problem.

Their Lordships had an unusually long sitting on Thursday evening, the second reading of the Burials Acts Consolidation Bill being the grave subject of their deliberations. Lord Granville initiated the discussion by proposing a resolution to the effect that no amendment of the law will be satisfactory which does not enable the relatives or friends having charge of the funeral of any deceased person to conduct such funeral in any churchyard in which the deceased had a right of interment with such Christian and orderly religious observances as to them may seem fit.

COMMONS.

Two waves of excitement have swept through the Lower House. The first was caused by the simple notice affixed by the Home Secretary in a conspicuous place, informing hon. members of the rescue of the imprisoned colliers from the Tynewydd Pit, and impelling them forthwith to subscribe a good sum for the reward of the rescuers and the relief of the rescued. But this appalling mining disaster, and all home topics, indeed, have been cast into the shade by the engrossing and eventful news of Russia's Declaration of War against Turkey.

A few words will suffice for the speeches made on domestic affairs; and the reticence judiciously observed with regard to the Eastern Imbroglio leaves little to be recorded on that point beyond what has been stated by the Foreign Secretary in the Upper House. Oblivious of the fact that the doctrine of the survival of the fittest applies to Parliamentary speeches as well as to mankind, some hon. members, at the instance of Mr. Hanbury Tracy, showed a disposition yesterday week to express dissatisfaction with the small amount of space devoted to their utterances in the daily press, but the speakers generally justly complimented the gentlemen of the press who at no small labour report their speeches whilst cribbed, cabined, and confined in a small gallery. Mr. Tracy's motion was for a Select Committee to inquire into the expediency of providing official reports of the debates. The idea met with approval from Mr. Gladstone, Mr. Bright, Mr. Forster, and the Marquis of Hartington; but was stoutly opposed by Sir Stafford Northcote and Mr. Gathorne Hardy; and the motion was rejected by 152 to 128 votes.

Replying to Mr. Forster, Mr. Bourke made a statement on Monday similar to the one made by Lord Derby as to the Russian Chargé-d'Affaires at Constantinople and the Russian troops at Bucharest. Then ensued an attack by Mr. Childers on the Budget, which the Chancellor of the Exchequer vigorously defended, saying it was an honest Budget, and calling on the Opposition to pass it, unless they had a better one to propose. The Public Works Loan Bill was next read the second time after some discussion, Mr. Selater-Booth explaining that the result of the measure would be to place four millions at the disposal of the Public Works Loan Commission.

On Tuesday, apropos of the alleged murders and outrages by the Turks in Ohievo, Mr. Bourke showed Mr. E. Jenkins that the British Consuls in Bosnia are kept duly informed of these reports, and that they have proceeded personally to investigate the truth of the statements. The Under-Secretary for Foreign Affairs also told Sir W. Harcourt that the Foreign Office knew nothing of the Turkish protocol published in the *Telegraph*. Home Rule for Ireland was then seriously discussed, on the motion of Mr. Shaw for a Select Committee "to inquire into and report upon the nature, extent, and grounds of the demand made by a large proportion of the Irish people for the restoration to Ireland of an Irish Parliament, with power to control the internal affairs of that country." Mr. King-Harman seconded the motion of the hon. member for Cork; but it was opposed in a long and able speech by Mr. Forster, and in a terse address by Mr. Fawcett, who denounced in spirited terms the threats of coercion used by the Home Rulers towards the Liberal Party if they did not espouse their cause. Among the many Irish members who relieved themselves of their views on what is to them an all-important question, Mr. Butt, as the leader of the Home Rulers, and perhaps the most moderate of them, commanded attention as he explained how, in his opinion, an Irish Parliament might work hand-in-hand with the Imperial Parliament. But he was answered by Sir M. H. Beach, on the part of the Government, the Irish Secretary making a point at the end of his speech by alluding to "two distinguished members of the great party opposite" (Mr. Gladstone and Mr. Bright), "whose special function it appears to be to write characters for Liberals out of seats." This was a hit at the right hon. members for Greenwich and Birmingham for having written letters in support of the Liberal candidate for Salford. But (after the Marquis of Hartington had dissented from "proposals which we believe to be injurious to that unity which is essential to the great interests of the British empire"), Mr. Gladstone explained that his letter had been written prior to the Salford election, and that therefore

Sir M. H. Beach's taunt was uncalled for as far as he was concerned. The debate was carried on to the small hours by Mr. Fay, Mr. Sullivan, and Mr. Shaw, whose motion was rejected by 417 to 67.

Wednesday was mostly taken up with the animated discussion of Mr. Hopwood's bill to render the administration of the criminal law in summary matters more merciful, and the tribunal more effective. The simple measure gave great offence on the Ministerial side of the House; and though Mr. Cross confessed that some alteration of the law was necessary, as was shown in the resolve of the Government to introduce a bill on the subject, the motion for the adjournment of the debate was first defeated by 219 to 165, and Mr. Hopwood's bill itself was then thrown out by 228 to 164 votes.

The chief business considered by the House on Thursday was the Universities of Oxford and Cambridge Bill. On the order for its recommitment, Lord F. Harvey moved a resolution declaring it to be "undesirable largely to increase the Professorial or to open offices in the University unconnected with the tuition and the expenses of the colleges." A long debate followed, in the course of which Mr. Knatchbull-Hugessen, Mr. Lowe, Mr. Grant-Duff, Mr. Mowbray, and many other members favoured the House with their experiences as University students and their opinions as to University reform. At the time dedicated to inquiries and their results, Mr. Bourke, in reply to the question of Mr. Collins, stated that no information has reached her Majesty's Government that it is the intention of either of the belligerent Powers to blockade any ports; and therefore there is no necessity to enter into any arrangements such as those suggested in the question of the hon. member. Of course, the matter will be borne in mind when the question arises. Responding to a question of Mr. Cartwright, Mr. Egerton stated that Hobart Pasha is still at this moment on the retired list of our navy; but an intimation had been given to him that he cannot remain on that list if he continues to hold his command in the Turkish navy. To a question put by Mr. Anderson, Mr. Bourke replied as follows:—"In answer to the question of the hon. member for Glasgow, I have to state that Lord Augustus Loftus is not going to leave St. Petersburg, nor has Count Schouvaloff intimated his intention to leave London. It may be probable that Count Schouvaloff may be obliged to absent himself for a short time; in such case, our communications will be carried on as usual with the Russian Chargé-d'Affaires."

THE CHURCH.

The *City Press* says that about £800 is wanted to prepare the tower for the peal of bells for St. Paul's Cathedral.

Mr. Kinard B. Edwards, of Burlage Hall, Leicestershire, has offered to restore the interior of the parish church of Burbage.

Both houses of Canterbury Convocation have been sitting this week. A resolution supporting the Burials Bill was carried on Wednesday by 48 votes against 14.

The revisers of the authorised version of the New Testament concluded yesterday week their first revision and their sixty-ninth session. They have also finished the second revision of the version of the Gospels.

A conference of clergy, over which the Archbishop of Canterbury presided, was held on Monday, in the library of Lambeth Palace, to consider the best means of effecting a reform in the administration of charitable relief.

The Lord Mayor, who was accompanied by the Lady Mayoress, opened on Wednesday, in the Bow and Bromley Institute, a bazaar, got up under the patronage of the Duchess of Teck, in aid of the building fund for the proposed new church of St. Paul, Old Ford.

A tea and coffee service in silver, from the residents of Richmond, Yorkshire, a silver salver from the parents of boys under his charge, a gold locket set with pearls, for his wife, and a gold telescope pencil-case from his boys, have been presented to the Rev. C. T. Hales, on his leaving the preparatory school in that town for his new school at Aysgarth, Yorkshire.

The Marquis of Lorne presided on Wednesday at a public meeting in Westminster on behalf of the Church of England Incumbents' Sustentation Fund, which owes its origin to Princess Louise and the noble Marquis, and the object of which is to raise every incumbency below £200 up to that amount. The Bishop of Exeter and the Dean of Lichfield were among the speakers.

On Wednesday morning, the Feast of St. Mark, the consecration of Dr. Benson as Bishop of Truro took place in St. Paul's Cathedral. There was a large congregation, including Lady Rolle, by whose liberality the new bishopric was finally established. The Primate officiated, assisted by the Bishops of London, Winchester, Llandaff, Lincoln, Hereford, Exeter, Ely, Nottingham, and Dover.

At a meeting last Saturday in the library of Canterbury Cathedral, presided over by Mr. Beresford-Hope, M.P., a resolution was passed approving of a design of restoration submitted by Mr. Gilbert Scott and pledging those assembled to further the object in view. The amount already promised is £5000, and the sum required to carry out the work decided on is about £15,000.

The oldest established church in Newfoundland was presented to the inhabitants of Placentia (formerly the capital) by William the Fourth, when Duke of Clarence, on the occasion of his visit there. It has now fallen into decay for want of funds to repair it. Strenuous efforts are being made by the few Protestant inhabitants to restore it, but they are generally very poor. Subscriptions for the purpose will be received at the National Provincial Bank of England, 53, Baker-street.

The Incorporated Society for Promoting the Enlargement, Building, and Repairing of Churches and Chapels held its usual monthly meeting on Monday at the society's house, 7, Whitehall—Archbishop Harrison in the chair. Grants of money were made in aid of the following objects, viz.:—Building a new church at New Clee, near Grimsby, and towards enlarging or otherwise improving the accommodation in the churches at Bwlch Gwyn, near Wrexham; Carlton Scroop, near Grantham; Kerrington, near Ashford, Kent; Llanwenarth-Citra, near Abergavenny; Mawdesley, near Ormskirk; Milbourne St. Andrew, near Blandford; and Tonbridge, Kent. Grants were also made from the Special School Church and Mission-House Fund towards building school or mission churches at Giant's Grave and Briton Ferry, Glamorgan, and Grampound-road, Cornwall. The society likewise accepted the trust of a sum of money as a repair fund for St. Peter's Church, Leighton-cum-Minshull, Chester. Next Friday the annual general court of this society will be held at the National Society's house, Broad Sanctuary, Westminster, the Archbishop of Canterbury presiding.

Mr. Fry, Q.C., Bench of Lincoln's Inn, has been appointed the new Judge. He is the author of a well-known work on "Specific Performance."

METROPOLITAN NEWS.

The banquet at the Mansion House to her Majesty's Judges is arranged to be given on June 6; and to the Archbishops, Bishops, and clergy on June 20.

The annual dinner in aid of the Newspaper Press Fund has been fixed to take place at Willis's Rooms next Saturday—the Marquis of Hartington, M.P., in the chair.

On Sunday afternoon the annual distribution of prizes to the students of the Jews' College, and to the pupils of the Jews' College School, took place at the Quebec Institute.

The president and council of the Royal Society held their annual conversazione on Wednesday night at the society's apartments at Burlington House, Piccadilly.

The certificates awarded to the most successful students in the Crystal Palace School of Practical Engineering were given away last Saturday.

The first spring meeting of the London Athletic Club is to be held this afternoon, when the new grounds of the company, at Stamford-bridge, will be opened by the Lord Mayor, accompanied by the Lady Mayoress.

The new large out-door cages at the back of the lion-house in the Zoological Society's Gardens were brought into use on Monday morning for the first time, and seem likely to answer their purpose very well.

The Duke of Cambridge presided over the thirty-second anniversary dinner of the German Hospital at Dalston, which took place on the 19th inst. at Willis's Rooms. Donations amounting to £3780 were announced.

The twenty-ninth anniversary of the City of London Hospital for Diseases of the Chest was celebrated on the 19th inst. at the Cannon-street Hotel, under the presidency of the Lord Mayor, who was supported by the Sheriffs. The subscriptions amounted to about £2600.

About a hundred ladies and gentlemen dined together yesterday week at Willis's Rooms, to celebrate the twenty-first anniversary of the Boys' Home, Copenhagen-street, Islington. Mr. A. F. Kinnaird, jun., presided. Subscriptions and donations amounting to about £1000 were announced.

We are informed that the Alexandra Palace will be opened for the season on May 10, when a concert will be given in the central hall, under the conductorship of Mr. H. Weiss Hill, in which the most eminent artists will take part. In the evening there is to be a display of fireworks.

On Wednesday evening the opening of the Victoria Hall, a new building in connection with the Victoria Park Congregational Chapel, was celebrated by a dinner, presided over by Mr. Samuel Morley, M.P.; Sir Charles Reed, Sir John Bennett, and Mr. J. Holms, M.P., being amongst the speakers.

There were 2475 births and 1532 deaths registered in London last week, the former having been 31 above and the latter 46 below the average numbers. Sixty-eight persons died from smallpox, 41 from measles, 25 from scarlet fever, 6 from diphtheria, 46 from whooping-cough, 26 from different forms of fever, and 11 from diarrhoea.

Last Saturday the Columbia Meat Company (Limited), which is formed to carry out the views of Baroness Burdett-Coutts for the sale of American meat to the poor of the East-End, began its operations. There was a great supply, and the demand was brisk. A collation was provided, all the meat on the tables being American. Mr. Sheridan, M.P., presided.

Sir James M. Hogg gave his annual dinner on Saturday at Willis's Rooms, to the members of the Metropolitan Board of Works and their principal officers. Among the visitors present were the Duke of Teck and a large number of members of Parliament; and among the speakers were the Lord Chancellor, Lord John Manners, and Mr. Hardy.

Captain the Hon. Francis Maude presided yesterday week at the thirty-eighth anniversary of the Shipwrecked Fishermen and Mariners' Royal Benevolent Society, when it was reported that 10,386 widows, orphans, and shipwrecked persons had been relieved during the year, at a cost of £19,839, and that 1965 widows received annual grants, for which purpose the dividends of the funded property are set apart.

At a meeting of the Royal Humane Society last week several cases of distinguished gallantry in saving life were brought under the notice of the committee and rewarded. A special meeting of the committee has been called to take into consideration the gallantry of the Welsh miners who went to the rescue of their buried comrades, with a view to vote them the society's honorary rewards.

The Grand Lodge of English Freemasons was held on Wednesday night at Freemasons' Hall. It was announced that the Prince of Wales, grand master, had appointed the Earl of Carnarvon pro-grand master; Lord Skelmersdale, deputy grand master; the Duke of Connaught, senior grand warden; and Prince Leopold, junior grand warden. A banquet afterwards took place.

A dinner to the bankers and merchants of the city of London was given on Tuesday evening by the Lord Mayor at the Mansion House. The guests numbered about 250, and included the Earl of Jersey, Viscount Middleton, Mr. Goschen, M.P., and Mr. Childers, M.P. The toast of the Houses of Parliament was responded to by Mr. Goschen, who made some remarks on the present aspect of the Eastern Question.

Their Excellencies the Chinese and Japanese Ambassadors visited Highbury New Park College on Tuesday. The Chinese Ambassador visited the Court of Appeal at Lincoln's Inn on Thursday. The Judges (the Master of the Rolls and Lords Justices James and Baggallay) shook hands with the Ambassador and his attendants, who were invited to take seats upon the bench, where they remained for some time while a trade-mark appeal was being heard.

The trial of the five men concerned in the fraud upon Madame de Goncourt, having occupied ten days, came to a close on Monday evening. In the course of the summing up, Mr. Baron Huddleston stated that the prisoners had succeeded in obtaining £12,500, of which £11,300 had been recovered. Four of the prisoners were found guilty of forgery, and one, Murray, of being accessory after the fact. Benson, the chief actor in the conspiracy, was sentenced to fifteen years' penal servitude; the two Kerrs and Bale to ten years' each; and Murray to eighteen months' imprisonment.

A suit which has occupied one of the Chancery Courts for several weeks came to a close on Wednesday. It was a case in which the collieries and ironworks company in Staffordshire, known as John Bagnall and Sons (Limited), sought to recover a sum of £85,000 which they alleged had been improperly received by the defendants as promotion money. The defendants were Mr. James Carlton, of Manchester, who received £12,500; Mr. Albert Grant, to whom Mr. Carlton paid £65,000; and the chairman and secretary of the company, Messrs. Richardson, between whom £7500 was divided. Vice-Chancellor Bacon ordered all these sums to be refunded.

SCENE FROM "THE SCUTTLED SHIP."

The audience night, after night, at the Olympic Theatre, continues to feel a sympathising interest aroused by the representation of Mr. Charles Reade's new play, in the fortunes of Robert Penfold and Helen Rolleston. It will be remembered, from our notice of the first performance at Easter, that this hero and heroine of modern domestic romance are on board the ship *Proserpine*, bound from Tasmania to England; and that Robert, an innocent and virtuous man who has suffered penal transportation under a false accusation of forgery, is devotedly in love with Helen. The owner of the ship, a prosperous villain who was really the forger and author of Mr. Penfold's ruin, and to whom Miss Rolleston is unhappily engaged, has conspired with the captain and mates to destroy his own vessel and defraud the insurers. The *Proserpine* is in the open sea, but Helen and Robert, with a few others, are saved; and the scene we have illustrated is that of their rescue in the same boat. They are finally made as happy together as heart could wish.

STREET SKETCHES IN CONSTANTINOPLE.

The readers of our last week's Supplement, which was mainly filled with Mr. Sala's entertaining account of "Constantinople As It Is," will certainly be glad to see a few additional sketches of the costumes, habits, and petty trades or industries of different classes of people, in that motley capital of the Eastern world. The "mad dervishes" are, of course, peculiar to a Mohammedan city, though bearing some resemblance to the Hindoo religious devotees, or vernal adepts of an ostentatious fanaticism, whose performances may be seen at Benares, and elsewhere in the Empress of India's dominion, several thousand miles farther to the East. For the other groups and single figures, represented on the same page, their occupations are not quite unknown to the townsfolk of Western Europe. Dancing bears were formerly a popular exhibition, which many of us have witnessed in our youth, for the amusement of our own countrymen; but we do not know whether the Turks have yet accepted our fanciful notion of regarding that formidable and ungainly beast as an emblem of the Russian foe, or whether they are likely to cherish a special antipathy to Bruin on that account. The various dealers in soup, eggs, and sweetmeats, the seller of brooms, and the laborious "hamal" or street porter, who bears a load of nearly 5 cwt. on his back, will attract passing observation. Most of these industrious people are not Turks, but either Bulgarians or Armenians, who do, in fact, perform the largest share of all daily work in the city.

THE CIVIL WAR IN JAPAN.

Our Special Artist at Yokohama, Mr. C. Wigram, furnishes another illustration of the departure of military forces sent from that port by the Mikado's Government to put down the rebellion in the province of Satsuma, which was described in his letter of Feb. 27. His last communication, dated March 12, speaks of the embarkation of 1500 troops on the Saturday before, and this is the scene presented in his sketch engraved for the Number of the current week. It would appear, from the later intelligence received by telegraph, that the rebels have been signally defeated at Kumamoto, where an Imperial army of 12,000 troops was assembled six weeks ago. Our Artist, who has resided twenty years in Japan, hopes the insurrection will be speedily and finally suppressed; and then, he says, "this country will enjoy years of peace."

A MARRIAGE IN WESTMINSTER ABBEY.

The wedding, on Tuesday week, of Miss Northcote, eldest daughter of the Right Hon. Chancellor of the Exchequer, to Mr. Reginald M'Leod, of an ancient Highland Scottish family, was described in our last chronicle of the Court and Fashion. It took place at Westminster Abbey, with a choral service, and with such accessories of proper ceremonial as make it worthy of an illustration in our Journal. The officiating clergy were Dean Stanley, the Rev. Flood Jones, Minor Canon, and the Hon. and Rev. F. Pelham. They are shown walking in advance of the bride and bridegroom; these are followed by the six bridesmaids; and Sir Stafford Northcote, with Mr. Balfour, M.P., as the bridegroom's friend, is seen in the rear of the nuptial procession.

BANK OF NEW ZEALAND

(Incorporated by Act of General Assembly, July 29, 1861).
Bankers to the New Zealand Government.
Paid-up Capital, £725,000. Reserve Fund, £250,000.
DIRECTORS.
J. LOGAN CAMPBELL, Esq., President.
George B. Owen, Esq.
Alfred Cox, Esq., M.P.
Samuel Browning, Esq.
W. J. Taylor, Esq.
James Watt, Esq.
Hon. Jas. Williamson, M.L.C.
LONDON BOARD.
The Right Hon. Sir James Ferguson, Bart., K.C.M.G.
Archib. Hamilton, Esq.
A. J. Mundella, Esq., M.P.
Head Office, Auckland.
BRANCHES AND AGENCIES.
In Australia.—Melbourne, Sydney, and Newcastle.
In Fiji.—Suva.
In New Zealand.—Auckland, Christchurch, Dunedin, Wellington, Napier, Nelson, Invercargill, Picton, and at seventy-five other towns and places throughout the Colony.
The Bank grants Drafts on all their Branches and Agencies, and transacts every description of banking business connected with New Zealand, Australia, and Fiji on the most favourable terms.
The London Office RECEIVES DEPOSITS of £50 and upwards for fixed periods of two to five years, bearing interest at 5 per cent per annum. The rate for shorter periods can be ascertained on application at the Office of the Bank.
LARKWORTH, Managing Director.
No. 1, Queen Victoria-street, Mansion House, E.C.

THE CIVIL WAR IN JAPAN: EMBARKING CAVALRY AT THE CUSTOM-HOUSE, YOKOHAMA.

MARRIAGE OF MISS NORTHCOTE AND MR. REGINALD M'LEOD AT WESTMINSTER ABBEY.

SHAKESPEARE MEMORIAL, Stratford-on-Avon.—SUBSCRIPTIONS received in London by H. Graves, Esq., 6, Pall-mall; and in Stratford-on-Avon by the Chairman of the Council (J. E. Flower, Esq.). A complete list of subscribers will be made up in May, which, with a report of the proceedings at the ceremony of laying the first stone, on Shakespeare's Birthday, may be had upon application to the Secretary, C. Lowndes, Esq., Stratford-on-Avon.

MALVERN COLLEGE.—The SECOND TERM will begin on MONDAY, MAY 7.

SMART'S WRITING INSTITUTION, 97a, Quadrant, Regent-street (entrance in Swallow-street). Open from Ten till Nine daily. Persons of all ages received (privately), and taught at any time suiting their own convenience. Lessons one hour each. No classes. Extras. Improvement guaranteed in eight to twelve easy lessons. Separate rooms for Ladies. Apply to Mr. Smart, as above.

BACKWARD CHILDREN.—There are a few VACANCIES in an Establishment near London for the Education of Children of the Upper Classes who are backward in intelligence. Address, ALFRED, care of Mr. Reed, 67, Oxford-street, W.

SOUTHSEA.—The Finest Hotel in Hampshire is the ROYAL BEACH MANOR'S HOTEL, Southsea. It has more than one hundred rooms, nearly all facing the sea. It is directly on the seashore, and the sitting-rooms command a view, unequalled in extent and beauty, of the Isle of Wight from Osborne to Penbridge, Spitham, and the entrance to Portsmouth Harbour, with the Forts and Shipping. The Hotel is newly furnished, and conducted in the most approved modern fashion. Inclusive Terms up to the end of June, 12s. per day. Apply to the Managers.

BELGIUM.—NAMUR SUMMER SEASON.—By its exceptional situation, the city of Namur, with her beautiful valleys, is the indicated centre for charming excursions. Woody mountains, steep rocks, surround the city, and present picturesque views which recall to the mind the banks of the Rhine.

Beautiful walks in the environs, parks, and squares. Excursions by steam, in boats and carriages; six railroad lines. Reading and Conversation Rooms; Newspapers and Reviews from all countries; Public Library, Archeological Museum, Exhibition of Beaux-Arts, great Fair in July, Swimming School, Baths of the Meuse, well recommended; Hydrotherapeutic Establishment. First Class Societies.—The Casino, the Cercle Artistique and Littéraire, the Champs Elysées, the Royal National Club, the Skating Rink, Jeu de Croquet, Cricket, &c. A series of Festivals are offered to the Visitors during the season by the Authorities of the City, from May 15 until Oct. 1. Numerous Concerts, Balls, Balls for Children, Tombolas, Music Games, Illuminations, Fireworks, &c. First-Class Hotels at moderate charges.

HOUSE PROPERTY AND INVESTMENT COMPANY (Limited), 92, Cannon-street, London, E.C. (seven doors east of the Cannon-street Station). Capital One Million, in 40,000 fully paid-up shares of £25 each. For the Purchase and Sale of Property, and the Management of House Property and Improving the Dwellings of the Working Classes on the self-supporting principle. Registered March 15, 1876.

DIRECTORS. Henry Aste, Esq., 8, Trinity-square, Tower-hill, and Castle-hill Lodge, Upper Norwood (Chairman London Corn Exchange). William Macdonald Baden, Esq., 11, Great St. Helen's, and Lloyd's. William Sutton Gover, Esq., 4, Queen-street-place, E.C., and Haverling House, Blackheath (Member of the London School Board). Fountain John Hartley, Esq., Adde-street, E.C. (Hon. Secretary London Sunday School Union). William Smith, Esq., Oak Lane, Brompton, Upper Norwood. Robert Parker Taylor, Esq., Adelaide-place, London Bridge. (Director Lambeth Baths and Wash-Houses Company). Edward Bean Underhill, Esq., LL.D., Hampstead (Hon. Sec. Baptist Missionary Society). Thomas White, Esq., Upper Thames-street, E.C. **SECRETARY.**—Henry Gover, Esq., 92, Cannon-street, E.C. **MANAGERS.**—John Thomas Bedford, Esq., 12, King street, Snow-hill, and Mechling-square (Chairman West Ham Park Committee); James Clarke, Esq., 1, Cedar-road, Clapham, and 18, Fleet-street, E.C. (Editor and Proprietor of "The Christian World"); Charles Kemp Dyer, Esq., J.P., St. Albans, Herts, and Lloyd's.

BANKERS.—London and Westminster Bank, Lothbury. 1. The first issue of 4000 fully paid-up shares of £25 each has been allotted. 2. Applications are now being received for the second issue of 4000 shares at £1 per share premium, 315 of which have been already allotted. 3. Sixty-undated shares have been purchased, at a cost of £153,601, and other purchases are in course of negotiation. 4. After making a full allowance for all rates, repairs, loss of rent, and diminution of term in case of leaseholds, the income from the estates already purchased is expected to amount to nearly 8 per cent, besides profit on sales. 5. Shareholders, in addition to 5 per cent interest, will participate in the periodical bonuses, which, it is expected, will be declared by the Company from time to time. 6. Owners of eligible House Property, wishing to sell at a moderate price, should send particulars to the secretary. 7. As the estate purchased will give a good profit revenue, it will have to be considered at what premium the third issue shall be offered to the public, so as to protect the interest of existing shareholders. For full information apply to W. H. Baden, Secretary, of whom may be obtained approving notice of the press and an explanatory pamphlet, entitled "Another Five Minutes' Talk about the House Property and Investment Company (Limited)," prospectus, and share application forms.

INVESTMENT.—Messrs. T. I. MALING and CO., of Hereford-street, Christchurch, New Zealand, receive MONEY for INVESTMENT on Mortgage of Lands in the Colony, and allow 7 per cent interest pending investment. For particulars and references apply to Messrs. W. R. and Hawes, 7, Great Winchester-street-buildings, London.

FRENCH HOSPITAL AND DISPENSARY, Little-street, Leicester-square.—Open to all Foreigners who speak French, without letters of recommendation. Owing to the large increase of the foreign population in London, urgent and distressing cases are constantly referred for want of room. The Committee have resolved to make an APPEAL to the Benevolent for DONATIONS to the New Fund for the much-needed enlargement of this Institution. Donations will be thankfully received by H. Duval, Esq., Hon. Treasurer for this Fund.

ACCIDENTS BY FLOOD AND FIELD. Accidents of all kinds may be provided against by a Policy of the RAILWAY PASSENGERS' ASSURANCE COMPANY, the oldest and largest Accidental Assurance Company. Hon. A. Kinnaird, M.P., Chairman. Subscribed Capital, £1,000,000. £1,120,000 have been paid as compensation. Apply to the Clerks at the Railway Stations, or 61, Cornhill, London. WILLIAM J. VIAN, Secretary.

TOTAL ABOLITION OF PAIN IN DENTISTRY. Royal Polytechnic Institution (Limited). Patron—His Royal Highness the Prince of Wales.

I HAVE much pleasure in stating that my original conviction (as expressed in my Chemical Lectures at the Polytechnic Institute some years ago) remains unaltered. I have again examined and tested the Patent Pneumatic Articulating Plate, combined with the Enamel Teeth, invented, patented, and manufactured by Messrs. Moggridge and Davis, and the highest praise can be bestowed in that they are true to nature, and they combine the great essentials of comfort, economy, elegance, and durability. I would recommend all persons in quest of artificial teeth to visit Messrs. Moggridge and Davis, a great establishment and manufactory, at 143, Strand, and judge for themselves of the quality of their workmanship. (Signed) JOHN HENRY PEPPEY, Late Honorary Director and Professor of Chemistry, Royal Polytechnic, and Fellow of various Learned Societies.

Specimens, Testimonials, and Consultations free. Hours from Ten till Five.—143, Strand, W.C.

PAINLESS DENTISTRY. Mr. G. H. JONES, SURGEON-DENTIST, will be glad to forward his New Pamphlet, gratis and post-free, which explains the most unique system of the adaptation of artificial and extraction of natural teeth without pain, from his only London address, 67, Great Russell-street (opposite the British Museum).

TESTIMONIAL. My dear Sir,—Allow me to express my sincere thanks for the skill and attention displayed in the construction of my Artificial Teeth, which render my mastication and articulation excellent. I am glad to hear that you have obtained Her Majesty's Royal Letters Patent to protect what I consider the perfection of Painless Dentistry. In recognition of your valuable services you are at liberty to publish my name as a patient. By Appointment Surgeon-Dentist to the Queen. To G. H. Jones, Esq.

GLYCERINE JELLY.—PIESSE and LUBIN. A white and delicate hand is the first attribute of beauty and civilization. "The hand," says Sir Charles Bell, in the "Bridge-water Treatise," "distinguishes man from the brute. Be careful of it, for in polite society it is an index not only of the body, but of the mind." Too much cannot be said in favour of Glycerine Jelly for rendering the hands white, soft, and fair. Sold in Jars, 2s.—2, New Bond-street, W.

TOM-BOY!—PIESSE and LUBIN'S NEW PERFUME.—A New Bond-street. "Tom-Boy! Girls will be boys!"—Punch. Kiss her gently, but be shy: Kiss her when there's no one by: Steal your kiss, for then 'tis sweetest—Stolen kisses are the best! Sold in Flacons, 2s. 6d., 3s.; Cut Bottles, 1s. Copyright.

TURKISH PASTILS.—PIESSE and LUBIN. "Through all my travels few things astonished me more than seeing the beauties of the human smoking apparatus at Stambul. After smoking a sweet, aromatic liqueur or pastil is used by them, which is said to impart an odour of flowers to the breath. I have never seen these breath lozenges but once in Europe, and that was at PIESSE & LUBIN'S shop in New Bond-street."—Lady W. Montague. In Boxes, 2s.; by post, 2s. 2d.

BREIDENBACH'S WOOD VIOLET PERFUME, fresh as morning-gathered flowers, 2s. 6d., 10s. per Bottle. Breidenbach's MACASSARINE, invaluable for preserving the Growth of the Hair, 1s., 2s. 6d., 5s. per Bottle. Of all Chemists, and the Makers, 157a, New Bond-street, W.

JOHN GOSNELL and CO.'S CHERRY TOOTH PASTE gives a beautiful Set of Teeth, makes the Teeth of pearl-like whiteness, and protects the enamel from decay.—Of all Chemists and Perfumers, at 1s. 6d. per pot.

ROWLANDS' ODONTO has been proved, by its unparalleled success of fifty years, to be the best Dentifrice for procuring White and Sound Teeth, Healthy Gums, and Fragrant Breath, being perfectly free from all deleterious and acid compounds, which give a temporary whiteness to the teeth, but ultimately ruin the enamel. Sold by Chemists and Perfumers. Price 2s. 6d. Take no Odonto but Rowlands'.

GOLDEN HAIR.—ROBARE'S AUROLINE produces the beautiful Golden Colour so much admired. Withstand not to injure the hair. Price 1s. 6d. and 10s. 6d. of all Perfumers. Wholesale, HOVENDEY and SONS, 5, Gt. Marlborough-st., W.; and 93 and 95, City-road, E.C. London; Pinaud and Meyer, 37, Boulevard de Strasbourg, Paris; 51, Graben, Vienna; 44, Rue des Longs Chariots, Brussels.

DOES YOUR HAIR TURN GREY? Then use HERRING'S PATENT MAGNETIC BRUSHES and COMBS. Brushes, 10s. and 1s. each; Combs, 2s. 6d., 7s. 6d., 10s., and 20s. each. Pamphlets upon application. 3, Great Marlborough-st., W.; 93 and 95, City-road; and of all Perfumers.

THOMPSON and CAPPER'S DENTIFRICE Water arrests decay in the Teeth and sweetens the Breath.—25, Bold-street, Liverpool. Sold in 1s. 6d., 2s. 6d., 4s. 6d., and 5s. 6d. Bottles by all Chemists.

HAIR DESTROYER.—248, High Holborn. London.—ALEX. ROSS'S DEPILATORY removes superfluous hair from face and arms without injury. 2s. 6d. Sent post-free, carefully packed, for 41 stamps, by Alex. Ross.

THE COAL-TAR SOAP. WRIGHT'S SAPO CARBONIS DETERGENS.—Antiseptic, Detergent, Disinfectant. The most healthful, agreeable, and refreshing TOILET SOAP in the world. By its daily use, freedom from infectious diseases is secured; the complexion improved; pimples, blotches, and roughness removed; and the skin made clear, smooth, and lustrous. WHY DO OUR TEETH DECAY?—Who

Has ever travelled among the Indians of North America, and seen the "Indians' teeth?" Many have wondered how these dusky savages could preserve such a full row of ivory, even to the greatest age, while premature decay of the teeth was the rule with the whites. What once was a mystery is no longer one. The extracts from plants which the Indians have for ages chewed have been concentrated into a liquid called FRAGRANT FLORILINE, a few drops of which on a wet toothbrush cause a sort of foam in the mouth, which penetrates every crevice, and cleanses the teeth from all impurities, hardens the gums, and prevents the decay of the teeth. The FRAGRANT FLORILINE should be used in all cases of bad breath, and particularly by gentlemen after smoking. The Floriline combines, in a concentrated form, the most desirable cleansing and astringent properties of the most sensitive and delicate organisation. It beautifies the teeth and gums. It arrests the decay of the teeth. It acts as a detergent after smoking. It renders the gums hard and healthy. It neutralises the offensive secretions of the mouth. It imparts to the breath a fragrant, purely aromatic and pleasant.

Put up in large bottles (only one size) and in elegant toilet-case, or in small bottles, for sale by Chemists and Perfumers. Prepared only by HENRY C. GALLUP, 493 Oxford-st., London.

FLORILINE.

For the TEETH and BREATH.

The buds and blossoms now appear
On every verdant plain;
The winter, with its snowy wreath,
Has left us once again.
The birds awake with cheerful notes,
And "twinkle the wild woods sing."
Whist nature dons its emerald hue,
To welcome glorious spring.

To cull from FLORA's sweet retreats,
The essence of each flower,
And use them for the public good,
Has GALLUP shown his power.
He has the richest perfume brought
From FLORA—lovely Queen,
And introduced this liquid gem,
The FRAGRANT FLORILINE.

Fragrant with each scented flower
This preparation stands;
And now a toilet requisite
It is famed through many lands.
The mouth is made a font of sweets;
The teeth like flakes of snow;
The gums it strengthens and improves,
And brightens Beauty's brow.

FLORILINE.

For the TEETH and BREATH.

Is the best liquid dentifrice in the world. It thoroughly cleanses partially decayed teeth from all parasites or living "animalcules," leaving them perfectly white, imparting a delightful fragrance to the breath. Price 2s. 6d. per bottle. The FRAGRANT FLORILINE removes instantly all odours arising from a foul stomach or tobacco-smoke.

For children and adults whose teeth show marks of decay its advantages are paramount. The "Floriline" should be thoroughly brushed into all the cavities; no one need fear using it too often or too much at a time. Among the ingredients being soda, honey, spirits of wine, borax, and extracts from sweet herbs and plants, it forms not only the very best dentifrice for cleansing ever discovered, but one that is perfectly delicate to the taste and as harmless as cherry. The taste is so pleasing that instead of taking up the toothbrush with dislike, as is often the case, children will on no account omit to use the "Floriline" regularly each morning if only left to their own choice. Children cannot be taught the use of the toothbrush too young; early neglect invariably produces premature decay of the teeth. "Floriline" is prepared only by HENRY C. GALLUP, 493, Oxford-street, London; and sold by all Chemists and Perfumers throughout the world at 2s. 6d. per bottle.

"Floriline" powder, put up in large glass jars, price 1s.

FLORILINE.

For the TEETH and BREATH.

WHAT DO THE LADIES SAY ABOUT IT?

What say the ladies? Why, they speak
In raptures of its use;
And for a toilet requisite
Their praise is all profuse.
All powders now are thrown aside,
And nothing else is seen
For cleaning well the teeth and gums
But FRAGRANT FLORILINE!

What say the ladies? Why, they say
It makes the breath as sweet
As flowers scented fresh and fair,
Which all the fair ones greet.
They say it does improve the teeth,
The gums, the breath, and skin;
And wonderful in its effects
Is FRAGRANT FLORILINE!

They say discoloured teeth look bad
(And that's a fact we know);
But Floriline soon changes them,
And makes them white as snow.
The breath of men is also bad,
When smoking they have been;
But changed it is to sweetness soon
By FRAGRANT FLORILINE.

FLORILINE.

For the TEETH and BREATH.

It may or may not be generally known that microscopical examinations have proved that animal or vegetable parasites gather, unobserved by the naked eye, upon the teeth and gums of at least nine persons in every ten; any individual may easily satisfy himself in this matter by placing a powerful microscope over a partially decayed tooth, when the living animalcules will be found to resemble a partially-decayed cheese more than anything else we can compare it to. We may also state that the FRAGRANT FLORILINE is the only remedy yet discovered able perfectly to remove the teeth from these parasites without the slightest injury to the teeth or the most tender gums.

Read this.—From the "Weekly Times," March 26, 1871:—"There are so many toilet articles which obtain all their celebrity from being costly and extensive, and which, in fact, make it necessary when anything new and good is introduced to the public that special attention should be called to it. The most delightful and effective toilet article for cleansing and beautifying the teeth that we in a long experience have ever used is the new FRAGRANT FLORILINE. It is quite a pleasure to use it, and the properties of imparting a fragrance to the breath and giving a pearly whiteness to the teeth make it still more valuable. Of all the numerous nostrums for cleaning the teeth which from time to time have been introduced, and which are sold in every shop, none are so good as this FRAGRANT FLORILINE. It is a pleasant preparation, considered as a beautifier or a valuable cleanser and preserver of the teeth and gums."

The FRAGRANT FLORILINE is put up in elegant toilet cases, and sold by all Perfumers and Dealers in Toilet Articles in the kingdom, at 2s. 6d. per bottle.

Prepared by HENRY C. GALLUP, 493, Oxford-street.

FLORILINE.

For the TEETH and BREATH.

WHAT DO GENTLEMEN SAY ABOUT IT?

They say it is a luxury,
And like a spell has broke
The sad annoyance incurred
By having just a smoke.
But now we can enjoy our weed,
Then join each festive scene,
For every trace of smoke is lost
In FRAGRANT FLORILINE!

They say it is a luxury,
The teeth it keeps as white
As blossoms on the lovely May,
When all is fresh and bright;
Discolourations all give place,
However long they've been,
And fresh and healthy is the mouth
With FRAGRANT FLORILINE!

They say it is a luxury,
Adds perfume to the breath,
And makes it quite as perfumed as
The violet-scented wreath.
The gums it gives a rosy hue,
The mouth makes fresh and clean,
And gentlemen and ladies too
Like FRAGRANT FLORILINE!

FLORILINE.

For the TEETH and BREATH.

The "Christian World" of March 17, 1871, says, with respect to Floriline:—"Floriline bids fair to become a household word in England, and one of the most pleasant meaning. It would be difficult to conceive a more efficacious and agreeable preparation for the teeth. Those who once begin to use it will certainly never willingly give it up."

Mr. Eakell, the celebrated dentist, 14, York-place, Portman-square, London, writes as follows:—"On April 13, 1871, I have tried your Floriline, and find it not only a great aid in my practice in cleansing the teeth and sweetening the breath, but it gives entire satisfaction. I recommend it to all my patients, and I believe hundreds that would never visit a dentist would be much benefited by the use of your Floriline."

May be had of most respectable Dealers in all parts of the world. Prepared by H. C. GALLUP, 493, Oxford-street, London.

STOCK OF

MESSRS. PULSFORD and CO.,
Successors to Youngman and Co., established over 40 years.

THE DISTIN BALLAD HORN. in C, 9s.
THE DISTIN FLAGE and POST HORN and BAND INSTRUMENTS, at all prices.
THE DISTIN MONTHLY BRASS BAND JOURNAL. 10s. 6d. per annum.
The above instruments were exhibited by Boosey and Co. at the Philadelphia Exhibition, and were awarded a First Medal "for power and good quality of tone, fine workmanship."
Estimates for Bands of all sizes, also Illustrations and Prices, to be had of the Sole Manufacturers.
BOOSEY and CO., 235, Regent-street, London.

CRAMER'S GRAND PIANOFORTES,
75 gs., 85 gs., 95 gs., and 105 gs.
Regent-street and Moorgate-street.

CRAMER'S PIANETTES,
from 25 gs. to 50 gs.
Regent-street and Moorgate-street.

CRAMER'S INDIAN PIANOFORTES,
45 gs. to 75 gs.
Regent-street and Moorgate-street.

CRAMER'S THREE-YEARS' SYSTEM OF
HIRE, applicable to all large instruments—Pianofortes, Harps, Organs for Church or Chamber, &c.
Regent-street and Moorgate-street.

NEW MUSIC.

C. GODFREY'S NEW DANCE MUSIC.
Performed at Marlborough House by the Band of the Royal Horse Guards.
PRINCES TOTU. Quadrille. 2s. 6d.
PRINCE OF WALES. Valse. 2s. 6d.
PRINCE OF WALES. Galop. 2s. 6d.
CHILPEIC. Quadrille. 2s. 6d.
ROYAL EDINBURGH. Lancers. 2s. 6d.
LEONIE. Valse. 2s. 6d.
FLEUR-DE-LYS. Quadrille. 2s. 6d.
FLY AWAY. Galop. 2s. 6d.
Post-free, half price.
The most popular Dance Music of the present season.
Band Parts may be had on application to METZLER and Co., 37, Great Marlborough-street, W.

ARTHUR SULLIVAN.—THE
CHORISTER.

ARTHUR SULLIVAN.—THE
CHORISTER. New Song. Music by ARTHUR SULLIVAN; Words by F. E. Weatherly. Post-free, 2s. 6d. stamps.
METZLER and Co., 37, Great Marlborough-street, London, W.

ARTHUR SULLIVAN.—SAD
MEMORIES.

ARTHUR SULLIVAN.—SAD
MEMORIES. New Song. Music by ARTHUR SULLIVAN; Words by C. J. Rowe. Post-free, 2s. 6d. stamps.
METZLER and Co., 37, Great Marlborough-street, London, W.

MOLLOY.—CLANG OF THE WOODEN
SHOON.

MOLLOY.—CLANG OF THE WOODEN
SHOON. Music and Words by J. L. MOLLOY. Post-free, 2s. 6d. stamps.
METZLER and Co., 37, Great Marlborough-street, London, W.

CIRO PINSUTI.—DREAMS, ONLY
DREAMS. New Song for mezzo-soprano.

CIRO PINSUTI.—DREAMS, ONLY
DREAMS. New Song. Words by C. J. Rowe; Music by CIRO PINSUTI. Post-free, 2s. 6d. stamps.
METZLER and Co., 37, Great Marlborough-street, London, W.

CIRO PINSUTI.—LISTENING TO THE
SINGER. New Song for mezzo-soprano.

CIRO PINSUTI.—LISTENING TO THE
SINGER. New Song. Words by C. J. Rowe; Music by CIRO PINSUTI. Post-free, 2s. 6d. stamps.
METZLER and Co., 37, Great Marlborough-street, London, W.

VIRGINIA GABRIEL'S NEWEST
SONGS.
ROMANI. Sung by Mrs. Osgood. 4s.
EIGHT FISHES OF CALAIS. Sung by Miss D'Alma. 4s.
BILLY BELL'S SONG ("Shepherd of Cornwalls"). 2s.
Two shillings each net, post-free.
METZLER and Co., 37, Great Marlborough-street, London, W.

ROYAL COURT MARCH. For the
Pianoforte. By Madame OUBY. Just published. Price 2s. net, post-free.
METZLER and Co., 37, Great Marlborough-street, W.

NELL GWYNNE. New Opera. By
H. B. FARNIE and ALFRED CELLIER.

IF I WERE RICH. (Now ready)
THE BROWN TRYST.
O, CUPID IS A MADCAP!
HER HEART.
WELL I KNOW MY LOVE LOVE ME!
Price 2s. each net, post-free.

CHAPPELL'S ENGLISH 20-GUINEA or
SCHOOL-ROOM PIANOFORTE with Check Action, in Canadian Walnut or Mahogany. This instrument combines good quality of tone and excellence of workmanship. Capable of enduring hard school practice without going out of order. In Solid Oak or White Ash, 22 gs.; Rosewood, or Walnut Case, 27 gs.

BY GEORGE AUGUSTUS SALA.

SUPPLEMENT TO THE ILLUSTRATED LONDON NEWS, APRIL 28, 1877.

THE EMPEROR ALEXANDER II. DRIVING IN THE NEVSKI PROSPECT AT ST. PETERSBURG.
FROM A SKETCH BY OUR SPECIAL ARTIST.

ST. PETERSBURG AS IT IS.

BY GEORGE AUGUSTUS SALA.

It takes at least a century, so social economists tell me, to make a London market popular; and if there be anything in this theory we may expect that, in about nine decades or so, the *post nati* will find that Columbia Market has become a decided commercial success. But, on the other hand, it may be asked: How much time is required for the making of a city? Only a very few years, our transatlantic cousins may confidently assert, as they point triumphantly to Chicago and Cincinnati, to San Francisco and Sacramento, and (a little less cheerfully, perchance) to the city of the Great Salt Lake. One might instance, too, in England itself, such towns as Brighton and Barrow-in-Furness as examples of phenomenally rapid development; but the city I have in my mind's eye must be a great European capital—a metropolis, in short. Can such a city be "made" in less than a thousand years? That would be, I should say, as a rule, the *minimum* period required. Venice began to be known about the middle of the fifth century. A thousand years later she was at the height of her splendour and prosperity. London required ten hundred years to grow from a mere group of mud and wattled hovels inhabited by wood-stained ancient Britons, to be the busy and thriving town to whose Bishop and Portreeve the Conqueror granted his first municipal charter; and by A.D. 2000 London, I should imagine, will be a very surprising city indeed: Fate and the devastating hordes of the Muscovite (who may invade us, via Bombay, the Suez Canal, and Brindisi) permitting. Julian the Apostate found Lutetia Parisiorum only a very poor place; but a thousand years afterwards it had become the superb mediæval city which Victor Hugo has painted in "Notre Dame de Paris." It is difficult, indeed, to recall the name of a capital on this side the Atlantic which has attained, in less than ten centuries, the dimensions, the magnificence, and the social importance of a metropolis. There is Berlin, to be sure, and there is Madrid, the political capitals of Germany and of Spain; but both, from a social point of view, must be considered failures. The typical Teutonic capital will always be Vienna, which, politically speaking, is no longer in Germany at all; while the genuine capital of Spain is assuredly not in gloomy, austere, and arid Castile, but in sunny, genial, and picturesque Andalusia. It is on the banks of the Guadalquivir, and not on those of the Manzanares. Its name is not Madrid, but Seville.

It is now, not without some fear and trembling, that I am about to submit to travellers and philosophers that which I hold, myself, to be a moot point. The proprietors of the *Illustrated London News* have asked me to write a description of St. Petersburg as it is; and, as in duty bound, I have at once acceded to their request. I happen to be sufficiently familiar with the city on the shores of the Neva; and I might almost paraphrase concerning it that which the Roman gentleman in Juvenal says of "the grove of Mars" and the "Cave of Vulcan neighbouring on the Æolian rocks," seeing that I lived in St. Petersburg for many months twenty years ago. I fell desperately in love while I was there; and a man (I think) never forgets the minutest features of the place in which he first experienced the "tender passion." It is only the person with whom you were in love that you are apt to forget. I went back to Petropolis last November; and, albeit my stay was necessarily but a hurried one, I renewed my acquaintance with all the well-remembered *cari luoghi*. The old Russian phrases which I thought had been utterly erased from my memory came back to me like old coins which had long lain in a drawer of which the key had been mislaid. But the key once found, the drawer once opened, the rusty half-crowns and shillings only needed a little rubbing up to be once more bright and shining, and as current coin as ever they were. I made good use of my time, and a most exciting time it was; for Lord Beaconsfield had just spoken his memorable after-dinner speech at Guildhall, and the Emperor Alexander had just uttered his equally memorable allocution in St. George's Hall, Moscow. Talk was rife of an imminently impending war between Russia and England; and I heard a deafening amount of war-talk at the Foreign Embassies, at opera houses and theatres, in private society, and in newspaper offices. With all this I was unable, and I am still to certain extent incapable of making up my mind as to whether St. Petersburg should be considered the veritable and legitimate capital of the Russian empire. It is the seat of Government, but is it the capital? Frenchmen are not accustomed to tell you that the real metropolis of France is not at Paris but at Lyons, or Marseilles, or Bordeaux; nor has Manchester or Liverpool, or even ancient and Imperial York yet put forward a claim to social superiority to London. The case is different in Russia. There is one section of Panславists who gravely inform you that St. Petersburg is only a capital *de circonstance*, that it is at the best only a bad imitation of Berlin, and that the genuine centre of Russian manners, wealth, and intelligence is Moscow. Another section as firmly maintain that the Holy City of Kiew is the proper capital of the orthodox Russ; while a third party—they are, it is true, the "party of the future"—vehemently maintain that the only possible metropolis of the colossal empire is situated on the shores of the Bosphorus, the Golden Horn, and the Sea of Marmora. I have seen Russian maps, prepared from this last-named point of view, in which Constantinople is called "Tzaregrad"—the City of the Czar—a feat of premature nomenclature which reminds me of the fabulous hunter who sold the skin of the bear before he had shot him.

But if St. Petersburg be, indeed, the real capital of the dominions of the Emperor Alexander Nicolaievich, that fact would at once render null and void all that I have advanced respecting the thousand years requirement. Petersburg was "created" (humanly speaking) wellnigh in the twinkling of an eye. It is, in a metropolitan sense, the newest city in Europe; a monstrously big and handsome bantling, but a baby for all that; and some inkling of this truth may have

been running in the mind of the Empress Catherine II. when she commissioned Sir Joshua Reynolds to paint that magnificent picture still in the palace of the Hermitage, but which is slowly going, I am sorry to say, to irretrievable rack and ruin—the picture in which St. Petersburg is typified as the infant Hercules strangling the serpents. Let me justify that remark about the city having been created in the twinkling of an eye. I mean that the place was founded, erected, decorated, stocked, peopled, and furnished, with wellnigh inconceivable rapidity by the indomitable will and under the unremitting personal superintendence of one of the most intelligent and the most ruthless despots that the world has ever seen—the Czar Peter Veliké, sometime called Peter the Great. The actual population of the city is close upon 700,000. In the first year of the eighteenth century it would have been very easy to compute the population of the site now covered by St. Petersburg, as easy indeed as it proved to the traveller to write that chapter concerning snakes in Iceland (or Ireland?). There was nobody in St. Petersburg at all; nobody who was not nomadic at least between Lake Ladoga, where the Neva rises, and the Gulf of Finland, into which the river falls. But, A.D. 1703, Peter, having finished his shipwright's apprenticeship in Holland, having visited England (where he drank amazing quantities of brandy, and where he made himself a sore burden to worthy Mr. John Evelyn, whose house at Sayes Court, Deptford, he tenanted, and through whose trim hedges the Czar and his tipsy boyards used to drive wheelbarrows) decreed that he would have "a window looking out into Europe;" and the window was built with a celerity in comparison with which the progress of the works at Mr. Beckford's architectural caprice at Fonthill was slow even to laggardliness. It was a pity that the casement constructed by Peter Veliké was set up in 59 deg. 57 min. north latitude, meteorological conditions which, during nearly six months of the year, lead to the window-panes being either blocked up with snow or thickly rimed with hoar frost. But the Great Czar was physically, as well as morally, a giant; he had plenty of warm fur coats and caps, and so did not mind the cold a bit; being an Emperor, he naturally did not care if the many millions of his subjects who were destitute of fur coats and caps shivered and shook until they nearly chattered their miserable teeth out of their heads in a horribly inhospitable climate; and, finally, his Imperial Majesty was notoriously subject to intermitting fits of madness. Nobody but an occasional maniac, I should imagine, would have thought of building a city on such a spot.

It was to be built nevertheless. Peter had so willed it; and that gigantic drunken savage of genius was one of those personages who once in a century or so come into the world apparently for the purpose of having their own way, and who have it with a vengeance. He brought many thousands of peasants from every part of Russia, and from Finland, and set them to work, in true Egyptian taskmaster-fashion, on his new city. Forty thousand was the annual contingent of *mozjiks* "conscripted" for this purpose, the Czar dwelling among them in one of those log cabins of which he was so fond, and personally superintending the progress of the works. He was not unprovided, you may be sure, with a big stick wherewith to accelerate the movements of the masons and carpenters. People who have their own way usually carry a big stick, and are accustomed to lay it about them lustily. Peter's staff of command—and correction—is still preserved in the strange museum of personal relics of the mighty Czar, which forms one of the attractions of the Hermitage. The Imperial cane is nearly four feet high, and I should say that its percussion on any part of the human anatomy would be painful to the "percussed."

St. Petersburg began on the north side of the Neva; and in 1705 the broad, handsome street called the Millionaya, at the extremity of which is the Hermitage, was built. The large island between the Great and Little Neva was colonised by the serfs of the famous favourite Menschikoff; but he did not give his name to the quarter granted to him. The island was called and is still known as Vasili Ostrow, or Basil's Island, from one Major Vasil or Basil, who was placed in command of a block-house at the eastern point thereof. The first brick tenement in Petersburg was built in 1710, by Chancellor Count Golovkin; and in 1711 the construction of the Admiralty was begun, in brick. The difficulties in the way of building were simply tremendous. They equalled the obstacles which lay in the way of the founders of Venice. They surpassed the problems which puzzled the architects of Amsterdam. It had pleased Peter to order that his metropolis should be built in the midst of a morass; and into this sloppy marsh it was necessary to drive millions upon millions of wooden piles before the foundations proper of the houses could be laid. I wish that Mr. Ruskin, who has written so eloquently on the stones of Venice, had deigned to say something about the piles of Petropolis; and I should like to know how many thousands of wretched "conscripted" *mozjiks* succumbed to bronchitis, pleurisy, and ague before the "sea stories" of the magnificent city were completed. As it is, St. Petersburg, splendidly embanked as is the Neva throughout the whole length of the town, is in chronic danger of inundation, especially after a thaw, and at the period of the spring tides; and it is considered not at all unlikely that some day or another it may be swept away altogether, as Earl Godwin's village on the Kentish quicksand was. The knowledge of such a liability does not add appreciably to your comfort while you are sojourning at St. Petersburg; and I well remember the cold shiver which came over me one early summer day during my first visit, when, watching the workmen mending the pavement on the Bolshoi Moraskia, one of the handsomest thoroughfares in the city, I found that after digging a very few feet, and removing a tier of rotten timbers on which the soil supporting the pavement was laid, they had struck not "ile," but the black waters of the stagnant morass beneath. Travellers whose ambition it is to be funny have sometimes remarked that Russia need never be in want of ready money, since the Czar has always a large "floating capital" at his

command. There is nothing funny, however, in the idea of being floated out of your bed some gusty morning and washed down the Neva into the harbour of Cronstadt; and, timber-piles and granite quays notwithstanding, there have been eight terrible inundations of the Neva within the last hundred and fifty years. The last was in '73. A stiff sou'-wester is the gale most favourable to a Petropolitan flood, and most likely to bring about the conversion of the inhabitants into so many drowned rats. Whenever this gale begins to blow "attention" is the word on the banks of the Neva. When the river begins to rise warning guns are fired from the Krepost, or fortress; and on the waters attaining a certain altitude the cannon thunder at more frequent intervals. Then the dwellers in cellars and basements hasten to take refuge in the upper storeys, and barges manned by sailors from the fleet and by the police begin to ply in the streets, which have by this time flooded into the similitude of so many canals. On the principle of the cobbler's children being rarely well shod, of pastrycooks' young ladies detesting sweetstuff, and of workmen in gunpowder factories being much addicted to carrying lucifer-matches loose in their pockets, it is not astonishing to learn that the humbler quarters of St. Petersburg abound with underground cellars, and that the lower class of the people are very fond of living in them. On the whole, the marsh in which Petersburg stands is, geographically, about as well suited for the site of an Imperial city as the bottom of a coalpit would be for the establishment of an astronomical observatory, or the summit of Mont Blanc for the construction of a Consumption Hospital. But Peter said he would have his "window" here, in the midst of marshy Ingria, and he had it.

One thing in St. Petersburg the Autocrat was powerless to do. He could not make his city healthy. Setting aside the normal asperity of the climate—the merciless rigour of the long winter and the scorching heat of the brief summer, with a soaking spring and a foggy autumn of yet shorter duration, the quaking bog on which the city is built makes it the abode at most times of a number of distressing maladies. Catarrh, rheumatism, bronchial affections, and asthma are the prevailing diseases of the winter; while ague and dysentery are the chief ailments of the summer in St. Petersburg. When I first sojourned there Asiatic cholera was chronic in the lower quarters of the town; but sanitary matters have much mended within the last twenty years, and cases of cholera are but rarely heard of in the St. Petersburg of the present day.

The enlargement and the embellishment of the city of the Czar have been wellnigh unremittingly pursued from the very first moment of its inception to the times in which we live. In the course of a century and a half it was but natural to expect that some slums and rookeries should grow up; and where such disfigurements to the stateliness of the city have been found to exist, they must be ascribed first to the circumstance that the dwellings of the peasants who were draughted into the service of building St. Petersburg were hastily run up, and almost invariably constructed of the perishable material, wood, and next to the habits and mode of life of the humbler classes of the population, which even in this enlightened age are far from cleanly, but which in bygone days were indescribably unsavoury. The slums and the rookeries—situated as they principally are in the remotest outskirts of the town—are rapidly disappearing; and the substitution of brick for rough-hewn logs as a building material has grown to be wellnigh universal. The masses, again, are at present able to earn more money for themselves than was the case in the days of their serfdom—*then* they toiled in order that their roubles and kopecks might swell the revenues of their lords and masters. The Petersburg *mozjik* of 1877 is, materially speaking, by no means badly off; and he is, consequently, becoming less and less habituated to residing in a pigstye. He is learning to read, too, and to write, and to take some interest in politics; he has (since he is no longer beaten by his master or by the police) all but abandoned the practice of thrashing his wife—a recreation of which he was formerly extremely fond; and, if he were not so grossly superstitious and so fervently addicted to getting tipsy whenever he has a chance of obtaining *vodka*, the *mozjik* might be contrasted, certainly not greatly to his disadvantage, with the working man of any other European capital. The Government, unfortunately, both directly and indirectly encourages the superstition of the common people, fanaticism being usually found a most valuable aid to the preservation of Russian High Toryism: it is the brine which keeps the old carcase of despotism from putrefying; but the supreme authority has, to its honour, done of late years everything in its power to diminish the drunkenness of the people. The municipality of St. Petersburg have recently closed at least a third of the low brandy shops which formerly swarmed in the more densely populated quarters, while, on the other hand, breweries are actively fostered; and a light and wholesome beer is now made, to which the people seem to be taking very kindly. They are likewise tremendous tea drinkers; and, on the whole, the tourist sees nowadays far fewer tipsy people in the streets of Petersburg than at Moscow. The encouragement given to temperance reflects the greatest credit on the Government, when it is remembered that the Imperial revenue is accustomed to benefit wellnigh as largely from the excise on home-manufactured *vodka*, as our own revenue does (to our national shame and destruction) from the duties on imported spirits. Another and very characteristic cause has likewise tended to diminish the number of the St. Petersburg rookeries. Formerly fires were as rife at St. Petersburg as they are still rife at Pera, in which last interesting suburb of Constantinople the average number of conflagrations is two and a half per day, from about ten to fifty houses usually "burning up," as the Americans phrase it, at each fire. Fires in Stamboul are numerically rarer, but the average is in the long-run comfortably adjusted by the larger number of dwellings which are consumed in a single casualty. Five streets, or, say, two hundred and fifty houses, consumed to ashes, constitute in

Stamboul a "first-class blaze." These catastrophes used to be to the full as frequent in St. Petersburg, and many a night in the long syne have I been awakened by the hoarse cry of "Ogon!"—"Fire!"—by the rattling of the clumsy engines through the stony street, and the tramping of the large bodies of troops who were always marched at the double quick to the scene of disaster. The Czar Nicholas used to say that a St. Petersburg fire on a large scale nearly equalled a review in the opportunities it afforded for testing the capabilities and exhibiting the mettle of his Imperial Guard. If the fire was a "first-class blaze," the Grand Dukes, and even the Emperor himself, attended the conflagration in person; but this system was not unattended by disadvantages. The St. Petersburg Fire Corps is essentially a military organisation; and military etiquette demanded that the officer who was highest in rank should take the command of all the troops on the ground; and, as Russian Emperors and Grand Dukes even in modern times are personages who usually insist upon having their own way, the Captain Shaws of the St. Petersburg Fire Brigade found with sad frequency that their operations were sadly hampered and impeded by Grand Ducal or by Imperial interference. The plenitude of wooden houses, and overheated stoves, and a careless population, much given to going to bed in a state of *vodka*, and putting lighted candles underneath their pillows, were among the commonest causes of the fires which used to devastate St. Petersburg by the whole quarter at a time. These catastrophes are at present of far less frequent occurrence; the Fire Corps is much better drilled, and is somewhat more independent in action than of yore; and fires are, in general, easily extinguished. The most stringent precautions continue, however, to be taken against the Fire Demon; and the city is dotted with tall wooden towers, in the topmost galleries of which watchmen are stationed, both by day and by night, to look out for a redness in the sky. The extensive fires of bygone times are not (save when they were accompanied by loss of life) to be regretted. They burned the rookeries down, and the rookeries have not been rebuilt. The most repulsive quarters of St. Petersburg as it is comprise at present very few log cabins; but they abound in dirty, squalid brick edifices very closely resembling the "tenement houses" of the lower districts of New York. In these houses, which sometimes shelter as many as a hundred families, lurk the dangerous classes of the Russian capital—if St. Petersburg be the capital of Russia. The tenement houses are General Trepoff's rabbit-warren. Thither come the agents of the terrible chief of the Petropolitan police (General Trepoff's name, if it be uttered aloud, is generally pronounced in a whisper, so intense is the terror which this formidable personage inspires). In these tenements do the police find the assassins, the burglars, the bank-note forgers, the swindlers and vagrants of whom they are in quest. But when political conspirators, Socialists, Nihilists, Polish patriots, and what not, are "wanted" it is much further afield, and to far different quarters of the city that Trepoff's detectives are fain to go. The conspirators have to be pounced upon in Vasil Ostrow, in the neighbourhood of the University, and sometimes in the most fashionable quarters of the city.

I will not ask you to survey the city of the Czar from the car of a balloon, as, in imagination, we surveyed Byzantium. It is in winter time that Petersburg assumes its grandest and most striking aspect; and if we made an ascent, say from the Admiralty-square, in an aerial machine it would be necessary for the aeronauts to take a stove with them, if they wished to avoid being frozen to death. And fire-balloons are perilous things.

Mr. T. Michell, sometime Second Secretary to H.B.M. Embassy and Consul at St. Petersburg, the latest editor of Murray's admirable guide-book to Russia, Poland, and Finland, and who, in addition to being a facile and well-informed writer, is one of the most accomplished Russian scholars of the age, advises the tourist, or at least endorses the advice given to that tourist by Murray's original editor, to ascend the dome of St. Isaac's Cathedral if he wishes to obtain an accurate knowledge of the topography of the city. Thence, looking north, he will behold the island of Vasil Ostrow, with the Exchange, the University, the Academy of Sciences, and the Military School. To the left is the Kreput, or Citadel, and beyond, north and west, are the islands of Aptekarski, Kamennoi, Petrofski, Krestofski, and Elaghinski. In some of these islands the great nobles and wealthy bankers of Petersburg have their splendid villas; and at Aptekarski is the College of Surgeons. The islands of the Neva are in summer-time delightful places of resort, and Krestofski is, in particular, the special rendezvous for the German colony. I daresay there altogether are a hundred thousand Teutons in St. Petersburg. At Krestofski, in summer, take place picnics lasting from midnight until morn; there is light enough to read small print the whole night through, and the sun never seems to set—it only dips across the horizon, and is born again before it dies. I remember going to one of these German picnics at Krestofski, on St. John's Day, I think, in the summer of 1857. The "jinks" were very high jinks indeed for this subdued and police nightmared city; but I do not know what St. John could have had to do with the festival, the saint most intimately connected with it being, seemingly, St. Hans Breitmann. There was a good deal of "souse and browse" going about, and much "bianoblayin," and oceans of lager beer were imbibed by the Deutchers, among whom one of my companions, an officer in the Chevalier Guards, declared that there were at least fifteen hundred German tailors, and as many bootmakers. They did not, however, "gif a cheer" when "de shpicket" was knocked out from a fresh cask of lager. "Matilda Yane" was innocently romped and flirted with from time to time; but I did not see that damsel "schlog" anybody "on de kop;" still less did I notice that "de gombany vought mit de taple lecks till the polishman made 'em shlop." The truth was that the "gombany" at Krestofski were afraid of the police, and behaved themselves with a

degree of gravity approaching the melancholy in its decorum. We came home very tired, but not very much amused: the officer in the Chevalier Guards—he was a subaltern then, with "looks crull," as the son of the Knight's was in the "Canterbury Tales"—another young Russian who was a cadet in the Imperial Corps des Pages, a Professor of Natural History in the University, and your humble servant. I daresay that the Chevalier Guardsman is by this time a General. He is with the Czar, perhaps, at Kizmenew. Why will Mr. Renter's agents persist in translating the Slavonic Kizmenew into the Teuton Kischeneff? The ex-cadet of the Corps des Pages has become, I have heard, a diplomatist, and is somewhere in South America; and last November, being at a scientific and journalistic tea-party in St. Petersburg, I heard news of my old friend the Professor of Natural History. He had recently travelled in the pursuit of knowledge far into Central Asia. The natives of those parts, to whom he had not brought letters of introduction, objected to his photographic apparatus, to his sketch and notebooks, to his tall black hat and his gold-rimmed spectacles, and to himself personally. They tripped him up and beat him badly. They stretched him across a log and tried to scrape him to death with cactus-leaves. They gave him a fearful scalp wound, so that a flap of skin hung down and obscured the sight of one eye; and then somebody in authority (I think he was a Khan) alighted a rope round the Professor's neck, and so dragged him at his (the Khan's) saddle-bow as he spurred his horse at full gallop through a jungle of brambles and prickly pear. "I the more regretted the indelicacy of these proceedings," subsequently wrote from Samarcand the happily-rescued Professor, "since, owing to the peculiar circumstances in which I was placed, I was unable to make duly detailed notes on the *Fauna* and *Flora* of a most interesting region."

Devotion to science is a wonderful thing. I cannot help this digression, into which I was seduced by the remembrance of the German High Jinks at Krestofski. Not everything, O tuneful Hans Breitmann, goes away into the *ewigkeit*, with the "gloud on de mountain's prow," the *himmelstrahlendestern*, and the lager beer. If they do vanish, they return; and who will not join in the pious old orison, "Keep my memory green"? And it is while surveying the Neva that there comes back to me the memory of a mighty Russian nobleman (long since dead, I should say), who was wont twenty years since to hold high state in his sumptuous country house on one of these islands. This was Count Strogonoff, formerly Ambassador of Russia at the Court of St. James's. He was, when I saw him, an aged and most venerable gentleman; but in England his name, perchance, only dwells in the memory as serving to eke out a most irreverent rhyme in Tom Ingoldsbey's inimitable burlesque poem on the Coronation. The bard is describing the banquet which took place in the cloisters of Westminster Abbey, after her Majesty's investiture, and mentions that

Count von Strogonoff
Sure he got prog enough,
The sky old devil underneath the stairs.

These irreverent rhymes have their value, however. If you will turn to Southey's clever, malicious ballad of the "March to Moscow"—one of the deftest pieces of "patter" ever penned—you will find a list of Russian names, many of which may turn up again, ere many weeks are over, among the Generals waging war against the Turks. The grandfathers of those Generals may have been among those who worsted the great Napoleon in Russia. How fond we were in 1813 of Russian Generals; and how we lionised the Hetman Platoff.

Reverting to that imaginary eyrie at the summit of St. Isaac's golden dome, it is to be noted that to the East of the Great Neva, and on the north bank of the Neva, stretch long ranges of barracks, factories, and Government establishments. The outer walls of all public buildings, not being churches or palaces, are invariably painted with one "administrative" hue—a dull yellow ochre; and the effect produced thereby on the eye is the reverse of pleasant. The communication between the mainland and the islands is by four bridges, the Nicolaiefski Most, so called after the Czar Nicolas; a stately structure of granite piers with graceful arches; the Dvortsoi or Palace Bridge, which is of boats, between the Exchange and the Winter Palace; the Troitski or Trinity Bridge, between the fortress and the Champ de Mars, and nearly opposite that British Embassy, where his Excellency Lord Augustus Loftus dispenses such splendid and such courteous hospitality; and, finally, the Liteiny, likewise a floating bridge of lighters. When the ice of the Neva begins to "pack," as it was just beginning to do when I arrived last November, the floating bridges are removed; but so soon as the river is well frozen over the bridges are restored to their places. There is a general sensation of relief when the winter has thus begun in real earnest. The Russians prefer a sound, solid, inflexibly hard frost to the mere dallying and shilly-shallying of alternate frost and thaw, which mark the first fortnight in November, and sometimes the whole of that month. When the ice on the bosom of the Neva has solidified to a proper wintry degree of thickness people know that the Worst has come, and they prepare, with Spartan fortitude to "grin and bear it." To a foreigner, at least, the inconvenience lies in the fact that the "Worst" of which I have spoken lasts for four, and very often for five, mortal months. The good people of Petersburg endeavour meanwhile to make themselves as comfortable as they can under the circumstances. Everybody who possesses a *schoub*, or fur-lined pelisse, enwraps himself in that commodious although clumsy-looking garment, the skirts of which descend to his heels, while the huge fur cuffs nearly cover his fingertips and the huger fur collar protects his ears and ascends to the tip of his nose. You cannot buy, in Petersburg at least, a *schoub* of even the most inferior kind of fur for less than fifteen pounds, and you may, if you are rich enough, give as much as a hundred, or even two hundred and fifty, guineas for one of the superb sable mantles sold by the aristocratic furriers of the Nevski, the Bolschoi Morskala, or the Gostinnoi-Dvor.

At Moscow furs are even dearer than at Petersburg, and more expensive, perhaps, than they are in England; but they can be purchased at comparatively moderate prices in Germany. Leipzig and Koenigsberg are the two best German towns for buying furs cheap. Twenty years ago I should have recommended Berlin; but since the imposing city on the Spree has become (politically) the capital of the German Empire everything has grown dearer there. Even sausages and sauerkraut have "gone up."

The Neva being thus satisfactorily frozen as hard as the nether millstone, or the heart of a politician (the similes are convertible ones), the shovels of an army of *moujiks*, amicably aided by the strong blast blowing from the Lake of Ladoga, smooth away the roughnesses of the frozen field, and soon the whole face of the stream gleams with glassy brightness. Wells are dug at stated intervals in the thick ice to supplement the water supply by draughts from the rapid current which flows beneath. A broad road is swept and garnished leading from above the city right down to Cronstadt. This road is prettily bordered with dwarf evergreens, with larch and birch trees, and makes a capital promenade. Sleigh-driving sets in with amazing dash and vigour; and the streets of Petersburg (which is at most times rather a silent city) resound throughout the day and late into the night to the incessant jingling of the sleigh-bells. The tintinnabulation is not entirely of an ornamental or festive character. The jingling is intended to save foot-passengers from being run over, for the runners of the sledges glide so gently and yet with such rapidity over the snow as to be wellnigh inaudible until the horses' hoofs are within a few inches of you. All the city noises are indeed muffled by the snow which wraps Petersburg in jewellers' cotton, so to speak, so that she may come out again very bright and shining next summer. It is not safe to walk in the snow unless you are provided with high boots lined with fur or lambewool, or unless (as the general custom is) you wear indiarubber goloshes. When you pay a visit you remove your overshoes—which are furnished with little rudimentary spurs in the heel, so as to be easily kicked off—in the hall of the house, and when your visit is at an end you resume your goloshes again. If you are awkward in donning or doffing these flexible *sabots*, the *dvornik* or the *moujik* in attendance downstairs is always ready to assist you, and you reward him with a few kopecks for his pains. I used to calculate my expenditure on goloshes at about a rouble (which should be worth three shillings, but which is just now at a sad discount), and the cost of sleighing at five roubles a day; for, although you may walk in mid-winter and with tolerable ease and comfort in the Nevski, the two Morskais, the Millionais, and in the principal "linie" of Vasil Ostrow, the distances to be traversed seem to be so enormous when you have many letters of introduction to deliver and many sights to see, that you hail an *ischvoostchik* and bestow yourself in a sledge as naturally and as often as does in London a barrister in good practice who lives in the Temple, but fluctuates between the courts of Westminster and those at Guildhall. The common one-horse sledges which ply for hire in St. Petersburg are not comfortable. There is scarcely room on the seat behind the driver for a single passenger, especially if the passenger be, like some with whom I have been acquainted for many years past, rapidly approaching that degree of obesity which has been immortalised by Washington Irving in his sketch of the Stout Gentleman who entered the stage-coach on the wet day. If you (being stout) happen to have a *valet de place* with you, the situation becomes, to use a Gallicism, one of extreme tension. The bulwarks of the sledge are but frail. It is supported on runners without springs; and, if you don't trim the boat—or sledge—with extreme care, the probabilities are disagreeably in favour of the entire concern tipping over. The *ischvoostchik* is used to these little casualties. He has not far to fall, and he has a way of rolling himself over and over in the snow, and then of coming up again, smiling, like a frozen miller. The horse, too, seems to be used to occasional tumbles, and rather to like a recumbent position in the soft snow; but the case of the passenger is far different, especially if he have a companion who falls on the top of him, while the heavy runners of the sledge fall atop of both. The *ischvoostchik*, or drivers, are civil fellows enough, clad, in summer time, in caftans of blue cloth and low-crowned hats with curly brims; and, in winter time, in turban-shaped fur caps, and flowing robes lined with imitation astracan or some cheap fur. Their waists are girt with sashes of brilliant hues—once brilliant hues would, perhaps, be the most appropriate expression. The majority of these drivers are tawny, brawny, flowing-bearded peasants of the unmistakeable Slavonic type, but among them there is a considerable proportion of mere striplings, seemingly of not more than fifteen or sixteen. I never met with a Tartar *ischvoostchik* in St. Petersburg. I have done so occasionally in Moscow; but, on the other hand, the waiters in the hotels and restaurants in both capitals are nearly always Tartars. The landlords prefer a Tartar to a Slav, because the former is a Mohammedan, who drinks no fermented liquors and disdains to steal anything save horseflesh. The honestest Tartar, they say, cannot occasionally resist the temptation of illegally turning a horse to his own use and profit; and it is for this reason, perhaps, that there are no Tartar drivers of hackney carriages in St. Petersburg. The cab-masters may be nervous lest a Calmuck driver should run away some morning, horse and all, and never come back again. In summer time, of course, the sledge with its runners is replaced by a *droschky*—a kind of shabby Victoria—on wheels. This vehicle is a little roomier than the winter-time sledge, and still leaves a good deal to be desired.

Official tariff of fares there is none; the driver is entitled to charge as much as he likes; but no one but a lunatic would think, after he had been a couple of days in St. Petersburg, of engaging a *droschky* or a sledge without making a preliminary bargain with the charioteer thereof. As a rule, the demand made by the driver

SKETCHES AT ST. PETERSBURG, BY OUR SPECIAL ARTIST.

is not extortionate, and the bargain is easily struck, and rigidly adhered to by the Russian Jehu. If you present him with a trifle of copper money as a gratuity over and above his fare he will shed tears of joy—it is when he has been drinking too much *vodka* that he weeps most plentifully—still, if you give him nothing beyond the sum stipulated to be paid he does not upbraid you; far less does he strew over you the flowers of a Slavonic Billingsgate, as some London cabmen are rather too prone to do. A rouble will about cover the longest journey you could undertake in the streets of St. Petersburg; while for a short course so moderate a fee as twenty kopecks (about sevenpence) will often be cheerfully accepted. Fancy a sevenpenny cab fare in our own dear metropolis! If, however, you go out much at night to theatres, balls, or clubs, you had best hire a closed carriage with two horses by the evening, or, better still, by the week. It should not cost you more than twelve shillings *per noctem*, and the charge will be less if you hire it by the week. The drivers of these carriages—and those also who steer the private equipages of the Russian nobility and gentry—seem to be men of iron, wholly impervious to the effects of cold; and your coachman will take you to the opera, thence to three or four parties, thence to a couple of clubs, or wait cheerfully for you in the frigid courtyard of some great mansion, or on one of the bleak and wind-swept quays of the Neva, until four or five on a December morning. In the vicinity of the great theatres and the Imperial palaces there are permanent circular braziers of iron roofed in, and in which roaring fires of logs are lit on wintry nights. The watchmen gather round these jovial bivouacs, clap their fur-gloved hands together, warm their poor chilled noses, and are happy.

Reverting to your fancied station, perched on the topmost cupola of St. Isaac's, you will easily descry the great edifice of the Admiralty with its graceful gilded spire. Southward the great bulk of the city—the portion inhabited by the Court, the nobility, the corps diplomatique, and the principal bankers, merchants, and shopkeepers—stretches in thickly-serial lines and blocks, the Neva pursuing for nearly four miles a south-westerly course. The districts on this side the river are divided into three semicircular regions by as many canals, the Moika, the Ekaterina and the Fontanka. It is well worth while to bear this topographical arrangement in mind, since it closely and curiously resembles the lines on which the city of Amsterdam is built. It would seem as though the shipwright of Saardam had never been able to efface the remembrance of Holland from his mind; as though he had consciously or unconsciously adopted the Dutch capital, the arrangement of whose streets and canals has been compared to the section of half an onion, as a model for his autocratically-planned metropolis. Another Dutch town, Rotterdam, was called long ago a "vulgar Venice." Waterside St. Petersburg might from more than one point of view be qualified as a sublime Rotterdam.

The three principal streets of the city radiate from the Admiralty Place, and throughout the whole length of these streets the Admiralty spire is visible, closing the vista towards the river. They are all as straight as darts and as wide as church doors; while the houses surrounding them are generally as tall as maypoles or as deep as wells, according to the precise figure of speech which you may elect to use. These three thoroughfares are the world-renowned Nevski Prospekt, or "Perspective of the Neva"; the Gorokhovaya-Oulitsa, or "Pease-street"; and the Vosnesenski-Prospekt, or "Ascension Perspective." The other principal streets are the Bolschoi and Mala (great and little) Morskais, the Millionaia, the Kazanskais, or Street of Kazan, and the Sadovaya, or Garden-street. All these streets are strictly rectilinear, and are crossed by the smaller thoroughfares at right angles. For administrative purposes the streets are divided into three classes—first, Perspectives, which might be likened to Boulevards; next, Oulitzas, or ordinary streets; and, thirdly, Pereouls, or minor cross streets. When I first went to Petersburg the city was very imperfectly lit; in many of the streets there were only oil lamps, and in many more no lamps at all; while the state of the pavement, both on the roadway and on the side-walks, was indescribably execrable. When I went back last year—I travelled via Berlin, and it was nearly midnight before we reached the terminus—I found the gaslighting of the city to be thorough and brilliant. The roads were, it is true, too thickly covered with snow to enable me to affirm or to reverse in 1877 the judgment which I had presumed to form in 1857 upon "the Czar's Highway." This judgment was contained in a book long since out of print, called "A Journey Due North," a work full of crude and hasty notions, and which was so justly, impartially, and mercilessly slaughtered in the *Saturday Review* that it forthwith went into a second edition. Then it was abused in the *Times* as a "bundle of impertinences," and the second edition was, in consequence, swiftly exhausted; a fact upon which I and my worthy publisher, the late Mr. Richard Bentley, both heartily congratulated. I never yet published a book without finding it subjected to unmitigated abuse; and the abuse never failed to do me a large amount of moral and material good. I am about, shortly, to bring out another work about the land of the Sultan and the Czar; and if the reviewers, in addition to saying that I am an idiot and an ignoramus, will only be kind enough to hint that my uncle was transported for stealing a gasometer, and that I know more than I ought to do about the murder of Eliza Grimwood and the Waterloo Bridge mystery, I shall consider my fortune to be substantially made. *Tempus abire*; and one cannot go on grinding in the Philistines' mills for ever.

There is an immense amount of sight-seeing, in the true guide-book student and Cook's Tourist's sense, to be accomplished at St. Petersburg; more, perhaps, than in any European capital, save Paris. I will briefly enumerate a few of the principal shows, and will take them in groups. First, you must see the colossal cathedral of St. Isaac, a

basilica which is only surpassed in magnificence by St. Peter's at Rome. Next in size and splendour to this sumptuous fane is the Kazan Cathedral; and the ecclesiastical edifice next in interest is the vast Monastery of St. Alexander Nevski. After these you must view the Winter Palace and the Crown Jewels, the Alexander Monolith, with the Imperial Library and the Agricultural Museum. Next will follow an inspection of the glorious picture-galleries of the Hermitage, the museum of Imperial carriages, and the Naval Museum. Then cross the Neva and visit earnestly and attentively the Fortress of St. Peter and St. Paul, with its garrison cathedral containing the sepulchres of all the Czars and Czarinas from Peter the Great and Catherine I. to Nicolas I. Close to the Fortress are the Artillery Museum and the consecrated building in which is enshrined the cottage in which Peter Veliké dwelt during the building of Petersburg, and the boat which with his own hands he fashioned. There remain the Academy of Sciences with its museum, the Imperial School of Mines, and the Smolni church to be seen; and you cannot give less than a day to the exploration of the Gostinnoi and Apraxin Dvors, the great bazaars of St. Petersburg. You should witness a review, also—say of 50,000 to 75,000 men—if the Emperor happens to be in town. If your visit happens to be during the fashionable season—that is to say, between December and January—you must needs go to the Bolschoi Theatre, or Italian Opera House, a truly superb house, nearly equalling in size and handsomeness the Great Theatre at Barcelona. If Patti or if Albani happens to be singing at the Opera House you will probably have to pay as much as five guineas for a stall; but on the "off" nights the prices are more moderate, and on Sundays in particular there is usually given, for the delectation of the families of the innumerable race of *Tchinnoviks*, or Government *employés*, a very grand ballet, rivaling in beauty of decoration the most elaborate choreographic spectacles of La Scala or of the Paris Académie de Musique. The *corps de ballet* are numerous, and excellently drilled—the sylphides being mainly drawn from the Imperial Terpsichorean School, a Governmental institution which adopts indigent female children and trains them for their capering calling. The ranks of the Terpsichorean School are extensively recruited from the St. Petersburg Foundling Hospital; and the same is the case in Moscow, where there is another splendid theatre for the performance of Italian opera, and which appeared to me to be even larger and handsomer than the Bolschoi Theatre at Petersburg. My appreciation of the beauty of the Moscow house may, perhaps, have been enhanced by the fact that through the kindness of Mr. Leslie, H.B.M. Vice-Consul at Moscow (and brother of Mr. Henry Leslie of choral fame), who, as managing director of the Moscow Gasworks, supervises the lighting of the Imperial theatres, I had the opportunity (very rarely enjoyed by a foreigner) of going behind the scenes of the Opera House, between the acts of the performance, and inspecting the whole enormous edifice from garrets to cellar when all the departments were in full working order.

In addition to the Petersburg Opera, there is the Marie Theatre, a very large establishment, devoted to the performance of opera and drama in the native vernacular. There you may witness the masterpieces of such Russian *maestri* as Alexis Lvoff (who wrote the Russian National Anthem), of Glinka (the composer of the opera called "Life for the Czar"), and of Vertofsky, the Jacques Offenbach (*longo intervallo*) of Russia. The Marie Theatre is supported by the Government and managed by Government officials. At the Alexander Theatre you may sometimes be fortunate enough to hear Griboïdoff's comedy, "Sorrow Comes from Wit," and Gogol's famous satirical drama of the "Revisor." At the Michael Theatre French plays are performed; and during the winter season the most distinguished artists of the leading Parisian theatres play Sardou and Alexander Dumas, Scribe and Alfred de Musset, to say nothing of the productions of the minor *vaudeuvillistes* of the day, to the intense delight of the Imperial family and of the cream of St. Petersburg society. The performers (the ladies in particular), are munificently paid, and return to France laden not only with roubles (or the equivalent in gold, for if they be wise they will change their bank-notes into specie before crossing the frontier), but with "pearls and diamonds and jewels rare," homages to their genius respectfully offered to them by Russian Princes and Counts. A French actress, if she be pretty and good-looking, or thinks herself to be so, which amounts to pretty nearly the same thing, always looks forward to an engagement at St. Petersburg as the ultimate goal of her ambition. Not every *comédienne* can expect to become a *Sociétaire* of the august and awful Théâtre Français; but the periest little *soubrette* of the Palais Royal and the sauciest little heroine of an *opéra-bouffe* may hope some day to earn a couple of thousand pounds by a six months' engagement in Russia, and to bring home a pocket full of diamonds into the bargain. With respect to presents of jewellery made to artists by the Emperor, a very droll yet business-like arrangement exists. The singer or dancer may keep the glittering baubles if he or she chooses; but if preference is given to solid pudding over shining stone, the trinkets may be taken confidentially to the Treasury of the Hermitage, where the jewels are exchanged for cash, a moderate commission being charged for the transaction.

The hotels of St. Petersburg are numerous, fairly comfortable, but ruinously dear in their charges. Excellent fare is provided at the table d'hôtes, and, as many military officers dine there, the dinner itself is reasonable. The prices charged for foreign wines are simply monstrous in their extravagance; and if you ask for Crimean vintages, which are very good and should be cheap, you will be told that there are none in store. So the officers drink beer—home-brewed beer, be it well understood; for Allsopp's Pale Ale and Guinness's Stout are charged for at the rate of a rouble a bottle. As for the travelling Frenchman or Englishman, he is gloomily content to pay from five to six shillings for a bottle of very inferior Bordeaux. Havana cigars of the very finest brands may be obtained at

such places as Ten Cate's (the *Magasin Hollandais*), on the Nevski, and at the principal restaurants; and, indeed, I remember being told many years since at Havana by Señor Anselmo del Valle, the respected head of the world-famous house of Cabafia, that, after Great Britain and the State of California, Russia ranked highest as a consumer of Havana cigars of first-rate quality. The smoker of choice "weeds," therefore, may enjoy his desire to the full while residing in Petropolis, but he must be a smoker with plenty of money in his pocket. A moderately-sized Regalia Britannica will cost him eighteen pence; the modestest London or Henry Clay is not procurable under ninepence, and Regalias Imperiales (it is true that they are only smoked by Grand Dukes and American cartridge and smallarms contractors) cost three and sixpence a piece. Analogously inflated prices rule with respect to any other article of luxury. A Paris bonnet will cost six guineas; a lady's ball-dress would be cheap at thirty. Silk mantles are all but unattainable, save by Princesses, Ambassadors, and French actresses. A dinner for four at Dusaux' or Borel's, a luncheon at Wolf's or Donon's, a supper at Dominique's or Auguste's (all the best restaurants are close to the Admiralty end of the Nevski or in or about the Two Morskais and the Millionaia) will make an irretrievable hole in a ten-pound note: even without the champagne, which, if you have a fancy for Heideseeck, or Pommery and Greno, or, above all, Clicquot, will "stand you in" from a guinea to thirty shillings a bottle. Wearing apparel, linen, and hosiery, gloves, and knick-knacks are all equally expensive; and, in fact, I know of scarcely anything in St. Petersburg that can be called cheap save the rye bread, the reeking cabbage soup, the half-pickled cucumber, and the sour *quass* on which the moujiks, the soldiery, and, I am afraid, a large proportion of the poorly-paid Government *employés* mainly live. Let me just hint, "in this connection," that the Russians, with all their faults (and they have a good many both public and private), are by no means destitute of the domestic virtues. They abound in children, and the men of the lower and middle classes are most fond fathers and (since they have given up thrashing their wives) most excellent husbands. Old Russians, indeed, are wont to declare that the Slavonic Benedicts were quite as attached spouses when they did castigate their Beatrices; and that a Russian lady, whose husband was so inattentive to her welfare as to keep his hands off her, was sometimes fain to declare that, like the Irishman's wife, she was "growing mouldy for want of a bating." For the rest, blows and stripes have faded out altogether (they say) from among Muscovite usages. "En Russie," wrote the Marquis de Custine some forty years since, "tout le monde donne des coups!" The observation has lost its significance. The Knout and the Pleiti have long since been abolished as engines of criminal jurisprudence. Corporal punishment in the army has (they say) been totally abrogated; Russian schoolboys are never birched; and the beating or kicking of *moujiks* or peasants by irate nobles (a practice common enough when I first went to Russia) is prohibited under pain of fine and imprisonment. An insolent or spiteful *moujik* will sometimes do his best by abusive language to provoke a gentleman to strike him; but, woe to the gentleman should he venture to uplift his hand against Ivan Ivanovich. He will be summoned forthwith to the police office, subjected to innumerable interrogatories, and, on the whole, will have a bad time of it. Nobody in Russia now, a days seems to be liable to personal chastisement—excepting only the Uniat Greeks, who, when they exhibit stubborn reluctance to conform to the Orthodox Russo-Greek Church, are still led, by smart applications of the Cossack whip, to acknowledge the beauty of Religious Unity. The Russians are yet, it must be remembered, a very young people; and it is barely two centuries since we felt constrained, in this tolerant country, to scourge the Quakers.

In concluding this necessarily brief sketch of a very magnificent and very remarkable metropolis, permit me to remark that the traveller who is fond of pictures or of Greek and Egyptian antiquities, or of rare books and manuscripts, or of arms and armour, and who goes to St. Petersburg with a pocket-book well lined with letters of introduction from persons high in place at home to foreign ambassadors, consuls, generals, and statesmen in St. Petersburg, and with plenty of circular notes addressed to the correspondents of the Union or the London and Westminster Banks, will probably have in St. Petersburg what the Americans emphatically call "a good time." He will be received, in the first *salons* of the Russian capital, with exquisite politeness and lavish hospitality; he will have every week a great many more invitations to dinners, balls, and soirées than he is able to accept; he will be made an honorary member of one or more palatial clubs. There is no need for him to speak even half a dozen words of Russ, for everybody whom he meets with in "society" will be able to speak certainly French, and most probably English, with purity and fluency. The shopkeepers in the fashionable quarters speak French or German; and when the traveller goes shopping to the Gostinnoi Dvor he must take an interpreter with him whose services will not cost him more than three roubles a day. But, should he be a traveller, "remote, unfriended, melancholy slow," unprovided with letters of introduction, and with no more money in his purse than is sufficient to pay the ordinary cost and charges of locomotion and maintenance in a civilised country, I should most earnestly advise him to give St. Petersburg a very wide berth indeed. The asperity of the climate may tell upon his health; and the uncouth manners and incomprehensible speech of the seemingly barbarous folk with whom he comes in contact will give him the horrors. He will grow weary after awhile of the palaces and the picture galleries, and may feel, some gloomy winter morning, inclined to take a pickaxe and dig a hole in the ice of the Neva, and so definitively drown himself. I think that I could live, quite unknown and obscure, "the world forgetting," and "by the world forgot," at Seville or at Granada upon a pound a week; but I should not like to

lead a bachelor's life at St. Petersburg even on three hundred a year. One might just be raised above indigence on five hundred, and on eight hundred or a thousand a few of the little comforts of life might be secured. Leave St. Petersburg alone, then, tourist of moderate means. You won't like the city, and the citizens won't like you. "It is a cage," said to me a very charming American lady, whom I met in Petropolis in the course of my last expedition to Russia. "When the bars are gilt and there is always a lump of sugar between them the cage is barely tolerable; otherwise it becomes a horrible dungeon."

OBITUARY OF EMINENT PERSONS.

SIR ALEXANDER BANNERMAN, BART.

Sir Alexander Bannerman, ninth Baronet, of Elsick, in the county of Kincardine, D.L., died on the 21st inst., at his residence in Grosvenor-place. He was born April 6, 1823, the only son of Sir Charles Bannerman, eighth Baronet, by Anne, his wife and cousin, daughter of Charles Bannerman, Esq., and was educated at Trinity College, Cambridge. He succeeded to the baronetcy and representation of the old family of Bannerman of Elsick at the death of his father, June 18, 1851. He had previously been attached to the Legation at Florence. Sir Alexander married, first, 1860, Lady Arabella Diana, daughter of George John, fifth Earl Delawarr; and, second, Jan. 20, 1874, Lady Katherine, daughter of the Earl of Ashburnham, by the former of whom (who died Feb. 10, 1869) he leaves an only child, Ethel Mary Elizabeth. In default of male issue the baronetcy passes to the next male heir, Sir Alexander's cousin, now Sir George Bannerman, tenth Baronet.

LIEUTENANT-GENERAL SIR BURKE CUPPAGE.

Lieutenant-General Sir Burke Cuppage, K.C.B., Colonel Commandant R.A., died on the 19th inst. at 4, Cranley-place, South Kensington, in his eighty-third year. He entered the Royal Artillery in 1812, served in the Peninsula in 1814, and was present at Waterloo. From 1834 to 1849 he was Adjutant and Brigade-Major of the Royal Horse Artillery; from 1857 to 1863 he commanded the artillery in the south-eastern district; and from 1863 to 1868 he was Governor of Jersey. In the latter year he attained the rank of Lieutenant-General, and in 1875 he was made a K.C.B. Sir Burke married Emily Anne, daughter of the late Sir John Macleod, G.C.H.

SIR THOMAS TILSON.

Sir Thomas Tilson, Kt., J.P. and D.L., died at his residence, South-road House, Clapham Park, on the 9th inst., in his seventy-fourth year. He was the son of Thomas Tilson, Esq., of Brixton-hill, by Maria Matilda, his wife, daughter of Free-love Johnstone, Esq., and was educated at Merchant Taylors' School. For some time he was Chairman of Quarter Sessions for Surrey, and was a member of the General Assessment Sessions. From 1870 to 1872 he sat on the London School Board for the Lambeth Division. He received the honour of knighthood in 1868. Sir Thomas married, in 1827, Maria, daughter of William Shadbolt, Esq., J.P., of Stockwell.

The deaths are also announced of—

The Very Rev. Thomas Williams, M.A., Dean of Llandaff, on the 24th inst.

James Archer Butler, Esq., Clerk of the Peace for the county of Tipperary, on the 13th inst.

Captain Spencer, author of "Travels in European Turkey" and other works on the East, on the 17th inst.

The Hon. W. F. O. O'Callaghan, M.P. for the county of Tipperary, second son of Viscount Lismore, on the 20th inst., in his twenty-fifth year.

The Rev. John Edward Nassau Molesworth, D.D., Vicar of Rochdale, grandson of Major the Hon. E. Molesworth, fourth son of the first Viscount, on the 21st inst., aged eighty-seven.

CHESS.

TO CORRESPONDENTS.

All communications relating to this department of the Paper should be addressed to the Editor, and have the word "Chess" written on the envelope.

EXETER (Pursell).—We believe the first important chess-match by telegraph was played in 1861 between London and Bristol.

WOOLWICH CHESS CLUB.—We are surprised to find you at fault. There is no error in the diagram of No. 1727. See below.

E S (Jenkintown, Pa.).—We regret we are unable to comply with your request.

E H G (Bry).—Please inscribe your problems on diagrams.

D M T (Alexandria).—The problem is still under examination, and, if found correct, it shall be inserted in its turn.

S R (Macon, Ga.).—We are much obliged for the games, which are very interesting and shall receive due honour.

H G (Calcutta).—It is unsuitable, and in any case has been published before, both in St. Petersburg and London. The author was the celebrated Russian player, Petr II.

N S W (Temple).—Boden's Popular Introduction to Chess is a very valuable and interesting work. It contains a fine collection of endings of games from actual play.

CORRECT SOLUTIONS OF PROBLEM No. 1728 received from Woolwich Chess Club, H D, R S, Henry Wilson, W L R, and Simpsons.

CORRECT SOLUTIONS OF PROBLEM No. 1729 received from Tredunnock, W E Whitehead, Hostock, Titus, S W Russell, E P Valliamy, and Little J.

CORRECT SOLUTIONS OF PROBLEM No. 1730 received from Maggie Irwin, H B, L Nathan, Guya, Fitzroy Chess Club, Cant, W S B, C E, Coplaine, E L G, E Worsley, H Buggier, Only Jones, W Nelson, B Roughhead, O D, A G R, D H, W E Whitehead, Dolly Lianoy, Leonora and Leon, W Lee, S Western, Tippet, Harrobian, Gwick, B Lavy, De Goff, E Fran, W V G D, Paul's Roost, Americana, Little, R T King, Queen of Connaught, J S W, Black Knight, Simplex, J Williams, B R Stone, J Westons, Talloho, W Alston, L S R, A Wood, R H Brooks, Woolwich Chess Club, E P Valliamy, Titus, J de Honsteyn, G H V, and M H H V.

PROBLEM No. 1727.—It will answer a large number of correspondents to point out that if in this problem White begins with K to Kt 3rd, Black's answer is B to K R sq or K R 2nd; 1. Kt to K R 3rd (ch) has an obvious answer in B takes Kt; and Q to B 4th met by Kt to K Kt 4th, exposing the White King to check on the following move.

SOLUTION OF PROBLEM No. 1729.

WHITE.	BLACK.	WHITE.	BLACK.
1. R to Q 5th.	B takes R	3. R to K 4th.	
2. P to Kt 5th (ch)	K moves	Mate.	

PROBLEM No. 1732.

By T. GUEST.

BLACK.

WHITE.

White to play, and mate in three moves.

CHESS INTELLIGENCE.

On the 18th inst. Mr. Blackburne exhibited, at the City of London Chess Club his marvellous power of playing chess without sight of the boards and pieces. Although obviously in ill-health, he conducted eight games simultaneously against amateurs of considerable force, and succeeded in winning four games. The "blindfold" player lost two and two were drawn.

An important match was played on Saturday last in Manchester between the Manchester and Athenaeum Chess Clubs. Thirty players, fifteen on each side, engaged in the contest, which resulted in a decisive victory for the representatives of the Manchester Club, with a score of eleven to six, and eight drawn games.

The unusual pressure upon our space this week obliges us to defer the publication of the games.

WILLS AND BEQUESTS.

The will, dated Sept. 29, 1876, of Mr. Robert William Moore, late of Brixton-rise and of the Stock Exchange, who died on the 10th ult., was proved on the 13th inst. by Mrs. Seraphina Moore, the widow, William Edward Moore, the son, William Isaac Carr, the nephew, George Tunstall, and Herbert Dalton, the executors, the personal estate being sworn under £300,000. The testator bequeaths to the Church Pastoral Aid Society, £1000; to the Church Missionary Society for Africa and the East, the British and Foreign Bible Society, the Religious Tract Society, and the Colonial and Continental Church Society, £200 each; to the British Home for Incurables (Clapham-rise), the Idiot Asylum (Redhill), the National Benevolent Society (Southampton-street, Bloomsbury), and the Prayer-Book and Homily Society (Salisbury-square), £100 each; to the Brixton National Schools, Church-road, in connection with Brixton church, £50; to his wife, his furniture, plate, pictures, horses, carriages, and household effects, a pecuniary legacy of £3000, and the income of two sums of £23,000 and £65,000 for life, with a special power of appointment over the former sum among children on her death; upon trust for his daughter Mrs. Watson, in addition to the amount settled on her at her marriage, £13,000; upon trust for each of his other daughters £28,000; and there are legacies to his executors, clerks in the employ of his firm, and others. The residue of all his property he leaves to his two sons, Robert Marshall Moore and William Edward Moore.

The will and codicil, dated March 25, 1875, and Aug. 28, 1876, of Admiral Sir Augustus William James Clifford, Bart., C.B., R.N., Gentleman Usher of the Black Rod, late of Westfield House, Ryde, Isle of Wight, and of Royal Court, House of Lords, who died on Feb. 8 last, were proved on the 18th inst. by Sir William John Cavendish Clifford, the son, Miss Isabella Georgiana Camilla Clifford, the daughter, and Sir Walter Rockliff Farquhar, Bart., the executors, the personal estate being sworn under £250,000. The testator settles his mansion-house, Westfield, and the residue of his property, under which settlement his eldest son takes the first life interest. Among the legacies may be mentioned £50,000 and a house in Eaton-square upon trust for his two daughters; £18,000 to his eldest son; and £10,000 to his son Colonel Robert Cavendish Spencer Clifford.

The will, dated May 31, 1876, of Mr. Thomas Mann Gladdish, late of Pettings Ash, near Wrotham, Kent, and of Belvedere-road, Lambeth, who died on the 8th ult., was proved on the 7th inst. by Edward Rosher, George Rosher, Frederick Rosher, and Alfred Rosher, the executors, the personal estate being sworn under £120,000. The testator gives legacies to his sister, nephews and nieces, clerks, bailiff, and servants. The remainder of his property is to be realised and divided into ten parts between his sister, nephews and nieces, and the widow and children of a deceased nephew.

The will, dated Feb. 10, 1871, of Mr. Edward Leigh Pemberton, formerly of Whitehall-place, and late of Eaton-place, and of Torry Hill, Kent, who died on the 12th ult., was proved on the 14th inst. by Edward Leigh Pemberton, M.P., and Loftus Leigh Pemberton, the sons, the executors, the personal estate being sworn under £70,000. The testator gives certain furniture, horses, carriages, plate, pictures, and articles of virtu to the person who shall succeed, at his death, to the Torry Hill estate, under the will of his brother, the late Lord Kingsdown. There are legacies to two of his servants; and the rest of his property is divided among all his children other than his eldest son, Edward, who is provided for by the will of Lord Kingsdown.

The will, dated Dec. 18, 1863, of Dr. Lawson Cape, late of No. 28, Curzon-street, Mayfair, who died on the 22nd ult., was proved on the 11th inst. by the Rev. Richard Pole Clerk, the sole executor, the personal estate being sworn under £70,000. The testator gives all his freehold, copyhold, leasehold, and personal property to his wife, Mrs. Barbara Cape, absolutely, subject only to the payment of his debts and other charges.

Mrs. Higgin, of Quarry Bank, West Derby, has bequeathed £24,200 to the Liverpool charities. The Seamen's Orphan Institution is benefited to the extent of £5000, five other institutions receive £2000 each, seven receive each £1000, four £500 each, and one £200. These amounts are exclusive of the sum of £10,000 distributed among the charities by Mrs. Higgin shortly after the death of her husband.

- A Mouth of Tynewydd Pit.
B Shaft descending perpendicularly 276 feet.
C Main Roadway Level, about 14,000 yards.
D Incline to Lower Level, called Charles's Heading.
E Edward Williams's Heading or Stall.
F Drift through which Divers attempted rescue (entering at *).
G 1 Main Lower Level Heading. G 2 George Jenkins's Heading.

- H 1 Glynog's Heading, leading to H 2 Middle Level Heading.
I Windway through which the first four rescued attempted to escape.

On the 30th ult., at 30, Charles-street, St. James's-square, the Marchioness of Waterford, of twin daughters.

On the 26th ult., at 1, Clarendon Villas, Putney, the wife of Robert Walond, of a daughter.

MARRIAGES.

On the 2nd inst., at St. Thomas's Church, Southborough, by the Rev. C. J. Vaughan, D.D., Master of the Temple, assisted by the Rev. H. J. Bigsby, M.A., Vicar of St. Thomas's, Major-General E. A. Rowlett, late Bengal Staff Corps, to Geraldine, youngest daughter of the late Baron de Hochepied Larpent, of Holmwood House, Dorking, Surrey.

On the 26th ult., at St. James's Church, Southampton, by the Rev. C. D. Kebbel, William Lennard, of Middlesborough, to Rosa Lambie, of Southampton. No cards.

On Feb. 27, at the Cathedral, Bombay, by the Rev. Ward Maule, Wilson Bell, M.I.C.E., Chief Engineer G. I. P. Railway, to Ada Montfort, second daughter of the late E. F. S. G. Montfort Bromley, of Scotdale, Tasmania.

On the 26th ult., at St. George's, Hanover-square, Horace Helyar, Esq., her Majesty's Diplomatic Service, eldest son of William Helyar, Esq., of Coker Court, Somersetshire, to Violet, only daughter of C. F. Webster-Wedderburn, Esq., of Hove, Brighton.

DEATHS.

On the 5th ult., at sea, on the homeward voyage from Natal, Arnott Browning, C.E., second son of the late Rev. David Cunningham Browning, of Newcastle-on-Tyne, aged 38 years.

On the 25th ult., at Egham House, Staines, Eliza Henrietta, last surviving daughter of the late Lieutenant-Colonel Moore, 56th Regiment in her 89th year.

On the 24th ult., at Ewell, Surrey, Mary, eldest daughter of the late Jacob Maude, Esq., of Selaby Park, in the county of Durham, and widow of Vice-Admiral Constantine Richard Moorsom, eldest son of the late Vice-Admiral Sir Robert Moorsom, K.C.B., in her 81st year.

* * * The charges for the insertion of Births, Marriages, or Deaths is Five Shillings for each announcement.

CALENDAR FOR THE WEEK ENDING MAY 12.

SUNDAY, May 6.

Evangelical Sunday.
St. Paul's Cathedral, 10.30 a.m., Rev. Prebendary Dalton; 3.15 p.m., Rev. Canon Lightfoot; 7 p.m., the Bishop of Ely.
Westminster Abbey, 10 a.m., probably Hon. and Rev. Lord John Thynne; 3 p.m., uncertain; 7 p.m., Rev. Sir Edmund Bayley.
St. James's, noon, probably Rev. Francis Gordon.
Whitehall, 11 a.m., Rev. F. J. Jayne; 3 p.m., Rev. Canon Barry (first Boyle Lecture).
Savoy, 11.30 a.m., Rev. Augustus Francis Tollemache; 7 p.m., Rev. Canon William Walsham How.
Temple Church, 11 a.m., Rev. Dr. Vaughan, the Master; 3 p.m., Rev. Alfred Ainger, the Reader.
St. James's, Piccadilly, 3 p.m., Rev. Dr. Maclear on the Missionary Church of England.
Welsh Church (St. Nicholas Cole Abbey), Queen Victoria-street, E.C., anniversary services at 2.30 and 6.30 p.m., Canon Griffiths, of Machynlleth.
Christian Evidence Society, St. Stephen's, South Kensington, 4 p.m., Rev. Professor Wace.

MONDAY, May 7.

Levée by the Prince of Wales, St. James's, 2 p.m.
Institute of British Architects, anniversary, 8 p.m.
Gresham Lectures, 6 p.m. (Very Rev. J. W. Burgon, Dean of Chichester, on Divinity), and on Tuesday, Wednesday, and Friday.
Licensed Victuallers' Asylum, jubilee, Willis's Rooms.
Royal College of Veterinary Surgeons, anniversary, 1 p.m.
Anniversaries: British and Foreign School Society, Borough-road, noon; Colonial and Continental Church Society, St. James's Hall, 2 p.m.; Christian Evidence Society, Willis's Rooms, 3 p.m.; Haged School Union, Exeter Hall, 6 p.m.
Society of Arts, Cantor Lecture, 4 p.m. (Professor Colvin on Greek and Roman Art).
United Service Institution, 8.30 p.m.
Royal Academy Exhibition opens. Victoria Institute, 8 p.m.
Wagner Festival, Albert Hall, 8 p.m. Farmers' Club, 5.30 p.m.
Medical Society, 8.30 p.m., annual oration. Musical Association, 5 p.m.

TUESDAY, May 8.

Easter Term ends. British Museum reopens.
Royal Institution, 3 p.m. (Dr. Gladstone on the Chemistry of the Heavenly Bodies).
Institute of Civil Engineers, 8 p.m. (Discussion on Street Trams; Sir W. G. Armstrong on Water Pressure Machinery).
Anthropological Institute, 8 p.m.
West London Scientific Association, 8 p.m.
Anniversaries: Church of England Temperance Society, Lambeth Palace, 3 p.m.; Home Missionary Society, Memorial Hall, 7 p.m.
Photographic Society, 8 p.m. Medico-Chirurgical Society, 8.30 p.m.

WEDNESDAY, May 9.

Half Quarter day.
Literary Fund, eighty-eighth anniversary dinner, Willis's Rooms.
Infant Orphan Asylum, Wanstead, jubilee celebration, St. Paul's, 4 p.m., preacher, the Bishop of London.
Society of Telegraph Engineers, 8 p.m.
Society of Arts, 8 p.m. (Mr. Joseph Lucas on the Artesian System of the Thames Basin). Geological Society, 8 p.m.
Wagner Festival, Albert Hall, 8 p.m. National Health Society, 4.30 p.m.

THURSDAY, May 10.

Ascension Day. Holy Thursday. Alexandra Palace reopens.
Royal Institution, 8 p.m. (Professor Tyndall on Heat).
Society of Arts, Chemical Section, 8 p.m. (Mr. G. E. Davis on a New Process for Production of Soda).
Anniversaries: London Missionary Society, Exeter Hall, 10 a.m.; Hospital for Sick Children, Great Ormond-street, 4.30 p.m.
Mathematical Society, 8 p.m. Inventors' Institute, 8 p.m.
Botanic Society Exhibition, 2 p.m. Historical Society, 8 p.m.

FRIDAY, May 11.

Royal Institution, 8 p.m. (Mr. D. Mackenzie Wallace on the Intellectual Movements and Secret Societies of Russia, 9 p.m.).
United Service Institution, 8 p.m. Botanic Society, lecture, 4 p.m.
Astronomical Society, 8 p.m. Quekett Microscopical Club, 8 p.m.
Architectural Association, 7.30 p.m. New Shakespeare Society, 8 p.m.

SATURDAY, May 12.

Wagner Festival, Albert Hall, morning.
Royal Institution, 8 p.m. (Mr. W. H. Pollock on Modern French Poetry).
Artists' General Benevolent Institution, anniversary dinner, Willis's Rooms, 6 p.m.
Physical Society, 8 p.m. Botanic Society, 8.45 p.m.

ST. JAMES'S HALL, PICCADILLY.

THE MOORE and BURGESS NEW ENTERTAINMENT. THE GREAT SUCCESS OF THE SEASON will be repeated EVERY NIGHT at EIGHT. MONDAY, WEDNESDAY, and SATURDAY, at THREE and EIGHT. Fauteuils, 5s.; Sofa Stalls, 5s. and 2s.; Gallery, 1s. No fees. Doors open at 2.30 for the formal dress, and at 7.00 for the informal dress. Extra charge, at Austin's Office, St. James's Hall, any day from Nine till six.

ST. JAMES'S HALL.—Signal Success of the MOORE and BURGESS Easter Burlesque on THE MARVELLOUS GIRARDS, which will be repeated EVERY NIGHT at EIGHT; MONDAY, WEDNESDAY, and SATURDAY, at THREE and EIGHT. Vide extract from the "Morning Post," April 3:—"In a burlesque performance entitled 'The Marvellous Girards,' Messrs. T. Sully, James Moore, and Hene emulated the scenic gymnastics of the well-known 'Girards' with absolute accuracy in the minutest particulars of action and expression, doing everything that the clever originals do, and as nearly as possible in the very same style and manner. A new 'Interlocutor' appeared for the first time in the person of a gentleman bearing the illustrious name of J. P. Kemble, who, being gifted with a fine voice and a keen sense of humour, is likely to prove an acquisition."

MR. and MRS. GERMAN REED'S ENTERTAINMENT. TWO FOSTER BROTHERS, by Gilbert A. Beckett; EDWIN AND ANGELINA, by Mr. Corney (traveller); and "No. 24," by F. G. Burnand. EVERY EVENING, except Monday and Tuesday, Eight o'clock, Monday and Saturday at Three. Admission, 1s., 2s., 3s., and 5s.—ST. GEORGE'S HALL, Langham-place, Oxford-circuit.

DORE'S GREAT WORKS, "CHRIST LEAVING THE PRÆTORIUM" and "CHRIST ENTERING THE TEMPLE" (the latter just completed), each 83 by 24 in.; with "Descent of Christ's Wife," "Christ's Martyr," &c., at the DORE GALLERY, 30, New Bond-street. Daily, Ten to six. 1s.

CRYSTAL PALACE PICTURE-GALLERY.—Open all the year round for the Reception and Sale of Pictures by the British and Foreign Schools. For particulars, apply to Mr. C. W. Wase, Crystal Palace.

THE ILLUSTRATED LONDON NEWS.

LONDON: SATURDAY, MAY 5, 1877.

Her Majesty's Proclamation announcing the firm and determined purpose of her Government to "maintain a strict and impartial neutrality in the state of war unhappily existing" between the Czar of Russia and the Sultan of Turkey, marks a further stage, so far at least as this country is concerned, of the Eastern Question. It tells much, and it suggests even more. It is the end of a long series of efforts made by the Government of the United Kingdom, but made unsuccessfully, to preserve peace. We shall not discuss the political wisdom or unwisdom of the English Cabinet as it respects the past. Whether a more decided policy two years or even a twelvemonth ago would have been more likely to precipitate a European war, or to retard it, we must leave to the judgment of our readers. Certainly, the course which has been pursued has not served to accomplish the main object at which it aimed. War has come, though not in an indefinite form. It is not between the United Powers of Europe and the Porte, but simply between Russia on the one hand and the Ottoman Empire on the other. Russia, impelled, no doubt, by internal necessities, has unexpectedly taken upon herself the execution of the Resolutions arrived at by the Conference at Constantinople. She can, perhaps, plead an international justification of the act, though there may be something in the manner of it to which the other Signatory Powers may take objection. We take up an attitude of neutrality in regard to the contest, as do the other Powers. The question occurs whether we shall be able to maintain it to the end—in other words, will the War be localised, or is it likely to be extended? Will it be confined to the object proposed by Russia, or will the probable progress of Russian Arms rouse her ambition to turn to selfish account the victories she may chance to win? Will armed interference in the dispute be forced upon England by any probable issue of the contest? This is a question which the Royal Proclamation of neutrality immediately thrusts upon our consideration.

Reasonable hopes may be entertained that the policy of Great Britain may be kept disentangled from any international complications likely to arise from the pending struggle. In the first place, the disposition of the people of England is so decided to abstain from affording any material assistance to the Porte in its present conflict that no Government would feel itself justified in running counter to its manifestations. It may be able to command a majority of the House of Commons against the Resolutions to be proposed on Monday next by Mr. Gladstone, but even in that case it will not be authorised to interpret the will of the nation as favouring the position taken up by the Porte. The remedial policy of the right hon. gentleman may be condemned even by those who are unprepared to sympathise with or to protect the anarchical rule which for a long time past has prevailed in the insurgent Provinces of Turkey. There would seem to be no sufficient reason why what has been done before in similar instances should not be repeated, and that under the Suzerainty of the Sultan there should not be established by the success of Russian arms a degree of administrative self-government which will, at any rate, guarantee the Rayahs against the license of the Pashas. To some extent, it may be true that the influence of Russia in South-Eastern Europe will be increased by the part she is taking in the settlement of this question. It seems natural enough that it should be so. But this has not always been the case in similar enterprises, nor is it by any means certain that a more intimate acquaintance with the general style of Russian rule will tend to cement ties of fraternity between the Slavs of Turkey and those of Russia. At any rate, England has had her choice in the affair, and, perhaps, has chosen wisely. What she would not do herself, although recognising the expedience of being done, she has little right to protest against as being done by another.

But, quite independently of public opinion in this country, the localisation of this War appears to be more than probable. Russia has to do, it should be borne in mind, not with England only, but with other European Powers, in her conduct of hostilities and in the permanent end to which she may turn them to account. Even on the hypothesis that she finds herself able in a military sense to dispose of the difficulties with which she will have to grapple, there are empires as strong as herself with which she will have to reckon before she can appropriate to other purposes than those which she has publicly set forth the fruits of victory. She is acting, at present, with the acquiescence of Austria and Germany, to say nothing of France and Italy. So long as she restricts her military action to the internal reforms approved of by the Conference she may count upon their neutrality, "benevolent," or otherwise, as the case may be. But should she be tempted to seize Constantinople, or possess herself of the Mouths of the Danube, or annex to her territory the Bosphorus and its adjacent shores, she would unquestionably evoke from the European Powers we have already named a protest to which it would be madness in her to turn a deaf ear. As the *Times* has pertinently remarked, "Germany could not permit the Gates of the Bosphorus, and thus the freedom of the Danube, to be at the mercy of Russia. Austria would forbid such a conquest for reasons at least as peremptory as the motives which would guide this country. It could not be permitted by Powers which, like Italy and France, have a great naval stake in the Mediterranean. Ambitions as Russia may be, we cannot suppose that she would absolutely invite a disaster." Taken in conjunction with the known wishes of the English people, the interests of the European Powers on the Continent may well serve to calm down apprehensions, not otherwise unreasonable, perhaps, respecting the lengths to which Russia may carry the war she has commenced. Possibly, without any active concurrence of her own, it may eliminate Turkish rule, or at all events the rule of the present oligarchy of Pashas, from South-Eastern Europe. But at present there would appear to be no well-founded reason for believing that the neutrality of England cannot safely be maintained to the last. She is not likely to help the Porte. She will not be called upon, it is hoped, to measure her strength with Russia. The Czar's armies will find enough to do in carrying into effect the published programme of the Government at St. Petersburg. And, whatever may be their success, it is certain that their progress will be vigilantly—perhaps somewhat suspiciously—watched by the neutral Powers. Unlooked for occurrences may, of course, turn up to disturb the calculations of the political world; but men do not usually base their expectations of the future upon conclusions which cannot be reasonably sustained.

A number of appointments to the Order of St. Michael and St. George were gazetted on Tuesday night. Sir Henry Holland, M.P., Mr. Wellington Cairns, Lieutenant-Colonel H. J. B. Maxse, and Mr. William FitzHerbert, agent for the colony of New Zealand, are appointed Knight Commanders.

The Duchess of Teck, accompanied by the Duke, on Wednesday opened the new East London Hospital for Children, which has been erected at Shadwell. A very cordial welcome was given to the illustrious visitors to the East-End by the inhabitants; and at the hospital Lord Enfield read an address thanking them and giving a brief history of the institution. A dejeuner followed, at which a list of subscriptions amounting to £2000 was read.

THE COURT.

The Queen was visited at Windsor Castle on Thursday week by King Francis of Naples and the Duke of Teck; they remained to luncheon. Commander Ruggiero de Besia was in attendance on King Francis. Her Majesty's dinner party the previous evening included the Duchess of Edinburgh, Princess Beatrice, Prince Leopold, Prince Edward of Saxe-Weimar, the Countess of Caledon, Lady Emma Osborne, the Right Hon. R. A. Cross, Lieutenant-General Sir T. M. Biddulph and the Hon. Lady Biddulph, and Lord Bagot.

The Bishop of Truro was introduced to the Queen at the castle yesterday week, and did homage on his appointment. Princess Beatrice was present at the ceremony. The Duchess of Edinburgh went to Cumberland Lodge, and lunched with Prince and Princess Christian. The Earl and Countess of Breadalbane, Admiral the Hon. Sir James Drummond and Lady Drummond, and Colonel and the Hon. Mrs. Campbell of Blythwood dined with her Majesty and the Duchess of Edinburgh.

Princess Christian of Schleswig-Holstein visited the Queen and the Duchess of Edinburgh on Saturday last, and remained to luncheon. Sir Herbert Stanley Oakeley, Professor of Music in Edinburgh University, played on the organ in St. George's Hall in the afternoon, before the Queen, the Duchess of Edinburgh, Princess Christian, Princess Beatrice, and Prince Leopold. Princess Christian and Captain A. B. Haig, R.E., dined with her Majesty.

The Queen and Princess Beatrice attended Divine service on Sunday in the private chapel of the castle. The Rev. J. J. Stewart Perowne, D.D., Canon of Llandaff, Hulsean Professor of Divinity, Cambridge, officiated. Princess Christian lunched with her Majesty. This being the birthday of the Emperor of Russia, the Duchess of Edinburgh went to London and attended Divine service at the Russian Chapel in Welbeck-street. The Duchess dined with the Russian Ambassador, and returned to the castle in the evening.

The Queen held a Council on Monday, at which were present Prince Leopold, the Duke of Richmond and Gordon, the Earl of Beaconsfield, the Earl of Derby, the Marquis of Hertford, and the Right Hon. R. A. Cross. The Earl of Beaconsfield, the Duke of Richmond and Gordon, the Earl of Derby, and the Right Hon. R. A. Cross had audiences of her Majesty. The Portuguese Minister, Chevalier D'Antes, was introduced to an audience of the Queen and presented his credentials. Mr. Justice Fry and Colonel Herbert Sandford, Royal Artillery, received the honour of knighthood.

Her Majesty, accompanied by the Duchess of Edinburgh, Princess Beatrice, and Prince Leopold, left the castle on Tuesday for London. The Royal party travelled by a special train on the Great Western Railway to Paddington, and drove thence, escorted by a detachment of the Royal Horse Guards, to Buckingham Palace. This was the twenty-seventh anniversary of the birthday of the Duke of Connaught and Strathearn. His Royal Highness, who had arrived at the palace early in the morning from Dublin, met the Queen on her arrival. Her Majesty held a Drawingroom. Prince Arthur, Princess Louise of Lorne and the Marquis of Lorne, and Lieutenant-Colonel Sir Howard and Lady Elphinstone were included in the Queen's dinner party. The Duchess of Edinburgh, Princess Beatrice, and Prince Christian went to the Royal Italian Opera, Covent-garden, in the evening. Prince Leopold went to the Criterion Theatre.

The Queen, the Duchess of Edinburgh, and Princess Beatrice, attended by the Countess of Caledon, Lady Emma Osborne, and the equestrian in waiting, visited the exhibition of flowers held in the Conservatory of the Royal Horticultural Society, South Kensington, on Wednesday. Her Majesty was received by Lord Aberdare (president) and the council of the Horticultural Society, who attended her round the exhibition. The boys of Christ's Hospital, of the Foundation of King Charles II., arrived at the palace to exhibit their drawings and charts to her Majesty. The Queen, accompanied by Princess Beatrice and the Duke of Connaught, entered the Picture-Gallery at a quarter to three o'clock, when various gentlemen connected with the hospital were presented to her Majesty by the Duke of Cambridge, president; after which the Queen inspected the drawings and charts, which were laid before her by each boy separately. Her Majesty selected from amongst the drawings a water-colour drawing of her Majesty's ship *Thunderer*, by Frank D. Thomsett, of the Mathematical School. Subsequently the Queen and Princess Beatrice visited Princess Louise of Lorne at Kensington Palace.

Her Majesty held a Drawingroom on Thursday.

The Queen's visit to the Camp at Aldershot has been fixed for Monday next.

Princess Beatrice inspected Miss Thompson's pictures at the gallery of the Fine-Art Society on Tuesday. Prince Leopold was present at the annual meeting of the Royal Society of Literature last week, of which his Royal Highness is a member.

The Hon. Evelyn Paget has succeeded the Hon. Ethel Cadogan as Maid of Honour in Waiting, and the Hon. Caroline Cavendish has arrived as Maid of Honour in Waiting. Major-General H. Ponsonby has succeeded Colonel G. A. Maude as Equerry in Waiting, and Colonel Maude has arrived as second Equerry in Waiting.

THE QUEEN'S DRAWINGROOM ON TUESDAY.

The Queen held a Drawingroom on Tuesday at Buckingham Palace. Princess Beatrice, the Duchess of Edinburgh, the Duke of Connaught and Strathearn, the Duke of Cambridge, the Duke and Duchess of Teck, and Prince Christian were present. The customary state ceremony was observed. This being collar day, the knights of the several orders wore their respective collars.

The Queen wore a dress with a train of black brocaded silk, trimmed with passementerie and crape, and a long white tulle veil, surmounted by a coronet of sapphires and diamonds. Her Majesty also wore a necklace, brooches, and earrings of sapphires and diamonds, the ribbon and star of the Order of the Garter, the orders of Victoria and Albert, Louise of Prussia, St. Katherine of Russia, St. Isabella of Portugal, &c., and the Saxe-Coburg and Gotha family order.

Princess Beatrice wore a dress and train of pale pink silk, trimmed with Honiton lace and pale blue corn-flowers. Head-dress, feathers and veil; ornaments, pearls and diamonds; orders, St. Katherine of Russia, St. Isabella of Portugal, the Victoria and Albert order, and the Saxe-Coburg and Gotha family order.

The Duchess of Edinburgh wore a petticoat of rich pale green and cream-colour poul-de-soie, trimmed with rich green fringe. Corage and train pale green satin, lined and trimmed with cream-colour. Head-dress, a ruby and diamond diadem, feather and veil; ornaments, necklace, brooch, and earrings of rubies and diamonds; orders, Victoria and Albert, and St. Katherine of Russia.

The Court was very fully attended; various presentations in the diplomatic circle took place, and in the general circle about 180 presentations were made to the Queen.

The Prince of Wales reached Marseilles on Wednesday in the *Sultan*, and was saluted by a French man-of-war and by

the guns of the port, on landing. His Royal Highness, after receiving various dignitaries, landed at three p.m., and left by railway for Paris. The Prince has been again appointed Grand First Principal of the Royal Arch Freemasons of England.

The Duke of Connaught was present yesterday week at a ball given by the Lord Mayor and Lady Mayoress of Dublin.

The Duchess of Teck, accompanied by the Duke of Teck, opened the East London Hospital for Children at Shadwell on Wednesday. The Duchess after inspecting the three wards named them "Princess Mary," "Enfield," and "Heckford," the last being the name of the founder. The Bishop of London took part in the ceremony. A guard of honour of the Tower Hamlets Rifle Brigade was in attendance. The Duke and Duchess dined with Mr. and Mrs. Henry Petre on Tuesday in Berkeley-square.

The Duke of Devonshire has arrived at Devonshire House from Chatsworth.

The Duke of Norfolk has arrived at Norfolk House, St. James's-square, from Arundel Castle.

The Duchess of Beaufort has arrived in town from Badminton.

The Duchess of Buccleuch and Lady Mary Scott have arrived at Montagu House, Whitehall, from Scotland.

The Duke and Duchess of Westminster kept their Silver Wedding on Saturday. There were great rejoicings at Chester and other places in celebration of the event.

The Marquis and Marchioness of Bristol and Lady Mary Hervey have arrived at their residence in St. James's-square, from Ickworth Park, Bury St. Edmunds.

The Marchioness of Camden and Captain P. Green have arrived at their residence in Eaton-square from the Continent.

Countess Olga Münster, Lady in Waiting to the Empress of Germany, has arrived at the German Embassy, Carlton House-terrace, from Berlin.

The coming of age of Mr. Llewellyn Nevill Vaughan Lloyd Mostyn, heir to the barony and extensive estates of Mostyn, was celebrated on Tuesday in Flintshire. The present heir, who attained his majority on April 7 last, is the son of the late Hon. T. E. Mostyn Lloyd Mostyn, and grandson of the present Lord Mostyn.

On Wednesday Mrs. Ward Hunt held her first reception this season at the First Lord's official residence at the Admiralty, Whitehall. The full band of the Chatham division of Royal Marines, conducted by the bandmaster, Mr. Kappey, was in attendance.

FASHIONABLE MARRIAGES.

The marriage of the Hon. and Rev. Algernon Robert Parker, M.A., third son of the Earl and Countess of Maeclesfield, with Emma Jane, only daughter of the Hon. Edward Kenyon, of Maesfen, Chester, took place at St. Michael's Church, Chester-square, on Thursday week. Mr. Herbert J. Hope was best man. The bridesmaids were Miss Alice M. Kenyon and Miss Georgina Dunbar, her cousins, and the Ladies Mary and Evelyn Parker, sisters of the bridegroom. The bride wore a white silk dress, trimmed with Brussels lace and small bunches of orange-flowers; wreath of orange-blossoms, and veil. Her jewels were pearls and diamonds. The bridesmaids' dresses were composed of ivory white silk, trimmed with rose-coloured ribbons, with toques hats to match. The ceremony was performed by the Rev. Charles J. Vaughan, D.D., Master of the Temple, assisted by the Rev. James Fleming, B.D., the Vicar.

The marriage of Mr. Edmund Mallet Vaughan, of Lapley, Staffordshire, and Miss Mary Vaughan, youngest daughter of the Hon. George Vaughan, was celebrated on Thursday week at the Roman Catholic Chapel of St. Mary, Cadogan-terrace. Mr. Francis Monckton, M.P., was best man; the bridesmaids were the Hon. Mary Gerard and the Hon. Catherine Gerard. Each wore a gold porte bonheur bracelet, with "Minnie" in pearls, the gift of the bridegroom. The bride was given away by her father. The religious ceremony was performed by the Very Rev. Canon Macmullen. The wedding breakfast was given at the residence of the Hon. George Vaughan, in Wilton-crescent.

The marriage of Lord Fermoy and the Hon. Cecilia O'Grady has been solemnized at Tullybrackey church, near Rock-barton, the bride's residence. A deputation from the tenantry presented the bride with an address.

The Lord Mayor has received from Mr. T. E. Wales, her Majesty's Inspector of Mines in Wales, an official statement of the different plans which were tried to effect the release of the imprisoned men in the Tynewydd Mine. Referring to the final plan adopted, he states that the engineers and officials knew that the water which was kept back by the compressed air was standing from four to five feet above the men, and when it was resolved to open out the three holes which had been bored through and plugged, and allow the air to escape from the imprisoned men till it was reduced to the same pressure as the air with them, it was seen that as the air was discharged the water would rise, and if the men were not extricated in sufficient time they would be drowned. On the other hand, the engineers knew they could not pump the water out for some two or three days, and the men had told them that they could not live much longer. As soon as the holes were opened and the air allowed to escape the water began to rise, and the men said that they would soon be drowned. For two hours the imprisoned men continued to call out in the most pitiful tones that they would soon be drowned; and they also tried to stop up the holes. At last, however, when the water had risen to within a few inches of their mouths it ceased to rise. The men were then informed that they were quite safe and would be relieved in a short time, and asked if they would have food sent through the holes, or wait until they were relieved. They replied they would wait, as they could live a little longer. Mr. Wales says that the conduct of all—mining engineers, medical men, and colliers—was far above any language to express; he also praises the bravery shown by the two divers from London. The Court of Common Council has voted 100 guineas towards the Mansion House Fund, which now amounts to over £1800. The five men rescued continue to go on favourably. The body of another of the drowned colliers has been recovered.—Tuesday's *Gazette* states that the Queen has extended the two decorations styled "The Albert Medal of the First Class" and "the Albert Medal of the Second Class" to cases of gallantry in saving life on land. This is done to enable her Majesty to confer that honour upon the rescuers of the entombed miners.—At a special meeting of the committee of the Royal Humane Society on Tuesday it was resolved that the honorary medal of the society be granted to the miners at Pontypridd who most distinguished themselves in rescuing their fellow-workmen from the colliery.—A special morning performance, under the patronage of the Lord Mayor, was given on Thursday at the Folly Theatre, Charing-cross, in aid of the rescued miners and their brave deliverers.

NATIONAL SPORTS.

A very heavy week's racing was wound up at Sandown Park last Saturday, and, under the auspices of Messrs. Pratt and Barbrook, and the energetic management of Mr. Hwfa Williams, the most successful meeting that has ever taken place at Sandown was brought off. The Esher Stakes, with £500 added, was quite a second City and Suburban, and fell an easy prey to Ironstone (6st. 7lb.), who had a very light weight for a five-year-old. Balbriggan (7st. 13lb.) was strongly fancied, but failed to show to nearly such advantage as at Epsom. Woodcock (12st. 5lb.) well sustained his high character as a hurdle-racer by winning the Great Sandown Hurdle-Race, beating Scamp (12st. 7lb.) very easily indeed; and Grace, who displayed such smart form at Epsom, secured another rich two-year-old event for Mr. Peck. Last Saturday, which was devoted entirely to jumping events, made a grand conclusion to a brilliant meeting. Eight ran for the Grand International Steeplechase, which was carried off by Congress (12st. 7lb.), one of the most consistent steeplechasers of the day, who, though he does not know how to fall or refuse, has occupied the tantalising position of second on several occasions this season. A few strides from home it appeared as though he would once more take his old position, but Citizen (10st. 3lb.) swerved just at the finish, and suffered a neck defeat.

The Newmarket First Spring Meeting opened most tamely last Tuesday, and, with the exception of the Two Thousand Guineas, there was not a race that we need allude to on the first two days. The second victory of Skylark over Coltness, in the Prince of Wales's Stakes, naturally gave renewed confidence to the followers of Silvio for the great event, as the latter was said to be able to beat the four-year-old at 10 lb. Still the great rush was upon Morier, who was confidently reported to be a second Macgregor, and at last he fairly passed Chamant in the quotations, a shade under 2 to 1 being accepted about him. Great disappointment was felt that he was not saddled in the paddock, where Chamant certainly bore off the palm on the score of looks and condition, and everyone connected with him made no secret of their confidence, which did not appear to be in the least shaken by the moderate display made by Verneuil "across the water" last Sunday. Strachino, the other French representative, did not create a favourable impression; and, as he was said to have lately given evidence of the possession of a very bad temper, he receded several points in the betting. There was little delay at the post before Monachus, in the centre of the course, jumped off with a slight advantage, and, making running at his best pace, showed the way for Brown Prince on his left, with The Monk, Silvio, and Thunderstone all in a cluster close up with them on the Stand side. Following immediately on their heels came Chamant on the left. On the other side of the course were Kingsclere, Morier, and the Voltella colt, while stretching away from these were Silvio and Warren Hastings, with Strachino—who showed a deal of temper at the post—whipping in. Little change occurred in this order of running until half way across the flat, where Monachus still held possession of the lead; but Brown Prince had ceded his position to Thunderstone, who now came on in advance of the American, the pair being just in front of Silvio and Chamant, The Monk and Warren Hastings being most prominent of the remainder, of whom Morier was being hard ridden in order to live with the front rank. Coming over Bushes Hill Strachino made his effort, and, fairly running into his horses, looked like making a bid for victory; but he died away again immediately, and at the top of the hill Chamant romped to the front, with Silvio struggling on in his track, followed by Brown Prince, and thus they ran into the Abingdon Mile Bottom. As soon as the ascent was commenced for home Lord Falmouth's colt was in trouble, and gave way to Brown Prince, who made an ineffectual effort to overhaul Chamant, the latter easily holding his own to the end, and winning, without ever being fairly called upon, by a length. Ridden out to the end, Silvio obtained third place, three parts of a length behind Brown Prince. The Voltella colt, who came with a rush at last, was a moderate fourth, about a neck in advance of Monachus and The Monk, fifth and sixth respectively. Thunderstone and Strachino, close together, were the next pair, about a dozen lengths in front of Morier, who ran in trouble from the moment the flag fell, and Kingsclere was the absolute last. The surprises of the race were the forward position held by the American colt, Brown Prince, and the miserable exhibition of Morier. It is probable that the latter's running was far too bad to be true; indeed, he was slightly lame at the post, owing to an accident on the previous night; still, Chamant had the race so completely in hand from start to finish that he jumped at once to 2 to 1 for the Derby.

The Craven Hounds were sold by auction on Wednesday, and realised 1175 gs.

On Saturday last the new grounds of the London Athletic Club, situated at Stamford-bridge, Fulham, were formally opened by the Lord Mayor and Lady Mayoress; and on the following Monday W. Slade and J. Gibb ran a four-mile match there. The latter made the running at a great pace, and, as Slade's right leg most unfortunately gave way, he had to retire just before finishing two miles, which the leader covered in 9 min. 51 sec.

T. Taylor and Joseph Bennett played their third match this season, on a championship table, last Thursday week. Each of the previous games had fallen to Taylor, who won them by 27 and 21 points respectively, and, after another wonderfully close contest, he was again successful, this time by only 11 points.

An international contest of a peaceful nature is to come off on the Thames in the summer. The Thames International Regatta, which is warmly supported by Mr. Gulston and Mr. Hastie, the captains of the London and Thames Rowing Clubs, is fixed to take place on July 26, 27, and 28, and is expected to draw oarsmen from America, France, and Germany to compete with English amateurs and watermen for the valuable prizes to be offered on the occasion. Three hundred pounds will be presented as the first prize for the professional four-oared race; and entries should be made to Mr. J. Leith, secretary of the Thames International Regatta, 18, Bennet's-hill, London, E.C.

A new railway was opened on Wednesday, connecting the seaside village of Felixstowe with the Great Eastern system. The junction is at Waterfield, a few miles beyond Ipswich. The total length of the line, which has been made at the sole cost of Colonel Tomline, is fourteen miles and a half.

The inauguration of a training school for nurses in connection with St. Bartholomew's Hospital took place on Tuesday. A large block of buildings within the precincts of the hospital has been set apart and fitted up as a "Home" for the present nursing staff and the candidates for training. For the latter the period of training is fixed at twelve months, at the end of which time their proficiency will be thoroughly tested by a series of examinations, upon passing which they will be granted a certificate of proficiency, and will be free to remain in the hospital or to seek private engagements.

THE WAR IN THE EAST.

FROM SKETCHES BY OUR SPECIAL ARTIST.

TURKISH SOLDIERS PASSING THROUGH A VILLAGE.

ENCAMPMENT OF TURKISH CAVALRY.

THE TURKISH IRONCLAD HAMIDIEH.

THE WAR.

The Russian armies, both in Europe and in Asia, commanded respectively by the Grand Dukes Nicholas and Michael, have made some progress in their advance to the invasion of Turkey, since the declaration of war at the beginning of last week. The geographical bearings of the campaign in Europe will be rendered more intelligible by the aid of our Panoramic View, which is given as an Extra Supplement to the present Number of this Journal, with the further assistance, in our ordinary Supplement, of a special Map of the Dobrukscha, and the Delta of the Danube, on the western shore of the Black Sea. The Dobrukscha or Dobruja, as most of our readers know, is the spacious alluvial plain almost inclosed by a great bend of the Lower Danube, flowing northward first to Braila (or Brailow) and to the commercial port of Galatz, but thence turning eastward, nearly at a right angle, to pass into the Black Sea by three several channels, which are the Kilia, the Sulina, and the St. George's mouth of the Danube. All the territory on this right bank of the Danube is under the immediate rule of the Sultan. The left part of Bulgaria; whilst the left bank of that river, with the lands formerly known as Wallachia and Moldavia, belongs to the Slav Principality of Roumania, over which Prince Charles of Hohenzollern has been called to reign. To the north-east of Roumania is the Russian province of Bessarabia, approaching the Danube as near as possible, but nowhere actually touching it. The river Pruth, a tributary of the Danube, marks the frontier between the Russian Empire and the province of Roumeria, which owes a modified allegiance to the Sultan; and the crossing of the Pruth by the Russian troops within a few hours of the declaration of war last week, must have been considered a positive act of hostility towards Turkey. It has been followed by the Russian occupation of Galatz, of the Barbochi bridge over the Sereth, of the neighbouring river Buceo, and of the town of Braila. But the passage of the Danube anywhere in those parts would be a difficult and dangerous attempt while the broad river is swollen by the late heavy rains, and the roads through the Dobrukscha are quite impassable from the mud and mire. Our Artist's view of the scenery at the confluence of the Pruth with the Danube, some miles below Galatz, has an impressive aspect of lonely desolation; with the mountains rising on the one hand, the reeds, and rushes, and other weeds, on the other, growing in the shallow part of the river, and harbouring a flock of pelicans, which will be disturbed only for a moment by the passing steam-boat. But it was in these quiet waters, no longer ago than last week, that the English naval commander of the Turkish fleet, Admiral Hobart Pasha, on board the Rethymo despatch-boat, ran the gauntlet of the enemy's fire, and made his way scatheless into the Black Sea.

Hobart Pasha arrived safely at Constantinople last Monday evening. The story of his adventurous feat has been reported to us by telegraph. It appears that while his vessel was lying near Rustchuk the Turkish authorities received intelligence of the arrival of the Russians at Galatz, and that they were placing torpedoes in the river. Hobart Pasha was advised to leave his steamer in the Danube and return to Constantinople by land through Varna; but, disdaining all such counsel, he declared that he would rather blow up his ship than desert her. Night approaching, he made everything ready for running into the Black Sea in opposition to all Russian hostile intentions, getting clear fires under the boilers of his craft, in order to avoid smoke from her funnel, and making other arrangements. When Hobart Pasha started on his daring expedition the Danube current was running at fully five knots an hour. Upon nearing Galatz he found that heavily-armed Russian batteries commanded the river, looking capable of sinking anything afloat, besides the torpedoes reported to be hidden beneath the waters. Immediately it was dark, the word was passed, "Lights out," and the Rethymo sped rapidly along. The batteries were soon reached, and the Russian lanterns, the heavy guns, and soldiers in great numbers were clearly visible to those who manned the saucy Rethymo, when suddenly a rocket was sent up from the Roumanian shore to apprise the Muscovite gunners of Hobart Pasha's coming. Other rockets followed in quick succession, then the hoarse word of command was distinctly heard, bugles sounded, and drums beat merrily, summoning the Russians to their posts. Hobart Pasha expected every moment to be blown out of the water by the fire of the heavy guns he was treating so cavalierly; but, being determined to make efforts in some degree proportionate to the great risk he was facing, he ran his vessel close in shore, not forty metres from the batteries themselves—indeed, so near that the Russian gunners were unable to compress their pieces sufficiently fast to get good aim. His boat went quickly by at twenty knots an hour, and soon all danger was over. When satisfied he had nothing to fear from his enemies, Hobart Pasha ordered the crew of the Rethymo, which carries one 40-pounder Armstrong gun, to throw one shell into the centre of the Russian camp, an order which was quickly obeyed—the missile bursting in the midst of the Muscovite tents. He reports the Russians in great force close to Galatz, making preparations apparently to cross the Danube and enter the Dobrukscha to move upon Varna. He also found that twelve small Russian gun-boats had been brought by rail across Roumania, and were ready for launching in the river.

The skilful coup-de-main which, fourteen hours after the beginning of the campaign, made the Russians masters of the bridge over the Sereth, near Barbochi, was executed by General Stobelieff, the well-known commander of Russo-Asiatic irregulars in Turkestan. This bridge, connecting the West Roumanian Railway with Galatz, will be a most important link in the Russian chain of communication during the entire campaign, and, being situated but a few hours' march from the Turkish frontier, might easily have been seized and blown up by Ottoman troops. While Stobelieff's flying column performed over 150 miles to seize the important bridge, the Turks from Matchin or some other point on the Danube might have reached Barbochi in eight hours. The advance of the Russian troops has already kindled the animosity of the Turks against the Christians in the villages opposite Braila and Galatz. Fugitives have crossed the Danube, flying from violence and robbery. Cossack patrols have been sent over to protect the Christians. About 6000 Russians of all arms are encamped on the heights above Galatz and at Barbochi, covering the bridge over the Sereth, where some earthworks constructed by the Roumanians are now mounted with Russian artillery. There are 8000 Russians at Ismail, and about a division camped in detachments between Ismail and Galatz, chiefly on the left bank of the Pruth. Prince Schokosheff, commanding the troops who crossed the Pruth, has issued peremptory orders that all ships at Galatz and Braila must depart. The Russian engineers were at once to commence laying torpedoes to cover both above and below the pontoon-bridge about to be constructed probably from a point on the Roumanian bank, opposite Isakia.

The Emperor of Russia, accompanied by the Czarewitch and the Grand Duke Vladimir, arrived at Odessa at two o'clock on Wednesday. After having inspected the troops and the Russian flotilla, his Majesty left for Kieff.

In the Roumanian Chamber the Minister for Foreign

Affairs has laid before the House a convention with Russia, dated the 18th inst., in accordance with which Roumania assures to the Russian troops free passage and the treatment due to a friendly army, and the Czar binds himself to respect the rights of the Principality. The Chamber, by seventy-nine votes to twenty-five, adopted the convention.

There is every indication that Turkey is in a position to make a strenuous defence upon the Danube and in the Balkans. In addition to the army properly so called, she possesses 200 battalions of territorial infantry on the Danube; and Sadyk Pasha, the late Ambassador at Paris, now Governor of this province, is displaying great activity. The places situated upon the banks of the river are intrenched and well provided with supplies, and some of them, such as Widdin and Varna, are very strong. The latter town has eight advanced forts and 200 siege pieces, a fourth of which are Krupp guns. The garrison is under the command of Blum Pasha, a Prussian; the officers of foreign origin comprise Poles, Hungarians, Englishmen, and even Americans. The Turkish fleet will assume the offensive in the Black Sea, where it disposes of sixteen large ironclads, as many vessels of lighter draught, a powerful artillery, and English engineers.

We learn by telegraph from Bucharest that there was fighting on the Danube last Thursday. At about ten o'clock in the morning fire was opened between the Russian batteries near Ibraila and three Turkish monitors. The Turkish vessels drew in nearer to the shore and commenced to bombard the town itself, but were compelled towards noon to withdraw before the Russian fire.

Hostilities against Turkey are announced from a fresh quarter, fighting having been resumed in Herzegovina, where the insurgents, who are being largely recruited, attacked the Turkish vanguard near Nevesinje, and killed fifteen men. The Turks, on the other hand, are reported to have completely overcome the Miridites, in the north of Albania.

The contradictory intelligence from the seat of war in Asia renders it difficult to trace the course of events in that quarter. It would appear that the Russians have developed two main lines of attack in Armenia. Their right column, starting from Akaltzik, in the neighbourhood of Batoum, may either have been intended for the capture of that important port, or for a circuitous march upon Erzeroum, masking Kars. The left or Alexandropol column has marched direct upon Kars, which lies about forty miles south-west of Alexandropol. It seems that the right column met with a reverse at Ardahan, although there may be some exaggeration in the Turkish estimate of the Russian losses. Better fortune appears to have befallen the Alexandropol column, which seized the heights of Moukhaater, half way to Kars, yesterday week, in spite of a resolute defence on the part of the Ottoman forces. While these operations have been taking place on land the Turkish fleet has bombarded Chevetil, St. Nicholas, and other places on the Russian coast. There was a report that Poti had been entirely destroyed by Turkish shells, and that the town was on fire for twelve hours. A Russian official despatch says, however, that the Turkish monitors approached Poti, but went away without doing any damage. During the bombardment of Fort St. Nicholas one Russian sub-officer was killed, and one of the inhabitants wounded. It is rumoured that an important battle on the road to Kars began last Sunday.

A telegram from Tiflis announces that the Russians have occupied Bayezid, a town in Armenia, not far from the Persian frontier, and 1500 miles south of Erzeroum. The place has a citadel and an arsenal. It seems that on the appearance of the Russian troops the Turkish garrison, numbering 1700 men, left the town, abandoning a large quantity of arms and ammunition. According to letters received in Constantinople, the Turkish forces in Armenia number 83,000 men, without counting the Circassians, Kurds, and militia, who have been called out. These would, if they all obeyed the summons, furnish 44,000 additional men.

From Egypt we have the text of a speech delivered by the Khedive at a sitting of the Assembly of Notables which he had summoned for the purpose of considering the advisability of sending troops to the Sultan. His Highness said that, notwithstanding its evident desire for peace, the Porte had been compelled by Russia to go to war. Egypt would, as before, send troops to Turkey, but their numbers must be determined by the means of the country. It was for this the Assembly had been convoked. The Khedive, in conclusion, said his son Hassan, being a soldier, would start for Turkey, to share the honour of defending "the just cause and sacred rights of the empire."

We hear from Constantinople that the Bosphorus and the Dardanelles are closed during the night, almost every light being extinguished. The Sultan has signed an Irade appointing Mr. Valentine Baker commander-in-chief of the gendarmerie, with full powers for the reorganisation of the police forces throughout the Ottoman provinces, sanctioning the engagement of English officers in posts of direction, superintendence, and inspection.

The British Mediterranean squadron, consisting of the ironclads Alexandra, Monarch, Swiftsure, Devastation, and Hotspur, under the command of Vice-Admiral Hornby, left Malta for Corfu on Saturday.

An extraordinary number of the *London Gazette* was published on Monday night containing a Royal Proclamation, in which the Queen enjoins all her subjects to observe strict neutrality in the war pending between Turkey and Russia on pain of her Majesty's high displeasure. The *Gazette* also publishes a letter from Lord Derby to the several Government departments on the same subject.

THE TURKISH IRONCLAD FLEET.

The ship of which an Illustration appears in this Number of our Journal belongs to the Imperial Navy of Turkey, but has not yet been enabled to join the fleet under the command of Admiral Hobart Pasha, which is expected to perform efficient service in the war that has just broken out. This vessel, which was originally called the Memdoudhiyeh, has been renamed the Hamidieh, in honour of the present Sultan Abdul Hamid II. She was built, along with a sister ship, the Mesoudiye, by the Thames Ironworks and Shipbuilding Company at Blackwall, from the design furnished by Ahmed Pasha, Chief Constructor of the Turkish navy, slightly modified by suggestions from the British Admiralty; and her building was superintended by Mr. Housom, appointed by the Admiralty for that purpose at the request of the Turkish Government. The dimensions of this ship are, length between perpendiculars, 332 ft.; extreme breadth, 59 ft.; depth, 19 ft.; burden, 5349 tons, builder's measurement; displacement, nearly 9000 tons. The hull is divided into seventy-one water-tight compartments. The whole ship is protected by a belt of armour-plate 12 in. thick, and the main-deck battery is fortified with plates 12 in. thick at the water-line and 10 in. above. The bow is yet more strongly defended, and is furnished with a powerful iron beak, to pierce an enemy's ship below its armour. The main deck is shell-proof in every part. The main-deck battery, arranged for a broadside fire, is 148 ft. long, containing twelve 18-ton guns; the four corner ports are so placed at an angle that their guns

may fire astern or ahead of the ship, as well as on the broadside. There are two 6-ton guns mounted on the fore-castle, and one in the poop. The engines, constructed by Messrs. Maudslays and Field, are of 1250 nominal horse power, and the ship is capable of a very high speed. The Hamidieh is now quite ready to go to sea, but has been detained some days in the Thames, owing to causes not yet explained. Her sister, the Mesoudiye, with several other ironclad frigates, is lying in the Bosphorus, and will shortly find employment in the Black Sea.

FOREIGN AND COLONIAL NEWS.

FRANCE.

The Chambers reopened on Tuesday after the Easter recess. In both Houses the Duc Decazes made a statement, which was favourably received, respecting the policy of the Government in the present conflict. That policy, he said, would be based upon the most absolute neutrality. The Yellow-Book, which was distributed on the same day, comprises 530 pages, and is mainly occupied with Eastern affairs. The latest despatch, dated April 25, is a circular addressed by the Duc Decazes to the representatives of France abroad. It expresses regret that Turkey had rejected the Protocol, which provided her with an honourable means of solving the difficulties in a pacific manner.

The Salon opened on Tuesday. There are 2192 oil paintings. Gustave Doré has come out as a sculptor; he exhibits a plaster group—"La Parque et l'Amour."

There was a crowded and distinguished gathering at the Grand Opera yesterday week to see the long-promised opera, "Le Roi de Lahore." Marshal MacMahon and the Duchess of Magenta were among the early arrivals. The music is composed by M. Massenet, who has hitherto confined himself to smaller productions at the Opéra Comique, and the words are by M. Louis Gallet.

A brilliant audience assembled at the Comédie Française on Saturday evening to witness the first representation of "Jean Dacier," a drama of five acts, in verse, by M. Charles Lomon, a young writer of a well-known literary family.

SPAIN.

The King opened a wine exhibition at Madrid on Monday. The exhibition building comprises twelve halls, splendidly decorated from floor to roof with the products of the vine in casks. Fifty provinces are represented, the number of exhibitors being 8000.

Señor Posada Herrera has been elected President of the Congress by 265 votes to five. The members belonging to the Constitutional party did not take part in the voting. The Budget was submitted to the Cortes yesterday week. The estimated expenditure for 1877-8 amounts to a little above £29,000,000 being £3,000,000 more than of last year, and the probable income is also fixed at £29,000,000. Some new taxes are to be levied, and there is to be a fresh issue of Treasury Bonds for the consolidation of the public debt.

The Biscayan Juntas have been dissolved.

ITALY.

An official declaration has been issued proclaiming the neutrality of Italy.

The Treaty of Commerce concluded between Italy and Belgium on April 9, 1863, has been prolonged until the end of December, 1877.

The debate on the Clerical Abuses Bill has begun in the Senate.

The church erected by the Wesleyan Methodist Society in the Via della Scrofa, Rome, opposite the Palace of the Cardinal Vicar, was consecrated on Sunday morning.

GERMANY.

The German Emperor arrived at Strasburg on Tuesday afternoon. The bells of the churches were rung, and salvoes of artillery were fired. His Majesty is said to have been enthusiastically welcomed by large crowds which had assembled at the railway station and in the streets. All public buildings and many private houses were decorated. On Wednesday he witnessed a parade of the troops. The weather was fine, and a dense crowd thronged the streets. The Emperor, after the parade was over, visited the cathedral and university. His Majesty is reported to have been greeted everywhere with continuous cheering.

On Monday morning the colossal statue of Prince Bismarck, which was so much admired at the Munich and at the Philadelphia Exhibition, was unveiled at Kissingen. The site is close to where the attempt was made on the Chancellor's life. Herr Max Lion, the Chairman of the Berlin Committee, to which Kissingen is indebted for the statue, delivered the speech of the day, in which he extolled the Chancellor's merits, and thanked the King of Bavaria for permitting the first statue of Prince Bismarck on German soil to be erected in Bavaria.

In the German Parliament, yesterday week, the protectionist tendencies of the Government met with a serious check. The bill imposing compensatory or retaliatory duties on iron was rejected by a majority of one hundred.

AUSTRO-HUNGARY.

The Hungarian Parliament has voted its thanks to the Sultan for his gift of the Corvinus antiquities, and the Government has been requested to forward an official expression thereof to the Sultan.

A congress of Austrian Roman Catholics was opened at Vienna on Monday. Numerous telegrams and letters sympathising with the objects of the congress were received from France, Italy, England, Spain, and Germany. Count Egbert Belcredi was elected president.

AMERICA.

In the case of proceedings by the owners of the Enns Silver Mining Company to recover 5,000,000 dols. a jury has returned a verdict for the defendants.

Mr. Noyes, ex-Governor of Ohio, has accepted the post of United States Minister to France.

The grain supply of the United States is represented in a report issued from the Agricultural Bureau at Washington to fall short, as will the Californian of 1877.

Archbishop Wood and other Roman Catholic clergymen have started from Philadelphia to attend the Pope's Jubilee. They take an offering of 30,000 dols.; Archbishop Bayley, of Baltimore, takes 35,000 dols. Father Kearney, representing Cardinal McCloskey, of New York, sails with 50,000 dols. There have also been sent from Philadelphia 15,000 dols. of special contributions from the laity, collected by an organisation presided over by Mrs. Sherman, the General's wife. The estimated amount of the gifts sent to the Pope from the United States and Canada is over 300,000 dols.

An American inventor, Mr. Ross Winans, engineer, inventor, and millionaire, died on April 11, at Baltimore, in his eighty-first year.

CANADA.

The Dominion Parliament has been prorogued. Letters have been addressed to the newspapers by Mr. Alexander Mackenzie, the Premier, and Mr. John A. Macdonald, pointing out that on June 20 next her Majesty will have completed the fortieth year of her reign, and pre-

posing that the Canadians should manifest their national attachment to their Sovereign by requesting her Majesty to take the title of Empress of Canada.

An offer has been made to the Imperial Government by the Toronto field battery to go on active service if needed.

THE CAPE COLONIES.

We have intelligence from South Africa, by telegram from Madeira, to April 10.

The South African Exhibition, at Cape Town, was opened by Sir Bartle Frere on April 5. Great élat attended the opening ceremony, and the exhibition is regarded as a complete success.

From the Transvaal the latest news is of an indecisive character. The people were being urged by Paul Kruger, the candidate for the presidency, to abide by the new Constitution and pay the taxes, as the only means of preventing annexation by Great Britain.

AUSTRALIA.

It is announced that the Parliament of Victoria has been dissolved, and that the general election has been fixed for May 11. The Ministry have announced that they will adopt a policy in the direction of free trade. They propose to cover the deficit by the imposition of stamp and land taxes.

A despatch, dated Brisbane, March 9, says Dr. Hale, the Bishop of Brisbane, tendered his resignation recently in consequence of the inadequacy of the support rendered to the General Church Fund. At the request of the Bishop of Sydney, however, he has withdrawn the same for twelve months.

The rate for the conveyance of book-packets from London to British India has been reduced to 6d. per pound.

Sir Thomas Wade has forwarded to Lord Derby a report which he considers to be "both able and interesting," by Mr. Davenport, respecting the trading capabilities of the country traversed by the Yunnan Mission. The report is very long.

A famine is raging in the north of China, and people are dying by thousands of sheer starvation. The scenes of the chief distress are in the north and east, in the extreme north of Kiangsu, in Shantung, in Pechili, and in Shanse; and from Shantung especially the accounts are heartrending.

THE CHURCH.

PREFERMENTS AND APPOINTMENTS.

Baylies, William Wyke, to be Rector of St. Michael's, Stone.
 Bell, Arthur L'Argent, to be Vicar of St. Mary's, Eling.
 Bellamy, Algonon Parker; Rector of Harford.
 Bennett, Robert Atkin; Vicar of Ninfeld.
 Bent, Robert Paul; Rector of Tickenote, Rutland.
 Brigstocke, F. H. J.; Hon. Canon of Christ Church Cathedral, Fredericton.
 Broughton, Reginald; Rector of Mottetown-with-Shorwell.
 Browne, Henry Joy; Perpetual Curate of Christ Church, Barnet.
 Carpenter, William; Vicar of Guyhirne with Ring's End, Wisbeach.
 Chambers, John; Perpetual Curate of Woodhead, Cheshire.
 Chute, John; Vicar of St. Jude's, Hunslet.
 Clarke, W.; late Vicar of Wingham; Vicar of Hook, near Surbiton.
 Daniell, Reginald Percy; Diocesan Inspector of Schools for Epton.
 Dixon, John Hulke, Curate of Leeds-cum-Bromfield; Vicar of Wye.
 Dobbin, A. J.; Curate of Ruddington; Vicar of Cropwell Bishop.
 Evans, Alfred; Vicar of Bidford.
 Fearon, Thomas H. Browne; Rector of Norton-in-the-Moors, Staffordshire.
 Finch, T. R.; Vicar of Dorington, Salop.
 Gauntlett, John George; Vicar of Holy Trinity, Swansea.
 Gepp, Nicholas P.; Vicar of Sandon; Rector of St. James's, Colchester.
 Glover, Archdeacon; Vicar of Christ Church, Wolverhampton.
 Guest, Arthur; Perpetual Curate of Lower Peover, Cheshire.
 Hackman, Adolphus; Rector of Llyswen, Brecon.
 Hall, John William; Perpetual Curate of South Baddesley.
 Haythornthwaite, Richard; Vicar of Great Broughton, Cumberland.
 Healey, Robert M.; Organising Secretary to the Central African Mission.
 Herbert, David; Curate of Cwmaman.
 Hillis, William; Perpetual Curate of St. Luke's, Reigate.
 Holland, Walter; Rector of Puttenham, Surrey.
 Hopkins, Frederick; Vicar of St. John the Evangelist, Holdenhurst.
 Hopton, Michael; Vicar of Canon-Frome with Munsley.
 Hughes, Richard; Rector of Llansadwrn.
 Jennings, Arthur Charles; Vicar of Whittleford.
 Johns, Thomas; Vicar of Llanwnda, Pembroke.
 Jones, Thomas; Curate of St. John's, Pembroke Dock.
 Ketchley, Walter Guy; Vicar of Kirby Moseley, with Gillmore.
 Knapp, John Oliph Charles; Rector of Suenley, Bucks.
 Laidman, Samuel Lancaster; Vicar of Christ Church, Barnston, Cheshire.
 Laycock, William; Perpetual Curate of Holy Trinity, Huddersfield, Cheshire.
 Lepard, S. C.; Rector of St. Andrew and St. Mary Brelman, Canterbury.
 Lewis L.; Curate of St. Michael's, Derby; Vicar of Ockbrook, near Derby.
 Macdure, Edward Craig; Vicar of Rochdale.
 Mantle, W.; Inspector in Religious Knowledge in the Diocese of Carlisle.
 Martin, William; Vicar of Bromyard.
 Matthews, W. A.; Rector of Skelton.
 Montath, R. R.; Chaplain of Sackford Hospital, Woodbridge, Suffolk.
 Neville, Canon; Rector of Stow.
 Nixon, John Wannop; Vicar of Robert Town.
 Norrie, Thomas; Rector of Alexton.
 Paul, Henry Hugh Beams; Vicar of Upton, Shropshire.
 Phillipps, John; Perpetual Curate of Bisphopton, Warwick.
 Pilling, John Rushworth; Rector of Barby.
 Potter, Robert, Vicar of Bulkington; Rector of Corley, Coventry.
 Powell, James T.; Vicar of Llandilior fan with Llandinangel Nantbran.
 Prescott, John Eustace, Canon of Carlisle; Vicar of St. Mary's, Carlisle.
 Priestley, William; Vicar of St. Bartholomew's, Bowling.
 Roberts, Paul; Curate of Stockton.
 Robeson, Edmund; Vicar of Mildenhall; Vicar of Tewkesbury.
 Scott, John Anker; Perpetual Curate of Armthwaite, Cumberland.
 Seaton, John Abdiel; Perpetual Curate of St. John's, Cleckheaton.
 Seed, John; Perpetual Curate of Mowcop, Staffordshire.
 Smith, Sidney Anderson; Vicar of Chatteris.
 Steele, Otto William; Vicar of Wolstanton.
 Stone, Charles Henry; Rector of Cheldon, Devonshire.
 Thompson, William Oswald; Vicar of Hemel Hempstead.
 Tomlinson, Edward Murray; Vicar of St. Trinity, Minorics.
 Trotter, H.; Vicar of Christ Church, Cambridge.
 Turner, C. H.; Vicar of St. Saviour's, Charlotte-street, Fitzroy-square.
 Vincent, William Philip; Perpetual Curate of Salt.
 Watson, George Augustus Frederick; Vicar of Abbotaleys.
 Watts, R. E. R.; Vicar of St. Paul's, Bedford.
 White, Joseph Henry; Vicar of Weybread, Suffolk.
 Whipple, Arthur; Rector of Belstone.
 Wilkinson, Henry Bliss, Curate of Sharnbrook, Chaplain to the High Sheriff of Bedfordshire; Vicar of Sharnbrook, Beds.
 Williams, Thomas; Minor Canon in Bangor Cathedral.
 Wright, Charles Howard; Chaplain of Hartley-Wintney Union.
 Youard, Henry George; Vicar of Whitegate, Cheshire.
 Young, N. B.; Rural Dean of Eaton Socon, northern portion.—*Guardian*.

It is stated that the Archdeacon of St. Asaph is about to resign the archdeaconry and canonry.

The *Western Mail* states that the vacant deanery of Llandaff has been accepted by the Ven. Archdeacon Blosse.

An iron church for Coley, a poor district of St. Mary's, Reading, has been opened by the Bishop of Oxford.

The Rev. Anthony Wilson Thorold, Vicar of St. Pancras and Canon-Residentary of York Cathedral, will succeed Bishop Claughton in the see of Rochester.

The *Sheffield Telegraph* learns that Mrs. Samuel Parker, of Bromgrove, has undertaken the entire cost of erecting the south transept in the restored parish church of Sheffield.

An address has been sent to the Home Secretary, signed by BISHOPS, deans, archdeacons, and about 3500 clergymen of the Church of England, asking Mr. Cross to support the bill to make vivisection illegal.

The Bishop of Truro was enthroned on Tuesday in his cathedral church by the Bishop of Exeter. In the Townhall there was a large assemblage of persons to witness the preliminary proceedings.

Last Saturday afternoon the Countess of Wharncliffe laid the foundation-stone of a new church at Deepcar, near Sheffield. The Earl gave an address on the occasion, in which he warmly advocated the system of free sittings.

The *Bradford Chronicle* says that, in order to raise the sum of money required if Wakefield is chosen as the cathedral town for the new see, Mr. Benjamin Watson has offered to give £1000 if fourteen other gentlemen will give a like sum.

Canterbury Convocation again met yesterday week. The Clergy Discipline Bill was amongst the subjects discussed in the Upper House, while in the Lower the co-operation of laymen in spiritual work was a topic of consideration. Both Houses stand prorogued until July 3.

The officers, non-commissioned officers, and troopers of the 2nd Life Guards have made a handsome offering to the Rev. Arthur Robins, Rector of Holy Trinity, Windsor, and Chaplain to the Household Brigade at Windsor, in aid of the new Church of the Saviour in that town.

In Cossall churchyard, near Nottingham, there has been erected a marble monument to the memory of Shaw, the Life-Guardsman, and his two Waterloo companions, Waplington of the Blues, and Wheatley of the 23rd Light Dragoons, all of whom came from the above-named village.

Last Saturday the Bishop of Guildford dedicated an additional chapel-of-ease for the district still attached to the mother parish of Battersea. The new building is called St. Matthew's, and is situated on Lavender-hill. The site was given by Mr. J. Westwood, of the Manor House, Dulwich. The architect is Mr. William White, F.S.A., and the chapel will accommodate between 500 and 600 persons.

A beautifully chased silver salver, with an inscription: Wordsworth's "Commentary on the Bible," handsomely bound; a travelling bag, writing case, and pocket-book, silver-mounted; and address, with many influential names appended, expressive of high respect and personal regard and regret at the loss of so good a neighbour, with sympathy upon his recovery from a long and dangerous illness; have been presented to the Rev. J. H. Wanklyn, upon his leaving Bourne-mouth, after residing there nearly twenty years. A handsome photographic album was presented to Mrs. Wanklyn.

Four memorial windows of richly-stained glass, by Messrs. Ward and Hughes, have been presented to the parish church of Illingworth, Yorkshire, which is now quite remarkable for its numerous beautiful windows. A large east window has been placed in Farn church, Montgomeryshire, to the memory of Mr. John Moore. Three memorial windows, by Messrs. Ward and Hughes, have been placed in the chancel of the Church of Teversal, Notts, in memory of the late Henrietta Anna, Countess of Carnarvon, by her tenantry and other friends, to record their gratitude for her unwearied beneficence and reverence for her Christian character.

THE UNIVERSITIES AND PUBLIC SCHOOLS.

At Oxford the Rev. Charles Henry Hamilton Wright, of Exeter College, and formerly of Trinity College, Dublin, has been elected Bampton Lecturer for the ensuing year. A Liberal Club was set on foot among the undergraduates last Tuesday, when Viscount Lymington, of Balliol, was elected to the first presidency.

Dr. Phear, Master of Emmanuel, Cambridge, has been elected Sadlerian Professor of Pure Mathematics in the place of Dr. Cookson, deceased. The Esquire Bedellship has been carried off by Mr. A. P. Humphrey, of Trinity, who polled 200 votes, against 167 for Mr. Wace, of St. John's. H. W. Fulford, B.A., of Clare College (bracketed fourth in the first class of the Classical Tripos of this year), has been elected to a fellowship at Clare.

Mr. H. A. Dalton, M.A., scholar of Corpus Christi, and senior student of Christ Church, Oxford, has been appointed to the head mastership of St. Edward's School, Oxford.

THE IRISH CHURCH SYNOD.

The revision preface of the Irish Church Prayer-Book was passed on Thursday week in the House of Bishops by a vote of five to four. Those voting were:—For including the preface, the Bishops of Killaloe, Meath, Cashel, Kilmore, and Ossory; against it, the Primate, the Archbishop of Dublin, the Bishop of Down, and the Bishop of Derry.

Yesterday week Lord Plunket's motion was discussed, relieving the Archbishops and Bishops who dissent from the new Prayer-Book preface from the necessity to impose it upon candidates for orders. This led to a long discussion, at the close of which the Bishop of Meath stated that these Bishops would forego their objection to requiring subscription from candidates, and the motion dropped. Afterwards there was a fresh debate on the Athanasian Creed.

The General Synod concluded its session on Tuesday last. The debate was resumed on a motion made on a former day by the Dean of the Chapel Royal for the addition to the first Rubric in the order for the burial of the dead of words to authorise the reading certain psalms or lessons, the Lord's Prayer, and the Benediction over the graves of unbaptised issue the offspring of Christian parents, and who had not been withheld from baptism by wilful default or neglect, and of persons at the time of their death ready for baptism. The motion was adopted. Master Brooke moved the third reading of the bill fixing the "Time and Terms" for bringing the Revision Statute into operation, which was passed by a two-thirds majority—ninety-four clergy and 137 laity voting for, and ten clergy and three laity against it.

The Bishop of Meath announced a donation from Sir Joseph Napier of £1000 for the widows and orphans of the clergy of the diocese of Dublin.

The return of metropolitan pauperism for last week (the fourth week of April) again shows an increase compared with the corresponding week of last year. The total number of paupers at the end of the week was 83,006, of whom 38,278 were in workhouses and 44,725 received outdoor relief. This is an increase of 1283 compared with the corresponding week in 1876, but a decrease of 8102 and 17,604 respectively compared with 1875 and 1874. The number of vagrants relieved on the last day of the week was 729, of whom 493 were men, 189 women, and 47 children under sixteen.

The jubilee festival or fiftieth anniversary of the British Orphan Asylum at Slough was celebrated yesterday week. The Earl of Dartmouth was chairman of the dinner at Willis's Rooms; and the Earl of Shrewsbury and Talbot and the Lord Mayor of London were present, with Mr. Woolton, Mr. Gilliat, and other gentlemen, the active and liberal supporters of this benevolent institution. The number of children now maintained and educated in the asylum is 114 boys and 97 girls. The subscriptions amounted to about £2600. Many of the former inmates have won for themselves a good social position; and some have shown their gratitude to the asylum by contributing largely to its funds.

METROPOLITAN NEWS.

On Wednesday the Lord Mayor entertained the members of the Municipal Council of Paris, who are on a visit here.

Mr. Newton H. Nixon has been appointed secretary of University College Hospital.

Professor Huxley presided on Tuesday at the distribution of prizes to the students of the Dental Hospital.

A festival in connection with the Children's Home, Victoria Park, took place on Tuesday; Mr. Forster, M.P., and the Dean of Westminster being amongst the speakers.

Mr. George Noon, solicitor, has been elected by the electors of Bishopsgate Without common councilman for that ward; and in the Tower ward Mr. J. C. Howell has been chosen.

The disused burial-ground in Drury-lane, belonging to the parish of St. Martin-in-the-Fields, has been laid out as a garden for the use of the poor people of the neighbourhood and their children; and it was opened for that purpose on Tuesday.

By order of the War Office, the first brigade field-day of the present season will be held to-day (Saturday) in Hyde Park, when, according to the regulations, at least half the enrolled strength of each of the regiments whose attendance has been ordered must be present.

There is an extensive library of books relating to Canada, comprising the statutes, law reports, bluebooks, maps, commercial and statistical publications, and all works of interest or utility having reference to the dominion, at the Canadian Government offices, 31, Queen Victoria-street.

A general meeting of the London and Middlesex Archaeological Society is to be held at Serjeant's-inn Hall, Chancery-lane (by permission of Mr. Serjeant Cox), to-day (Saturday), at half-past one o'clock. Lord Talbot de Malahide, president of the society, will preside.

Professor Tyndall presided last Saturday evening at the concluding lecture of Dr. Corfield's course on the Laws of Health, at the Society of Arts, and took occasion to express his decided conviction that there was no power of spontaneous generation of the germs of contagion.

The Fishmongers' Company have made a grant of £250 to the fund for rebuilding the Metropolitan Free Hospital; fifty guineas to the Shipwrecked Mariners' Society; twenty-five guineas to the Artisans' Institute, St. Martin's-lane; and twenty guineas towards the Bricklayers' Technical Education Classes.

A public meeting, at which the claims of the Charity Organisation Society were placed before the citizens of London, was held at the Mansion House yesterday week. Sir John Lubbock, M.P., presided, and amongst the other speakers were Mr. Samuel Morley, M.P., Lord Richard Grosvenor, M.P., Mr. Goehen, M.P., Mr. Hubbard, M.P., and the Earl of Lichfield.

At a largely-attended public meeting held on Tuesday evening in Regent's Park Baptist Chapel, under the presidency of Sir Morton Peto, Mr. Justice Lush presented to the Rev. Dr. Landels (ex-President of the Baptist Union) an illuminated address, accompanied by £1000, in acknowledgment of his twenty-two years' services to the Baptist Church.

A handsome monument to perpetuate the memory of the great engineer Isambard Kingdom Brunel has been erected on the Thames Embankment, on a site granted by the Metropolitan Board of Works, in the garden adjoining the Temple station. The full-length bronze figure of the engineer has been hoisted on its pedestal, but will not be uncovered until the masonry work is finished.

Last week 2535 births and 1557 deaths were registered in London. The deaths included 89 from smallpox, 47 from measles, 14 from scarlet fever, 3 from diphtheria, 30 from whooping-cough, 18 from different forms of fever, and 12 from diarrhoea. The fatal cases of smallpox rose last week to a higher number than had been returned in any week since the middle of March. The deaths referred to diseases of the respiratory organs, which in the four previous weeks had declined from 645 to 343, were 349 last week, and exceeded the corrected weekly average by 60.

At the annual meeting of the Royal Institution of Great Britain, held on Tuesday—Mr. William Pole in the chair—the annual report of the committee of visitors for the year 1876, testifying to the continued prosperity and efficient management of the institution, was read, and adopted. The real and funded property now amounts to above £84,000, entirely derived from the contributions and donations of the members. Seventy-two new members paid their admission fees in 1876, and sixty-three lectures and nineteen evening discourses were delivered last year. The following officers were re-elected:—President, the Duke of Northumberland; treasurer, Mr. George Busk; secretary, Mr. William Spottiswoode; and also a new committee of manager and visitors.

The meetings of religious and benevolent societies for which May is noted are now in force, and we much regret not having space to devote to a detailed account of their important and interesting proceedings. At Willis's Rooms on Monday the Archbishop of Canterbury presided at the annual meeting of the Society for the Propagation of the Gospel in Foreign Parts, which employs 533 missionaries, besides 800 catechists, and has an income of £137,000. Several colonial Bishops described the operations of the society in their dioceses and in India. His Excellency Sir Thomas Wade, K.C.B., examined minutely the results of the work in China, and paid a high compliment to the Jesuits for the schools they had established. For success in the Chinese empire, men of intelligence and superior education were required. Illustrated papers, in his opinion, would be found the best means of paving the way to extended Christianity, as the Chinese were a curious people, and might be gradually led from such papers to the enlightenment characterising the nineteenth century in Europe. Mr. Waddy, M.P., presided at the Wesleyan missionary meeting at Exeter Hall in the morning; and the National Temperance League assembled at the same place in the evening. The seventy-fourth annual meeting of the Sunday School Union was held yesterday week—Sir Charles Reed in the chair. A favourable report was adopted, and several resolutions bearing on the interest of the union were passed. The Baptist Missionary Society have presented to their late secretary, Dr. Underhill, a testimonial in the form of a casket of fine gold, of the cinque-cento style, designed and manufactured by Mr. J. W. Benson. In the casket was an illuminated address. The principal meeting held on Tuesday was that of the Church Missionary Society, at which the Earl of Chichester and the Archbishop of Canterbury were the chief speakers. Among the anniversary meetings on Wednesday were the Bible Society, at which the Earl of Shaftesbury and the Archbishop of Canterbury were the principal speakers; the British and Foreign Sailors' Society, which provides amusement, religious influences, and libraries for sailors; and the Curates' Augmentation Fund, which seeks to provide an average income of £200 to a curate who has fulfilled his duties for fifteen years. The Earl of Harrowby and Lord Hatherley were the chief speakers at the last-named meeting.

VISIT OF THE PRINCESSES OF WALES TO GREECE: STREET FLOWER-SELLERS OF ATHENS.

THE DANUBE, AT THE JUNCTION OF THE PRUTH.

PARLIAMENT. LORDS.

The international questions arising out of the war between Russia and Turkey have naturally overshadowed the domestic subjects brought before both Houses; but there have yet been a few debates and divisions on home legislation which command notice. Though Earl Granville was unsuccessful on Thursday week with his amendment to the second reading of the Government Burials Bill—141 to 102 voting against—his motion that no alteration in the law in question would be satisfactory that did not allow the relatives of a deceased person to hold any religious service which might please them over the grave—the noble Earl has given notice of his intention to persevere with his resolution in Committee. Questioned by Lord Stratheden and Campbell yesterday week as to what the Government thought of the statement in the Russian Circular that the Czar represented the views of Europe, the Earl of Derby (after Earl Granville had interjected the remark that such a query should hardly have been made without due notice) confined himself to the statement that—

We are in no way bound by the expression of opinion issued by the Russian Government, and as a matter of fact we do not accept or admit either the conclusions or arguments embodied in that document.

Lord Bury the same evening moved his resolution, apropos of the report of the Royal Commission on Railway Accidents, that direct legislative interference with the details of railway management tended rather to increase than diminish the danger of accident by dividing responsibility; but, the motion being opposed in a thoughtful speech by Lord Beaconsfield who said that, although legislation might be necessary, the subject demanded further consideration, Lord Bury ultimately withdrew the resolution. Monday's sitting only lasted twenty-five minutes, the proceedings of general import being Earl Granville's notice of his amendment in Committee on the Burials Bill, and the Earl of Carnarvon's statement, in reply to the noble Earl, that her Majesty's Proclamation of Neutrality would be issued that evening. Tuesday's sitting was of the same brief duration, and the only noteworthy matter was Lord Derby's assurance to Earl Granville that further papers on the East would be laid on the table on Thursday, and that the Government had sent an answer to Prince Gortschakoff's Circular.

Their Lordships gave up twenty minutes of their precious time on Thursday to the disposal of public business. Sir W. Knollys, the recently appointed Gentleman Usher of the Black Rod in the place of Sir Augustus Clifford (deceased) was introduced. He was accompanied by Colonel Clifford. Starkie's Estate Bill was read the second time, the Dublin Central Tramways Bill was read the third time. The Judicial Proceedings (Rating) Bill was also read the third time and passed. Earl Cadogan informed their Lordships that it was the intention of the Government to place in the library a map of the seat of war in the East, and that some one would attend daily from the War Office to mark off the various changes in the position of the forces.

COMMONS.

Mr. Gladstone's Resolutions have been the chief topic in the Lower House, where some members of the Government have been called upon to fulfil the duties of special reporters, as it were, to those hon. gentlemen who are never happy unless they can fire off a series of questions at Ministers on the Treasury Bench. Nor are the members of the Government at all backward in replying. Indeed, it may be said that, as a rule, their answers are courteous and to the point. Markedly concise was Mr. A. Egerton, who, filling the great void (from a physical point of view) caused by the absence of Mr. Ward Hunt, informed Mr. W. Cartwright on Thursday week that Hobart Pasha was still a captain on the retired list of the Royal Navy, but that an intimation had been conveyed to him that he would not be allowed any longer to be at once an officer in her Majesty's service and an Admiral in command of a fleet engaged against a State with which the Queen was on friendly relations. The rest of the evening was mostly spent in a debate on the Universities Bill, Lord F. Harvey's motion, that it was undesirable to increase the professoriate largely, being made only to be withdrawn, and the consideration of clause 4 in Committee resulting in a series of divisions rather derogatory to the impartial judgment of the majority, inasmuch as such eminent men as Professors Huxley and Max Müller and Dr. Hooker were rejected for the Commission.

Mr. Bourke, on whom the chief burden of replying to Eastern questions has fallen, and who has invariably essayed to give ample and thorough answers, made known to the House yesterday week that neutral merchant-vessels entering Odessa were steered by Russian pilots and manned by Russian crews whilst navigating the channels in which torpedoes had been laid down. For the second time in one week a night was devoted to Ireland, and yet Home-Rulers were not happy! The O'Donoghue moved his resolution which implied that it was a corollary of the Irish Land Act that the exaction of exorbitant rents should be forbidden and evictions prevented. Several Irish members waxed eloquent in support of the motion, which was opposed, however, with equal fluency by Mr. Plunket, resisted by Mr. Gibson, the Marquis of Hartington, and Sir M. Hicks-Beach, and defeated by 189 to 65 votes.

Notice of Mr. Gladstone's Resolutions was first given by Mr. Howard yesterday week, and on Monday last the right hon. gentleman himself asked the Government for an evening on which to move his five resolutions, the pith of which is embodied in the third:—

That, in the midst of the complications which exist and the war which has actually begun, this House desires the influence of the British Crown to be employed in the councils of Europe in the effectual development of local liberty and practical self-government in the disturbed districts of Turkey by putting an end to the oppression and misery that they now suffer without the intervention upon them of any other foreign dominion.

Sir Stafford Northcote promptly placed Monday evening next at the disposal of Mr. Gladstone, whose Resolutions did not appear to meet with anything like unanimous support from hon. members who correspond to the Whigs of a former day. Sir John Lubbock, indeed, at once announced that he should move the previous question when the Resolutions came to be introduced. Moreover, it may be mentioned, in passing, that on Thursday a morning paper had it that Mr. Gladstone's late colleagues, at a meeting held at Earl Granville's residence, had decided to withhold their support from the ex-Premier on this point; and that the Ministry had resolved to make the division one of a vote of confidence in the Government. To return to the sitting of Monday last. Mr. Bourke, satisfying Sir George Campbell's curiosity with regard to the Khedive had promised at this juncture, explained that the Khedive had promised to send what assistance he could to the Sultan, and that the Egyptian troops would be under the command of the Khedive's son, but that the extent of the aid he would be able to afford Turkey would greatly depend upon the "voluntary contributions" he might obtain. This dry little joke elicited laughter, and brought up Mr. Gladstone with a question as to how the payment of the Turkish Loan of 1854 would be affected, to which Mr. Bourke cautiously replied he had no reason to believe there would be any change in the ordinary arrangements. Hobart Pasha's name was again brought forward, this time by Captain Pim, who formulated

his query in such a fashion as to show he was of opinion that the Admiralty had not the power to interfere with Hobart Pasha's position on the retired list of the Navy. But Mr. Egerton soon enlightened the gallant captain, and asserted that the Admiralty decidedly had the power. The Marquis of Hartington had previously received an early copy of the Queen's Proclamation of neutrality from the Chancellor of the Exchequer. Sir William Harcourt being an authority on international law, wished to know how the maritime commerce of England would be affected by the war; and Mr. Bourke, responding succinctly as usual, stated that the Russians had stopped the navigation of the Danube without giving notice, and had begun to place torpedoes on the river, that Mr. Layard had sent word home that the blockade of the Black Sea would soon be declared by Turkey, and that the Dardanelles and Bosphorus were closed to all ships from sunset to sunrise, and that the lighthouse on the Straits, with the exception of the great ones at the entrance of the Bosphorus, Black Sea, and two at the entrance of the Dardanelles were to be extinguished. Mr. Gladstone having placed it beyond doubt that he wrote the letter recommending Mr. Kay to the Liberals of Salford prior to the death of the late member, the House took up the thread of its discourse on the Universities Bill, various clauses of which were disputed, but, being ably supported by Mr. Hardy and the loyal majority at his back, the clauses were adopted with little amendment.

Mr. Biggar made himself conspicuous on Tuesday. As champion of Mr. John Clare, who has a grievance against the Admiralty, he read a long paper, in spite of the Speaker's objection that he was transgressing the rules. When Mr. M'Arthur's motion respecting ecclesiastical endowments in Ceylon (the worthy Alderman thought it a grievance that Hindoos and Buddhists should be mulcted to pay for Protestant services) had been negatived by 147 to 121 votes; when Mr. Shaw-Lefevre's motion for a Select Committee to inquire into the working of the forty-fourth, forty-fifth, and forty-seventh clauses of the Irish Land Act had been assented to, Mr. Biggar ventilating his opinions on the subject, in common with other Irish members; when Mr. Gregory had been granted a Select Committee on the Companies Acts; and after Mr. Cross had introduced his bill for creating four new Bishops—namely, a Bishop of Liverpool, a Bishop for Northumberland, a Bishop for Halifax or Wakefield, and a Bishop for Derby and Nottingham—at a salary of £3000 a year—Mr. Biggar became a bone of contention in connection with the Cattle Plague Committee. Mr. Butt and other Irish members persisted in proposing that he should be added to the Committee, and kept the House sitting till the small hours of the morning by repeated divisions without achieving their purpose.

On Wednesday Mr. Holt's Cruelty to Animals Bill, the object of which was to prohibit vivisection, was rejected by 222 votes to 83. Mr. O. Morgan withdrew his Burials Bill, but promised to reintroduce it in the form of an amendment to the Government Bill. Mr. W. Johnston's bill for improving the position of assistant county surveyors in Ireland was read the second time by 211 against 32 votes, and other measures were advanced a stage.

As usual, the Under Secretary for Foreign Affairs had to discharge the most important function on Thursday of Ministerial informant, and, as heretofore, we have to complain of the sotto voce tone in which he communicated the valuable intelligence of which he was possessed. The strain which he imposes upon the reporters in the gallery to elucidate his statements is really painful, and repeatedly are they obliged to compare notes before they can venture to transcribe them for publication in the various journals which they represent. In reply to inquiries from Mr. Collins and Mr. Gourley as to the particular articles which constitute contraband of war, and from Mr. Stackpoole as to the obligations of the Khedive to the Sultan of Turkey, his Suzerain, Mr. Bourke stated that coal carried in neutral vessels had been held by certain Powers, under peculiar circumstances, to be contraband; but that, as well as many other articles, must be declared by the prize courts to come under the category before they could be recognised as such. Her Majesty's Government had no intention of calling upon the two belligerents to define the articles which they would deem contraband of war, but they would watch the decisions of the prize courts in order to observe whether any other substances than those usually considered to be such should be declared contraband of war. In reference to the reported destruction of a British vessel at Kertch, the hon. gentleman stated that no information upon that subject had reached the Government. The Khedive of Egypt was bound by the terms of a firman to place 30,000 troops at the service of the Sultan if required to do so; and that number might be increased in time of war if necessity demanded it. The payment of the Tribute by the Khedive was wholly independent of this supply of troops. The Chancellor of the Exchequer, responding to a question from Mr. Muntz, said that her Majesty's Government could not assent to any arrangement under which all ships of war would be interdicted entering the Suez Canal, inasmuch as we should thus be debarred sending reliefs to, or receiving any from, India. They would use their best endeavours to protect the navigation of the Suez Canal. Mr. G. Hardy intimated that the most correct maps of the seat of war and the position of the respective armies would be placed in the library for the information of the members. Mr. O'Clary gave notice that, in the event of Mr. Gladstone's Resolutions being adopted, he would move that Nos. 2 and 3 rebuking Turkey, her Majesty's ally, for the misgovernment of its Christian subjects, be likewise applied to her Majesty's ally, the Emperor of All the Russias, respecting the torture, oppression, and persecution of the Russian subjects of the Emperor of Russia in the Polish and other Christian States, which acts had been the subject of the opprobrium of Europe and a scandal to humanity and civilisation. The remainder of the evening was dedicated to the consideration of the Universities of Oxford and Cambridge Bill, on its recommittal.

Collections were made last Sunday in all the Roman Catholic places of worship in aid of the English offering to the Pope. The Duke of Norfolk contributed £500, the Marquis of Ripon £250, and the Earl of Denbigh £250 to the offering.

A Parliamentary return issued on Thursday shows that during the year 1876 there was an increase of 933 in the number of persons employed, and of £174,628 in the salaries, expenses, &c., of the public offices or departments. On the other hand, reductions were effected of 61 persons employed and of £36,140 in salaries and expenses.

In the United Kingdom the births of 298,435 children, and the deaths of 182,469 persons of both sexes, were registered in the three months ending March 31. The recorded natural increase of population was thus 115,966. The registered number of persons married in the quarter ending Dec. 31 was 146,260. The resident population of the United Kingdom in the middle of 1877 is estimated at 33,444,419; that of England and Wales at 24,547,309, of Scotland at 3,560,715, and of Ireland at 5,336,395.

NEW BOOKS. REGIMENTAL.

Though we are not a military nation, we all of us take an interest in our gallant little Army and its valiant deeds, so that such works as *The History of the Rifle Brigade*, by Sir William H. Cope, Bart. (Chatto and Windus) appeal to national as well as to special and professional sympathies, and are not likely to appeal in vain. Different people, no doubt, are prompted by different motives in the attention they pay to our men of war; and, whilst some of those motives have a tinge of romance, others are of the most unsentimental description. Memory, for instance, calls to mind a scene depicted some years ago in our chief comic newspaper: an undersized taxpayer is staring with all his might and main at one of those huge warriors who display their noble proportions daily at the Horse Guards; and when the warrior, growing as uncomfortable under the fixed gaze as Hazael grew under that of the Jewish prophet, utters a mild remonstrance, he is met by the indignant rejoinder, "Why shouldn't I stare at yer? I pay for yer!" The taxpayer, in fact, was evidently anxious to assure himself that he was getting value for his money. But even on that head the taxpayer is likely to derive perfect satisfaction from a perusal of the bulky volume containing a record of the services performed, as well as of the various uniforms adopted and the transformations undergone, by the now fashionable Rifle Brigade. For that corps is nowadays undoubtedly a very fashionable one; though, such is the curious constitution of human nature, it is doubtful whether hard campaigns and gallant achievements would have won for it the amount of favouritism it suddenly attained under the distinguished patronage of the late Prince Consort. The changes made in the uniform are illustrated by some coloured engravings, which, however suggestive they may be of the cards hung up in tailors' shops, unquestionably serve to embellish the pages and to assist the imagination. There are also many useful and carefully-executed plates, exhibiting plans of the principal battles in which the brigade won the chief portion of its imperishable renown, from the action on the Coa, July 24, 1810, to that of Amoaful, Jan. 31, 1874. It appears that the origin of the Rifle Brigade is to be traced back to the formation, in 1800, of an experimental corps of riflemen, and that it has since that time been known by the style and title, successively, of Rifle Corps up to Dec. 25, 1802; then, of 95th Regiment up to Feb. 16, 1816; and, then, of Rifle Brigade to the present day. The record of its services includes many, not to say most, of those engagements which have shed lustre upon the British Army, and upon which civilians as well as military men are accustomed to look back with the greatest pride, although the glory is somewhat dimmed occasionally by dark deeds of blood and rapine and lust, which might be advantageously pondered upon by the humane but inconsiderate denouncers of atrocities committed by troops unacquainted with any but the most rudimentary forms of discipline, and as apt to be carried away by their passions in dealing with a rebellious country as the British soldiery were with a stubbornly-resisting Ciudad Rodrigo or Badajoz, not discriminating between combatants and non-combatants, and making the defenceless pay the price. The volume abounds with personal anecdotes of a very interesting description; they are, of course, too numerous to be recounted here in full, and it is difficult to make a selection where there is so little ground for preference. It is better to refer the reader to the book itself. It may be worth while, however, to briefly sum up the alterations which have taken place in the brigade's peculiar weapon: in November, 1839, the flint-lock Baker was replaced by the percussion Brunswick, which rifle "continued in use for nearly twenty years," though in 1846-7 the Lancaster came into partial use; the Minié was served out for the Crimea, and while in the Crimea the regiment "received the long Enfield and bayonet," subsequently "the short Enfield and the sword were substituted;" then there was a conversion into "breach-loaders on the Snider principle," followed by "the Snider proper, in 1867," though the fourth battalion "had received in 1864 Whitworth rifles, in place of the short Enfield;" and "the Snider was replaced by the Martini-Henry, which was issued to the several battalions towards the close of the year 1874."

Presumably there is more to come, whether in a larger or a smaller shape, to complete the tale begun and carried on in the two volumes entitled *History of the Organisation, Equipment, and War Services of the Regiment of Bengal Artillery*: by Francis W. Stubbs, Major, Royal (late Bengal) Artillery (Henry S. King and Co.), for these two volumes appear to be confined to "war services," and, even then, to bring matters down no nearer the present day than the year 1826. Yet, even in that case, it will be seen how great a work the author must have already accomplished by acting strictly up to the theory he propounds to the effect that "a history of the services of the Artillery is the military history of the country to which it belongs." As it is, indeed, he has achieved a most arduous and most laborious task, and in the most painstaking manner, with all the loving diligence with which his professional connection was sure to inspire him. To give a list of the mere maps, plans, &c., with which he has furnished and enriched his pages would alone require a farious amount of space; and to that list must be added various appendices and an index containing the names of a legion of artillery officers. We first make the acquaintance of the Bengal Artillery in the Black Hole of Calcutta, where, sad to relate, forty-five men, forming the greater portion of the first company of regular artillery ever established in Bengal, and established in 1749, perished on the night of June 20, 1756. Hard upon this supervened the battle of Plassey; and yet, strangely enough, although it was "almost entirely an artillery engagement," until "the final advance to storm the intrenchment," for that victory, "which laid the foundation of our Empire in India, the Bengal Artillery were omitted from the list of corps permitted to reckon it among their regimental decorations." Henceforth the author's business is to reproduce, as it were, the panorama of our career in India, from the point of view of the Bengal Artillery, since the siege of Masulipatam, in 1859, to that of Bhurtpore, 1825-6, including certain episodes, such as the expedition to Egypt in 1801-2, when troops were ordered on service from Bengal. Among the biographical memoirs at the end of the second volume there is none which a young officer could study to greater profit than that which tells how Sir John Horsford served for forty-five years in India, "spent in constant and unwearied devotion to his duty, never having, even in sickness, enjoyed the indulgence of one day's furlough or leave of absence from his professional labours." Not that his example is recommended, in its entirety, to weak brethren, who are not made of iron, and who hold sound opinions about "all work and no play;" but, with reasonable modification, such a model might be held up for the imitation of all young aspirants for glory and for promotion in the enervating climate of India, remembering that "a sound constitution and strict temperance enabled him to endure what our present nervous temperaments would shrink from," and reflecting upon the causes to which "our present nervous temperaments" are attributable.

THE ROYAL ACADEMY.

The law of coincidence has decreed this year that the opening of the Royal Academy Exhibition should be virtually simultaneous with such an exceptionally characteristic display of esoteric English art as is afforded by the collection in the Grosvenor Gallery, and with such a thoroughly representative collection of modern English pictures of established celebrity as those brought together by Mr. Albert Grant, to be dispersed, as was the case last week, by the ruthless hammer of the auctioneer. Thus brought into the closest juxtaposition with the rarities assembled by Sir Coutts Lindsay in New Bond-street and with the treasures so recently passed in review in King-street, St. James's, Burlington House, in the month of May, 1877, is placed exceptionally on its mettle, and challenges a degree of criticism which, if it be not invincible, can scarcely fail to be unusually stringent. Are the veteran Academicians up to the mark, not only of their illustrious predecessors, but to the standard of their own works of a bygone period—works which we have all long been gazing on with delight at Christie's? Do the more recently elected Academicians and Associates manifest marked symptoms of improvement, or have they even succeeded, with tolerable uniformity, in holding their own? And the younger men (and we may say likewise, with renewed gratification every year, the younger ladies), are they coming forward? Do they continue to show that they have neither been deterred by neglect from fresh efforts to excel, nor betrayed by indulgence and applause into mannerism, into carelessness, or into that stationary mediocrity which is often more fatal to the artist than absolute retrogression itself—since there is hope for a painter who transgresses, repents of his backsliding, and promises amendment; whereas the case of him who has too much common-sense to recede, but not sufficient genius or discernment to move onwards, is substantially desperate. When Art is without movement the commencement of decay cannot be far off.

It is eminently satisfactory to be able to record that on the whole the present exhibition of the Royal Academy is of a nature to endure the test of which fortuitous circumstances induce this year the application. It is true that we must not look to the saloons of Burlington House for any surprising examples of classical, devotional, or historical art on the grandest scale; still, we venture to think that the paucity in what is generically styled "High Art" is due, less to a falling off in the supply than in a growing absence of the demand. Art-patrons belong for the most part to "Society." The State continues to stand aloof from the encouragement of historical painters. The Church only patronises that section of sacred art which is decorative, Byzantine and bizarre; Classicism, either of the French or the Italian pattern, shocks our national sense of prudery; even the pure Hellenisms of Mr. Leighton, when they are executed on a large scale, find many admirers but few purchasers; and "Society," as a rule, prefers to acquire pictures which it can conveniently hang in its dining-rooms and its drawing-rooms—landscapes, moderately-sized specimens of historic *genre*, portraits, "conversation" pieces, portraits, flower pieces, and the like—works which demand no strained attention, and which provoke no unenvenomed controversy as to their style or their spirit—pictures which, in a word, may be considered "safe" not only as to their innocuousness upon our decorous susceptibilities, but as regards their likelihood of selling to advantage when, in the process of time, the *opus malit* of Christie, Manson, and Woods recurs. There is a very delightful variety of safe and sound work to be found in the present Royal Academy Exhibition. There is a singular absence of absolute dabs, and pictures that are simply simpering and silly are few and far between; while, on the other hand, the rooms are full of, without being overcrowded with, sensible, capable, well-meant, and well-executed work.

Mr. Millais, although not at his best, may be said to be adequately represented by a splendidly painted landscape, by a striking portrait, and by a characteristic "conversation" piece; Sir John Gilbert is as broad as rich, and as gravely magisterial as of yore in his excerpts from old English and from Venetian history; Mr. Elmore and Mr. Calderon show no signs of fading powers; Mr. Hodgson is Oriental; Mr. Erskine Nicol is Hibernically humorous; Mr. O'Neill is conscientiously, if not agreeably, true to himself; Mr. Ansell abates not one jot in the ingenious laboriousness which gained him long since substantial laurels; Mr. Leighton successfully commands our admiration, not only as a painter but as a sculptor; Mr. E. M. Ward returns pleasantly to his beloved reminiscences of the First Napoleon and the Third William; Mrs. E. M. Ward shows, in a delightful transcript from the child-life of the Princess Charlotte, that her accomplished pencil has lost nothing of its grace and of its *verve*. In portraiture Mr. W. W. Oulless is as forcibly life-like and intense, Mrs. G. F. Watts as thoughtful and nervous, and Mr. Baccani as truthfully refined, as ever. There are many grand and admirable landscapes and sea pieces from such masters as Virat Cole, as Brett, and as H. Moore—but where is Miss Clara Montalba? While Mr. J. O. Horsley, R.A., asks for our willingly-conceded suffrages for his approved examples of history and manners, his son, Mr. W. O. Horsley, makes a most brilliant first (or nearly first) appearance with a couple of contributions full of talent and fuller of promise; Mr. W. G. Orchardson shines with his usual brightness, and Mr. Pettie with unusual brilliance; Mr. A. Gow has been nobly ambitious, and, to some extent successful, in a scene from English Parliamentary history; Mr. Leslie, Mr. H. Stacy Marks, and Mr. Marcus Stone present us with works reflecting their own peculiar and pleasing idiosyncrasies; Mr. Herkomer—albeit not exceptionally strong—puts in a notable appearance; Mr. Fred Morgan has made a considerable advance, and Mr. Eyre Crowe (in the "Sanctuary") an amazing *pas en avant*, in artistic excellence; Mrs. Louise Jopling continues to do better; M. Fantin shows that he is as puissant in flower-painting as he has been in portraiture; Mr. Albert Moore, in his delicately imaginative *figurines*, still maintains his position as a prince among classically decorative artists; Mr. Armitage and Mr. Goodall adhere, and satisfactorily adhere, to the sternly dignified department in their vocation which they long ago elected to pursue; Mr. F. P. F. Poole proves that he has not yet lost his mastery over the mystically romantic in landscape and history; Mr. G. F. Boughton is still *facile princeps* in tender pastorals; and Herr Heinrich von Angeli, as the legitimate successor to Winterhalter, shows, in his superb portrait of the Imperial Crown Princess of Germany, that, in the genealogy of Court painters as well as of crowned heads, the maxim yet holds good—*Le Roi est mort; vive le Roi*.

We have said enough to make it clear that the visitor to Burlington House this year will be able to renew his acquaintance with a very large number of old familiar friends, whom he will find, for the most part, clad in their gayest attire, and who will welcome him with justifiably complacent smiles. He will discover but few veterans "lagging superfluous on the stage;" but, on the other hand, he will observe with much regret that Mr. W. P. Frith, R.A., is altogether absent from the exhibition; that Mr. E. J. Poynter, R.A., is only represented by a modern portrait of a lady, and by

his small "deposit" picture of a Fortune Teller; that Mr. Faed, R.A., is certainly below his usual mark; that Mr. Luke Fildes has been content with a single and unimportant contribution; that there is nothing from Mr. Israels, and nothing from the foreign Honorary Academicians; and that a French painter of English battle scenes M. Philippoteaux, has been preferred by the Council to an English practitioner in the same class of subjects, Mr. T. Jones Barker.

It is manifestly a task of extreme difficulty, in an assemblage of more than fifteen hundred works of art, to select from so vast an aggregate, we will not say one or two, but a group even of half a dozen pictures which, taken from every point of view, may be qualified as the best performances in the entire collection. Such a selection, however, when the mass of the contents of an exhibition do not rise above a medium degree of capacity, it is imperatively unnecessary to make; and it is thus, with a full sense of the responsibilities of artistic criticism, that we assign the foremost rank in the Academy display of 1877 to Mr. Edwin Long, A.R.A., for his superb "Egyptian Feast;" to Mr. Frederick Leighton, R.A., for his "Music Lesson;" to Mr. Frank Dicksee for his "Harmony;" and to Mr. Alma Tadema for his "Four Seasons." Among the sculptors the palm must, we think, be divided among Mr. Leighton for his "Youth Struggling with a Python;" M. Dalou, for his "Boulognaise Nursing a Child;" and Lord Ronald Gower for his admirable lifesize picture in bronze, "La Garde meurt et ne se rend pas," and his exquisitely touching statue in marble of "Marie Antoinette Going to Execution."

Descending from generals to particulars, we must first take the "Egyptian Feast," a work of very large proportion and crowded with figures. Obviously, Mr. Long's masterpiece will recall Mr. Poynter's famous picture of "Israel in Egypt," and will be contrasted with that famous example of learning and labour; but to our mind the "Egyptian Feast" will rather gain than suffer by the comparison. Mr. Long's draughtsmanship is, perhaps, not so academically accurate as Mr. Poynter's (and, indeed, the undraped female figure in the left-hand corner of the "Feast" might have been advantageously banished from a composition to which it renders no assistance and in which it does not throw a satisfactory light on the painter's knowledge of anatomy); but Mr. Long has, nevertheless, as a designer, a most flowing, supple, and harmonious line. He models his forms better than does Mr. Poynter; he is a warmer and more genial colourist; and he is much more fully imbued than is the learned painter with whom we must perforce compare him with the sentiment of female beauty and with the power of infusing variety of expression into the countenances of his personages. Mr. Long has drawn his inspiration from the well-known anecdote recorded by Herodotus, that in social meetings among the wealthy Egyptians it was customary at the conclusion of the banquet for slaves to parade before the assembled guests a bier on which was placed the wooden image of a corpse displayed after the manner of a mummy—less, however, the commentators think, as a ghastly and terror-inspiring *memento mori* than "to teach men to love one another and to avoid those evils which tend to make them consider life too long, when it is in reality too short." Herodotus adds that as the simulated corpse was brought round an attendant was wont to say, "Gaze here! Drink and be merry; for when you die, such will you be." But in noting this tradition Sir Gardner Wilkinson has not omitted to point out that the ancient Egyptians were naturally a lively people; that their view of death was not a gloomy one, and that their notions of dissolution were mainly connected with the prospect of a happy union with Osiris. There can be little doubt that the merely melodramatic effect of Mr. Long's "Feast" might have been considerably enhanced had the spectator been given to understand that the image on the bier was a real and not an artificial emblem of mortality. The actual presence of a skeleton at a banquet would scarcely fail temporarily to appal the boldest of revellers; as it is, the Egyptian merry-makers take the matter very philosophically, and seem to consider the apparition of the mummy as rather a good joke than otherwise. The value and the charm of the whole picture lie, first, in the wealth of archaeological learning displayed, but not pedantically insisted upon, in the architecture, the costumes, and the accessories; next, in the amazing variety of attitude and expression in the *dramatis personæ*; and, lastly, in the powerful manner in which the work is handled, and the brilliant but not obtrusive colour with which it is suffused.

The "Seasons"—"Spring" (117), "Summer" (118), "Autumn" (119), and "Winter" (120) form a magnificent quartette of Græco-Roman compositions in the very highest decorative style; and the series is calculated largely to increase the well-earned renown of Mr. L. Alma Tadema. To imaginative powers the painter has never made any claim; yet in these Seasons his allegory, albeit direct, extends far beyond the bounds of mere realism, and trenches on the verge of poetry. The furious "Bacchante," for example, who personifies "Autumn," is much more than Anacreontic. She is Pindaric; and there is so much culture, so much thoughtfulness, so much suggestiveness in the "Winter," that those who assert that there is as close a connection between poetry and painting as, according to Mr. Whistler, there is between painting and music, might qualify the "Winter," and, in a relative degree, the bathing scene of "Summer," and the vernal floridness of "Spring" as so many Horatian Odes translated into form and colour. The architectural details and the technical execution of these four pictures are, it is almost needless to say, of surpassing excellence. We shall have, on a future occasion, again to recur to Mr. Alma Tadema's contributions to the Exhibition; but for the present it must suffice to call attention to the four productions which undeniably form this year his *capi d'opera*.

Deferring, until we have subjected the picture to renewed inspection, Mr. Frank Dicksee's "Harmony" (14)—a work so thoroughly beautiful that it can well afford to wait awhile for detailed appreciation—we turn to Mr. F. Leighton's "Music Lesson" (209). The story narrated in the picture is a delightfully simple one. The scene is the interior of an Eastern harem, and the persons represented are only two in number—an Odalisque of, say, seventeen or eighteen, giving a lesson on the mandolin to a blonde and blushing little beauty of thirteen or fourteen. It is notorious that Mr. Leighton could essay if he chose, and has essayed time and again, much grander and more heroic themes than the one here expounded; but the vast majority of his admirers will, we should say, be thoroughly satisfied, for the nonce at least, with the pretty and pathetic story of the "Music Lesson." We qualify it as pathetic for the reason that the painter has instilled into the narration of his drama an indefinite yet unmistakable impression of the loneliness and isolation of these two girls mewed up in a seraglio, and who, but for a little tinkling of the mandolin and a good deal of sweetmeat-eating and cigarette-smoking, would lead—their fine clothes and sparkling jewellery notwithstanding—the dreariest of lives. The drawing of the two figures is as near perfection as modern academic draughtsmanship trained in the very best schools can be. The silky and

gauzy textures of the draperies are marvellously executed; and the only fault that the most fastidious hypercriticism could find in Mr. Leighton's work might be that the flesh tints are somewhat "waxy" in general tone. But a warm complexion is by no means a phenomenon among ladies of the harem, who take little exercise, bathe continually, and sustain existence mainly on the fumes of Persian tobacco and lollipops.

If we have not ranked Mr. Millais among the very foremost of the contributors to this year's picture show at Burlington House, it has certainly not been for the reason that we have detected any surcease of industry or any decline in the capacity of an artist who, with all his faults (and they are numerous and flagrant), must be held as the most gifted, the most facile, and the most vigorous painter of the age. But Mr. Millais has, for reasons best known to him, determined that he shall not be represented this year, at Burlington House at least, by any performance for which undisputed rank as a masterpiece can be obtained. His "Effie Deans," of which report speaks so enthusiastically, is not in the Royal Academy, to the saloons of which his principal contribution is a brilliant land or rather water scape, "The Sound of many Waters" (273). It may at once and frankly be conceded that this magnificent transcript of natural scenery is full of meritorious qualities, and that the production of such a work would suffice to place its author—had he done nothing more than this—in the foremost rank of modern landscape-painters; but, excellent as is the "Sound of Many Waters," it cannot be held as exceptionally superior to what has been accomplished by our landscape-painters *pur sang*—by the Constables, and Lees, and Creswicks of the past; by the Vicat Coles, the Bretts, and the Peter Grahams of the present generation. Mr. Millais's present landscape is, moreover, destitute of those daring eccentricities and those dazzling caprices in which he has habitually taken delight. It would be unfair to judge it from an exceptional standpoint: it is sensibly, firmly, and unostentatiously painted; and thus, seeing that it is brought into direct competition with the works of other professors of a branch of art in the pursuit of which the English are acknowledged to surpass all other nations, we are unable to say more of the "Sound of Many Waters" than that it is a splendid specimen of ability in a department in which equally splendid results have been attained by at least half a score of living landscape painters. And again, when in "A Yeoman of the Guard" (52), and "Yes" (409), we have the old original Mr. Millais before us, and are not obliged to contrast him with any other painter, it is impossible to assign conspicuously shining merit to the clever, audaciously glowing portrait of an ancient Beefeater, or to the equally clever but slight and carelessly executed group representing a brawny young fellow in an Ulster coat holding the hands of an interesting but far from beautiful young lady in a black silk dress. "Yes" is a very large picture, and will doubtless command a very high price; but it must be obvious to the meanest comprehension that Mr. Millais has not bestowed one pennyworth of thought upon it; that it has been conceived as it has been executed, in the most haphazard of fashions, and that it does not demand extended or exhaustive criticism.

Next week we shall resume in detail the examination of the leading pictures in a certainly most interesting Academy Exhibition.

THE GROSVENOR GALLERY.

The new Fine-Art Gallery, in New Bond-street, provided by the liberality and enterprise of Sir Coutts Lindsay, has this week been opened for the first public exhibition of pictures and sculpture. We here speak only of the building, which does much credit to the architect, Mr. W. T. Sams. The exterior presents an imposing façade of stone in the Italian Renaissance style, with a fine doorway which is an actual work of the famous Palladio, formerly belonging to the Church of Santa Lucia, at Venice. Through this doorway lies the entrance to a vestibule and corridor, flanked with green Genoa marble columns and Ionic pilasters, leading to a flight of steps 15 ft. wide, with pedestals for statues at each side. The principal gallery is 104 ft. long, 35 ft. wide, and 36 ft. high, having a coved ceiling painted blue, and sprinkled with gold stars, and a lantern above. The walls are divided into large panels by sixteen Ionic pilasters, fluted and gilt, which came from the foyer of the old Italian Opera-House at Paris, supporting an elaborate frieze and cornice running round the gallery. The walls are entirely covered with rich deep-toned crimson silk damask, upon which the pictures are hung, with an ample interval of space between the frames. The floor is of parqueterie, the tone of the woods being dark and the pattern subdued, so as not to attract the eye. Adjoining the principal gallery, and entered from the side by a handsome doorway, is a smaller room, 60 ft. long and 28 ft. wide and 30 ft. high, in every way corresponding with the larger apartment. The light is modified by a valarium worked from the exterior of the building. A sculpture gallery is provided, having a good light, with a wagon-headed ceiling, and a cornice supported on columns, and at the sides alcoves suited for statues, which are lighted from above. The water-colour room leads out of this sculpture gallery, and is about 40 ft. long, with a somewhat narrow form, well adapted for exhibiting works of this kind. A most important requisite of all picture galleries is that they should be safe from fire and water. The whole construction of the Grosvenor Gallery is of iron girders and plates supporting the floors, which are made fireproof by concrete. Additional safety is obtained by a complete set of hydrants distributed throughout the building. Warmth is provided for by a complete system of hot-water pipes from a calefactory in the basement; and, by means of a steam-engine, fresh air is drawn from a high level, to be supplied to the galleries through perforated metal skirting. In very hot weather the air will be cooled by means of a spray of water made to fall in the chamber below, from which the current of air is furnished. The restaurant is on the ground floor beneath the great gallery. It is a splendid salle à manger, having a row of scagliola marble columns with gilt Ionic capitals on each side, dividing the apartment into spaces where tables can be placed, inclosed by draperies or screens if required. The kitchen and offices are replete with every requisite. A large and powerful lift is provided for raising statues and pictures up to the gallery floor. Our notice of the exhibition opened this week is deferred for want of space.

We regret to announce the death of Mr. V. W. Bromley, a young and promising artist. Mr. Bromley was an Associate of the Institute of Painters in Water Colours, and also a powerful oil painter. His untimely death is a great shock to a large circle of friends.

An important purchase for the nation has just been made (says the London correspondent of the *Manchester Guardian*) out of the Chancery Fund. It consists of Mr. Leighton's bronze group, about which the art-world is talking as the most admirable work of the approaching exhibition of the Royal Academy. The amount paid is said to have been £2000.

THE GROSVENOR GALLERY OF FINE ART, NEW BOND-STREET.

VISIT OF THE PRINCESS OF WALES TO GREECE: IN THE PALACE GARDENS, ATHENS.

THE CIVIL WAR IN JAPAN: STREET SCENE AT YOKOHAMA.

THE PRINCESS OF WALES IN GREECE.

The visit of her Royal Highness the Princess of Wales to her brother, King George, at Athens, is an agreeable incident of these days, in the midst of war's alarms and diplomatic consternation. Our Special Artist, lately employed in Greece to furnish illustrations of the remarkable archaeological discoveries of Dr. Schliemann at Mycenae, has sent us one or two additional sketches of the Royal Palace and Gardens at Athens, with the Acropolis and its Parthenon, and the columns of the Temple of Zeus or Jupiter Olympius, conspicuously seen in the background. He contributes, also, the sketch of a lively scene of popular Greek life in the modern city of Athens—a street market-place frequented by men in the national costume selling flowers and bouquets to ladies and gentlemen whose personal taste and fancy, or their regard for an elegant fashion of Athenian polite society, may lead them to purchase these floral articles of trade. The wild and warlike dress of the Greek peasant, which bears some resemblance to that of a Scottish Highlander, looks rather odd upon a man so peacefully occupied in disposing of the prettiest and most innocent of nature's gifts. One would rather have expected this sort of petty commerce to have fallen into the hands of young women, as in Florence, Paris, and London. Another peculiarity, which has a very grotesque effect, is the arrangement of huge bouquets upon the branching extremities of a bough cut from a tree, or a pole with sticks fastened to it like branches, in such a manner as to suggest the notion that each bouquet is an enormous flower growing on its stem. This whimsical device is shown in our illustration of the bustling scene.

THE CIVIL WAR IN JAPAN.

Our Special Artist at Yokohama continues to sketch the unwonted incidents that have lately been occasioned in that commercial town, which is the residence of many Europeans, by the military expeditions sent forth to put down rebellion in the disturbed provinces of Japan. A detachment of the Imperial troops is seen in the native city, resting with piled arms and knapsacks in the common street, awaiting the hour for its embarkation on board the steamer, by which it will be conveyed to the seat of war. The ground is kept from intrusion by unarmed sentries, or policemen, whose long-skirted and wide-sleeved great coats, and their low-crowned caps, do not present a very martial appearance.

At the quarterly general court of the Royal Society for the Protection of Life from Fire, held at their offices, Ludgate-hill, yesterday week, the secretary reported the establishment of the society's fire-escape station at Wells, Somerset, the appliances being placed under charge of the Volunteer Fire Brigade, numbering twenty members. A resolution of thanks, accompanied with a donation of ten guineas, was read from the Council of Wells. Letters were read from the authorities of Harrow, Ilfracombe, and Truro, requesting that the society would organise means for the saving of life from fire in these towns. Resolutions were agreed to granting escapes to the respective localities so soon as proper arrangements are made for the working of the machines. The rewards voted in cases of saving life comprised a testimonial with two guineas to Police-Constable Hodge, 148, L Division, for his praiseworthy endeavours to save the life of an aged woman at a fire in Prince's-road, Lambeth; testimonial with £5 to Charles Ward, in the service of the East India Dock Company, for his prompt and courageous conduct at a fire at Thomas-street, Limehouse, on Jan. 6 last, when, at much personal risk, he saved the life of Margaret McGregor.

GLYCERINE JELLY.—PIESSE and LUBIN.
A white and delicate hand is the first attribute of beauty and civilisation. "The hand," says Sir Charles Bell, in the "Bridge-water Treatise," "distinguishes man from the brute. Be careful of it, for in polite society it is an index not only of the body, but of the mind. Too much cannot be said in favour of Glycerine Jelly for rendering the hands white, soft, and fair. Sold in Jars, 2s.—2, New Bond-street, W.

TOM-BOY!—PIESSE and LUBIN'S NEW PERFUME.—2, New Bond-street.
"Tom-Boy! Girls will be boys!"—Punch.
Kiss her gently, but be shy;
Kiss her when there's no one by;
Steal your kiss, for then 'tis sweetest—
Stolen kisses are the sweetest.

Sold in Flacons, 2s. 6d., 4s.; Cut Bottles, 21s. Copyright.

TURKISH PASTILS.—PIESSE and LUBIN.
"Through all my travels few things astonished me more than seeing the beautiful, sweet, aromatic clove or pastil used by them, which is said to impart an odour of flowers to the breath. I have never seen these breath lozenges but once in Europe, and that was at PIESSE & LUBIN'S shop in New Bond-street."—Lady W. Montague. In Boxes, 2s.; by post, 2s. 2d.

BREIDENBACH'S WOOD VIOLET PERFUME, fresh as morning-gathered flowers, 3s. 6d. 10s., 10s. per Bottle. Breidenbach's MACASSARINE, invaluable for preserving the Growth of the Hair, 1s. 6d., 2s. 6d., 5s. per Bottle. Of all Chemists, and the Makers, 167a, New Bond-street, W.

SALOPIAN.

HOUSE PROPERTY and INVESTMENT

COMPANY (Limited), 62, Cannon-street, London, E.C. (Seven doors east of the Cannon-street Station). Capital One Million, in 40,000 fully paid-up shares of 25 each. For the Purchase and Sale of Productive and Profitable House Property and Improving the Dwellings of the Working Classes on the self-supporting principle. Registered March 15, 1874.

DIRECTORS.
Henry Ayle, Esq., 6, Trinity-square, Tower-hill, and Castle-hill Lodge, Upper Norwood (Chairman London House Property Company); William Macdonald Baden, Esq., 11, Great St. Helen's; William Sutton Gover, Esq., 4, Queen-street-place E.C.; and Having House, Blackheath (Member of the London School Board).
Fountain House, Hartley, Esq., Addle-street, E.C. (Hon. Secretary London Sunday School Union).
William Smith, Esq., Oak Lawn, Beulah-hill, Upper Norwood.
Robert Parker Taylor, Esq., Adelaide-place, Lord's Bridge, (Director Lambeth Baths and Wash-House Company).
Edward Foster Underhill, Esq., L.L.D., Hampstead (Hon. Sec. Baptist Missionary Society).
Thomas White, Esq., Upper Thames-street, E.C.
SECRETARY.—Henry Gover, Esq., 40, King William-street, E.C.
MANAGER.—W. H. Baden, 92, Cannon-street, E.C.
ATTORNEYS.—John Thomas Belford, Esq., 13, King-street, Savoy; and Mecklenburgh-square (Chairman West Hill Park Committee); James Clarke, Esq., 1, Cedar-street, Chelsea; and H. Fleet-street, E.C. (Editor and Proprietor of "The Christian World"); Charles Kemp Dyer, Esq., J.P., St. Albans, Hertford, and Lloyd's.

BANKERS.—London and Westminster Bank, Lombard.
1. The first issue of 4000 fully paid-up Shares of 25 each has been allotted.
2. Applications are now being received for the second issue of 4000 Shares at 21 per share premium, 250 of which have been already allotted.
3. Sixty-four estates have been purchased at a cost of £119,500, and other purchases are in course of negotiation.
4. After making a full allowance for all repairs, repaid, loss of rent, and disbursements of terms in case of leaseholds, the income from the estates already purchased is expected to amount to nearly 8 per cent, besides profit on re-sales.
5. Shareholders, in addition to 5 per cent interest, will participate in the periodical bonuses, which it is expected will be declared by the Company from time to time.
6. Owners of eligible House Property, wishing to sell at a moderate price, should send particulars to the Secretary.
7. As the estate purchased will give a good profit return, it will have to be considered at what premium the third issue shall be offered to the public, so as to protect the interest of existing shareholders.
For full information apply to W. H. Baden, Secretary, of whom may be obtained approving notice of the first issue and explanatory pamphlet, entitled "Another Five Minutes' Talk about the House Property and Investment Company (Limited)," prospectus, and share application forms.

"FOR THE BLOOD IS THE LIFE."
CLARKE'S WORLD-FAMED BLOOD

PREPARED is warranted to cleanse the Blood from all impurities from whatever cause arising. For Scrofula, Eczema, Skin and Blood Diseases, its effects are marvellous. In Bottles, 2s. 6d. each, and in Cases containing six times the quantity, 10s. each, of all Chemists. Sent to any address for 50 or 100 stamps, by the Proprietor, F. J. CLARKE, Chemist, Lincoln.

stances inseparable from Poultices made with Linseed or
read. These spoil the linen, bedding, &c. dry up on the edges,
rapidly ferment, giving a most unpleasant odour; and no ad-
vantage can be placed on the quality and freshness of the
meat. This New Poultice is instantaneous, for it is ready
in a few seconds. Sold retail by all Chemists.
Wholesale, RIGGOLD and CO., 21, Southwark-street, London.

Large lots of French Guipure and Lace Curtains very cheap,
in 6s. 6d. per pair.

cessful with the smaller articles, I tried the larger, and now
all at home—viz., curtains, table-covers, dresses, &c., with
most satisfactory results.

For FEMALES these Pills are truly excellent, removing the
 distressing headache so very prevalent, depression of spirits,
 loss of sight, nervous affections, blotches, pimples and cold.

ASHDOWN and PARRY'S EDITIONS of STEPHEN HELLER'S WORKS are to be had of every Music-seller in Great Britain, Ireland, the Colonies, India, the United States of America; or will be sent post-free, at half price, on receipt of Post Office order or stamps. ASHDOWN and PARRY, Hanover-square.

STEPHEN HELLER'S PIANOFORTE COMPOSITIONS.—A COMPLETE CATALOGUE is now READY, and will be sent, on application, post-free, to any part of the world.—ASHDOWN and PARRY, Hanover-square, London.

ARTHUR SULLIVAN'S Celebrated Song, THE SAILOR'S GRAVE. Editions of this beautiful Song are now published for Soprano or Tenor (in F), and Mezzo-Soprano or Baritone (in E flat). Price 4s. ASHDOWN and PARRY, Hanover-square.

SONG SHOULD BREATHE OF SCENTS AND FLOWERS. By J. L. HATTON. Ashdown and PARRY have just published new Editions of this beautiful Song for Soprano in G, Mezzo-soprano in F, Contralto in E. Price 2s. London: ASHDOWN and PARRY, Hanover-square.

J. P. KNIGHT'S NEW GEMS OF SONG. THE WATCHMAN. C. bass, compass G to D; E flat, baritone. THE ANCHOR. F. bass, compass A to D, G for baritone. PEPIITA, the Merry Gipsy Maid. G, mezzo-sopr., A, soprano. Post-free, 2s. each.—W. MOSELEY, Jun. 70, Upper-street, E.

CHAPPELL'S ENGLISH 20-GUINEA or SCHOOL-ROOM PIANOFORTE with Check Action, in Canadian Walnut or Mahogany. This instrument combines good quality of tone and excellence of workmanship. Capable of enduring hard school practice without going out of tune. In Solid Oak or White Ash, 22 ga.; Rosewood or Walnut, 20 ga. 37 ga.

CHAPPELL and CO'S ORIENTAL MODEL PIANOFORTE. Iron Frame, Trichord throughout. Check Action, Seven Octaves, Solid Walnut Case, FIFTY-FIVE GUINEAS; or in Solid Mahogany or Black Walnut, with Check Action, FORTY-THREE GUINEAS; with Plain Action, THIRTY EIGHT GUINEAS.

Made expressly to withstand the heat and moisture of extreme climates. Every part that is liable to also secured with brass. The felt on the hammers, &c., is fastened with pins. The back and the silk frame are lined with perforated zinc to keep out damp and insects; and every precaution taken that has been suggested by persons who have had many years' experience in the care of musical instruments in India and China. Testimonials of the durability of these Instruments can be seen at 50, New Bond-street.

The price includes—1, Packing-cases of tin and wood; 2, A stable tuning hammer or key; 3, A tuning fork; 4, Some additional strings; 5, Book on Tuning and Preserving the Instrument; 6, And the Carriage to the Dock. Show-Rooms, 50, New Bond-street. Factory, Chalk Farm-road.

CHAPPELL and CO'S MIGNON IRON GRANDS with Transverse-String Bass, 15 ga. to 25 ga. The smallest Horizontal Piano made; length only 5 ft. 9 in.

CHAPPELL and CO'S THREE-YEARS' SYSTEM of HIRING HARMONIUMS from 10s. per year and upwards.

CHAPPELL and CO'S ALEXANDRE ORGAN HARMONIUMS from 4 ga. to 120 ga. Full Illustrated List free by post.

L'HARPE EOLIENNE, ORGUE DE SALON with eighteen stops, fourteen half sets of reeds, percussive action, double expression, pneumatic action, &c., of the finest workmanship. This model has been commended highly by all musicians who have tried it. Price 100g. CHAPPELL and Co., 50, New Bond-street.

CHAPPELL and CO'S ALEXANDRE ORGANS. The best imitation of real pipe organs yet produced. From 20 ga. to 120 ga. A number of these instruments returned from hire to be sold at greatly reduced prices for cash. Full descriptive Catalogue free by post. CHAPPELL and Co., 50, New Bond-street.

CHAPPELL and CO'S ALEXANDRE CHURCH MODEL HARMONIUMS with two rows of keys and 21 octaves of pedals, from 45 ga. to 180 ga. SHOW-ROOMS—49, 50, and 51, NEW BOND-STREET.

BOOSEY & CO'S PIANOFORTE ROOMS, 285, REGENT-STREET (Solo Address). Instruments by all the great makers, English and Continental Upright and Grand. Secondhand, from 217. New, from 231. The net price is marked upon each Piano in plain figures, and the terms of purchase upon the Three-Years' System. A great variety of Short Iron Grands, by Kaps and others, from 120.

BOOSEY & CO'S SHORT IRON GRAND PIANOFORTE 5 ft. long, seven octaves, trichord throughout, very durable, and with excellent tone. Cash price, 120; or, on the three-years' system, 25 lbs. per quarter. (Solo Address) 285, Regent-street.

BOOSEY and CO'S BRASS

MANUFACTURE OF WAR MATERIALS AT THE ROYAL ARSENAL, WOOLWICH.

MANUFACTURE OF TORPEDOES.

The Royal Arsenal at Woolwich, in which ten thousand hands are employed by her Majesty's Government to fabricate the artillery and ammunition for land and sea service, has lately been producing different kinds of torpedoes. The merits of the Whitehead torpedo were made, the other day, a topic of discussion in the House of Commons; and we had occasion to quote some observations thereupon its extraordinary destructive powers, when we gave an illustration of the new torpedo-vessel *Lightning*, which is to be armed with that most formidable weapon. The Harvey torpedo, the manufacture of which is shown in a series of Engravings presented this week, is designed for totally different purposes. It might be used with good effect, during the chase of one vessel by another of superior force, to give the former a chance of destroying its pursuer. The torpedo is encased in a wooden chest, which is buoyant, and can be set afloat by lowering it from the ship's deck with a windlass; after which, by the aid of a rope and one or two cork buoys, if required, it can be placed so as to drift or keep in the position for coming into contact with the enemy's ship. There is a lever projecting from the top of the chest at one end, which will descend immediately on being struck or pressed by the hull of the vessel to be destroyed; this lever sets in motion, at once, the mechanical apparatus attached to the "percussion bolt," which is charged with detonating powder. The torpedo charge of gunpowder is thereby ignited, and it is highly probable that a large hole will be made in the ship's side or bottom, causing her to sink without any more trouble. Our illustrations show only the processes which may be witnessed by ordinary visitors to the Laboratory Department of the Royal Arsenal. The interior construction of the torpedo, and the machinery connected with its percussion bolt, are not revealed to public inspection. Workmen are seen engaged in making the outer case and its fittings, the metal cylinder of the percussion bolt, and the cork buoys to serve in the practical application of this maritime weapon. The last-mentioned operation is also illustrated by one of our Engravings. The torpedo in question was invented by Commander Harvey, R.N. At the bottom of the same page we have introduced sketches representing particular stages in two other kinds of warlike ammunition, carried on likewise in the Laboratory Department of Woolwich Arsenal, for the supply of our Army and Navy. In the Rifle Shot and Shell Factory, annexed to this Department, but in a separate building with a furnace chimney 220 ft. high, the casting of Palliser shells is one of the most interesting kinds of work. The point of the shell is made intensely hard by a contrivance for its more rapid cooling than that of the iron in the body of the shell, which latter is made brittle, so that it may break up and scatter its pieces about when the shell has pierced the enemy's armour-plate. The final trimming, smoothing, and polishing must be done by huge grindstones, which are worked by steam; and the bronze studs, to fit into the grooves of the rifled guns, are lastly to be inserted in the side of each shell. Another subject of our illustrations is the manufacture of bullets, mixed lead and tin, for the Martini-Henry rifled small-arms. The metal, after leaving the furnace, is squirted forth in the shape of an endless rod, as thick as the intended bullets; these being not globular balls, but of an elongated conical form. The rod of soft metal passes very swiftly through a machine which cuts it up into short pieces, compresses one end of each piece into a cone, hollows the other end, and so produces the completed bullets with amazing rapidity. The rifles themselves are made in the Government Small-arms Factory at Enfield.

ASTRONOMICAL OCCURRENCES IN MAY.

(From the "Illustrated London Almanack.")

The Moon is near Jupiter during the morning hours of the 2nd, near Mars on the morning hours of the 5th, near Saturn on the morning of the 8th; she is near Venus during the evening hours of the 13th, near Mercury on the 14th, and near Jupiter again during the early morning hours of the 29th. Her phases or times of change are:—

Last Quarter	on the 5th	at 19 minutes after 11h	in the morning.
New Moon	" 13th	" 29 "	" morning.
First Quarter	" 20th	" 56 "	" morning.
Full Moon	" 27th	" 5 "	" morning.

She is nearest the Earth on the afternoon of the 17th, and furthest from it on the morning of the 5th.

Mercury at the beginning of this month is the most favourably situated for observation during the year. He sets on the 1st at 9h. 33m. p.m., on the 2nd at 9h. 35m. p.m., on the 3rd at 9h. 36m. p.m., on the 4th at 9h. 38m. p.m., and on the 5th at 9h. 39m. p.m., or 2h. 12m. after sunset on each of these days; on the 6th at 9h. 38m. p.m., or 2h. 9m. after sunset. This interval gradually decreases to 1h. 54m. by the 11th, to 1h. 21m. by the 16th, to 41m. by the 21st; the planet setting on these days at 9h. 30m. p.m., 9h. 5m. p.m., and 8h. 32m. p.m. On the 25th the planet and Sun set nearly together; from May 26 to July 18 he sets in daylight. He rises at the same time as the Sun on the last day. He is at his greatest eastern elongation (20 deg. 56 min.) on the 3rd, near the Moon on the 14th, stationary among the stars on the 15th, in his descending node on the 20th, near Venus on the 23rd, in inferior conjunction with the Sun on the 26th, and in aphelion on the 30th.

Venus sets on the 9th at nearly the same time as the Sun; on the 21st at 8h. 12m. p.m., or 21m. after sunset; and on the last day at 8h. 39m. p.m., or 36m. after sunset. She is in superior conjunction with the Sun on the 7th, near the Moon on the 13th, and in ascending node on the 25th. She is due south on the 1st at 11h. 52m. a.m., and on the last day at 26m. p.m.

Mars is a morning star, and rises on the 1st at 1h. 50m. a.m., on the 11th at 1h. 28m. a.m., on the 21st at 1h. 3m. a.m., and on the last day at 0h. 39m. a.m. He is near the Moon on the 5th. He is due south on the 1st at 6h. 9m. a.m., on the 15th at 5h. 49m. a.m., and on the last day at 5h. 23m. a.m.

Jupiter rises on the 1st at 11h. 38m. p.m., on the 10th at 11h. 1m. p.m., on the 20th at 10h. 19m. p.m., on the 30th at 9h. 36m. p.m. He is near the Moon on the 2nd, and again on the 29th. He is due south on the 1st at 3h. 38m. a.m., on the 15th at 2h. 40m. a.m., and on the last day at 1h. 51m. a.m.

Saturn is a morning star, and rises on the 1st at 3h. 10m. a.m., or 1h. 24m. before sunrise; on the 11th at 2h. 32m. a.m., or 1h. 45m. before sunrise; on the 21st at 1h. 53m. a.m., or 2h. 10m. before sunrise; and on the last day of the month at 1h. 16m. a.m., or 2h. 36m. before sunrise. He is near the Moon on the 8th; due south on the 1st at 8h. 39m. a.m., on the 15th at 7h. 48m. a.m., and on the last day at 6h. 49m. a.m.

At a meeting of the University Extension Committee at Sheffield on Monday the results of the working of the system for three years were made known:—3566 tickets had been sold for the classes, the income amounting to £1586, and the expenditure to £1506. So successful has this scheme been that a magnificent building, in which lectures and classes will be held, is about to be erected at a cost of nearly £20,000. It is the gift of Mr. Mark Firth.

MUSIC.

HER MAJESTY'S THEATRE.

Mr. Mapleson began his new season, according to previous announcement, on Saturday last, at Her Majesty's Theatre, in the Haymarket; this having been the first use made of the building for its destined purpose, since its erection on the site of the old theatre which was burnt down, in December, 1867. The season of Her Majesty's Opera in the year following was carried on by Mr. Mapleson at Drury-Lane Theatre, where that gentleman continued to direct the same establishment during each following season, except those of 1869 and 1870, until the present year. The two last-named years formed the period of the fusion of the two opera-houses, at Covent Garden Theatre, under the joint management of Mr. Gye, of the Royal Italian Opera, and Mr. Mapleson; Her Majesty's Opera, at Drury-Lane Theatre, having, in 1870, been carried on by Mr. George Wood.

This year's opening of Mr. Mapleson's season was an event of much interest, for it brought him back to the very ground which he had worthily occupied for several years, until the burning of the old theatre. During that period some grand and interesting works were brought forward. It was to Mr. Mapleson that we owed the first production in this country of Cherubini's "Medea," and of an Italian version of Gluck's "Iphigenia in Tauris." The fine performance of Mdlle. Titiens as the heroine in each opera was a memorable feature. Mozart's "Seraglio" ("Die Entführung aus dem Serail") Weber's "Oberon," Nicolai's "Merry Wives of Windsor" ("Die Lustigen Weiber von Windsor") were also finely rendered during that period.

It is gratifying to find that Mr. Mapleson in his prospectus (as already stated in our summary thereof) proposes this year to revive "Medea," in addition to producing Gluck's "Armida."

The theatre presents a brilliant aspect. The audience part is well shaped and proportioned, and the acoustic properties are good. The fittings and decorations—including bright amber-coloured drapery to the boxes—are in excellent taste, and the theatre is thoroughly well lighted only by the large chandelier in the centre of the ceiling. The footlights are lowered so as to cast a bright reflection on the stage without, as usual, interposing a glare to the eye of the spectator. The various entrance approaches afford easy access to the different parts of the house; these features, and a considerable enlargement and improvement of the stage, contrasting favourably with the construction and arrangements of the old theatre.

The opera with which Her Majesty's Theatre was opened on Saturday evening was "Norma," the cast of which was so nearly identical with that of many past performances that slight comment may now suffice. Again Mdlle. Titiens was the representative of the Druid priestess, her first entry having been greeted with an enthusiasm which showed how strong were the recollections of her many fine performances in the old theatre, and afterwards at Drury Lane. Again the grand declamation and tragic pathos of the artist were successfully displayed. Mdlle. Alwina Valleria was an excellent Adalgisa, Signor Fancelli sang with great effect as Pollione, Signor Brocolini was an efficient Orovoso, and the subordinate characters were filled by Mdlle. Filomena and Signor Rinaldini.

A strong association with the locality was offered by the appearance of Sir Michael Costa on that very spot where he officiated as conductor during many past seasons in the old building. The first appearance of the distinguished chief d'orchestra in the new theatre was hailed by a special greeting; and he, as well as the principal singers and Mr. Mapleson, were called before the curtain at the close of the opera. As usual on opening or on closing nights, the National Anthem preceded the performance.

On Tuesday "Il Trovatore" was given, with the first appearance of Signor Millet Cabero (as Manrico), and of Mdlle. Nandori (as Leonora), neither of whom produced any impression. On Thursday Mdlle. Salla was to make her first appearance as Amelia in "Un Ballo in Maschera," and to-night (Saturday) a performance of "La Traviata" is to bring back Madame Christine Nilsson as Violetta.

ROYAL ITALIAN OPERA.

The specialty of last week at the Royal Italian Opera was the first appearance, on Saturday, of Mdlle. Albani, whose return drew a crowded and brilliant audience. This charming artist, who has recently achieved so triumphant a success at Paris, met with an enthusiastic reception on her return to the locality where she first made her fame, in the season of 1872. As Elvira in "I Puritani" Mdlle. Albani again displayed those powers of sympathetic expression and brilliant execution which have before rendered the character one of her most attractive representations. Signor Gayarré, as Arturo, sang with effect in the more declamatory passages; Signori Graziani and Baggiolo were again respectively the Ricardo and Giorgio, and Mdlle. Ghiotti was efficient in the small part of Enrichetta, the fugitive Queen.

The promised appearance of Mdlle. Marimon, on Thursday week, already more than once postponed on account of indisposition, was further deferred; and again Mdlle. Smeroschi proved her value as an efficient substitute, as Norina in "Don Pasquale," the cast of which included M. Capoul and Signori Cotogni and Ciampi respectively, as Ernesto, Dr. Malatesta, and Don Pasquale.

The five performances of this week began, on Monday, with a repetition of "Les Huguenots." On Tuesday Mdlle. Albani made her second appearance this season, and repeated one of her most charming performances, that of Amina, in "La Sonnambula," the cast of which included M. Capoul as Elvino, and Signor Baggiolo as Count Rodolfo. On Thursday, "Un Ballo in Maschera," was to be repeated; yesterday (Friday) Mdlle. Avigliana was to make her first appearance as Donna Elvira in "Don Giovanni," the occasion bringing back Mdlle. Thalberg as Zerlina. For this (Saturday) evening, "Il Flauto Magico" is announced, with the first appearance of Signor Caracciolo in the small part of Monostatos. The return of Madame Adelina Patti is promised for May 15, as Dinorah.

The first Floral Hall concert of the season takes place this (Saturday) afternoon, the programme including the co-operation of Mdlle. Albani and other principal members of the Royal Italian Opera Company.

THE BACH CHOIR.

As already briefly recorded, the second of the two concerts announced by the Bach Society took place last week, when Bach's motet, "Ein feste Burg," and Gade's dramatic cantata, "Comala," were performed for the first time in London. The motet consists of pieces for solo voices and choruses, with orchestral accompaniments. As usual, both with Bach and Handel, the choral writing far transcends in grandeur and power that for the solo singers. In the cantata referred to the opening chorus, with its jubilant effects and masterly incidental treatment of the chorale subject, is the principal feature of the work. Admirable also is the movement in six-eight time in choral unison ("If all the world"), in which the old

church melody is given out by the voices in unison, the orchestra being employed in a figurative accompaniment. The incidental solo pieces in the cantata were well rendered by Madame Lemmens-Sherrington, Mr. Cummings, and Herr Henschel. A special feature in this respect was the last-named singer's excellent delivery of the florid solo, "All men born of God," the effect of which is finely contrasted by the sustained melody of the chorale sung by a semi-chorus of sopranos.

Herr Gade's cantata is based on a dramatic poem by Dr. Klengel, after Ossian; the adapted English text being by the Rev. J. Troutbeck. The composition has much of the tone of northern romanticism of which the subject is suggestive; the indication thereof being effectively announced in an orchestral introduction, which, although brief, is characteristic, and contains some good contrasts. The pieces for solo voices are few. Of these the most effective was the scene where Comala is awaiting the return of Fingal. This was very well rendered by Madame Lemmens-Sherrington; the passages for Fingal having been finely declaimed by Herr Henschel. Subordinate solos for the characters of Dersagrena and Melicoma were assigned respectively to Mdlle. A. Riego and Mdlle. Gowa.

The choral movements contain some very dramatic and occasionally expressive writing. Specially noticeable are those for male voices, "Up for the fight" and "Far fled is the foe;" the chorus of spirits, "Our pathway is the storm;" and the lament for female chorus (with bass solo), "O sing not loud triumphant songs." These features received their full importance from the careful singing of the choir, and the fine orchestral playing in the performance referred to. The programme of the concert included Handel's coronation anthem, "The King shall rejoice;" a skilfully-written (unpublished) eight-part motet, "In Thee, O Lord!" by the late Sir W. Sterndale Bennett; and the "Sanctus" from Palestrina's "Missa Papae Marcelli."

Mr. Otto Goldschmidt conducted, and Mr. T. Pettit presided at the organ.

The last concert but one of the Sacred Harmonic Society's forty-fifth season took place yesterday (Friday) week, when Sir M. Costa's "Eli" was given, conducted by the composer. The occasion derived a special interest from its having included the reappearance of Mr. Santley in oratorio, after an interval caused by his engagement in Mr. Carl Rosa's Opera Company. The singer met with a cordial greeting. The other principal vocalists were Mesdames Sherrington and Patey, Mr. V. Rigby, and Mr. L. Thomas.

That meritorious vocalist Miss Palmer gave an evening concert last week, at which, among other interesting features, were introduced Brahms's "Liebeslieder Walzer," for vocal quartet and pianoforte duet.

Last Saturday's New Philharmonic Concert included a performance of Rubinstein's "Ocean" symphony, of which we have already spoken in noticing the Rubinstein concert at the Crystal Palace a fortnight ago.

At last Monday's concert of the Philharmonic Society a new symphony, in C, by M. Silas, was performed for the first time, and well received. Of this work we must await another opportunity to speak in detail. At the same concert Herr Hausmann, from Berlin, obtained a genuine success by his fine performance of Raff's concerto for violoncello. The player made his first appearance at the Crystal Palace last Saturday.

Herr Rubinstein gave the first of his series of pianoforte recitals at St. James's Hall on Monday afternoon, when he played a long and varied selection of pieces, with those special powers and that marked individuality of style for which he is so renowned.

Herr Franke, the violinist, gave the third of his series of Chamber concerts, on Tuesday evening, in the concert-room of the Royal Academy of Music; Miss Ellen Horne (vocalist) gave her evening concert at St. James's Hall on Wednesday evening; and on Thursday evening the concert of the well-known pianist, Miss Zimmerman, took place in the same locale; where, yesterday (Friday) afternoon, Mr. Charles Hallé began his new series of pianoforte recitals.

The annual performance of "The Messiah" by the Royal Society of Musicians, with Mr. Cusins as conductor, was to take place at St. James's Hall yesterday (Friday) evening. The solo vocalists announced were Mrs. Osgood, Miss Butterworth, and Madame Patey; Mr. W. H. Cummings and Mr. Lewis Thomas.

The event of next week will be the opening of the Wagner Festival, at the Royal Albert Hall, on Monday evening, followed by performances on Wednesday evening and Saturday afternoon—the proceedings extending to the following week. Rehearsals have been going on for several weeks, under the direction of Herr Richter and Mr. Dannreuther, and all is now ready for the opening concert, the programme of which includes a selection from "Rienzi," "Tannhäuser," and "Die Rheingold."

THEATRES.

Mrs. John Wood has imitated the example of other managers in falling back on the revival of older pieces to repair the want of attractiveness in recent new dramas. In this way Mr. Charles Reade's romantic drama of "The Wandering Heir" was reproduced at St. James's on Saturday last. The work has suffered compression since its former representations, and has been improved by abridgment. Mrs. Wood, who on previous occasions had won much reputation by her performance of the part of Philippa Chester, has increased it on the present by the improvements which she has introduced into conception and execution of it. We take it for granted that the reader is aware that Richard Annesley, the hero, is an historical character, and that Mr. Reade had depended for the popularity of the subject on its resemblance to the case of "the Claimant." Whether there be any element of the kind on that account at the present time it would be hard to determine; certain it is that the audience of Saturday manifested the greatest interest in the fortunes of the hero, and that it was sustained to the conclusion of the piece. The fact may be partially accounted for by the excellence of the acting, which was in all respects deserving of the applause which it received. In all probability the drama will keep the house open for a considerable time to come.

M. Offenbach's "Orphée aux Enfers" has been produced at the Alhambra with striking success.

The performances of a small band of Indian jugglers and snake-charmers prove an attractive supplement to the general programme of entertainments at the Aquarium.

The *London Gazette* notifies that Earl Annesley has been chosen an Irish representative peer in the room of the Earl of Bandon, deceased.

Mr. W. W. Robinson, solicitor, of Oxford, has been elected Coroner for the central district of Oxfordshire, in the place of the late Mr. William Brunner.

ROYAL INSTITUTION LECTURES.

CHEMISTRY OF THE SUN.

Professor Gladstone, Ph.D., F.R.S., began his second lecture on the 17th ult., by alluding to our knowledge of the nature of the sun obtained by the telescope alone, especially referring to the red flames, corona, and other phenomena observed during an eclipse, and the mottled appearance, likened to willow-leaves by Nasmyth and to rice-grains by Stone. He then gave a summary of the interesting results of the researches of Lockyer, Janssen, Young, and others, who employed the spectroscopic with the telescope in a variety of very ingenious apparatus. The nucleus of the sun is now believed to emit rays of every degree of refrangibility, and to consist of a globe of light specific gravity (half as much again as that of water), indicating a vast conglomeration of condensed vapours. The first atmosphere, termed the "photosphere," consists of clouds of vapours of sodium, iron, and about seventeen other metals, together with hydrogen; these clouds being sometimes heaped together in very bright masses, termed "faculae" (little torches), or giving way to colder spaces, where the absorption of light is greater, presenting the appearance known as "sun-spots." Outside the photosphere is another luminous red atmosphere, visible only at the edge of the sun, named by Lockyer the "chromosphere." It is composed of hydrogen and vapours of the more volatile metals, sodium and magnesium, the vapours of iron and other metals occasionally rising in it. The visible limit of this red zone, about five or seven thousand miles, is determined by the cooling of the glowing gas; but it probably extends two hundred thousand miles beyond the chromosphere. Red flames of hydrogen, fantastic in form, some about 130,000 miles high, rise out of the zone, and are incessantly moving, some at the rate of 147 miles a second, indicating violent storms. During a total eclipse of the sun an enormous expanse of faint white light, termed the "corona," appears far beyond the red flames. This is attributed partly to reflected solar light; but Dr. Gladstone stated that it exhibits a yellow ray in its spectrum, also found in that of the chromosphere, which ray has hitherto not been produced by any terrestrial substance, but which is said to be identical with one of the rays observed in the spectrum of the aurora borealis.

GENERATION OF HEAT.

Professor Tyndall, D.O.L., F.R.S., began his second lecture, on the 19th ult., with additional experimental illustrations of the thermo-electric pile; the movements of the galvanometer, indicating heat or cold, being made visible by reflections of light from a small mirror attached to it. The generation of heat by frictional electricity was next shown, first by the electrophorus. It was proved, by weighing, that more force is required to lift the lid from excited indiarubber than from unexcited, the excess of force resolving itself into a spark. The discharge of the electric machine is the result of a similar excess of power, due to the action of the muscles of the person turning it. The Professor then showed that more force is required to lift one side of a coil of over-spun wire when the ends are connected, than when unconnected, with a voltaic battery; this excess of force being converted, first into electricity, and next into heat. In like manner, when a bar-magnet was thrust through a hoop wound round with wire, the push and pull were greater when the ends were connected than when unconnected. A flat coil experienced very sensible resistance when moved between the poles of the electro-magnet only when its ends were connected with the battery. A silver medal fell slowly through the magnetic field between the poles; and the oscillations of a copper disc, suspended like a pendulum between the poles, were quelled when the magnet was made by connection with the battery; and some fusible metal was melted by the heat generated by the excess of force used to overcome resistance. The Professor also showed that enough heat is developed by the magneto-electric machine to fuse platinum. Proceeding next to chemical action, he showed, first, that the heat of the feeble flame of the oxy-hydrogen jet could fuse platinum, and burn a file, a watch-spring, and a diamond; and, after explaining that the rusting of metals is a low combustion due to the action of oxygen, the Professor explained how the Rangoon and Singapore electric cable was saved from destruction by Dr. Siemens, who, by means of his electric thermometer, ascertained that the temperature of the middle of the coil was 86 deg. Fahrenheit, while the outside temperature was 60 deg.; and that the heat was rising at the rate of 3 deg. a day.

PHILOSOPHY OF SPINOZA.

Mr. Frederick Pollock, M.A., in his discourse at the evening meeting on the 20th ult., stated that Baruch, or Benedict de Spinoza, born at Amsterdam, in 1632, was the son of a Portuguese Jew; that, after studying theology and philosophy, he doubted the authority of the Jewish writers; that, in consequence, he narrowly escaped assassination by a zealot; that he was excommunicated; that he supported himself by preparing excellent glasses for optical purposes; that he preferred a retired life to a professorship at Heidelberg, and died in 1677. His chief philosophic writings, not published till after his death, show that the sources of his doctrines were the Jewish peripatetic school (such as Ibn Ezra and Maimonides), the Neo-Platonists (through Giordano Bruno), and Descartes. The fundamental conception of the unity and uniformity of the world was held by Spinoza in both a speculative and scientific aspect. As to the relation of mind to matter, he held that there is an exact parallelism of mental and material events; not by a pre-established harmony, but as two aspects of the same thing. No link in the chain can be a link in the other. This is the opposite of materialism. The psychology of Spinoza, such as the complexity of mind, the law of association, and the analysis of the passions, was shown to be in harmony with the modern theory of evolution. In his ethical doctrines the self-preserving effort is the spring of action. This does not lead to a system of selfishness; since it is given, as a fact of experience, that man is a reasonable and sociable animal, and must therefore seek his own welfare in that of society; and a parallel exists between Spinoza and the Stoics in their conception of morality. His principle of the uniformity of human action was described as "reasonable service," and not fatalism—"Frei, und Eins mit dem Gesetzt" (free, and one with the law). Spinoza's philosophy was not seriously studied in England in the last century; it was condemned by Dutch theologians, but taken up in Germany by Lessing, and influenced Goethe and the disciples of Kant—Fichte, Hegel, and others. It was introduced into England by Coleridge, and in our own day is set forth by Matthew Arnold, Froude, Clifford, and other philosophers, and has been scientifically applied by Huxley and G. H. Lewes. Spinoza did not found a school, but started vital ideas. Systems are the perishable body of philosophy; ideas are the living souls.

BABYLONIAN LITERATURE.

The Rev. Archibald H. Sayce, M.A., of Oxford, gave the first of a course of three lectures on the 21st ult. He began with an account of the gradual decipherment of the ancient cuneiform inscriptions, begun by Grotefend in 1801, and successfully carried on by Burnout, Raak, Rawlinson, Lassen, and others. The interest was greatly increased by the dis-

covery of a great library at Nineveh, not of books, but of tablets of burnt clay, relating to all branches of human knowledge, which, moreover, revealed the existence of an ancient language, that of the Accadians or primitive Chaldeans, the builders of the great cities of Babylonia, the inventors of the cuneiform system of writing, and the originators of the art and civilisation of which not only the Assyrians were the heirs, but the Hebrews and Greeks, and eventually ourselves. The monarchs of the seventeenth century B.C., who styled themselves Kings of the land of Accad, formed libraries, "towns of books," the most famous being one established by Sargon I. at Agané, noticed by Berosus, who describes its arrangements. The early history of this Sargon, who was a conqueror, resembles that of Moses and Romulus. At the Assyrian conquest by Sennacherib, the libraries were carried away, Babylonian literature declined, and intellectual activity was transferred to Assyria, where books were eagerly sought for and copied, and new libraries founded, literature being warmly patronised by Sardanapalus and other sovereigns. Most of what we know of the Babylonians is derived from the relics of the library of Assur-bani-pal, at Nineveh, discovered by Layard in 1850, the value of which was at once recognised by Sir Henry Rawlinson and studied; and many interesting tablets were unearthed by the late Mr. George Smith. In the latter part of the lecture Mr. Sayce commented upon the historic results of these researches, reading several interesting extracts from the great epic of Gilgamesh, the prototype of Hercules, and other specimens of the historic and romantic literature of Babylonia, the influence of which is apparent in Greek mythology. The chronological tables are specially valuable, giving much accuracy to the ancient history of Asia.

CHEMISTRY OF THE SOLAR SYSTEM.

Dr. Gladstone, in his third lecture, given on the 24th ult., described the results of recent researches into the chemistry of the sun by additional remarks upon the red flames or prominences, and showed by experiments how their chief constituent, hydrogen, from its lightness, would rise above other gases and vapours. The absence of mercury and other metals in the solar atmosphere, he said, may be due either to their density in the gaseous state being too great, or to their boiling point being too high, to admit of their rising beyond the region of the luminous cloud. As far as we know at present, from the absorption lines of the solar spectrum, there are many other substances not yet recognised; but there is no indication of oxygen or any other non-metallic element, except hydrogen. The coloured vapours of chlorine, iodine, bromine, and sulphur are absent; but some of them may be present in combination with metals. The spectra of some of these elements, separately and in combination, were exhibited. Proceeding to the consideration of the solar system, Dr. Gladstone stated that it has been ascertained that the planets Mercury, Venus, and the Moon reflect the light of the sun little, if at all, modified by any atmosphere. The appearance of Mars leads to the supposition that its atmosphere contains aqueous vapour, like the earth. Jupiter and Saturn possess very dense atmospheres, giving evidence of absorption. The spectrum from the light of Uranus is very remarkable; but its strong absorption bands, as well as those in the spectrum of Neptune, are not at present understood. The visibility of comets is attributed to the reflected light of the sun; but, as Dr. Gladstone stated, Dr. Huggins has shown that their heads are self-luminous, indications being given of the presence of an incandescent gas, probably carbon or one of its compounds. Among the illustrations, the spectrum of the glowing gas between the carbon points of the electric lamp was cast upon the screen. This difficult experiment was specially performed in order to give evidence of a carbon spectrum. The carbon points themselves were shaded by brass screens; and the light from the electric arc sent through the prisms produced a spectrum, with numerous bands supposed to be due to carbon.

GENERATION OF HEAT.

Professor Tyndall began his third lecture, on the 26th ult., with several additional illustrations of the very intense heat generated by chemical combination. These included the combustion of bark-charcoal in a current of oxygen, the sparks of which swept round in brilliant circles; that of similar charcoal placed on saltpetre, producing a volcano of sparks; and that of potassium thrown on water, when the metal combined with the oxygen of the water, and the hydrogen separated from it burst into flame, with a small explosion. The generation of heat in the voltaic battery was next explained and illustrated. In a Grove's cell the zinc is burnt by the action of acidulated water; and an electric current is produced, its final form being heat, the origin of which is considered to be the overcoming something tantamount to friction. Thus, when the electric current was sent through continuous platinum wire in front of the table, and copper wire mounted beside it, all remained cool; but when the copper wire—a good conductor—was removed the platinum wire immediately reddened. When pieces of platinum and copper wire were joined end to end the platinum became red and the copper remained black. The Professor then demonstrated that in the battery the solution of a definite amount of zinc produces invariably the same definite amount of heat, in perfect accordance with the law of equivalence—the heat of the combustion being, by means of the conducting wires, capable of being conveyed far away from the place where the fuel is burnt. So likewise in the animal body, nutritive blood passing through muscle is burnt, and there produces heat. The heat of a contracted muscle was demonstrated by Becquerel; and a rise of ten degrees has been observed in cases of tetanus. This was still further illustrated by Professor Tyndall's lifting and letting fall a weight, and his explaining the analogy of the principle involved in the actions to those of the voltaic battery and the magneto-electric machine. The principle of Faraday's voltameter, based upon the quantity of hydrogen evolved and zinc consumed in a battery, was also elucidated. After showing how the magneto-electric machine had been utilised by Froment, the lecture concluded with an ingeniously-devised experiment illustrating the way aqueous vapour is condensed into clouds by the cold produced by the rarefaction of the air in the higher strata of the atmosphere.

ARCTIC LIFE.

Dr. John Rae, at the weekly evening meeting on the 27th ult., gave a discourse on some of the results of his observations on animal life, made during his residence in Arctic regions, illustrated with diagrams, a fine collection of furs lent him by Mr. Ince, and a part of the natural history collection of H.M.S. Discovery. He began by describing the punctual migration northward of various animals in the spring, including the reindeer, musk-ox, wolf, aquatic birds, lemmings, spiders, and flies. He then commented on the habits of the two house-building animals, the musk-rat and the beaver, explaining their mode of working, and their ingenious arrangements for ventilation and storing food for winter. The beaver strikes on the ground with his tail to give an alarm, and supports himself with it while walking. There are five kinds of foxes—the red, cross, silver, Arctic white, and Arctic blue. The skin of a silver fox sometimes sells for £50; that of a red fox for about

20s. or 25s. In respect to the sagacity of the animal, Dr. Rae explained how a fox will carry off the bait of a gun-trap without injury to himself. Comments were then made upon the great value of the reindeer, every part of the animal being available in Arctic life. It is only the superstition of the Eskimos which prevents its domestication. Hibernating animals were noticed, as well as the habits of bears and walrus, and several very interesting details were given of the seals. The Eskimos themselves were classified into three groups; those from the McKenzie river, westward to Behring Strait, live in wooden houses; those from the McKenzie river, eastward to Hudson's Bay, construct snow huts; and those of Greenland dwell in houses built of earth, stones, and bones. Of the opinions that these people have migrated from the south, from America, or from Siberia, Dr. Rae prefers the last, for various reasons. Our limited space prevents us from giving details respecting the habits and modes of life of these interesting people, whom Dr. Rae described as skilful workers, hunters, and fishers. They are a cheerful, gossiping race, fond of amusement and music, cleanly, amiable in their domestic relations, and truthful; their rare falsehoods being somewhat justifiable. They often show much delicacy of feeling, and gratitude, declining reward for their own little acts of kindness. They believe in the existence of a good and an evil spirit, and endeavour to please the former that he may defend them from the latter. "Surely," said Dr. Rae, "such a people merit a higher place amongst the uncivilised races than has been hitherto awarded them."

BABYLONIAN LITERATURE.

The Rev. A. H. Sayce began his second lecture, on the 28th ult., with a summary of the Accadian or Chaldean legend of the deluge, corresponding in many points with that in Genesis. Susuthrus, "the sun of life," warned by Hea, the god of the deep, that the wickedness of men was about to be punished, according to command built a ship 600 cubits long and 60 broad. He entered into it with his people and all the beasts of the field, and all life was destroyed. In due time he sent out, first a dove and then a swallow, which returned. When the raven did not return he drove forth all the animals, built an altar, poured forth libations of wine, and was translated into heaven, like Enoch, his people settling in the plains of Babylonia. The legend of the wars of the Titans, or giants, with the gods was next noticed, followed by that of the presumptuous erection of the tower of Bab-el, or "the gate of the god" (the name afterwards corrupted into "Babel," to confound). Its remains were known as Birs-i-Nimrud. Many of the Chaldean myths are of solar origin—and a very singular one is the war of the seven evil spirits, or storm-clouds, against the moon—evidently relating to an eclipse. Another legend describes the descent of Istar, the goddess of love and queen of night, into Hades, "the land from whence there is no return," to recover her beloved Tammuz. On her detention all the upper world stands still. Eventually, orders are given to unveil the tablets of destiny, to give Istar to drink of the waters of life, and to guide her back through the seven gates of the infernal world, and to restore all the ornaments of which she had been deprived. The influence of these poems lasted long after the extinction of the language in which they were written. The Accadian hymns were next noticed, and extracts from one of praise to the Sun-God and one of penitence were read, showing their similarity to the Hebrew Psalms and the hymns of the Sanscrit Rig-Veda. The following words occur in the latter:—"The sin that I have sinned to blessedness turn; my transgression let the wind carry away. . . . My transgressions are ever before me." These religious poems were collected and formed the authorised Babylonian prayer-book. Mr. Sayce also noticed the evidence of the prevalence of sorcery, such as charms, exorcisms, and spells, to avert diseases and other evils, as well as of a reformation from such superstitious practices, together with a renaissance of literature, resembling that of our fifteenth century. The discoveries in Babylonia and Egypt certainly show that ours is not the first age of civilisation.

Mr. D. Mackenzie Wallace on Friday next will give a discourse on Intellectual Movements and Secret Societies in Russia. On Saturday next Mr. Walter H. Pollock will begin a course of three lectures on Modern French Poetry.

WRECK OF A VESSEL OFF YARMOUTH.

The Norwegian barque Suez, bound from Norway to the port of Rochelle, in France, with a cargo of deals, was wrecked off Yarmouth on Thursday, the 19th inst. It was about two hours before daybreak, the sea running strong, with an easterly gale of wind, when the vessel ran upon the outside of the southern Scrooby Sand. The master seems to have mistaken his position, which he reckoned forty miles to the east of the Lemon and Ower Sands. The rudder was knocked away, and it was necessary to cut away the foremast and mainmast to prevent the vessel falling on her beam. In doing this work the carpenter was washed overboard and drowned. At daylight the Yarmouth life-boat, Mark Lane, followed by the Caiator life-boat, went to the vessel, by which time her bottom had been knocked out and she was full of water. The crew got off the wreck into the life-boat, and the flood made the vessel float off the sand. The steam-tug Comet then took the vessel in tow and beached her to the south of the Wellington Pier. The crew were landed and taken to the Sailors' Home. The value of the ship was about £1000, and cargo £1500; and the vessel was insured for £800. Endeavours were made to save the carpenter, but without effect. Our illustration, from a sketch by Mr. E. Hayee, shows the position of the vessel lying fast on the sandbank.

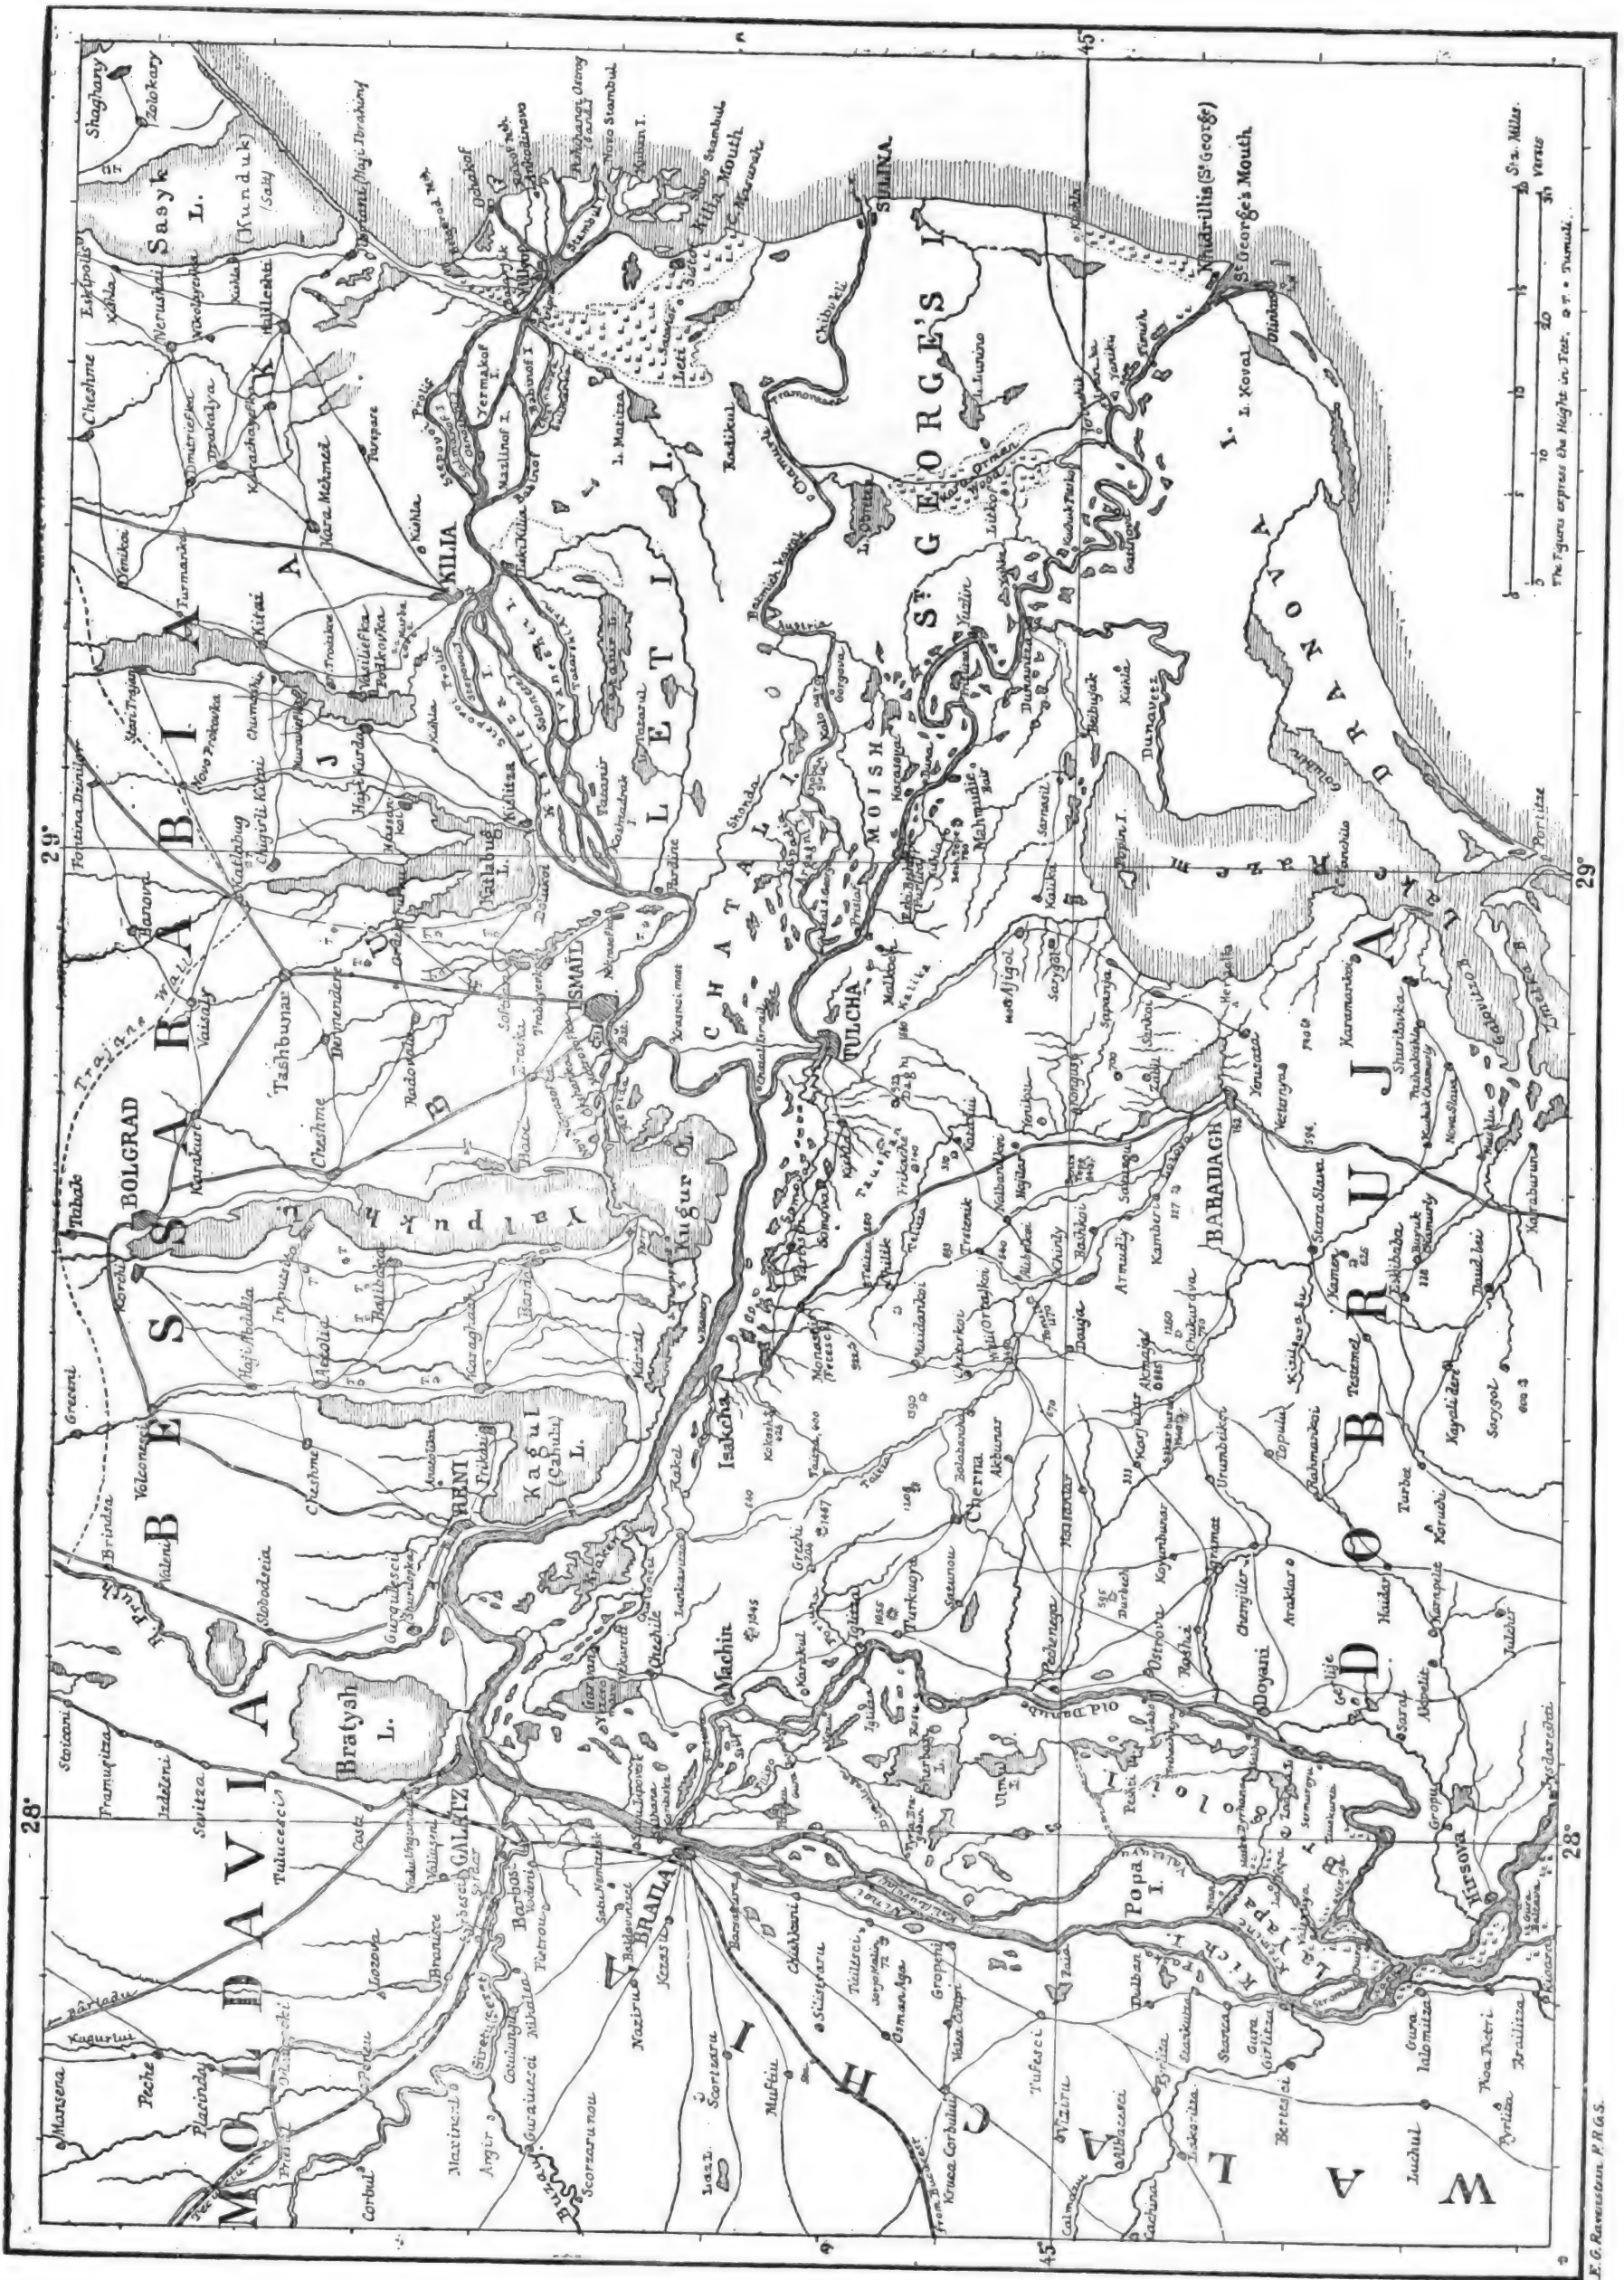

Mr. William Muter, of Manchester, has expressed a desire to hand over to the trustees of the English Presbyterian College, London, a sum of £2000, in order to found three theological scholarships of £30 each, with a proviso that competitors are to abstain from alcoholic liquors and tobacco.

A complimentary dinner was given last week to the Rev. Dr. Charles Rogers, the honorary secretary of the Royal Historical Society, at the St. James's Restaurant. Lord Talbot de Malahide was in the chair; and among the speakers were Mr. T. Heywood, Dr. Heinemann, Mr. G. Cruikshank, and others. A service of plate was presented to Dr. Rogers.

The sale of Mr. Albert Grant's pictures, at the rooms of Messrs. Christie, Manson, and Woods, took place on Friday and Saturday last week. The proceeds of the two days' sales were £106,202. The greater portion of the best-known pictures sold for considerably less than the prices which had been paid for them at former sales. Sir Edwin Landseer's "Otter Hunt," for which it was rumoured, Mr. Grant paid £10,000, was sold for 5650 guineas. Mr. Frith's "Before Dinner at Boswell's Lodgings in Bond-street, 1796," which sold at the Manley Hall sale for £4567 10s., on Saturday fetched only £3202 10s. One of the few pictures which sold at an increased price was Müller's "Interior of the Temple of Osiris at Philæ." Mr. Grant in 1872 bought this picture for 1800 guineas, and it sold on Saturday for 2300 guineas.

WRECK OF THE NORWEGIAN BARQUE RUZ OFF YARMOUTH. FROM A SKETCH BY MR. EDWIN HAYES, R.I.A.

MAP OF THE DELTA OF THE DANUBE AND THE DOBRUDSCHA.

FINE ARTS.

SOCIETY OF PAINTERS IN WATER COLOURS.

In this year's exhibition, the opening of which we announced last week, the figure-subjects are unusually few, notwithstanding that two of the three new Associates recently elected, Messrs. Buckman and Hopkins, are figure-painters. In this department Sir John Gilbert well maintains his high position as president of the society, and in "Marston Moor" (8), where the Protector's troops rout to full flight those of his adversary, is an example of the masterly vigour ever marking the works of that artist. But for a still finer production by the same hand we refer to "The Guide" (112). A lordly traveller and his companions, mounted on richly-caparisoned steeds, and followed by a retinue of armed attendants, have impressed into their service as a local courier a rustic lad who, astride an old grey horse, leads the way. The cavalcade are just emerging from the gloom of the forest depths, in sight of the distant embattled towers of which they have been in quest, and to which the boy points as their place of destination. In the absence of that vivid rendering of dramatic interest so frequently marking the designs of Sir John Gilbert, the art-qualities of this drawing are of the highest order, and among the many fine works he has exhibited on these walls "The Guide" will hold a very prominent position. Occupying the post of honour and attractive by qualities the very reverse of the last-named work is Mr. E. K. Johnson's single contribution of "A Golden Swarm" (64), which, as an outdoor sunlit garden scene, representing figures, flowers, and plants, painted up to the highest pitch of natural beauty and brilliance, is a marvel of executive skill. To sentiment it makes no pretension, its interest being exhausted in the display of its technicalities.

Turning to another garden scene, interesting rather by the human sympathies it evokes than the grandeur of its floral riches, "The Old Men's Gardens, Chelsea Hospital" (139), by Mrs. Allingham, we are impressed by its suggestive charm and unobtrusive treatment. Its sentiment is of the purest kind, and its manipulation exhibits that happy medium between generalisation and exactitude which, whilst satisfying the demands of the imagination by its suggestiveness, leaves unchallenged the detail of nature's minutiae. Most simple and unaffected is the pose and expression of the two girls waiting for the bunch of flowers the old pensioner is gathering for them; and with equal taste are introduced the various incidents referred to in the catalogue quotation. Fine are the two heads by Mr. Carl Haag (237 and 266), a comment equally applicable to Mr. Dobson's "Una figlia di Maria" (23), and "A Capri Girl" (125)—charming alike by that tenderness and breadth of execution common to all his pictures, whether in oil or water colours.

Mr. Buckman's accession to the society is an addition it may be congratulated upon. The two works of this artist, "The Business of Pleasure" (65) and "Our City Herald of Spring" (203), exhibit a degree of powerful originality most welcome at a time when the adoption of a borrowed manner is too frequently made the channel of success. To another new Associate, Mr. Hopkins, we have also a word of hearty welcome; but we do not recognise in "A Cornish Fisherman" (104) those better qualities marking "The Genius of the Village" (57) or "The Plough" (82). Of the three works by Mr. Thorne Waite we prefer "On the Way to School" (51), wherein he has realised in his usual felicitous manner a homely pastoral of village child-life. Exquisite as is the treatment of the upper part of the figure in Mr. Radford's anonymous picture (194)—intended for Lady Godiva, if we rightly remember the catalogue quotation from Tennyson—the work is virtually destroyed by the overpowering hue of the unbroken red in the dress. Wrought to the highest pitch of cabinet manipulation is "A Little Chilly" (279), showing a lady in sacque and toupée standing before her boudoir fire surrounded by every variety of bric-a-brac and bijouterie. Though grappling with the real difficulties of art, Mr. W. Duncan falls somewhat short of his aim in No. 180, "Love, Scandal, and Politics." Of Mr. Lamont's two drawings our taste inclines to "A Spring Offering" (90), the stooping figure of the girl being admirable in its drawing and delicacy of tint. In like manner we would select from Mr. Watson's four contributions "My Lady's Page" (257), but would contrast with the crude incompleteness of Mr. Marsh's "Driftwood" (198) the thoroughness characterising Mr. Alma Tadema's work, and well exemplified in "An Interesting Scroll" (218). This little picture, in its secondary scale of brown and green and grey, is a model of tone. Admirable as are certain passages in Mr. Parker's "What Sport" (160) the work, as a whole, wants that sense of connecting unity necessary to a fine work of art, an absence to be regretted, as the care and labour bestowed upon it bespeaks a conscientiousness of intention. Concluding our notes on the figure-subjects, we briefly refer to the two works of the late lamented Mr. Topham, "Blackberry Gatherers" (18) and "Haymaking" (116).

To M. Otto Weber our warmest commendations are due for two most exquisite drawings of "Laying their heads together—studies of three horses' heads" (117), and "Vaccine sympathy—Studies of Three Cows' Heads" (98). Nothing can surpass their truth of drawing and surface-texture. Foremost amongst the most dexterous works here exhibited are M. F. Tayler's pictures, which this year show a greater amount of incident than of late. His picturesque hunting-parties of gaily-dressed cavaliers and ladies, mounted as Mr. Tayler only can mount them, and surrounded by all the attractive accessories of hound and horn, are in this exhibition well represented. In "Rustic Surgery" (101)—a hound having his foot bound up—we recognise much of this artist's earlier and interesting manner. The drawings of Mr. Brittain Willis sustain the position they have long held on these walls, "A Scene in Cowdray Park" (169) being a characteristic example of his best manner. In our sympathies with the canine race, such a subject as Mr. Bradley's "Waiting for Master" (157) is certain of recognition, but when treated as here seen the warmer feeling of admiration is at once evoked.

Passing to landscape, always the stronger numerical element in our water-colour exhibitions, we find some established favourites hardly reaching the level of the merit that has long secured to them their well deserved popularity. Such variations in the balance of individual power are, however, inseparable from the emotional temperament under which all art-creations are evolved.

In No. 1 we are introduced to the work of a newly-elected Associate, Mr. Rigby, and, while acknowledging the honest, painstaking rendering of his subject, "The Esk, in quiet corners pausing," regret he should have sacrificed much of its pictorial effect by the cold, uninviting aspect under which it is presented. Of the four works Mr. Rigby shows, in "Randal How, Cumberland" (92) he does the fuller justice to himself. True to his early love for the mountain ranges of North Wales, Mr. Danby, in his grand picture of "Snowdon" (20), a glorious harmony of silvery sky and rocky wilderness, surpasses any work of similar character we remember to have seen by his hand on these walls, which at this time contain five others bearing his name. Believing, as we do, the legitimate aim of art to lie rather in conveying a sense of the impressions

of nature than the elaborate imitation of accidental detail, we rejoice in the larger manner of Mr. Newton's "Unveiling of the Mountain" (42), and the poetic atmosphere enveloping the scene as contrasting with the more realistic manner of his earlier style. To his small drawing on the fourth screen (282) a similar comment applies. Also as a strenuous effort at the realisation of a gorgeous burst of sunlight effect is Mr. A. Hunt's "Loch Maree—lifting of the Mists at Sunset" (17), wherein difficulties almost beyond the reach of art are attempted, and which, if not entirely overcome, the result is not to be characterised as failure. In "Capel Curig" (238), a small drawing on the second screen, Mr. Hunt has shown that grandeur is not necessarily dependent on size. The value of the union of detail with pictorial breadth is rarely more strikingly seen than in the drawings of Mr. Davidson, from whose numerous contributions of the present season we would select, in illustration of this peculiar merit, his beautiful rendering of summer foliage in the picture "At Whitby" (40). Less conscientious in the portrayal of natural forms, and far less varied in the selection of atmospheric effects than formerly, Mr. Jackson has adopted a sameness of sky treatment largely detracting from the value of otherwise interesting works. "The Last Glimpse of the Setting Sun" (2) and "The Valley of Rocks, Lynton" (19), are perhaps his most successful drawings now here.

In that list of established favourites comprising such names as Mr. Collingwood Smith, Mr. G. Frapp, Mr. Goodall, Mr. Dodgson, and Mr. Duncan, whose untiring industry is evinced by the number of their respective contributions, are to be found works aiding in no small degree the artistic interest and numerical strength of the exhibition. Notably would we particularise Mr. Smith's "Lake of Geneva" (175), in which is happily expressed those transient effects of light and air whereon the successful representation of such scenes depend. The eye is carried over the sparkling water from Chillon to the snow-clad Dent du Midi and the mountains in the valley of the Rhone. Some smaller works by the same also call for mention by their happy treatment of gleamy light, as in "A Ruined Martello Tower" (189). Rarely has Mr. Frapp been so liberal a contributor as in the twelve little gems here shown, for whose material mountain and lake, headland and valley have been laid under contribution, with an equality of success that leaves scarce a choice in the result. The gleaming dells and sylvan glades of Mr. Dodgson are this year no less charming than ever. Mr. Goodall's transcripts of Venice street scenes delight us equally as on his first return from the Queen of the Adriatic. Mr. Duncan with renewed vigour depicts the perilous scenes too frequently witnessed in the storms around our shores, as in his large drawing (128); and Mr. Jenkins remains, as ever, divided between the picturesque of Norman peasant life and the sterling beauties of the Thames, though, to whichever side his attentions may be drawn, the pleasure is equally ours.

Grand in scenic purpose, and more comprehensive in their constructional elements than the works of any other member of this society, the important contributions of Mr. T. M. Richardson form, at all times, a conspicuous feature in the contents of this gallery; to say those of the present exhibition realise the qualities of his best productions renders further comment superfluous. Mr. Naftel gains increased breadth and freedom of touch, and in the fifteen works he contributes this season may be noted such charming transcripts as "Cookham Church" (37), "Wotton Woods" (54), and "A Fishing Party, North Wales" (100). The distinctive character of Mr. Palmer's subjects and scale of colour place him alone in the walk of art he has adopted, from which no more characteristic example could be quoted than "Tityrus Restored to his Patrimony" (100), consisting of a composition of ideal landscape illumined by the dazzling glories of sunset, as the scene for the action of the fabled personages of his story. If less individual than on some former occasions, Mr. Powell has striven successfully against the difficulties of such subjects as 26 and 126. In the former the action of the waves and a sense of the weight of the advancing mass of water is conveyed with great truth. The Venetian scenes so ably rendered by Miss Montalba suggest realism rather than emotion, and, in the effort for powerful effects, the tenderness of nature is sometimes sacrificed to its strength. Contrasts of black and white may be made productive of strong relief, but do not suggest a sunlit atmosphere. Size and space, qualities at all times difficult to render in a picture, are given with singular effect by Mr. Whalke, not only in his grand work, "The Castle Rock" (268), but equally so in his smaller drawing, "Among the Fells" (30). In contrast with the brilliant light and colour of Mr. Birket Foster's former works we are at a loss to account for the strange blackness pervading the tone of his two present contributions (32 and 172). Wide as is the difference between the pictorial elements of the elaborate "Interior of St. Stephen's, Vienna" (190), and the savage "Coast of Antrim" (188), or the beetling cliffs whereon stand the grim walls of "Dunluce Castle" (161), Mr. S. Read, in his versatility of powers, seems equally at home in either. Mr. A. Frapp's rendering of sunlit atmosphere—an effect frequently treated in his works—has rarely been more successful than in "Summer Noon" (130), in which the hills are enveloped in a delicate film of shimmering hazy light, covering, though not concealing, the forms enveloped. Careful study and observation are evinced in Mr. Moore's "Sunset in the Highlands" (12), and "Waiting for the Tide" (22)—the former especially notable for its truthful play of cloud form illumined by the last rays of the setting sun. Equally observant of atmospheric effect, though more limited in range, is Mr. Goodwin, whose six drawings sustain his well-earned repute.

Want of space prevents our reference to other works we had marked for comment, beyond the mention of Mr. Andrews's transcripts of seaport aspect, the frost scenes of Mr. Branwhite, some tender passages of landscape by Mr. Barnes, and Mr. Brierly's able drawing (185), which by its artistic power and interest of subject will find a ready recognition on all sides.

INSTITUTE OF PAINTERS IN WATER COLOURS.

The exhibition of the Institute opened also on Monday week. "Highland Poachers" (7), by Edward Hargitt, are a group of red-deer that have come down upon a hillside farm, and are tossing about with their antlered heads the oaten sheaves. The value of the picture lies in the local truth of the scene depicted in respect of aerial perspective in a northern hill country. J. Aumonier, with very different materials and of a much lighter kind, compels us also to accept with pleasure the truth which he sets forth. We see on a broad, quiet piece of water, backed by a strip of land, a scattered flock of swans sailing "In the mellow light of an autumn eve." All the reflected lights are given with the most soothing effect, and, although the picture is little else than sky and water, one would never dream of calling it monotonous. Equally luminous is John Mogford's "Summer Light" (64), showing a boat going out to some fishing-smacks in the middle distance.

Near the last named hangs James Orrock's "Leicestershire

Meadow" (63) and his "Lincoln from the Meadows" (55), two works which, we think, are an advance on anything he has yet done. The delicacy with which he manages the distance in the latter picture, and allows the towers of the cathedral to assert themselves through the haze, is peculiarly grateful to the eye; and, although Mr. Orrock has based himself upon Cox, he has the art of preventing the evidence thereof from becoming too palpable. The other landscape-painters—and there are several in this gallery who have made the same master their model—are, to our thinking, too slavish in their imitation. E. M. Wimperis, for example—who is otherwise a most admirable artist—is, in his picture of "Broxton, Cheshire" (57), by far too suggestive of Cox.

H. G. Hine wields a much more individual and independent pencil, as may be seen in his carting hay in "The Weald of Sussex, near Lindfield" (50). The foreground here is all his own, and he runs into the far-reaching distance of the level weald with a truth of gradation which is not given to every one. C. E. Holloway's "Sussex Hillsides in September" (86), is remarkable for the rich glow with which he mantles his landscape, and makes a pleasing contrast to the fresh, cool verdure in which Valentine W. Bromley, a little further on, clothes the uncertain foreground through whose marshy tufts the two venturesome young ladies find "The Nearest Way to Church" (103), which we see peeping out above the bushy foliage in the distance. For solidity of workmanship and truthfulness of effect this picture will compare favourably with any in the gallery; and the natural way in which the two young girls figure in the foreground lifts the drawing entirely out of the category of ordinary landscape, and imparts to it an individuality of its own. Mr. Bromley's other work, representing a little girl surrounded with "Flowers" (134) in a conservatory, is pale, and lacks substantiality. It was this artist who gained last week, at the Crystal Palace competition, the gold medal for general excellence in water-colour drawing. Among other satisfactory landscapes are Edmund G. Warren's "Barden Tower, Wharfedale, from Barden Moor" (121); "Pittsworth Common" (128), by Thomas Collier; W. L. Leitch's "View on the Tweed" (178), and J. H. Mole's "Yewdale, near Coniston" (33).

Sea-subjects are always treated with much realistic power in this gallery, and, as a measure of the excellence of this year's exhibition in this respect, we would point to the following:—"Dutch Pinks Returning from the Dogger Bank, Katwyke, Holland" (27), by Edwin Hayes, R.H.A.; "White-Winged Pilots" (40)—seagulls on a rocky coast—by J. G. Philp; and "Entrance of the Scheldt, with Pilot Boat Ebbing for the Port of Flushing" (73), by Walter N. May.

In figure-subjects the Institute is specially rich. First of all we have Towneley Green's "Rainy Day" (10), showing a young girl at a recessed window—a drawing rich in tone and full of masterly modelling. Then there is "The Last Pursuit" (24)—an old connoisseur examining closely and curiously the picture placed before him on a chair, by Seymour Lucas, a young artist from whom we have yet much to expect. This remark is also applicable to two other young men, as the visitor will see for himself by examining "A Tale of the Sea" (174), by G. Clausen, and "Grandfather's Darling" (30), showing the interior of a fisher's home on the Zuyder Zee. The old woman's face in this picture is a splendid piece of characterisation. In this respect C. Green surpasses himself, and his "Here they come!"—shouted by a line of "roughs" four or five deep pressing against the barriers of the course on a Derby Day, all eagerly straining to catch the first glimpse of the horses as they come thundering on—worthily occupies the place of honour. The various degrees of truculence which we note in the faces before us would be almost unbearable were not their latent savagery somewhat relieved by the contemplation of the carriage folk who fill up the background. On the opposite side hangs James D. Linton's "Ave Maria" (149), an old man showing an image of the Holy Virgin to some rough but reverend troopers in a dark guard-room. In tone, colour, and drawing, everything is admirable; but we think Mr. Linton might, here and there, have given a little more sharpness to his outline and differentiated his qualities a little more pronouncedly. "Aaron Dodd" (137), prosecuting his triple calling of tinker, knife-grinder, and gossip at a seaside village, is one of the most ambitious and successful pictures yet attempted by Charles J. Staniland, so far as we can remember. Guido R. Bach's "Tambourine Girl of Cairo" (124) playing to the piping of an old man has all this artist's accustomed vigour of brush and fulness of colour. With this work we would class Mrs. Elizabeth Murray's "Algerine Barber" (96), performing the important ceremony of shaving an Arab boy's head for the first time. We fear the artist has made the body of the operator too short. The nature of "Dr. Schliemann's Excavations in the Acropolis of Mycenæ" (98), is admirably represented by that eminent traveller, linguist, philosopher, and artist, William Simpson.

Among other interesting figure-subjects we would name Robert Carrick's market-girls crossing a moorland stream at "Early Morning" (106), and E. G. Kilburne's girl stepping into "The Gondola" (60). The figure of the girl is slightly theatrical in look and pose, which is rather to be regretted in a work which is otherwise so full of local colour and detail. Nor must we neglect calling attention to the stable-boy sitting on the corn-bin blowing Pan's pipes with a most determined industry and heroic disregard of his waste of breath. H. B. Roberts was never more masterly in his treatment of light and shade than in this interior, or more successful in his rendering of character. With equal truth and force of delineation has William Small shown us how a bargain is struck in a Connemara market. The thing to be sold is a little lamb belonging to a pretty young Irish girl, who sits, bright-eyed and smiling, beside it in the midst of the fair, and the buyer is an eager old man who, in his bargaining for the lamb, "turns the purty compliment on her." Besides these, there are admirable pictures by such veterans as John Absolon, Edward Henry Corbould, and J. Wolf; and, although E. J. Gregory and Charles Cattermole are not in great force, the single figure of the former (230) and the two sets of sketch subjects from Shakespeare of the latter (217 and 220) are quite enough to show the quality of the men; and we need not mention the charming flower and fruit pieces of Helen C. Angell, Marian Chase, and Mrs. William Duffield.

The Royal Academy Exhibition opens to the public on Monday next; but, thanks to the council for the privilege of the press-day, we are able, in common with our contemporaries, to comment this Saturday on several of the more important pictures. The present Number also contains an engraving and some account of the Grovenor Gallery, which was opened on Tuesday.

The Queen has conferred a pension of £100 per annum on Mr. Thomas Wilmhurst, in consideration of his meritorious labours for the revival of the art of painting on glass.

The city of Antwerp has decided upon erecting a monument to the memory of Rubens, the painter, and the Municipal Council has voted a sum of 500,000*fr.* for that purpose.

Professor von Werner has received 75,000 marks as an honorarium for his great picture of the proclamation of the

German Empire at Versailles, which was presented lately by the German Sovereigns to the Emperor William.

At an extraordinary meeting of the Royal Institute of British Architects, last Monday, Dr. H. Schliemann was presented with his diploma of election as an honorary and corresponding member. Dr. Schliemann gave an address on the architecture of ancient Troy; and Mr. Gladstone followed with some remarks on the same subject.

The Court of Common Council has passed a resolution that, with a view to encourage and develop research in art and science, it be referred to the library committee to take the necessary steps, once a year, to arrange a conversation in the library of the Guildhall; the exhibition of objects of interest to be continued for one day subsequently.

OBITUARY OF EMINENT PERSONS.

LORD SUDELEY.

The Right Hon. Sudeley Charles George Hanbury-Tracy, third Baron Sudeley, of Toddington, in the county of Gloucester, died, on the 28th ult., at Toddington. His Lordship was born April 9, 1837, the eldest son of Thomas Charles, second Lord Sudeley, by Emma Elizabeth Alicia, his wife, second daughter of George Hay Dawkins, Esq., of Penrhyn Castle, Carnarvonshire. He received his education at Harrow, and, in 1854, entered the Grenadier Guards, from which he retired in 1863, with the rank of Captain. He was Lord Lieutenant of the county of Montgomery, Lord of the Manor of Toddington, and patron of five livings. He succeeded to the Peerage at his father's death, in 1863, and, as he was never married, the title devolved on his Lordship's next brother, the Hon. Charles Douglas Richard Hanbury-Tracy, M.P. for Montgomery.

SIR DAVID MONRO.

Sir David Monro, formerly Speaker of the House of Representatives, New Zealand, died on Feb. 15 last, at Newstead, Nelson, in that island. He was the fourth son of Dr. Alexander Monro, Professor of Anatomy in Edinburgh University, where he was educated and where he graduated M.D. in 1836. Having studied medicine in Paris, Berlin, and Vienna, Sir David proceeded to New Zealand, and in 1849 became member of the Legislative Council of the province of New Munster. He afterwards sat in the first Parliament of the colony, and was for some years Speaker. He was created a Knight Bachelor in 1866. He married, in 1845, Dinah, daughter of John Secker, Esq., of Widdford, Oxfordshire.

MR. MUNDY.

William Mundy, Esq., of Markeaton, in the county of Derby, J.P. and D.L., formerly M.P. for South Derbyshire, died on the 10th ult., aged seventy-five. The representative of one of the leading families in the Midlands, immediately descended from Sir John Mundy, Lord Mayor of London 1522-3, Mr. Mundy inherited at the death of his father, Francis Mundy, Esq., of Markeaton, M.P. for Derbyshire in 1837, a very considerable estate, and held a prominent place in his native county, for the southern division of which he sat in Parliament from 1849 to 1857 and 1859 to 1865. In 1843 he served as High Sheriff. He was educated at Eton, and at Christ Church, Oxford. He married, Oct. 23, 1830, Harriet Georgiana, eldest daughter of James Frampton, Esq., of Moreton, in the county of Dorset, by the Lady Harriet, his wife, daughter of Henry Thomas, second Earl of Ilchester, and leaves a son, Francis Noel, born 1833.

MR. MUNSTER.

William F. Munster, Esq., formerly M.P. for Mallow, whose melancholy death by accident after the fire of St. Louis has been announced, was son of Henry Munster, Esq., who was returned for Mallow, but was after a few months unseated on petition. The gentleman whose death we record was born in 1849, and received his education at Stonyhurst, and at the London University, where he matriculated in 1871. He was returned for Mallow, in the Home Rule interest, in 1872, and retired from Parliament in 1874.

The following deaths have also been announced:—

The Very Rev. Thomas Williams, M.A., J.P., Dean of Llandaff, on the 24th ult., aged seventy-five.

George Griffith, Esq., of Garn, Denbighshire, formerly Recorder of Denbigh, on the 23rd ult., aged eighty-seven.

The Rev. Alfred Williams, M.A., Vicar of Kingston-on-Thames, and late Fellow of King's College, Cambridge, on the 26th ult., in his fifty-ninth year.

Lady Frances Catherine Pettitward, wife of Robert John Pettitward, Esq., of Great Finborough, Suffolk, and sister of the present Earl Nelson, on the 14th ult., aged fifty-one.

Captain John Thomson, Senior Paymaster-in-Chief of her Majesty's Navy, son of the late Rev. David Thomson, and grandson of Sir Arthur Nicholson, Bart., on the 25th ult., at his residence, The Elysées, Emsworth.

George Cave, Esq., of Burfield House, Gloucestershire, J.P. and D.L., on the 14th ult., in his eightieth year. He was third son of the late Stephen Cave, Esq., of Cleve Hill, and uncle of the Right Hon. Stephen Cave.

Jemima Charlotte, Lady Watson, widow of Sir Charles Wager Watson, Bart., of Wrattling Park, in the county of Cambridge, and eldest daughter of Charles G. Colleton, Esq., of Hames-hill, Berks, on the 16th ult., in her seventieth year.

Major-General Francis Elliot Voyle, of the Bengal Staff Corps, in his sixty-second year. He entered the Indian Army in June, 1831, served against the Bheels in 1837, and in 1857 against the Googaria rebels.

The Hon. Mrs. William Byron (Mary), wife of the Hon. and Rev. William Byron (uncle of Lord Byron) and daughter of Vice-Chancellor Sir Richard T. Kindersley, on the 26th ult., aged forty-two.

Mary, Lady Molesworth, widow of Sir Arscott Ourry Molesworth, seventh Baronet, of Pencarrow, Cornwall, and mother of the Right Hon. Sir William Molesworth, M.P., Secretary of State for the Colonies in 1855, on the 16th ult., in her ninety-seventh year.

The Hon. Mrs. James Norton (Isabella), widow of the Hon. and Rev. James Norton (uncle of Lord Grantley), and only child of Thomas Lowndes, Esq., of Barrington Hall, Essex, on the 26th ult. Her eldest son, Robert Thomas, has assumed the additional prefix surname of Lowndes, and is married to Miss Lowndes Stone, of Brightwell Park.

CHESS.

TO CORRESPONDENTS.

All communications relating to this department of the Paper should be addressed to the Editor, and have the word "Chess" written on the envelope. Chess. There is no Bishop on Q 7th in the diagram of Problem No. 1724. Walker's treatise on the "Art of Chessplay" deals with the openings in the way suggested, but the book has been out of print for years past.

G F (Breslau).—Your letter has evidently been delayed in transmission. Your solution of No. 1726 is very full and accurate.

J F (Edinburgh).—We shall be very glad to receive and report on any games you may send us. Thanks for the inclosure.

W L (Leytonstone).—We are obliged for the problem. No. 1 requires further examination, but you shall have a report upon it in a week or two.

W G (Carrington).—We cannot give you the information without reference, but shall endeavour to oblige you in the matter next week.

J C (Glasgow).—The problem, if it is correct, is fully up to the mark. Thanks.

T W (Liverpool).—A very interesting game. It shall appear in due course.

H B (Breslau).—We are obliged for the problem. No. 1728. Black can play P to K 5th (Queening), in reply to Kt takes P, and if then White continues with Q takes K, Black's answer is B to K 7th.

W H S (Manchester).—We do not undertake to decide questions relating to what in this column.

B O C (Manchester).—The problem first received is too simple for our readers. The second batch shall be examined in due course.

ANY AMATEUR desirous of playing a game by correspondence can address E A W, care of Mr. Robert Baker, Whitlam-road, Broomhill, Sheffield.

CORRECTOR SOLUTIONS OF PROBLEM No. 1724 received from O P D, E Burkhard, F O Walker, H Johnson, E L W B, and T E Wilson.

CORRECTOR SOLUTIONS OF PROBLEM No. 1726 received from E Jefferys, C L H Bourmann, Oakley, G Crook, P S Shende, East Marden, W W Madden, Spalding, and Jane N.

CORRECTOR SOLUTIONS OF PROBLEM No. 1731 received from E Frau, H B E L G, B H Brooks, K d Ink, Llansey, Dolly, E Burkhard, Maggie Irwin, Triton, R Roughhead, Only Jones, Simplex, J Williams, B B Stone, W Alston, Tallyho, C L Sweeney, Cheltenham, Mariana, W W Whitson, H Bourmann, Spalding, Isleworth Reading-Room, C T B, R T King, E Worley, N E D, Mechanic, Little, J W H, H Barger, Leonora and Leon, S Western, O D Tippet, Paul's Boost, Black Knight, Harrovia, L S B, J Wontone, Americana, T R Y, W Nelson, Long Stop, A G H, W Lee, C E, Hereward, Cant, W Lesson, J de Honsteyn, Fitzroy Chess Club, Copiapino, Alice, Clive Crook, J T Bontledge, L J O, Edinburgh, P S Shende, Oakley, F V P, W S B, Woolwich Chess Club, E Levy, G H V, E B H V, W W Madden, J E Morris, and H R W. This problem, as nearly all our correspondents have discovered, admits of a second solution.

SOLUTION OF PROBLEM No. 1730.

WHITE.	BLACK.	WHITE.	BLACK.
1. B to K 7th	K to Q 4th	3. Mates accordingly.	
2. Kt to Kt 5th	Any move.		

PROBLEM No. 1733.

By H. E. KIDSON.

BLACK.

WHITE.

White to play, and mate in three moves.

CHESS IN LONDON.

The following very interesting Partie was played a few days ago between Mr. MACDONELL and Herr GUNZBERG, a young Hungarian player, now residing in London.—(Glasgow Piano.)

WHITE (Herr G.)	BLACK (Mr. M.)
1. P to K 4th	P to K 4th
2. Kt to K B 3rd	Kt to Q B 3rd
3. B to B 4th	B to B 4th
4. P to Q B 3rd	Kt to K B 3rd
5. P to Q 3rd	Castles
6. P to Q R 4th	

Probably the best move in this position.

7. Castles	P to Q R 4th
8. B to K 3rd	P to Q 3rd
9. B takes B	B to Kt 5th
10. Q Kt to Q 2nd	P takes B
11. P to K R 3rd	P to Q Kt 3rd
12. Kt takes B	B takes Kt
13. K to R sq	Q to Q 3rd

There does not appear to be any immediate purpose in this move; but, as the sequel shows, the King would have been better posted at B 2nd.

14. Q to Kt 3rd	Q R to Q sq
15. Q R to Q sq	Kt to R 4th
16. P to Kt 3rd	Kt to B 5th
17. K to Kt 2nd	Kt takes P
18. B to Kt 5th	Q to K B 3rd
19. B takes K	R to Q 3rd
20. Kt takes P	R takes B
21. K takes Kt	Q takes Kt
	P to Q B 5th

An excellent stroke, the effect of which

White has conducted to a game with remarkable judgment. ...e bow ever, we think he should have played 38. Q to Q Kt 5th.

38. Q to R 5th (ch) K to Kt sq

39. K to Kt 3rd P to B 5th

40. R to R 2nd

White has conducted to a game with remarkable judgment. ...e bow ever, we think he should have played 38. Q to Q Kt 5th.

38. Q to R 5th (ch) K to Kt sq

39. K to Kt 3rd P to B 5th

40. R to R 2nd

White has conducted to a game with remarkable judgment. ...e bow ever, we think he should have played 38. Q to Q Kt 5th.

38. Q to R 5th (ch) K to Kt sq

39. K to Kt 3rd P to B 5th

40. R to R 2nd

White has conducted to a game with remarkable judgment. ...e bow ever, we think he should have played 38. Q to Q Kt 5th.

38. Q to R 5th (ch) K to Kt sq

39. K to Kt 3rd P to B 5th

40. R to R 2nd

White has conducted to a game with remarkable judgment. ...e bow ever, we think he should have played 38. Q to Q Kt 5th.

38. Q to R 5th (ch) K to Kt sq

39. K to Kt 3rd P to B 5th

40. R to R 2nd

White has conducted to a game with remarkable judgment. ...e bow ever, we think he should have played 38. Q to Q Kt 5th.

38. Q to R 5th (ch) K to Kt sq

39. K to Kt 3rd P to B 5th

40. R to R 2nd

White has conducted to a game with remarkable judgment. ...e bow ever, we think he should have played 38. Q to Q Kt 5th.

38. Q to R 5th (ch) K to Kt sq

39. K to Kt 3rd P to B 5th

40. R to R 2nd

White has conducted to a game with remarkable judgment. ...e bow ever, we think he should have played 38. Q to Q Kt 5th.

38. Q to R 5th (ch) K to Kt sq

39. K to Kt 3rd P to B 5th

40. R to R 2nd

White has conducted to a game with remarkable judgment. ...e bow ever, we think he should have played 38. Q to Q Kt 5th.

38. Q to R 5th (ch) K to Kt sq

39. K to Kt 3rd P to B 5th

40. R to R 2nd

White has conducted to a game with remarkable judgment. ...e bow ever, we think he should have played 38. Q to Q Kt 5th.

38. Q to R 5th (ch) K to Kt sq

39. K to Kt 3rd P to B 5th

40. R to R 2nd

CHESS AT THE DIVAN.

An off-hand skirmish between two strong Amateurs.

(Two Knights' Defence.)

WHITE (Mr. A.)	BLACK (Mr. Dick.)
1. P to K 4th	P to K 4th
2. Kt to K B 3rd	Kt to Q B 3rd
3. B to B 4th	Kt to B 3rd
4. Kt to B 3rd	

The young player may be told that White's last move, which resolves the opening into a variation of the Giuoco Piano, is not nearly so effective as either 4. Kt to Kt 5th or 4. P to Q 4th.

5. P to Q 3rd	B to B 4th
6. Castles	B to Kt 5th
7. P to K R 3rd	B to Kt 5th

The correct move here is 7. B to K 3rd.

8. B to K Kt 5th	B to K 4th
9. P to K Kt 4th	P to K R 3rd
10. B to R 4th	

White had here an opportunity of getting the best of the opening, which he failed to seize. Instead of retreating the B he should have played 10. B takes Kt, followed by 11. Kt takes Kt, and 12. Kt to Q 5th, with the better game.

10. P to K Kt 4th

and White resigned.

CHESS INTELLIGENCE.

The annual tournament of the City and County of Dublin Chess Club, in which the competitors were divided into two classes, was brought to a conclusion last week. In class No. 1 Messrs. Pim, Melhado, and Woollett attained the principal places, and Messrs. Hassard, Gerahy, and Maxwell were successful in No. 2. The club, we are pleased to learn, is in a very flourishing condition, and a match against the Dawson-street Club, to be played immediately, is now being arranged.

The handicap tournament of the Liverpool Chess Club resulted in a victory for Mr. Allaire, who received the odds of pawn and move from the players of the first class. Mr. Cornelius Soul, who ranks among the first grade, carried off the second prize.

WILLS AND BEQUESTS.

The will of the late Right Hon. Sir David Dundas, of the Temple, London, and of Ochertyre, in Scotland, dated March 11, 1876, has been proved in London, and the personal effects sworn under £40,000. By the will, which is entirely in his own handwriting, he gives his valuable library in the Temple equally between the Hon. Charles Howard, M.P., and Egerton Harcourt, Esq. He gives all his effects at Ochertyre to his successor there. Various other specific bequests are given to the Hon. Charles Gore, Sir William Stirling Maxwell, Bart.; Hugh Adair, Esq.; the Rev. Henry Bull, and others. The will also contains pecuniary legacies of £1000 to each of his nephews in Scotland and to several of his godchildren, as well as to the Hon. Charles Howard, M.P., Sir Francis Doyle, Colonel Goulburn, the Rev. Charles Gore, and others. All his servants are amply provided for, and the residue is given to his nephews, Ralph Dundas and William James Dundas, Esqs., who, together with Mr. Edmund Barlow, of Rutland-gate, are appointed trustees and executors. He gives to each of his executors legacies of £500. All the legacies and bequests are free of duty.

The will, dated May 5, 1875, of Mr. William Holland, distiller, late of Deptford-bridge, Kent, and of Clare Lodge, Perry-hill, Sydenham, who died on March 23 last, was proved on the 24th ult. by Mrs. Eliza Jane Holland, the widow, George Canning Edwards, and Thomas William Marchant, the executors, the personal estate being sworn under £300,000. The testator bequeaths to his wife all his furniture, plate, pictures, horses, carriages, and household effects, the lease of his residence, a pecuniary legacy of £1000, and an annuity of £2000 so long as she remains his widow; on her second marriage she is to have, instead, an annuity of £500; to the Royal Kent Dispensary, £1000; to his housekeeper, Mary Downes, an annuity of £40 for life; to his two nephews and niece, the children of his late brother Thomas, £1000 each; to his executors, Mr. Edwards and Mr. Marchant, £500 each; and the residue of his property to all his children in equal shares.

The will, dated Jan. 25, 1864, of Mr. William Amédée Hammond, late of No. 47, Rutland-gate, Knightsbridge, who died on March 21 last, was proved on the 12th ult. by William Amédée Hammond and George Hutchinson Hammond, the sons of the deceased, the surviving executors, the personal estate being sworn under £200,000. The testator gives to his wife, Mrs. Olympia Margaret Hammond, his household furniture, plate, pictures, and effects, horses and carriages, his residence (with the stables attached), and £2000 per annum for life; and the rest of his property to his said sons.

The will and codicil, dated Oct. 20, 1874, and Aug. 8, 1876, of Mr. Richard Nation, late of No. 4, Orchard-street, Portman-square, and of Westcombe Lodge, Hayes, who died on March 21 last, were proved on the 18th ult. by Henry Alfred Stephens, the acting executor, the personal estate being sworn under £70,000. The testator bequeaths to St. Mary's Hospital, Paddington, the Royal Free Hospital, Gray's-inn-road, the Female Orphan Asylum, Grove-road, St. John's-wood (and £21 for a treat to the children), the Orthopaedic Hospital, Oxford-street (of which he was a governor), the Samaritan Institute or Hospital, Lower Seymour-street, Portman-square, and to the almshouses in St. John's-wood-terrace, for the endowment fund, £500 each, free of duty; to his wife, Mrs. Mary Ann Nation, who is already provided for by settlement, £1000; to his daughter Emily, £4000; to his daughters Annie, Mary, and Ellen, £6500; and there are other legacies. The remainder of his real and personal estate is settled upon his son Richard.

The will and codicil, dated July 13 and Dec. 8, 1874, of Mr. Arthur Ryland, J.P., late of the Linthurst-hill, Bromsgrove, Worcestershire, and of Birmingham, who died on March 23 last at Cannes, France, were proved on the 23rd ult. by Mrs. Anna Smith Ryland, the widow, and Miss Frances Hannah Ryland, the daughter, the executors, the personal estate being sworn under £30,000. After giving some legacies, the testator leaves the residue upon various trusts for his said wife and daughter.

The will, dated Jan. 8, 1873, of Admiral Sir Edward Belcher, K.C.B., late of No. 6, Melcombe-place, Dorset-square, who died on March 18 last, was proved on the 17th ult. by Charles Marryatt, the acting executor, the personal estate being sworn under £2000. The testator leaves all his property to his sister, Mrs. Catharine Marryatt.

LIFE-BOAT SERVICES.

A meeting of the Royal National Life-Boat Institution was held on Thursday at its house, John-street, Adelphi. The silver medal of the institution and its thanks inscribed on vellum were ordered to be presented to William Manifold, late assistant-coxswain of the Arklow life-boat, and the thanks on vellum to John Montgomery, late coxswain of the Chichester Harbour life-boat, in acknowledgment of their long and gallant services in those life-boats in saving life from various shipwrecks. The thanks of the institution inscribed on vellum were also voted to Mr. S. Richards, farmer, in testimony of his continued kind co-operation in forming one of the crew of the Cardigan life-boat whenever the boat was called out on occasions of shipwrecks. Rewards amounting to £308 were also granted to the crews of different life-boats for saving life on numerous occasions during the heavy gales of the past month, in which period they had been instrumental in saving seventy-eight lives, besides assisting to save two vessels from destruction. The thanks of the institution inscribed on vellum and £3 were voted to Captain John Smart, of the steamer Rio Banto, and £1 each to his crew of seven men, for saving three fishing-boats and their crews, consisting of twenty men, which had been overtaken by a sudden gale from the south-west, and were helplessly drifting away to sea off Glengad Head, in the county of Donegal, on Feb. 2. Rewards were granted to the crews of shore-boats for saving life from wrecks on our coasts. Payments amounting to £1330 were ordered to be made on some of the 256 life-boat establishments of the institution. The receipt of various contributions and legacies was announced. It was reported that, at a public meeting recently held at the Liverpool Townhall, a gratifying presentation was made to the crews of the Liverpool life-boat belonging to the Mersey Docks and Harbour Board and the New Brighton tubular life-boat of the institution. It consisted of a gold medal awarded by the Government of the United States of America to each survivor of the crews of those life-boats, and 600 dols. to the families of three of the Liverpool life-boatmen who perished while nobly succouring the crew of the American ship Ellen Southard, wrecked at the mouth of the Mersey during a very severe gale on Sept. 27, 1875. Reports were read from the inspectors of the institution on their recent visits to its life-boat stations.

With considerable display, the new works of the Margate Jetty were on Tuesday opened by the Lord Mayor and Lady Mayoress of London, who, with other civic magnates, went down by special train. The additional structure will afford, at the pier head, seats for 1200 persons.

THE ILLUSTRATED LONDON NEWS

REGISTERED AT THE GENERAL POST-OFFICE FOR TRANSMISSION ABROAD.

No. 1974.—VOL. LXX.

SATURDAY, MAY 12, 1877.

WITH
TWO SUPPLEMENTS } SIXPENCE.
By Post, 6d.

THE WAR: ADMIRAL HOBART PASHA, COMMANDER OF THE TURKISH FLEET.

BIRTHS.

On March 31, at Darjeeling, Bengal, Lady Ulick Browne, of a daughter.
On the 6th inst., at Moorallerton, near Leeds, the wife of Thomas Myers, of a son.
On the 3rd inst., at 47, Brook-street, Lady Lindsay, of a son.

DORE'S NEW GREAT WORK, THE BRAZEN SERPENT, 30 ft. by 19 ft., is NOW ADDED to the DORE GALLERY, 35, New Bond-street, W.

MR. and Mrs. GERMAN REED'S ENTERTAINMENT. TWO FOSTER BROTHERS, by Gilbert A. Beckett: EDWIN AND ANGELINA, by Mr. Corney Grain; and "No. 24," by F. G. Burnand. EVERY EVENING, except Thursday and Saturday, at Eight: every Thursday and Saturday at Three. Admittance, 1s., 2s.; Stalls, 3s. and 6s.—ST. GEORGE'S HALL, Langham-place, Oxford-circus.

ST. JAMES'S HALL, PICCADILLY. THE MOORE and BURGESS NEW ENTERTAINMENT.

THE GREAT SUCCESS OF THE SEASON will be repeated EVERY NIGHT at EIGHT, MONDAY, WEDNESDAY, and SATURDAY, at THREE and EIGHT. Pateville, 5s.; Sofa Stalls, 3s. and 2s.; Gallery, 1s. No fees. Doors open at 2.30 for Day Performances, and at 7.15 for the Evening ditto. Places may be secured, without extra charge, at Austin's Office, St. James's Hall, any day from Nine till six.

ST. JAMES'S HALL.—Signal Success of the MOORE and BURGESS Entertainments on THE MARVELOUS GIRARDS, which will be repeated EVERY NIGHT at EIGHT; MONDAY, WEDNESDAY, and SATURDAY, at THREE and EIGHT.

Video extract from the "Morning Post," April 3:—"In a burlesque performance entitled 'The Marvellous Girards,' Messrs. T. Sully, James Moore, and Rene emulated the eccentric gymnastics of the well-known 'Girards' with absolute accuracy in the minutest particulars of action and expression, doing everything that the clever originals do, and as nearly as possible in the very same style and manner. A new 'interlocutor' appeared for the first time in the person of a gentleman bearing the distinguished name of J. P. Kemble, who, being gifted with a fine voice and a keen sense of humour, is likely to prove an acquisition."

MOORE and BURGESS MINSTRELS. In pursuance of the policy long since instituted by the Directors of this Company to elevate the character of the entertainment with which their names are now so intimately associated, they have just introduced

AN ENTIRELY NEW and MOST DELIGHTFUL FEATURE IN THE SECOND PART OF THEIR PROGRAMME, in the form of an

OPERATIC MELANGE,

the whole of the music of which is new and strictly original, having been composed expressly for Messrs. Moore and Burgess by that highly-gifted and rapidly-rising Composer,

MR. JOHN HOBSON.

NORTH WALES, CITY OF CHESTER, and BORDER COUNTIES TRAINING-SHIP "CLIO," for Homeless, Destitute, and Poor Respectable Boys of all Denominations, stationed in Menai Strait. OLYMPIC.—THE SCUTTLER SHIP. By CHARLES READE. EVERY EVENING, at 7.30. Powerful Company and Black & white office hours Eleven to Five. No booking fees.

THE ILLUSTRATED LONDON NEWS

LONDON: SATURDAY, MAY 12, 1877.

The debate in the House of Commons on the Eastern Question and on the policy of her Majesty's Government in relation to it—one of the most important, we may add, of late years—though not, perhaps, all that could have been wished, has served a useful purpose. The change of tactics to which Mr. Gladstone, under the pressure of his old colleagues and party friends, consented, and the unseemly wrangle to which its announcement led, somewhat lowered the moral effect expected from the discussion. But, on the whole, its tendency has been to clear up to a considerable extent the mistiness which for some time past has hung about the subject, and will, we hope, have a sobering influence upon that small section of the British public which would, if it had been allowed to prevail, have hurried us into a second Crimean War. We are very far from thinking that the withdrawal from a distinct vote of the House of the last three of the resolutions originally proposed spoiled, even if it impaired, the opportunity which the whole series was meant to create. The right hon. gentleman fully developed in his speech the entire policy which his Resolutions commended to the House. Whether that policy be wise or not, whether it would now be opportune to pursue it to the extreme limits to which it might be pushed, or whether it be the best which, under all the circumstances that now environ the case, the country could adopt, we must leave to the judgment of our readers. What was practicable three months ago has, undoubtedly, become far more difficult since the Declaration of War against Turkey by the Czar of Russia, and the consequent disturbance of the concerted action of the signatory Powers. But, at any rate, on the assumption that the Russian arms attain success, Russia will know what are the bases upon which she may proceed in gathering up the fruits of victory.

Mr. Gladstone's speech, we need scarcely say, was worthy of his renown. It lifted the question up from a level of political partisanship to one of patriotism. It was a concise review of all the known facts of the case, particularly of those which have occurred since September last. It professed to illustrate the ambiguity of the policy pursued by the British Foreign Office, and it set forth with extraordinary eloquence the high principles which, in the opinion of the speaker, might and ought to have shaped the action of the Cabinet. The proofs he gave of Turkish misgovernment, viewed not in isolated cases only, but as a system, and the indignant spirit with which he denounced it and all participation, direct or indirect, in it by this country, were profoundly impressive. His style was terse and more rapid than usual. The earnestness of the convictions to which he gave utterance no one could doubt. There was a logical consistency in the arrangement of his subject-matter which, as he went along,

appeared to be unassailable. But the most compact logic is not invariably the best guide of statesmanship. Be this, however, as it may, the orator made out a strong case, which unquestionably justified the two Resolutions on which he consented to take the judgment of the House.

The reply of the Government was very efficiently given by Mr. Cross, the Home Secretary. Some of the interpretations he put upon the facts were certainly open to dispute, and there were aspects of the case with which he omitted to deal. But, taken as it stands, the speech contains a fair programme of Ministerial policy. That policy may be described as one of decided neutrality between Russia and Turkey, within the limits of the object for which the war is professedly waged. So long as it is localised we shall not otherwise intervene between the antagonists than by offering, at the first suitable opportunity, our good offices in bringing the contest to a close. Should the area of disturbance extend farther, we shall watch over and defend what are called "British interests." These Mr. Cross proceeded to define; and in defining them he identified them with those of Europe and of the world. They may be summed up in two or three sentences: the Suez Canal, Egypt, and the Straits of the Bosphorus. Should either of these be menaced, we should have a word to say and a part to act in the matter. It is far from probable, however, that any armed intervention of ours will become necessary. Russia has enough upon her hands without going out of her way to provoke a naval conflict in the Mediterranean. There are other Powers besides ourselves which would keenly resent any attempt in that quarter. There is reason, therefore, to hope that we may keep out of the fray. Should the policy indicated by the Home Secretary be scrupulously and steadily adhered to, there is good ground for believing that the country will be satisfied.

The chief ground of uneasiness appears to be that different shades of opinion are supposed to prevail in the Cabinet. This is denied by Ministers themselves. But the latest despatch of Lord Derby, in reply to the Circular of Prince Gortschakoff, written in a tone which closely verges upon a violation of the spirit of neutrality, is assuredly an awkward comment upon the impartiality which pervaded the speech of Mr. Cross, and, in the estimation of some, Conservatives as well as Liberals, lends a "moral support" to Turkey as against Russia. The tone, however, of the debate in the House of Commons will, doubtless, counteract the mischief which might otherwise have accrued.

We are passing through critical times. An incautious word may easily kindle a conflagration of angry passions. There is good reason why each of us should put a vigilant guard upon the expression of our thoughts. May we be brought through the crisis without suffering any further inconvenience than that which war ever is sure to inflict upon the peaceful industry of neutral nations!

THE COURT.

The Queen attended Divine service in the Royal Mausoleum at Frogmore on Sunday and received the holy communion, together with Princess Beatrice and the Duke of Connaught. The Duchess of Edinburgh attended Divine service in the private chapel of the castle. The Rev. W. H. Bliss officiated. The Dean of Windsor and the Hon. Mrs. Welleley dined with her Majesty. Lady Margaret Cameron left the castle.

The Duchess of Edinburgh and Prince Leopold came to London on Monday, and in the evening were present at the concert given by Herr Wagner at the Royal Albert Hall.

The Duchess of Edinburgh and Prince Leopold returned to the castle on Tuesday. The Queen, the Duchess of Edinburgh, and Princess Beatrice drove to Cumberland Lodge and visited Princess Christian. Herr Rubinstein played on the pianoforte and Herr Henschel sang before her Majesty and the Royal family. Mr. W. G. Cousins was in attendance and several members of the Royal household were present. Her Majesty's dinner party included the Duchess of Edinburgh, Princess Beatrice, Prince Leopold, Lady Churchill, his Excellency Count Schouvaloff, the Secretary of State for India, and the Marchioness of Salisbury, Earl and Countess Spencer, Viscount and Viscountess Castlereagh, Viscount Hawarden, Lieutenant-General Sir T. M. Biddulph, K.C.B., and the Hon. Lady Biddulph, and Major-General H. Ponsonby.

The Queen, accompanied by Princess Beatrice, went to Aldershot on Wednesday, arriving at the Royal Pavilion at half-past twelve o'clock. Her Majesty, accompanied by Princess Beatrice, afterwards proceeded to the South Camp and inspected a model for instruction in field tactics, invented by Captain Shaw, camp instructor, and also visited the Female Hospital, and then proceeded to the parade-ground, where the division was drawn up under the Lieutenant-General commanding. After witnessing the manoeuvres the Queen returned to Windsor.

The Prince of Wales and Princess Louise paid a visit to her Majesty on Thursday.

THE PRINCE OF WALES.

The Prince of Wales left Paris on Sunday, and travelled, via Boulogne and Folkestone, to London, arriving at Marlborough House on Monday morning. Princess Louise of Lorne, the Duchess of Edinburgh, the Duke of Connaught, and Prince Leopold visited his Royal Highness. The Prince held a Levée at St. James's Palace, and in the evening presided at a dinner in aid of the funds of the Licensed Victuallers' Asylum, at Willis's Rooms, after which he went to the Royal Italian Opera, Covent Garden. His Royal Highness visited the Duchess of Cambridge on Wednesday, and dined with Sir Court and Lady Lindsay, at the Grosvenor Gallery, in New Bond-street. The Duke of Connaught, Prince Leopold, Princess Louise of Lorne, the Duke and Duchess of Teck, and the Marquis of Lorne were present.

ACCOUCHMENT OF PRINCESS CHRISTIAN.

Princess Christian of Schleswig-Holstein (Princess Helena of Great Britain and Ireland) was delivered of a stillborn son at a quarter past six on Monday afternoon, at Cumberland

Lodge, Windsor Park. Dr. Priestley, Dr. Ellison, and Dr. Fairbank were in attendance. The Queen was present. The latest bulletins announce that her Royal Highness is making favourable progress.

Princess Louise (Marchioness of Lorne) and the Marquis of Lorne dined with his Excellency Count Beust on Monday at the Austrian Embassy, Belgrave-square. The Princess has become a patroness of the Victoria Hospital, Gough-square, Queen's-road, Chelsea.

The Duke of Connaught has been appointed Great Prior of the Order of the Temple (Ireland), in place of Marquis Conyngham. He will be installed in office in the Masonic Hall, Dublin, this month.

FASHIONABLE MARRIAGES.

The marriage of Captain the Hon. Reginald A. J. Talbot (1st Life Guards), brother of the Earl of Shrewsbury and Talbot, and Miss Margaret Jane Stuart Wortley, second daughter of the Right Hon. James and the Hon. Mrs. Stuart Wortley, was solemnised on Tuesday at St. James's Church, Piccadilly. The bride was attended by her four sisters as bridesmaids. The marriage service was performed by the Hon. and Rev. A. Chetwynd Talbot, Rector of Ingestre, and of Church Eaton, Staffordshire, uncle of the bridegroom, assisted by Hon. and Rev. Stephen W. Lawley, uncle of the bride, and the Rev. Edward Talbot, Warden of Keble College, Oxford. The breakfast was given by the Right Hon. James and the Hon. Mrs. Stuart Wortley at their house in St. James's-place. The bride and bridegroom left town for Ashridge Park, Earl Brownlow's seat in Hertfordshire, for their honeymoon.

A marriage is arranged between Lady Rosemond Spencer-Churchill, eldest unmarried daughter of the Lord Lieutenant of Ireland and the Duchess of Marlborough, and Captain W. Fellowes, of the 1st Life Guards, eldest son of Mr. E. Fellowes, M.P. for Huntingdonshire.

METROPOLITAN NEWS.

The members of the Paris Conseil Municipal left London on their return home last Tuesday.

The reopening of the Alexandra Palace was celebrated on Thursday by a fête, under the patronage of the Lord Mayor.

The Judicial Committee of the Privy Council have refused the application of Sir William Palliser for a prolongation of his patent for improvements in projectiles for ordnance.

Lord Coleridge and Sir Bartle Frere have been elected Fellows of the Royal Society under the statute for candidates of the privileged class.

Miss Octavia Hill read a paper on Open Spaces on Wednesday afternoon, at a meeting of the National Health Society, in the rooms of the Society of Arts, Adam-street.

Yesterday week the honorary membership of the Royal Archaeological Institute of Great Britain and Ireland was presented to Dr. and Mrs. Schliemann.

The Mercers' Company has granted fifty guineas to the Hospital for Women, Soho-square; and the Company of Fishmongers has granted twenty-five guineas to the Provident Surgical Appliance Society, Great Ormond-street.

The Provincial Newspaper Society held its forty-first anniversary at the Crystal Palace on Wednesday—Mr. W. P. Byles in the chair. Mr. W. W. Hargrove, of the *York Herald*, was elected president for the ensuing year.

The first dinner in aid of the funds of those recently-united institutions, the Jews' Hospital and the Orphan Asylum, Lower Norwood, was given yesterday week in the Freemasons' Tavern. Subscriptions were announced to the amount of £2187.

Favoured with fine weather, the fête and demonstration held on Monday evening in the Surrey Gardens for the benefit of the widow of the late George Odger was a success, financially and otherwise. A meeting, presided over by Sir John Bennett, was held in the great hall.

On Wednesday evening the eighty-eighth anniversary dinner of the Royal Literary Fund was held at Willis's Rooms—the Earl of Derby in the chair. The Chinese Minister, who was present, delivered a speech, a translation of which was read to the guests. The subscriptions amounted to about £1000.

The gross proceeds of the concert given on Easter Monday at the Albert Hall, in aid of the Cheesemongers' Benevolent Institution, amounted to £1115 11s, which sum has been handed to the treasurer—Messrs. Nurdin and Peacock bearing all the expenses of the concert.

On Tuesday afternoon the Grecians of Christ's Hospital were taken by the Rev. R. Lee, the Head Master of the college, and Mr. Allcroft, the treasurer, to inspect the antiquities in the Assyrian galleries of the British Museum. They were met at the Museum by Dr. Samuel Kinns, who conducted them through the rooms, and gave an instructive lecture on the History, Manners, and Customs of the Assyrians.

It is stated that Lord Penzance will be chairman of the Royal Commission on the Stock Exchange, on which Mr. E. P. Bouverie, Mr. Edward Stanhope, M.P., Mr. Scott, chairman of the Stock Exchange, and Mr. Hollams (of the firm of Hollams and Son) have consented to serve. Mr. R. G. Cornish Mowbray, Fellow of All Saints' College, Oxford, will, we are informed, be the secretary of the Commission.

Lord and Lady Hatherley were on Sunday, at the school of St. John the Evangelist, Westminster, presented with a gold pencil-case and seal, and a gold and ruby glass smelling-bottle, for which a subscription had been made by the teachers and children. This school was the first opened in London, and both Lord and Lady Hatherley have been connected with it as teachers since 1836.

The Lord Mayor presided at a public meeting held on Tuesday at the Mansion House in aid of the funds of the training-ships Chichester and Arethusa, and for rebuilding the Boys' Refuge in Great Queen-street, through the agency of which for several years past between 500 and 600 destitute boys have annually been reclaimed, and transferred either to the ships or the training-homes in the country. £700 was subscribed in the room.

Last week 2510 births and 1490 deaths were registered in London, the former having been 14 and the latter 9 above the average numbers. There were 54 deaths from smallpox—fewer than had been returned in any week since the beginning of December last; 23 were certified as unvaccinated, 11 as vaccinated, and 20 were "not stated" as to vaccination. There were 44 deaths from measles, 16 from scarlet fever, 2 from diphtheria, 43 from whooping-cough, 21 from different forms of fever, and 9 from diarrhoea. The deaths referred to diseases of the respiratory organs, which had been 343 and 349 in the two previous weeks, were 327 last week, and exceeded the corrected weekly average by 57; 193 resulted from bronchitis, and 87 from pneumonia.

Yesterday week the Lord Mayor was waited upon by a deputation whose object was to urge the advisability and necessity of establishing hospitals in the metropolis for the reception of patients who can afford to pay for their treatment. His Lordship consented to the holding of a public meeting at the Mansion House in support of the movement on June 27.

The weekly return of metropolitan pauperism shows that the total number of paupers at the close of last week (the fifth week of April) was 82,603, of whom 37,965 were in work-houses and 44,638 received outdoor relief. These figures show an increase of 1301 compared with the corresponding week of 1876, and a decrease of 7558 and 16,987 respectively compared with 1875 and 1874. In the number of indoor paupers there is an increase compared with the corresponding week in 1876, 1875, and 1874, of 2877, 3745, and 3145 respectively. The number of vagrants relieved on the last day of the week was 686, of whom 458 were men, 184 women, and 44 children under sixteen.

The forty-seventh annual meeting of the Congregational Union of England and Wales began its public business on Tuesday morning in Westminster Chapel—Mr. Henry Richard, M.P., chairman of the union, in the chair. The body of the chapel was filled with delegates and the galleries by the public. There were more than 800 members and delegates present. Upon the motion of Mr. R. W. Dale, of Birmingham, seconded by the Rev. Dr. Aillon, a petition to the House of Commons was adopted declaring that, in the judgment of the assembly, Turkey had by misrule and oppression lost all claim to the sympathy and moral support of this country and praying that "the influence of Great Britain in the councils of Europe should be employed with a view to secure the early and effectual development of local liberty and practical self-government in the disturbed provinces of Turkey." The Rev. Baldwin Brown has been elected chairman of the union for the ensuing year.

The fourteenth anniversary dinner in connection with the Newspaper Press Fund was given in Willis's Rooms last Saturday evening, the Marquis of Hartington in the chair. The chairman gave "The Queen and the Members of the Royal Family," which was most enthusiastically received; and "The Naval, Military, and Auxiliary Forces," was proposed by Mr. Ingram, M.P., amid cheers, Vice-Admiral Inglefield and General Sir William Codrington replying. Observations upon Parliamentary reporting were made by the chairman and Lord Houghton, the president of the fund, and also by Lord H. Lennox when responding for the House of Commons. The Duke of St. Albans replied for the House of Lords; for "The Distinguished Visitors," the Hon. E. Pierrepont, the United States Minister in this country; and Captain Burnaby for "The Travellers." Mr. Rodwell proposed "The Health of the Chairman," to which the Marquis of Hartington briefly replied. A selection of excellent music was given under the direction of Sir J. Benedict. Mr. Hyde Clark announced a list of subscriptions amounting to £900.

ADMIRAL HOBART PASHA.

We give a Portrait of the English naval officer who has been intrusted by the Sultan with the command of the Turkish fleet, both in the Mediterranean and in the Black Sea. The Hon. Augustus Charles Hobart is a son of the Earl of Buckinghamshire. That nobleman, who is in holy orders, and holds a prebendal stall, succeeded to the peerage, as sixth Earl, in 1849. The subject of this memoir was born in 1822, and entered the Royal Navy, in which he attained the rank of Captain. Having retired from active service on half pay, he found employment during the American Civil War, from 1861 to 1865, in commanding a swift blockade-runner, the *Don*, along the coast of North Carolina, and keeping up maritime communications with the Southern States in spite of the Federal blockading squadron. He published a narrative of these experiences, under the name of "Captain Roberts." In 1867, when the Cretan insurrection broke out, Captain Hobart entered the Turkish naval service, and was placed in command of the squadron which had to blockade the coasts of that island. The Greek Government then called the attention of her Majesty's Government to this fact, and the Admiralty, at the instance of the Foreign Office, struck his name off the British Navy List. In 1874, Admiral Hobart Pasha addressed a letter to Lord Derby, admitting that he committed a breach of naval discipline by accepting service under the Turkish Government without leave, but adding:—"During seven years that have elapsed since that time I have endeavoured to maintain the character of an Englishman for zeal, activity, and sagacity, and I have been fortunate enough to obtain a certain European reputation of which I hope I may be justly proud. I prevented by my conduct during a very critical period at the end of the Cretan Revolution (while I was in command of a large Turkish fleet) much bloodshed, and, many people think, a European war. I have organised the Turkish navy in a way which has led to high encomiums as to its state from all the Commanders-in-Chief of the English fleets who have lately visited Constantinople. I have established naval schools, training and gunnery ships (and here I have been ably assisted by English naval officers). While doing all this towards strengthening the navy of our ally, I naturally have made many enemies. . . . All that they can find to say (and it is bitter enough) is, 'He has been dismissed the English service,' without, of course, explaining the cause. This is most painful to me, and is very detrimental to my already difficult position." He therefore asked that his offence might be overlooked and that he might be relieved from "the ban of disgrace." This application was supported by the Earl of Derby, "as a matter of Imperial policy," considering it to be of material advantage that Admiral Hobart Pasha should occupy the position he held in Turkey. The Lords of the Admiralty therefore consented to allow the Hon. Augustus Hobart to be reinstated in his former rank as a Captain in the Royal Navy, placing him on the retired list, with the opportunity of rising by seniority to the rank of a retired Admiral. He is reputed, we believe, to be an officer of considerable skill and ability in his profession, as well as of high courage and enterprise. The bold and successful exploit he has lately performed of running down the Danube, past the Russian batteries, in the Turkish despatch-boat *Rethymo*, was described last week.

TORPEDO NETTING FOR SHIPS.

Our Illustration represents H.M.S. *Thunderer*, fitted with the netting suspended around her hull for her protection against marine torpedoes, upon which novel instruments of warfare something was said in our last. The application of this netting was merely an experimental demonstration. The *Thunderer*, which is a double-screw ironclad turret-ship, carrying four big guns, was commissioned at Portsmouth on Tuesday week by Captain J. G. Wilson, with a crew of 130 men. She is under orders to join the Channel Squadron, which will assemble on the 28th inst. at Devonport. The *Valiant* and the *Lord Warden* are to be added to this squadron, and the *Achilles* is to take the place of the *Resistance*.

FROM A SKETCH BY ONE OF OUR SPECIAL ARTISTS.

H.M.S. THUNDERER FITTED WITH NETTINGS FOR PROTECTION AGAINST TORPEDOES.

THE WAR: COSSACKS ON THE ROAD FROM GALATZ TO BARBOSCHI.
FROM A SKETCH BY ONE OF OUR SPECIAL ARTISTS.

THE WAR ON THE DANUBE.

The military operations of the Russian army in Roumania, under the command of the Grand Duke Nicholas, have not progressed with much apparent rapidity since our last week's notice of the war recently commenced. The line of advance to the invasion of Bulgaria seems to have been changed; and, while occupying all the left bank of the Lower Danube, from Ibraila (or Brailow) to the Black Sea, threatening to cross over into the Dobrukscha, the Russian forces now move across Moldavia from a point higher up the Pruth than was at first chosen, and descend through Wallachia to Bucharest, but passing on to Giurgevo, on the Danube, where they are being concentrated directly opposite Rustchuk. In the mean time, however, some movements of the Turkish troops on the Danube appear likewise to indicate an intention on the part of the military advisers of the Porte to concentrate a large army at Rustchuk, under the command of Ahmed Eyub Pasha, based upon the fortresses of Schumla and Varna, and having strong reserves at these latter places; while a smaller force, under the orders of Osman Pasha, will remain at Widdin, with reserves stationed at Sofia and Philippopolis. To this end the greater part of the army of Bulgaria, the main body of which was assembled when war was declared, on April 24 last, about Widdin has been moved eastward. Two divisions of infantry, commanded by Adil and Izzet Pasha, six regiments of cavalry, and twelve batteries of artillery were transported down the Danube from Widdin to Rustchuk on flat-bottomed boats towed by Turkish steamers; while two other brigades, under the orders of Tahir and Kharim Pasha, were dispatched to Matchin and Tultscha respectively. According to the best estimate, the troops in the Widdin, or westward quarter of the theatre of war, will amount, when the reserves shall have arrived at Philippopolis and Sofia, to about 59,000 men; but some little time must elapse before the rear troops come up, since the two divisions of which they consist have only recently been brought over to Europe from Syria and Mesopotamia. The strength of the reserve army at Schumla is calculated to be very nearly 40,000 men, while the force assembled at Varna is said to consist of 16,000 territorial militia.

We learn that on Sunday the Turks regularly attacked the port and town of Beket, on the Danube, several raids having previously been made on the place during the last few days by the Bashi-Bazouks. The bombardment lasted some hours, and several houses were burnt, as well as a number of grain-ships lying in the port and in the river Jul. Five of the vessels destroyed are said to have been British. Neither Beket nor Oltenitza, which was shelled on Sunday, are garrisoned. It is stated, also, that on Sunday afternoon the Turks bombarded Braila, and a shell fell into the station just before the arrival of the train conveying the Grand Duke Nicholas. The shell did not, however, explode, and this has been the case with many which have fallen at Reni and Braila.

The Roumanian forces on the Danube, without an express declaration of war, or avowed active alliance with Russia, are involved in actual hostilities against the Turks. This took place at Kalafat, opposite the Turkish fortress of Widdin. The artillery conflict there was commenced by the Turks. There are two versions of the way in which the affair was brought on, but they differ only in the number of shots fired by the Turkish batteries. Before the Roumanians replied, the Turkish shells, as before observed, did not explode, with one exception, and did no material damage to Kalafat; but the Roumanians assert that they set Widdin on fire, and that part of the town near the river was burnt. Shells have been sent from here to Kalafat, especially designed to produce great effect among the wooden houses of Widdin. The ruling Prince of Roumania, Prince Charles of Hohenzollern, in reply to an address of his Senate, has announced the participation of that Government in the war, giving these reasons for it:—"Without any provocation our villages on the Danube have been pillaged and burnt, and the inhabitants frightened from their homes. Our commerce on the river is ruined by Turkish gun-boats seizing vessels without any regard to the flags they carry. Open towns are bombarded. Bashi-Bazouks and Circassians have invaded our territory. Under all these unfortunate circumstances, it is evident that we are compelled to resort to force to prevent further devastations of our territory. We are confident that our young army will prove itself worthy of the reputation enjoyed by its ancestors in defending the cause of the Christians in the East." The Roumanian troops, under the command of Prince Charles, will form a wing of the Russian army.

The Turkish Government has declared a blockade of the whole Russian coast of the Black Sea and of the navigation of the Danube. The commerce of Odessa is stopped, and it is said that 40,000 inhabitants have left that city.

On Monday the Emperor of Russia returned to St. Petersburg, and met with a very cordial reception. At night the city was illuminated. On Wednesday the Czar received a deputation of the Municipality of St. Petersburg at the Winter Palace, and in reply to an address said he had done his utmost to arrange matters peacefully in order to avoid shedding precious Russian blood and prevent the disturbance of industrial activity in the Empire. "It has pleased the Almighty," the Emperor added, "to mark out for us the path by which our end is to be attained. Let us trust in the grace of God."

Our Special Artists contribute to this number several interesting sketches of the incidents of this war in the provinces on both sides of the Danube. The scene at the Rustchuk railway station, crowded with fugitives from the neighbouring towns, who are much encumbered with their luggage of household furniture, stores, and wearing apparel, bears witness to the sad disturbance of peaceable families in that country, at the approach of the liberating Russian army. There is an illustration, also, of the Russian battery of field-guns commanding the Danube at the mouth of the Pruth, some miles below Galatz; and one of the Cossacks marching to occupy the Barbooschi bridge over the Sereth, above that town, which was a position of great value at the outset of the campaign. Our Special Artist in that quarter has amused himself by delineating his own first meeting with a detachment of Cossacks, who showed him their lances and pistols, and behaved with much civility to the English traveller. The march of another column of Russian troops on the Bessarabian frontier, between Chotim and Lipitschany, is a specimen of the manner in which the late military movements have been performed. On the Turkish side there is a scene of the enlistment of volunteers, which is quite in the spirit of the times. A view of Cape Kalagria, on the Bay of Varna, will perhaps be rendered more interesting by the movements of the Turkish fleet.

The medals awarded to the officers and crews of her Majesty's ships Alert and Discovery, and the Pandora, for services in the Arctic expedition are in course of distribution.

The Victoria (Philosophical) Institute held a meeting at 10, Adelphi-terrace on Monday evening—Dr. C. Brooke, F.R.S., in the chair. After the election of Dr. Robinson, F.R.S., director of the Armagh Observatory, and several other members, a paper on the Indestructibility of Matter, by Professor Challis, F.R.S., was read.—Mr. Isaac Taylor's paper on the History of Alphabets will be taken in June.

THE WAR IN ASIA.

The official Russian military journal gives the following account of the Asiatic theatre of war and the operations hitherto carried out both in Asia and Europe, which will be more easily understood by the aid of our Maps:—

"The general character of the country bordering upon our Trans-Caucasian Provinces is that of a mountainous land, of which the hills are high and steep, but the valleys are wide and favour military movements. There are numerous carriage roads, but they are in a bad condition, especially in spring, at the rainy season, and in autumn. Every now and then military requirements and the wish to secure the transit of commerce have caused the Turks to do something for the roads; but, in most instances, the impulse had to be given by European Governments. The carriage roads require frequent repair. The principal roads connecting the vilayet of Erzeroum with our Trans-Caucasian Provinces are these:—First, from Alexandropol, three roads lead to Kars by way of Arpa Chai, the border post. Branching out from Molla Musa, one of these roads proceeds to Tichnis and Hadji Vali; the second to Kial Tchekchuchakh and Kurak Dara; while the third and most northerly goes to Mekus. Our troops marched along the two former roads, these being comparatively easy and passable at the present time of the year; the last road to Mekus is well provided with grass, but circuitous. In addition to these, there are two more roads connected with those enumerated. The distance from Alexandropol to Kars is seventy versts. Secondly, from the province of Erivan three roads lead to Bayazid. Of these, two are carriage roads, repaired by our Erivan detachment in 1854, while the third is fit only for horses. The first road goes from the village of Igdir to the post of Orgoff, then ascends the Tchangel ridge, and, passing by a sweet-water lake, reaches the Kurd village of Kurabulach. Thence it proceeds along the western side of the Lake Baigel, crosses the river Garnaux Tchai, and terminates at Bayazid. The second road goes from the village of Tchachtche, in the province of Erivan, twenty versts north-west of the Orgoff post, through the pass of Karavan Sarai, and the valley of the Balik Tchai. It then makes for Diadin, situated on the great transit road from Erzeroum to Bayazid, and further west reaches Bayazid. This pass is not so high as the preceding one, but has no water at first; at the rainy season, too, the valley of the Balik Tchai becomes a swamp. The third road is at present only for horses, but may easily be made practicable for carriages. It is south from our port of Abasgal, and, ascending the pass of the same name, proceeds to the monastery of Surpu Oganess, west of Diadin. Bayazid is 135 versts from a river. Thirdly, from Akhatzik to Ardahan there is but one carriage road. It accompanies the right bank of the river Dozchoff Tchai from the village of Ker, ascends in zigzags the ridge Souk Pugar, passes along Mount Ulgar, and descends to Ardahan. Two mule-tracks likewise cross the Souk Pugar. The road runs through the village of Kanardel, and, crossing the hills of Ardjan and the river Kara Tchai, descends to Ardahan. The clay hills of Ardjan are a serious obstacle along this road at the rainy season. At a distance of about ninety versts from Ouzget to Batoum there are two roads—one a carriage road along the shore by the fortress of Ziche Dairi, the other a mule-track by Kobuleti and the fortress of Tchuruksu. Besides these, there is another difficult mule-track from Akhatzik to Batoum through Chul. The distance is about fifty versts.

"These are the roads trodden by our troops on crossing the frontier. Another important communication leads from Kars to Erzeroum, and forms the trunk-road of all Armenia. The road from Kars to Erzeroum, a distance of about 200 versts, goes by the village of Kotanli; and, having ascended the Saganlung ridge, proceeds to Meshinkert, Khorasan, Ardost, Kuprekei, and Hassan Kale, and further on to Erzeroum. That portion of the road which crosses the Saganlung was made by our troops in 1829, but requires considerable repair now. The most troublesome parts are the ascent to the River Kara Dere, a tributary of the Araxes. Although this road is habitually used by the carriages travelling between Alexandropol and Erzeroum, it is very troublesome to pass, especially in spring. In this locality our troops may be detained both by the impracticability of the road and the facilities given to the enemy by the ravines of the Saganlung. Another road connecting Kars with Erzeroum skirts the spur of the Saganlung at Yenikoff, but this is very steep, and though, perhaps, a means of turning the enemy's flank on the Saganlung, will prove very troublesome. Erzeroum, towards which all the roads of the vilayet converge, is a strategical point of the greatest importance. Thence the only macadamised road in the country, 280 versts long, runs to Trebizond. A small portion of this road, near Trebizond, was constructed by French engineers, the rest by the Turks. The total expense was 1,705,000 roubles, or 6087 roubles the verst. The road is well laid down, but has this disadvantage that it is liable to be flooded and ruined in the rainy season by the water from the adjacent hills. In winter also immense quantities of snow accumulate on the Kop Dag ridge and Zigan Dag ridge, which have to be cleared away by the travellers. The road, however, notwithstanding all this, is passable during the whole of the year. Other roads from Erzeroum proceed first, to Bayazid, and further on to Tabreez, in Persia (about 280 versts); secondly, through Khinis and Mush to Bitlis; thirdly, to Erzindjan; and, fourthly, to Kars, Olti, &c. There is postal communication between Erzeroum and Trebizond; but the Turks, true to their old habits, prefer sending letters by special couriers. Telegraph lines connect Erzeroum with Erzindjan and Trebizond; with Sevas and Constantinople; Kars, Mush, Bitlis, Van, and Bayazid. The total length of the telegraph-wires in the vilayet is 900 versts.

"As regards Batoum, this is a little town with an excellent harbour, the Bay of Batoum being inclosed east and south by high mountains, and protected on the west by lillocks pierced by the River Tchurukhsu. On these hills stands the axis of the bay, going from north-east to south-west. The water is calm, whichever way the wind blows. It is deep enough for the largest vessels to get close to the fortifications of Batoum, both towards the sea and the mainland. For this purpose the coast population of Asia Minor were compelled to work on the redoubts last year. The new fortifications are towards the west, south, and east. The enemy, in attacking Batoum, may occupy commanding positions on the hills rising in terraces near the town. A macadamised road from Batoum to Ardahan and Kars is in course of construction, and was to have been finished last year. According to the latest intelligence thirty-four battalions of infantry, with thirty guns, were stationed at and near Batoum at the beginning of the war. Of these, six battalions were at Batoum, fourteen battalions and six guns at Tsikhedziri, and six battalions, with eighteen guns, at Tchuruksu. The Kars corps, together with the garrison of the town and the reserve at Erzeroum and Olti, consists of sixty-eight battalions, thirty squadrons, and 160 guns. Of these, twenty-four battalions, six squadrons, and eighteen guns are stationed at Kars and east of Kars; ten battalions, two squadrons, and thirty guns are at Ardahan; two battalions are at Olti; and thirteen battalions, two squadrons, and seventy guns at Erzeroum. Eight battalions of the Kars garrison have

just left for Erzeroum. Small detachments are distributed in the remaining portion of Asia Minor.

"The following is a succinct account of the operations hitherto carried out:—Immediately after the Imperial manifesto of April 24 our troops in Europe and Asia crossed the Turkish frontiers. The principal échelons of our European army crossed the frontier at Leovo, Bechtamach, and Kuba, and marched into the interior, a detachment of infantry on our left wing making seventy versts in twenty-four hours, while the accompanying cavalry performed one hundred versts in the same time. On April 25 they occupied Reni, Galatz, Brailoff, and the bridge over the Sereth at Barboosch. Fresh échelons coming up, Ismail and Kilia, on the Lower Danube, were taken possession of. Our troops thus anticipated the Turks in garrisoning Galatz, the great railway centre of Roumania—a circumstance which will not a little facilitate the concentration of our army and the transport of our baggage and train. The last few days some difficulty has been experienced in crossing the Pruth, in consequence of the inundations at Leovo. The advance of the columns entering the Principality at other points, as well as in the Principality itself, has been uninterrupted. The Roumanian population has everywhere joyously welcomed our troops. The Turks have undertaken no offensive operations. Only in the night of May 3 two Turkish ironclads exchanged a few shots with our field artillery at Brailow.

"Simultaneously with these movements, our Caucasian troops crossed the Asiatic frontier of Turkey in three columns. The main force, coming from Alexandropol, marched upon Kars; the Rion detachment marched upon Batoum; and the Erivan detachment upon Bayazid. The Alexandropol corps, under the command of Adjutant-General Loris Melikoff, entered the Turkish territory in two columns, and, taking the Turkish outposts prisoners, on the same day reached Molla Musa and Bash Shuragel. On April 27 the greater part of the corps crossed the River Kars Tchai, and passed the night at Kuruk Dara, Hadshi Vali, and Subotan. On the 29th the corps reached Zaim and Angi Keff, dispatching twenty-seven squadrons and sotnias, with sixteen guns, to cut off the communication between Kars and Erzeroum. This cavalry, under the command of Major-General Tchavchvadze, in their successful reconnoitring on the 28th, 29th, and 30th, destroyed the telegraph between Kars and Erzeroum, and pursued a Turkish detachment of eight battalions marching from Kars to Erzeroum, and commanded, as the prisoners told us, by Mukhtar Pasha himself. To support the cavalry General Loris Melikoff ordered twelve battalions of grenadiers, without knapsacks, accompanied by forty guns and five sotnias, to turn the flank of the enemy at Kars, and proceed rapidly to Viskineff. At the same time eight Turkish battalions sallied forth from Kars, and, with some artillery, took up a position under cover of the fortress guns. The artillery which accompanied our cavalry, opening fire, dismounted a Turkish cannon. In this engagement, General Loris Melikoff, leaving the camp at Viskineff, and with his remaining forces, returned on May 1 to his former camp at Zaim. The population everywhere showed the most friendly disposition towards our troops. There was no resistance or opposition whatever. On the contrary, Russian rule was everywhere accepted as a benefit. On April 24 a recently levied squadron of Karapapachs, with their colours, begged permission to enter the Russian service. All the irregular cavalry of the district either joins our forces or disperses.

"The troops of the Rion detachment, under the command of Lieutenant-General Oklobjio, marched upon Batoum in two columns. The left-hand column, under the command of Major-General Denibekoff, made for Muchastir, while the other, under General Scheremetieff, proceeded along the Atchmarum road. On April 25 the left-hand column, after a serious engagement, took the camp of Muchastir, and on the 26th fortified this strong position. The other column marched the Atchmarum road, and likewise had an engagement with the enemy. Our loss on the 25th amounted to thirty wounded, among them Lieutenant-Colonel Muscheloff, the commander of the sixth battery of the 41st Artillery Brigade.

"The troops of the Erivan detachment, under the command of General Tergukassoff, on the morning of April 30, reached Bayazid, and occupied the town and citadel. The Turkish garrison, 1700 strong, hastily withdrew to the Allah Dag hills when our troops approached the place."

Telegraphic intelligence to the 8th Inst. states that some skirmishing has taken place between the Russian and the Turkish forces in Asia.

THE FORTRESS OF KARS.

Our Extra Supplement for this week is a view of that fortress in Asiatic Turkey, near the Russian frontier, which is again to be attacked by the forces of its powerful neighbour, and which has actually fallen into Russian hands in two former wars. In the war of 1829 both Kars and Erzeroum were speedily captured by General Paskiewitch; but in the war of 1854 and 1855, as our readers must well remember, Kars was defended with heroic fortitude and perseverance by its Turkish garrison under the command of General Sir W. Fenwick Williams, assisted by Colonel Lake, Major Teesdale, and other English officers, with the support of a body of troops under the Hungarian Generals Kmety and Guyon, who had accepted commissions in the Turkish army. The siege was protracted from the middle of June, 1855, to the end of November, when the brave defenders of Kars, after inflicting many a severe repulse on their enemy, were compelled by famine to surrender to General Mouravieff, being disappointed of the promised relief from the armies of Omer Pasha and Selim Pasha, the former at Soukhoun Kaleh, the latter at Erzeroum, by whose timely arrival Kars would no doubt have been saved. Dr. Humphry Sandwith, a medical gentleman well known by his more recent efforts to benefit the distressed populations of Bosnia, Serbia, and Bulgaria, was present throughout the siege of Kars, acting as Inspector of the Military Hospitals there and at Erzeroum; and he wrote an interesting narrative, published in 1856, of the circumstances of that memorable struggle, and of his personal experiences in the Turkish provinces of Armenia and Lazistan. We would suggest to the author and to his publisher, Mr. Murray, that a new edition of this volume should be produced without delay, for its perusal at the present moment is most desirable. Some points of topographical description may here be noticed, as borrowed from Dr. Sandwith, to furnish a little commentary upon the view of Kars, with the two maps of the seat of war in Asia, and the country around Kars, which are this week presented to our readers.

The two fortified seaports of Trebizond and Batoum, on the south-east coast of the Black Sea, together with the two inland towns and fortresses of Erzeroum and Kars, form a notable Quadrilateral, covering the greater part of Armenia and Lazistan. Each of the four sides of the space between these fortresses is rather more than a hundred miles in length; the precise distances being—from Trebizond to Erzeroum, in a south-east direction, 120 miles; from Trebizond to Batoum, north-east along the seashore, 108 miles; from Erzeroum to

Kars, likewise north-east, but in a line through the interior, about one hundred miles, and the distance from Batoum to Kars is somewhat greater. Trebizond is the seaport of Erzeroum, as Batoum is the maritime gate of the Kars district, which is a portion of the large province of Erzeroum.

"The fortress of Kars," says Dr. Sandwith, "is a most picturesque model of a feudal stronghold. Built on a craggy rock, which rises abruptly at the entrance of a deep gully, it commands the whole city, and its grey old walls seem to blend with the scarped rock and precipices on which it is built. At the foot of its rocky foundations, the Kars Chai, a brawling mountain river, crossed by an ancient stone bridge, rushes over its stony bed. A curious circular tower or tomb stands near the castle, and fine remains of Persian architecture rise from amidst this city of mud huts. The domestic architecture of Kars scarcely differs from that of Erzeroum, except that good houses are even less frequent here. The houses of the lower classes, that is to say, nine tenths of the inhabitants, are constructed of mud, with a mud floor, the roof only being composed of wooden rafters. Here, during a long winter, a poor family will be huddled together, crouched over a charcoal brazier, or a hole filled with burning 'tezak,' or dried cowdung. Instead of windows, there are holes covered with greased paper. The better class of Armenian houses, built of stone, with their very windows, have a most gloomy aspect. You enter by a low door, and find yourself in a stone passage. On your right is a door which opens into a stable; on your left are sundry odd-looking rooms, such as kitchens and pantries, all excessively cold and damp. A stair on your left leads you into the upper rooms. All these apartments are built side by side, like so many independent houses; and each has a roof of its own, so that when you step outside you find a separate roof for each room, the lower ones leading to the upper by stone steps. In the spring of the year the whole population of the city, chiefly women and children, bring out their cushions and mattresses and sun themselves on these roofs. You can walk along the terraces from house to house over the town. The interior of the rooms is often gaily decorated with painted roofs, which, though curious, are utterly wanting in artistic taste. A native room contains but little furniture; a carpet and a sofa are, strictly speaking, the whole of it; but the wealthier Christians, and some of the Turks, have latterly adopted much of European luxury, and it is not unfrequent now to find chairs and tables. Moreover, the very recent introduction of glass windows has much increased the comfort and healthiness of the houses. But the streets of Kars are narrow and dirty, and the people sordid in appearance. It is a true Asiatic town, in all its picturesque squalor. The bazaar is just the same as in every other town of Asia Minor; each shop is opened by raising a large board which covers the whole apartment, and here squats the owner of a very paltry stock of goods, the price of which accords with the quality. It is scarcely necessary to describe minutely this Asiatic style of shop, which is the same from the Danube to the Tigris."

Dr. Sandwith also gives a description of the position of the fortifications constructed by Colonel Lake for the defence of this town:—"Kars, I must repeat, is situated under a precipitous rocky range of hills, in some parts quite impassable for artillery; but there are in some places rocky roads where an active country horse can clamber up and down. This range of hills runs nearly east and west. The western extremity is an easy ascent, a sort of mamelon, called Tahmasp; the eastern extremity is called Karadagh, very rocky and difficult of access. Tahmasp is about two miles distant from the town, Karadagh about a mile. The range of hills is bisected by a deep gorge, through which flows a river, and over this river are four or five bridges, the most important having been thrown across by Colonel Lake. On the south of Kars a fine level plain stretches away for many miles, till it is interrupted by a range of easy sloping heights. Colonel Lake's great care had been to fortify the heights which on most sides command the city. The year before, however, General Williams had planned and commenced several works, and some few open works existed before his advent. On the most commanding position, on the west of Kars, the Colonel had constructed a formidable closed fort, on the site of an open work which had existed years before, under the name of Veli Pasha Tabia. Inside this was a block-house, so protected by earth as to be bomb-proof. This Veli Pasha Tabia, or Fort Lake, was justly looked upon with pride by our engineer. It was armed with four heavy guns, 36-pounders, besides as many more of lighter calibre. The extent of country it commanded made it formidable in the extreme; in short, it was the key of the whole northern position, and the Colonel told me that, if the Russians ever took this, the capture of Kars was certain. Breastworks stretched away from this fort eastward to the gorge, a distance of about a mile and a half; and these lines were interrupted by two or three strong and closed redoubts. At the extremity of the gorge was a redoubt, called Teesdale Tabia, which that young officer had planned the year before; but this was open on the east, so as to be commanded by a fort on the opposite side of the gorge, called Arab Tabia; and this latter was again commanded by the eastern forts of Karadagh. I have thus given a hasty sketch of the northern defences of Kars; these were united to the works on the plain by breastworks and redoubts, placed in the most commanding positions. A space of ground, much too large for our small force to defend, had to be inclosed on the plain by forts and breastworks; but the area was necessarily too extended, for all the commanding positions within a certain range must be occupied by our defences or left to the enemy."

Such was the fortress of Kars in 1855, with a Turkish force of 15,000 regulars, and two or three thousand Bashi-Bazouks, Arabs, Lazi, and Circassians of Daghestan, and volunteers from among the townfolk. The Armenian population, generally, were in favour of Russia, and lent the invading army whatever aid they secretly could. The Russian army besieging Kars amounted to 40,000 excellent troops; but every assault upon the forts and outworks above described by Dr. Sandwith proved a signal failure. In the sanguinary conflict of Sept. 29, which raged seven hours and a half, chiefly at the position of Tahmasp, 6300 Russians were left dead on the ground, and were buried next day by order of the English commander. Captain Thompson and Major Teesdale performed great feats of personal valour in that obstinate fight, while the artillery, directed by Colonel Lake, was plied with terrible effect. But very soon, and during the month of October, the strength of the garrison was greatly reduced by starvation and disease. The cholera destroyed more than a thousand of the Turkish troops. There was no more beef, mutton, or even horseflesh, or any kind of animal food; they were put on daily rations of eleven and nine ounces of bread, with a little thin soup or porridge of flour; they ate all sorts of herbs, roots, and grass. The hospitals were full of sick and wounded, dying at the rate of a hundred a day. But it was not till Nov. 25, having got a message from Mr. Brant, the British Consul at Erzeroum, that the Turkish Generals would not advance to their relief, the defenders of Kars, General Fenwick Williams and his comrades, negotiated for a capitulation. It was arranged upon the most honourable

terms, the garrison piling arms in camp, and marching out with their music and colours, to surrender themselves prisoners of war. General Mouravieff expressed his admiration of "the noble and devoted courage" which they had shown, and allowed the officers to keep their swords, as a token of his respect for them. We feel much pleasure in recalling to mind this famous episode of the war twenty-two years ago, which makes the fortress of Kars so interesting to our countrymen.

FOREIGN AND COLONIAL NEWS.

FRANCE.

The Prince of Wales, attended by Colonel Ellis, Lord Suffield, and Mr. Owen, inspected the foundations of the Paris Universal Exhibition building last Saturday. He was received by M. Teisserenc de Bort, the Minister of Public Works, and M. Krantz, the Chief Commissioner of the Exhibition. His Royal Highness left for England on the following day.

M. Jules Simon made his promised statement in the Chamber of Deputies on Thursday week relative to the policy of his Government towards the Ultramontane party. In the course of his speech he said that if articles attacking foreign Governments were published in any of the newspapers the writers themselves were solely responsible, and neither the Government nor any political party could be held answerable for what was published. The Government would not tolerate any attack on the Catholic religion, and would protect the rights and liberty of Catholics. It sincerely respected the Catholic religion. He cited several facts to show that Catholicism now enjoyed more liberty in France than at any previous time. Passing then to the more immediate subject of the interpellation, the Minister pointed out that a distinction existed between the Catholic clubs, which were tolerated by the Government as long as they observed their statutes, and the Catholic committees, which had formidable ramifications. He explained the action of the Government which had interdicted these committees, prohibited preaching by the laity, and declared the act of using degrees conferred by the Chancellor of the Catholic Faculty of Lille punishable by the Penal laws, because it was contrary to the Concordat. M. Jules Simon proceeded to state that the Catholic petitions and the demonstration made by the Bishop of Nevers were based upon a fiction—namely, that the Pope was a prisoner in the Vatican. He condemned the petition as an interference in the internal affairs of a neighbouring country, and concluded by proclaiming the settled resolve of the Government to ensure respect for the laws of the country by all parties. On the following day M. Gambetta made a stirring speech upon the conduct of the clergy. M. Jules Simon repudiated the insinuation thrown out against him by a Church journal, and ultimately a resolution, censuring Ultramontane manoeuvres as dangerous to the peace of the country, was carried by 361 votes against 121. On Tuesday the Bonapartists made a series of attacks upon M. Jules Simon, which led to a good deal of uproar. The Premier was twice accused of having once belonged to the International Society, a charge which he called an absurd imputation. The business nominally before the Chamber was the Municipal Organisation Bill, but not much progress appears to have been made with it, and the House at its rising adjourned to Friday.

M. Durand (Republican) has been elected Deputy for St. Malo by 7347 votes, against 4975 for M. de Kerloguen (Legitimist).

At the sitting of the Academy on Thursday week—M. Alexandre Dumas in the chair—M. Boissier, Chancellor, presented his report in the name of the committee appointed for the competition for the prize of philology founded by M. Arthon-Despeyrouses. The prize was unanimously awarded to M. Adolphe Regnier, member of the Academy of Inscriptions and Belles Lettres, and director of the collection of the "Grands Ecrivains de France," which has now reached its sixtieth volume. The election to the chair vacated by the death of M. Autran is fixed for June 7.

Monday's *Journal Officiel* publishes a note by which strict neutrality is enjoined upon all French subjects at home and abroad during the present war.

SPAIN.

The Minister of Foreign Affairs made a speech in the Senate on Saturday opposing an amendment which had been moved to the address in reply to the Speech from the Throne demanding that the Government should support the restoration of the Pope's temporal power. The Minister pointed out that it did not become Spain to interfere in questions which did not come within her province and which affected nations allied with her. The Catholic party subsequently withdrew the amendment, the Government being, however, at the same time, requested to adopt the most suitable means for securing for the Pope complete and real independence.

In Tuesday's sitting of the Senate, the address in reply to the Speech from the Throne was approved by 135 votes against five.

In the Chamber of Deputies on Wednesday Señor Gamazo, a member of the Opposition, attacked the treaty with Germany and England, to which Señor Silvela, the Minister for Foreign Affairs, and Señor Collantes, the Minister of Justice, replied, defending the Protocol signed in April, and declaring that by that treaty the Spanish sovereignty over the Sulu Archipelago was recognized and liberty of foreign commerce tolerated with places not actually occupied by Spain.

A Royal decree has been promulgated completely assimilating the Basque Provinces to the rest of Spain.

ITALY.

The Senate has thrown out the Clerical Abuses Bill by a majority of thirteen, the numbers being 92 in favour of the bill and 105 against. The clerical journals of Rome are said to be jubilant at the rejection of the bill. Cardinal Simoni informed the Pope at once, who said "Thank God!"

Prince Amadeus, Duke of Aosta and ex-King of Spain, has sent the Pope a magnificent chalice, richly ornamented with precious stones, accompanied by an autograph letter, in which the Prince begs his Holiness to accept the present as an offering of a devoted son and sincere Catholic, and asks him to offer up a prayer for the repose of the soul of his deceased wife. According to the Roman correspondent of the *Times*, the Pope, on receiving the chalice and letter, was moved to tears, and exclaimed, "This is the greatest consolation which I have experienced in these moments. This gift, because of its donor, is the most precious I have received." Although the chalice, which is valued at 12,000*fr.*, reaches the Pope at this moment, it has not been sent as a jubilee present, but in fulfillment of a request made by the late Duchess to her husband.

The Pope on Sunday received 4000 pilgrims. Those from Clermont presented him with golden keys worth 9000*fr.* and those from Amiens with 70,000. Headed by the Duke of Norfolk, the English pilgrims arrived in Rome on Tuesday. His Holiness received the pilgrims from Corsica the same day.

GERMANY.

The Emperor William left Strasburg last Saturday morning. Before his departure his Majesty expressed himself highly gratified at the reception he had met with. He arrived

at Hagenau the same morning. Every preparation had been made for his Majesty's reception, the town and the railway station being decorated with flags and loyal devices. After reviewing the troops stationed there, his Majesty proceeded on his journey to Bitach. The Emperor William reached Metz on Sunday evening. The cathedral was illuminated in his honour, and at four the next morning it took fire, apparently from some oversight connected with the illumination. The Emperor, the Crown Prince, Marshal von Moltke, and the Bishop of Metz hurried to the square on the alarm being given. The roof is totally destroyed. The German Emperor visited the battle-fields round Metz. At Gravelotte he went into the cottage which he occupied on the night of Aug. 18, 1870, and spent some time in the room where he indited his despatch of victory. The Emperor also went over the farm-house where he spent part of Aug. 18, 1870, and inspected the German positions between Gravelotte and St. Privat, making a détour to reach them without passing over French soil. On Tuesday the Emperor visited Thionville and Fort Frederic Charles.

The session of the German Parliament was closed on Thursday week. There was no speech, and the members separated after giving three cheers for the Emperor.

The German squadron, consisting of the ironclads *Preussen*, *Kaiser*, *Deutschland*, *Friedrich Karl*, and the despatch-boat *Falke*, which has been put in commission, will assemble on the 28th inst., under the command of Rear-Admiral Batsch. The manoeuvres will be conducted for the present in home waters, but will probably be continued later in the Mediterranean.

AUSTRO-HUNGARY.

Statements as to the policy of the Austro-Hungarian Cabinet were made yesterday week in identical terms by Baron Lasser, in the Lower House of the Austrian Reichsrath, and by Herr Tisza, in the Hungarian Chamber of Deputies, in reply to the interpellations which were addressed to them. Both Ministers stated that the Government had devoted its efforts to the maintenance of peace, and when that became impossible to localise the war. It had not made any military preparations, and would not charge the public expenditure with a purposeless mobilisation, as, while fully recognising its responsibility, it looked forward with confidence to the course of events.

In the Lower House of the Hungarian Diet, on Wednesday, Herr Tisza, in reply to an interpellation of Herr Somssich regarding the navigation of the Danube, said that the neutrality of the Danube had never been expressly declared. Only the principle of free navigation on the river had been accepted, and therefore the interference of neutral Powers in the dispositions of belligerents would be impracticable as long those measures were permitted by international law. As, however, the Government were fully alive to its mission to use every exertion to prevent the restriction of navigation in regard to time and distance beyond the bounds of positive necessity, the common Ministry for Foreign Affairs, even before the interpellation was announced, had taken suitable steps at Constantinople and St. Petersburg, whence they expected a reassuring reply.

AMERICA.

Last Saturday the President issued a proclamation convening an extra Session of Congress for Oct. 15.

The War Department has ordered the discharge of 2500 soldiers; thus reducing the United States army to 25,000 men.

Thirteen hundred more Indians have surrendered to the United States authorities.

THE CAPE COLONIES.

The expected annexation of the Transvaal Republic to the British Empire has taken place. Sir Theophilus Shepstone proclaimed the country British territory on April 12. President Burgers issued a protest against the annexation, but at the same time counselled peaceable submission. It is stated that Dr. Jorison and Mr. Paul Kruger, two leading men in the Transvaal, will proceed to Europe and America for the purpose of protesting to the Powers which have recognised the Republic. A body of British troops had arrived in the Transvaal. The Cape Ministry has agreed to incorporate Griqualand West with the Cape Colony. By the annexation of the Transvaal, an area of 114,360 square miles, with a population of nearly half a million, of whom about seven per cent are whites, is added to her Majesty's dominions.

AUSTRALIA.

We have papers from Melbourne by the Overland Mail to March 22. The political news chiefly relates to the preparations for the general election which was to be held in April. The movement begun by Bishop Moorhouse, soon after his arrival, for the erection of a Church of England cathedral in Melbourne has been taken up with considerable heartiness, and the subscription-list amounted to £8870. The *Argus* says that the Bishop, who has contributed £500 to the cathedral fund, has entered upon his duties with great earnestness and vigour, and has created everywhere a highly favourable impression. Dr. Polding, the Roman Catholic Archbishop of Sydney, died on March 21, at the age of eighty-three. He was appointed a Roman Catholic chaplain for New South Wales by Lord Aberdeen in 1835, and arrived in Sydney in September of that year. In 1841 Dr. Polding went to Europe, and in the following year was raised by Gregory XVI. to the newly-established archiepiscopal see of Sydney. During his last illness he was visited by the Bishop of Sydney, Dr. Barker, and other Protestant clergymen.

Mr. Arthur Blyth, the agent-general for South Australia, has received the following telegram from the Government of South Australia, dated Adelaide, the 8th inst.:—"A sixty-ounce nugget has been found in the northern territory. The season is the best ever known, occasioning greatly-increased tillage of agricultural lands. The Echunga gold-fields are doing well. Wheat, 7s. 7d. per bushel."

Messrs. Lawrence, Clark, and Co., as agents for the Pacific Mail Steam-Ship Company, have received an intimation from the agent-general for New Zealand to the effect that the Post Office have arranged for the dispatch of the New Zealand and New South Wales mails on the 31st inst. by a steamer of the White Star line.

Intelligence has been received at St. Petersburg, from Tashkend, that the mission under Staff Captain Kuropertkin arrived at Kashgar on Nov. 7, 1876, and left again on Dec. 3. It passed the fortification of Maral Baschi, and the towns of Aksa and Kucha, and arrived on Jan. 25 at Kurnja, where it was received by Yakoub Beg. The expedition started on its return journey on Feb. 18, and arrived at Tashkend April 18.

The *Morning Post* is informed that the Chinese Government have agreed with the Shanghai and Woosung Railway that the railway shall be worked by the company for one year, and that at the expiration of that time the line shall become the property of the Chinese Government on payment of a sum of 265,000 taels, of which the Government has already remitted the first instalment. The Chinese Government, as well as the Chinese public, are so pleased with the railway, now that it has been seen in operation, that efforts are about to be made by the Government to establish railways in other parts of the empire, and notably in the Island of Formosa, where valuable deposits of coal and petroleum exist.

THE WAR: A RUSSIAN COLUMN ON THE MARCH FROM OHOTIM TO LIPTECHANY.
FACSIMILE OF A SKETCH BY ONE OF OUR SPECIAL ARTISTS.

THE WAR: CAPE KALAGRIA, BAY OF VARNA, IN THE BLACK SEA.

PARLIAMENT.

LORDS.

Questions and conversations in the Upper House, as well as in the Lower House, have exemplified afresh the diverse complications which neutral Governments have had gravely to consider since the outbreak of hostilities between Russia and Turkey. Yesterday week Earl Delawarr questioned the Foreign Secretary as to whether the maritime Powers of Europe had guaranteed the neutrality of the Suez Canal. The Earl of Derby replied that no international act of the kind alluded to was in existence, but added "that the maintenance of an uninterrupted passage through the canal is an English interest of the highest importance, and one which we shall assuredly feel it to be our duty not to neglect." The same question cropped up again on Monday, after the Earl of Carnarvon had informed Lord Kimberley that, from a telegram he had received from Sir Bartle Frere, there was little doubt that the news was true that the Transvaal in South Africa had been transferred to British protection by Sir Theophilus Shepstone. Lord Waverley feared that the first shot fired in the Mediterranean would be the signal for all the pirates of the Levant to begin operations on their own account. His Lordship, as a matter of form, moved for an address to the Queen praying her Majesty to invite the maritime States of Europe to co-operate for the purpose of maintaining the security of commerce in the Mediterranean and the seaways leading thereto. Lord Derby's reply was reassuring. He thought there was small cause for fear with regard to the pirates; and, as for the Suez Canal, his Lordship did not "apprehend the difficulty and danger on that point in which some people indulge," but he repeated that the Government had the question under their "earnest and anxious consideration, and if it is necessary we shall take steps for the protection of our commerce." With this assurance Lord Waverley was satisfied, and withdrew his motion. On Tuesday the Duke of Rutland found fault with Lord Derby's despatch in answer to the Russian Circular, said the language against Russia was far too strong, and such as Turkey might consider to be an abrogation of the proclamation of neutrality. His Grace supported his charges by stating that the despatch had occasioned the "greatest consternation at Berlin, Paris, and other capitals of Europe." Challenged by Lord Derby for his authority as to the last statement, the noble Duke mentioned the *Daily News*. Thereupon the Foreign Secretary endeavoured to throw doubt upon the trustworthiness of the telegraphic intelligence of the *Daily News*, and, defending the action of the Government in their reply to Prince Gortschakoff's Circular, said that England might remain neutral in the war and yet consistently protest against the course pursued by Russia. Lord Waverley having alluded to the popular nature of the St. James's Hall meeting in support of Mr. Gladstone's Resolutions, Earl Granville thanked the Duke of Rutland for the views he had expressed, defended the *Daily News* from the slur cast upon it, reminding the noble Earl that the journal in question had well proved the reliability of its sources of information in Turkey last autumn, and suggested that Lord Derby's despatch had been manufactured for home consumption. The Lord Chancellor deprecated both the censure of the Duke of Rutland and the suggestion thrown out by Earl Granville, and the matter then dropped.

The House did not sit on Thursday, it being the Feast of the Ascension.

COMMONS.

The debate on Mr. Gladstone's Resolutions has been the engrossing subject of the past week. Without dwelling upon the light preliminary skirmish on this question yesterday week, and without dilating upon the personal matters of purely local interest—which monopolised the rest of the sitting, we may proceed at once to the lively scene which the House presented on Monday evening. Every seat on the floor of the House and in the galleries was occupied. The Prince Imperial and the American Minister were among the distinguished visitors; and Lords Granville, Dudley, and Cardwell were conspicuous among the peers present during the early part of the sitting. The occasion was a great one. Whether the majority of hon. members conducted themselves with the dignity proper to so weighty an occasion may be strongly doubted. To make the course of proceedings plain, the Resolutions of Mr. Gladstone as they were first submitted may here be printed:—

First: That this House finds just cause of dissatisfaction and complaint in the conduct of the Ottoman Porte with regard to the despatch written by the Earl of Derby on Sept. 21, 1876, and relating to the massacres in Bulgaria.

Second: That until such conduct shall have been essentially changed and guarantees on behalf of the subject populations other than the promises or ostensible measures of the Porte shall have been provided, that Government will be deemed by this House to have lost all claim to receive either the material or the moral support of the British Crown.

Third: That in the midst of the complications which exist, and the war which has actually begun, this House earnestly desires the influence of the British Crown in the councils of Europe to be employed with a view to the early and effectual development of local liberty and practical self-government in the disturbed provinces of Turkey by putting an end to the oppression which they now suffer, without the imposition upon them of any other foreign dominion.

Fourth: That, bearing in mind the wise and honourable policy of this country in the Protocol of April, 1828, and the Treaty of July, 1827, with respect to Greece, this House furthermore earnestly desires that the influence of the British Crown may be addressed to promoting the concert of the European Powers in exacting from the Ottoman Porte, by their united authority, such changes in the government of Turkey as they may deem to be necessary for the purposes of humanity and justice, for effectual defence against intrigue, and for the peace of the world.

Fifth: That a humble address, setting forth the prayer of this House, according to the tenour of the foregoing resolutions, be prepared and presented to her Majesty.

Hon. members had evidently assembled in large numbers in the full expectation that Mr. Gladstone would deliver battle on the whole of these Resolutions. Great was the surprise expressed, therefore, when the right hon. member for Greenwich, replying to Mr. Trevelyan, followed up the avowal of his readiness to accept a verbal amendment of the second Resolution by the announcement of his willingness to sacrifice the last three Resolutions. Ironical laughter from the Conservatives greeted this declaration, which reconciled the Marquis of Hartington, however, to the motion of Mr. Gladstone. Responding to an appeal from the Leader of the Opposition, Sir J. Lubbock promptly said he would not move the "previous question," but would now willingly support the amended Resolutions. This altered state of affairs gave satisfaction neither to the Treasury Bench nor to a number of members below the gangways on both sides the House. The Chancellor of the Exchequer excited the Conservative members by some rather personal criticism of the course adopted by Mr. Gladstone, and over two hours were wasted in a fruitless and discreditable wrangle, during which the right hon. member for Greenwich (accused of "childish vacillation of purpose" by that experienced statesman, Mr. Chaplin) thrice explained why he had dropped the last three of his Resolutions. The standing orders having been at length postponed, in spite of a valiant protest on the part of Mr. Bentinck and other congenial souls, Mr. Gladstone was permitted to introduce the expurgated edition of his Resolutions. This he did in a speech at once calm, judicial,

and eloquent, but a speech stoutly maintaining the justice of the Resolutions in their entirety. Briefly put, the speech resolved itself into an elaborate indictment against the inconsistencies of the policy pursued by the Government in the East, and into an earnest recommendation of the adoption of the Resolutions for the keynote of the present and future policy of the Ministry in the East. The right hon. gentleman, who spoke for two hours and a half, and who, in conclusion, solemnly invoked the aid of the Government for the oppressed subjects of the Porte, was rewarded by loud and hearty cheering, again and again renewed. It was the first Resolution only which he formally moved. Sir H. Drummond Wolff, in lieu of moving the "previous question" (of which he as well as Sir J. Lubbock had given notice), submitted the amendment prepared by him at the suggestion of the Chancellor of the Exchequer:—

That this House declines to entertain any resolution which may embarrass her Majesty's Government in the maintenance of peace and the protection of British interests, without indicating any alternative line of policy.

Mr. Chamberlain, speaking in support of Mr. Gladstone, laid stress on the fact that the Government had reverted from their humane policy of December last to the so-called traditional policy of England, and called upon the Ministry to state explicitly the contingencies which might call for their active intervention. Mr. Cross, the first member of the Government to reply, made a praiseworthy attempt to be vigorous and clear, but the general effect of his speech was spoiled by a jerkiness of manner and by that dropping of the voice at the end of a sentence which is a not uncommon fault on the part of Parliamentary speakers. In the retrospective part of his speech, the Home Secretary disputed Mr. Gladstone's interpretation of the Treaty of Kainardji; warmly denied more than once that any member of the Cabinet did not share the national feeling of indignation elicited by the lamentable outrages in Bulgaria, and insisted that the Government had strenuously tried to bring about a thorough reform in the Turkish provinces which had been the scene of the outbreaks, but had at the same time endeavoured to preserve the integrity and independence of the Ottoman Empire, and to that effect had been the instructions given to the Marquis of Salisbury prior to his departure for the Conference. Then came Prince Gortschakoff's Circular and the Russian Protocol, avowedly framed to preserve the concert of the Great Powers; but Russia had presented the Protocol like a pistol to the head of Turkey, and her Majesty's Government felt bound to protest against this action. Now war had broken out, the neutrality of England had been declared. As to the future, the Home Secretary said England had no selfish objects to gain, but the right hon. gentleman seemed to foreshadow a possible course of action of the deepest importance. When he came to deal with what might come to pass, Mr. Cross said in words which deserve to be given verbatim:—

Although our efforts will be directed to prevent that war from spreading, it is impossible for anyone to say where it will stop. There are English interests, there are European interests, there are Indian interests, there are world-wide interests which may be concerned. We do not want additional territory—we want nothing. We wish this war had not broken out. Batoum and other places have been spoken of; but there is the Suez Canal, in which not only England, but the world, is seriously concerned. Why the Suez Canal should be attacked by Russia in any shape I cannot imagine. Whether attacked by Russia or by Turkey, that is a question of not only English, but European interest. It is the road from the West to the East of the world. Take another place in which not simply England but the world is interested. I mean Egypt. Well, what am I to say about the Treaties as to the Straits of the Dardanelles and the possession of Constantinople? Is it necessary for carrying on the war between Russia and Turkey and for the protection of the Christians in Turkey that Constantinople should be either attacked, approached, or occupied? I say "No." These are questions which no country in Europe could regard with indifference; and when I mention them I hope they are so remote that they will not practically arise. But they are questions which must be considered by any British Government, and which any Ministry, even if the right hon. gentleman (Mr. Gladstone) himself were at its head, would not dare to neglect, or, if it did, the country would very soon send it an answer which it could not mistake.

The Home Secretary ended an able speech by arguing that the Resolutions were purposeless now they had been deprived of their sting, and by saying, in conclusion, on behalf of the Government, that—

They are conscious of their own earnest desire for peace; they are conscious, if need be, of their strength. They have, I hope, the wisdom not to use their strength improperly, and wherever the opportunity may offer to stop this war, to heal these wretched divisions, to improve the condition of these Christian populations in a way which will really improve them—and that way, in my opinion, is not by war—to localise, to minimise, or to wipe away the effects of this war, there the Government will give their services.

The debate, adjourned on the motion of Mr. Childers, was resumed by that right hon. gentleman, who dwelt upon the harshness towards Russia exhibited by Lord Derby's latest despatch to Prince Gortschakoff, and thought the adoption of the Resolutions would do more than anything else to save this country from being dragged into the war. Viscount Sandon defended the Government very much after the fashion of Mr. Cross, as far as the matter of his speech went; and Mr. H. Vivian, Mr. P. Wyndham, Mr. Leatham, Mr. Baillie Cochrane, Mr. Baxter, Lord Easington, Mr. Roebuck, the Attorney-General, Mr. Lowe, and Lord John Manners, spoke for or against the motion. The two most notable addresses of the evening were those of Mr. Roebuck and Mr. Lowe, that of the former trenchantly animadverting on the course pursued by Mr. Gladstone, and strongly defending the Government (to which he has from the first been very kindly disposed); and the speech of Mr. Lowe being a more formidable, because less embittered, argument, throwing all the blame on the Ministry for the failure of European diplomacy to settle the Eastern Question. On the motion of Mr. Mundella, the debate was adjourned to Thursday.

Wednesday afternoon was marked by a series of withdrawals. Mr. Burt withdrew his bill for the extension of the Employers and Workmen's Act to seamen; Sir E. Wilmot withdrew the Homicide Law Amendment Bill, and his County Courts Jurisdiction Extension Bill, which was not unfavourably received by the Attorney-General; Sir O. O'Loughlin withdrew his Bar of England and Ireland Bill, after Mr. Cross had suggested the Benchers of the two countries should confer as to the advisability of English and Irish barristers practising in either country. The irrepressible Mr. Biggar then suffered another defeat, his Irish Voters' Bill being rejected by 125 to 99. Hon. members jaded by recent late sittings have found some consolation in Sir Stafford Northcote's announcement that he hoped the House would be able to adjourn for the Whitsuntide holidays from Thursday, the 17th inst., to the 31st inst.

Another crowded House on Thursday manifested the continued interest felt upon the momentous question that occupied the attention of the people's representatives for three whole days in the present week. How much longer the debate will last it is difficult as yet to say. It is, at all events, an accepted fact that it will not conclude to-night, and an impression now prevails that it will run into the beginning of next week. By general consent, this night is given up, with some few exceptions, to the rank and file of the House, the great chiefs of debate who have not as yet entered the field of action waiting until the closing day of the discussion to enter the lists. Mr. Bourke, in replying to a question put to him by Mr. D. Jenkins, stated that the Government did not contemplate

sending a naval force to the Black Sea, their opinion being that were they to send such a force there they might be subjected to much misrepresentation. No information had reached the Foreign Office as to the inability of the Porte to maintain an efficient blockade of the Black Sea forts. In the absence of Mr. Mundella from illness, the debate on the Eastern Question was resumed by Mr. Courtenay, who confessed that, having looked at Mr. Gladstone's Resolutions with the hope that they would have furnished the means of promoting union amongst the Liberal party, it was with consternation, and even bewilderment, that he found the third and fourth resolutions withdrawn. The right hon. gentleman had undoubtedly delivered a magnificent speech, but by the withdrawal of those resolutions the very purport and object of his speech were lost. Before resuming his seat, the hon. member for Liskeard strongly recommended the adoption by this country of an international action in an alliance with Russia. Mr. Chaplin followed in a remarkably able speech, in which he vindicated the conduct of her Majesty's Ministers in relation to the Eastern Question. It was the duty of England in the present crisis, he maintained, to observe a strict neutrality, and to limit and minimise as far as possible the area of the war, to seek the earliest opportunity of restoring peace, and to abstain from all interference so long as our interests permitted it, whilst preserving an attitude of armed preparation, with the fixed determination that Russia should never set foot in Constantinople whilst we had a man or a gun to defend it, and to keep open the highway to India, even if we had to sweep the Mediterranean in order to effect it. The debate was continued up to a late hour of the night.

The Chester Cup was won on Wednesday by Mr. F. Grettton's Pageant, Mr. Baltazzi's John Day being second, and Lord Rosebery's Snail third.

Two special cots have been established by means of children's pence at the Convalescent Home at Margate, a branch of the Victoria Hospital for Children at Chelsea—one by the children of Kensington, at the suggestion of Mr. Darling, to be called the "Kensington Cot"; the second by the boys of the Duke of York's School, at the suggestion of the Rev. Hugh Huleatt, chaplain to that school and honorary chaplain to the hospital, to be called the "Royal Military Asylum Cot."

At the weekly meeting of the London School Board on Wednesday a resolution was passed empowering head teachers to inflict immediate corporal punishment in exceptional cases, but obliging them to make a special report of each case, giving in full the reasons for departing from the ordinary rule of the board. A communication was received from the Home Secretary intimating the conditions upon which he would sanction the establishment of an industrial school training-ship at Thames, and the board resolved to accept the terms.

The Prince of Wales presided on Monday, at Willis's Rooms, at the jubilee dinner of the Licensed Victuallers' Asylum. Among the company were Earl Granville, the Earl of Harwick, the Earl of Dunmore, the Earl of Bradford, the Bishop of Winchester, the Bishop of Guildford, Bishop Piers Claugton, Lord George Hamilton, M.P., Lord Ernest Bruce, M.P., Lord Henry Lennox, M.P., and several other members of the House of Commons. The Prince of Wales, in acknowledging the toast of his health, said:—"During the last three or four days I have, I suppose, received as many as two hundred petitions from large bodies of persons in different parts of the United Kingdom begging me on no account to be present this evening. Of course I do not wish in any way to disparage those temperance societies, which, no doubt, have excellent objects in view; but I think that this time they have rather oversteered the mark, because the object of the meeting to-night is not to encourage a love of drink, but to support a good and excellent charity. I can only say that I am sure all here will agree with me that no one had at heart the interest of all persons in his adopted country more than my lamented father had, and I feel perfectly convinced that he would never have been a patron of this society unless he felt certain that it was one which was likely to do good and was deserving his support." The subscriptions amounted to £5000, including 100 guineas from the Prince of Wales.

The May Meetings on Thursday week included the London City Mission, the Church Pastoral Aid Society, and the Sunday School Union. Yesterday week the Archbishop of Canterbury presided at the annual meeting of the Incorporated Church Building Society; and the other meetings were those of the Religious Tract Society, the Protestant Blind Pension Society, the London Society for Teaching the Blind, and the Midnight Meeting Movement for reclaiming fallen women. Last Monday afternoon the British and Foreign School Society held its seventy-second general meeting at the society's house, Borough-road. Earl Granville presided, and the speakers included the Marquis of Lansdowne, Lord Aberdare, the Rev. R. Maguire, and the Rev. S. Manning, LL.D. Lord Harrowby presided over the annual meeting of the Christian Evidence Society, which was held at Willis's Rooms. Amongst the speakers were the Bishops of Oxford and Gloucester, the Rev. Dr. Rigg, and the Rev. Mr. Boyd-Carpenter. On Tuesday the Archbishop of Canterbury presided at the annual meeting of the Church of England Temperance Society. Among the other societies that held their anniversary meetings were the Irish Church Missions, the Ragged School Union, the Colonial and Continental Church Society, and the Christian Evidence Society. A public meeting in aid of the National Refuges for Homeless and Destitute Children was held at the Mansion House; and the annual meeting of the Servants' Benevolent Institution was held at Willis's Rooms. Many of the societies are complaining this year of diminished incomes, which fact is attributed for the most part to the state of trade.

POSTAGE OF THE ILLUSTRATED LONDON NEWS.

Copies printed on this paper may be sent to the Colonies and Foreign Countries at half the rates stated above; but their use is not recommended, the appearance of the Engravings being greatly injured by the print at the back showing through.

Newspapers for foreign parts must be posted within eight days of the time of publication.

THE CHURCH.

PREFEMENTS AND APPOINTMENTS.

Angell-Smith, Stuart; Chaplain and Fellow's Chaplain of Magdalen, Oxford. Atkinson, P. R., to be Rural Dean of Stoke, S.E. Blore, Ven. Archdeacon; Dean of Llandaff. Botter, C. A.; Rector of Hope Mansel, Hertfordshire. Downes, George Richmond; Rector of Begbroke, Oxford. Girdlestone, R. B.; Perpetual Curate of Combe-down, Bath. Harding, D.; Vicar of St. George's, Ferry-hill, Catford. Howcod, Thomas George; Incumbent of St. Peter and St. Paul, Brixton. North, Jacob Hugo; Rector of White Roding, Essex. Paine, John Lloyd; Vicar of Silverdale, Lancashire. Ponsbury, F. J.; Vicar of St. Mary Magdalene, Munster-square, St. Pancras. Taylor, Jun., R. F.; Vicar of Gomersale, Leeds.—*Guardian*.

The *Bradford Chronicle* says that, in order to raise the sum of money required if Wakefield is chosen as the cathedral town for the new see, Mr. Benjamin Watson has offered to give £1000 if fourteen other gentlemen will each give a like sum.

St. Andrew's Church, Black-lane, Radcliffe, was consecrated on the 3rd inst. by the Bishop of Manchester. The land for the church and churchyard was given by the Earl of Wilton, and £3000 was contributed by Mr. Lawrence Hall towards the erection of the building.

The ancient Church of St. John the Baptist at Belper has recently undergone considerable improvement. This church, or "chapele," was founded in 1562 by John of Gaunt, Duke of Lancaster, under the seal of the Duchy. Under 1824 it was the only church in Belper.

The fifth triennial festival of the York Diocesan Choral Association was held in the spacious nave of York Minster on the 3rd inst. The choristers exceeded 1400 in number; and the *York Herald* says they rendered the musical parts of the service in a manner worthy of the greatest praise.

Archdeacon Wright, late senior Chaplain in the Army, who is about to leave England for Vancouver Island, was on Monday night presented, at Portsmouth, with a testimonial, consisting of a handsome silver salver, with a tea and coffee service, and a purse containing 125 guineas, as a memento of his long and valuable services, especially for his untiring exertions for the restoration of the Royal Garrison church, Portsmouth.

The Bishop of Lichfield, seeing the futility by present means of arousing from religious indifference the multitude of boatmen in his diocese, has constituted the canals as a kind of water parish, and appointed a special and permanent missionary or chaplain for their spiritual care. The Rev. M. Graham, a clergyman of Sedgley, is chosen for the office. A floating church will be provided.

A beautiful two-light Munich stained-glass window, by Messrs. Mayer and Co., has been placed in Castle Donnington church, near Derby, to the memory of Mrs. Elizabeth Ann Wyr. It is situated on the south side, and represents the Presentation in the Temple. The window in Sarn church, Montgomeryshire, to the memory of Mr. J. Moore, mentioned in our last Number, was also made by Messrs. Mayer and Co.

THE UNIVERSITIES.

At Oxford the election of public orator took place on Tuesday. The candidates were Mr. Dallin, of Queen's (Conservative), and Mr. Nettleship, of Corpus Christi (Liberal). At the close of the poll the numbers were—Dallin, 411; Nettleship, 264.—The secretary to the delegacy has issued tables showing the number of candidates—boys and girls—and the subjects offered by them at the Oxford local examinations this year, from which it appears that the number of junior candidates is 1704, and of seniors 640, making a total of 2344 candidates, as against 2144 last year, showing a total increase this year of 200. Of the 1704 junior candidates 335 are girls, and of the 640 senior candidates 305 are girls, as against 317 and 269 girls respectively last year. Of the junior candidates 1214 offer the rudiments of faith and religion, and 426 Holy Scripture, leaving only 58 who decline these portions of the examinations; and of the seniors 465 offer the rudiments of faith and religion, and 129 Holy Scripture, leaving only 46 who decline these portions of the examination. The subjects selected by the majority of the junior candidates are the English subjects (Shakespeare, geography, and history), Latin, French, and mathematics; while of the junior girls 29 offer Latin, 5 Greek, 63 algebra and Euclid; 9 higher mathematics, 3 trigonometry, and 3 chemistry. The subjects selected by the majority of the senior candidates are the English section, Latin, French, and mathematics; while of the senior girls 24 offer Latin, 2 Greek, 21 Euclid and algebra, 6 higher mathematics, 4 trigonometry, 3 mechanics, 3 electricity, &c., 30 vegetable and animal physiology, and 2 geology. Italian has been added to the languages section this year, but only one candidate offers himself for examination in it. The examination will begin on Monday, the 28th inst., simultaneously at 32 centres. Aberystwith and Bolton appear as new centres this year.

At Cambridge, the Lightfoot (University) Scholarship, given for the study of history, and especially of ecclesiastical history, has been awarded to J. H. Flather, B.A., of Emmanuel College. The scholarship is tenable for three years.

At Tuesday's Convocation of the University of London a resolution was proposed thanking the Senate for their decision to admit women to degrees in medicine. To this an amendment was moved that it was undesirable to take this course before the House had considered the advisability of admitting women to degrees in all faculties. This was carried on a division by 142 to 129, and was afterwards adopted as a substantive motion by 144 to 116. On Wednesday (Presentation Day) Lord Granville, Chancellor of the institution, presided; Mr. Lowe, M.P., Sir John Lubbock, M.P. (Vice-Chairman), Sir Philip Grey Egerton, and other members of the Senate, were present also. Lord Granville spoke in favour of granting medical degrees to women, in allusion to which Mr. Lowe said that he believed the decision given by him (Lord Granville) was in accordance with the very spirit of the institution, which was founded by the Queen "for the encouragement of religion and learning for all her subjects, without any distinction whatever."—The Council of University College, have appointed the Rev. Samuel Beal Professor of Chinese.

The *Globe* states that Lord Zetland has intimated that with the sum, amounting to between £4000 and £5000, which he has received as compensation for the abolition of patronage in Orkney and Shetland, he intends to found several bursaries in connection with the Faculty of Arts in Edinburgh University. His Lordship, in so disposing of the money, has in view the advancement of the educational interests of those islands, of which the intending bursars must be natives.

An enthusiastic meeting, convened by the Eastern Question Association, was held on Monday night at St. James's Hall—Mr. Thomas Hughes, Q.C., presiding in place of the Duke of Westminster, who was kept away by illness. Resolutions in support of Mr. Gladstone's action in the House of Commons were carried by acclamation.

MUSIC.

ROYAL ITALIAN OPERA.

The performance of "Don Giovanni" yesterday (Friday) week included the first appearance of Mdlle. Arigiana as Donna Elvira. The lady's voice seemed somewhat deficient in power, and her style wanting in the force required by the character, in which the debutante produced but little impression. The occasion brought back Mdlle. Thalberg, whose voice has gained in fulness, and whose performance as Zerlina displayed all its former spirit and vivacity. The singer met with a warm welcome on her reappearance. The cast in other respects was also mainly as before—Donna Anna, Madame Saar; Don Giovanni, Signor Cotogni; Don Ottavio, Signor Marini; Leporello, Signor Ciampi; and the Commendatore, Signor Capponi, the part of Masetto having been transferred to Signor Scolaro.

The opera on the previous Thursday was "Un Ballo in Maschera," cast as recently, with the exception of the character of the Duke, which was filled, for the first time here, by Signor Gayarré, who sang the music with much success.

On Saturday "Il Flauto Magico" was given, and included the first appearance this season of Mdlle. Marimon, which had been several times postponed on account of indisposition. As the Queen of Night this accomplished artist sang with the same brilliancy as on former occasions, the second of her two bravura airs having been, as usual, encored. The cast was otherwise also as before, with the exception of the small part of Monstato, in which Signor Caracciolo was favourably received on his first appearance.

On Monday "Martha" was given, with Mdlle. Thalberg in the principal character; and on Tuesday "I Puritani" was to be repeated, with Mdlle. Albani as Elvira. For Thursday "La Favorita" was announced, and for Friday "Don Giovanni," each cast as before; and this (Saturday) evening Mdlle. Albani is to appear as Gilda in "Rigoletto."

The first concert of the season given in the Floral Hall, adjoining the Royal Italian Opera House, took place on Saturday afternoon, and included fine performances of Mdlles. Albani and Thalberg, and other eminent members of the opera company.

HER MAJESTY'S THEATRE.

Madame Christine Nilsson made her first appearance this season on Saturday as Violetta in "La Traviata." It was in that character that the eminent prima donna made her debut, in the theatre which stood on the site of the present new building, in 1867. Again, on Saturday, the special gifts and accomplishments of the singer were manifested, particularly in the delivery of the brindisi in the opening scene, the scena "Ah! fors' e lui," with its alternation of pathos and brilliancy; the duet with the elder Germont and that with her lover, Alfredo. Madame Nilsson met with an enthusiastic reception throughout her performance. The other characters just specified were very efficiently filled respectively by Signori Del Puente and Fancelli.

On the previous Thursday Mdlle. Caroline Salla made a very successful first appearance as Amelia in "Un Ballo in Maschera." The lady sang and acted with much dramatic feeling, and produced a genuine impression, particularly in the recitative, "Ecco l'orrido campo," and the aria, "Ma dall'orrido," in the following duet with the Duke, and in the closing scene. In this latter character Signor Fancelli sang very finely, Signor Rota having been a highly satisfactory representative of Renato, and Mdlle. Mila Kodani having rendered the music of the page, Oscar, with much brightness and vivacity. On Monday "Un Ballo in Maschera" was repeated, with the second appearance as Amelia of Mdlle. Salla, whose highly-successful debut in that character is recorded above. On Tuesday "Norma" was given, as on the opening night of the season.

THE WAGNER FESTIVAL.

The specialty of this week has been the Wagner Festival, at the Royal Albert Hall, which began on Monday evening, was continued on Wednesday evening, and is to be carried on this (Saturday) afternoon, on Monday and Wednesday evenings next week, and to close on the following Saturday afternoon.

It is difficult to avoid being struck by some discrepancy between Wagner's emphatically announced theories as to the conditions under which his later works should be judged, and the practice which is now countenanced and sanctioned by his personal superintendence and direction of the present performances. Perfect fusion and equality of the poetical, dramatic, and musical elements, with the accompanying accessories of stage action and scenery, were insisted on by the poet-composer as indispensable to the right comprehension and judgment of his "opera-dramas," as he himself styles these works. Yet we now have him voluntarily producing portions of them in concert-room performance, dependent on the musical effect only.

It must, however, in justice be admitted that no complete hearing of such elaborate works as those just referred to is practicable at present in this country, whatever possibilities may hereafter arise; and perhaps we should be glad that the composer's relaxation of the rigid conditions which he first laid down have enabled many to hear some extraordinary music, with the advantage of Wagner's co-operation, that they have hitherto had no opportunity of becoming acquainted with. It must be borne in mind, too, that any adaptations made for the present purpose are effected by the composer himself. Moreover, some of the solo vocalists of last year's Bayreuth representations are being heard at the Albert Hall performances.

A fine orchestra has been assembled, numbering 169 instrumentalists, and many rehearsals have been held in order to ensure that thorough preparation which the difficulty of the music renders necessary. These have been directed by Herr Richter (the conductor of the Bayreuth performances) and Mr. Dannreuther.

The entry of Herr Wagner on the platform was the signal for great and prolonged cheering, which he acknowledged with evident gratification. The operatic selections on Monday were preceded by the "Kaiser Marsch." The pieces from "Rienzi" were the prayer and the address to the conspirators, both sung by Herr Unger (of Bayreuth), the "March of Peace" having been given between. From "Tannhäuser" the extracts were the orchestral introduction to the second act and the entrance of Elisabeth, the duet for this character and Tannhäuser, the Landgrave's solo, and the scene of the reception of the guests at Wartburg, including the well-known march. The music of Elisabeth was finely declaimed by Madame Materna, who was well supported by Herr Unger as Tannhäuser, Herr Carl Hill (from Schwerin), as Wolfram, and Herr Chandon (from Vienna) as the Landgrave.

The closing portion of Monday's concert consisted of the orchestral introduction to "Das Rheingold," the opening scene with the Rhine Daughters (Woglinde, Wellgunde, and Flosshilde, represented by Fraulein Grün, Waibel, and Ester), and other extracts, closing with the final scene, and including the characters of Alberich (Herr Hill), Wotan (Herr Chandon), and others.

The effect produced by the selections from the earlier operas

of the composer was far greater than that which followed the extracts from the introductory work of the "Nibelungen" series, in which prolonged declamation so greatly prevails. Here, especially, the want of the stage accessories of scenery and action was strongly felt.

Wagner conducted with that energy and decision which are his well-known characteristics as an orchestral director, having resigned the bâton, during a small closing portion of the programme to Herr Richter.

Wednesday evening's performances consisted of the overture to "The Flying Dutchman," and extracts from the opera, including the chorus of sailors, the steersman's song, the Dutchman's aria, and the duet for Daland and the Dutchman, in the first act; and the great scene between the Dutchman and Senta in the second act. The music of the characters was very finely sung by Fraulein Sadler-Grün and Herr Carl Hill, the steersman's song having been effectively given by Herr Schlosser. The second part of Wednesday's programme consisted of the first act of "Die Walküre—the first of the "Nibelungen" operas, "Das Rheingold" being the prelude thereto. In the scene referred to, the principal characters concerned are Sieglinde and Siegmund, and their music was finely declaimed by Madame Materna and Herr Unger; that of Hunding having been efficiently rendered by Herr Chandon. Again, as on Monday, the earlier portion of the programme appeared to be that which most interested the audience. Herr Wagner conducted some portions of the concert, others having been directed by Herr Richter. The programme for the afternoon performance of to-day (Saturday) comprises selections from "Tannhäuser" and "Die Walküre."

The business arrangements of the festival have been carried out with great efficiency by Messrs. Hodge and Essex, of Argyl-street, and it is to be hoped that the results will prove remunerative of the enterprise.

The twenty-first series of the Crystal Palace Saturday concerts closed the week before last, and was supplemented, on the following Saturday, as usual, by an extra performance for the benefit of Mr. Manns, the conductor. The orchestral programme on this occasion comprised Sir Sterndale Bennett's overture, "Paradise and the Peri," Beethoven's pastoral symphony, and Herr Rubinstein's "Humoresque," in illustration of "Don Quixote," the last piece having been conducted by the composer. The remaining instrumental piece was Weber's "Concertstück" for pianoforte (with orchestra), which was brilliantly played by Miss Anna Mehlig. Brahms's second set of "Liebeslieder" waltzes for vocal quartet and pianoforte duet were well rendered by Mesdames Sophie Löwe and Redeker, and Mr. Shakspeare and Mr. Pyatt, with Miss Anna Mehlig and Mr. Walter Bache as pianists. Vocal solos were contributed by Miss Enriquez and Herr Henschel. Mr. Manns—who conducted the chief portion of the concert—was warmly greeted on his entry.

The second of Herr Rubinstein's recitals at St. James's Hall took place on Wednesday afternoon, when the great pianist again manifested his special powers and marked individuality by his performance of a selection from the works of various masters, including pieces of his own composition.

A very interesting concert was given at St. James's Hall last Thursday evening by Mr. J. B. Welch, the well-known professor of singing. The programme included Schumann's "Requiem" and Mendelssohn's Hymn for contralto solo and chorus, performed with a large choral force, and miscellaneous pieces by several eminent vocalists, including Mr. Santley.

Music is again to form a special feature in the arrangements at the Alexandra Palace. The proceedings at the opening of the new season, on Thursday, included a concert of English music, which was contributed to by several eminent solo vocalists, in addition to the large choir and band of the establishment.

Herr Lehmeyer was ably assisted in his first chamber concert, last Thursday, at Langham Hall.

The third subscription concert of Mr. Henry Leslie's new series took place at St. James's Hall yesterday (Friday) evening, when the programme consisted entirely of English music, comprising madrigals, glees, part-songs, and vocal solos, by composers of the past and present periods.

The sixth concert of the Philharmonic Society will take place next Monday afternoon, at St. James's Hall.

The annual concert of Mr. Ambrose Austin, manager of the concert arrangements at St. James's Hall, takes place next Thursday evening, with a very strong list of eminent artists. Mr. Austin deserves well of the frequenters of the hall for his special business efficiency and invariable courtesy.

By permission of the Duke and Duchess of Westminster, a morning concert will be given next Thursday, at Grosvenor House, on behalf of the Clio training-ship for destitute boys, which is to be stationed in Menai Strait. Madame Patey, Signor Foli, and other singers of note, will assist. The Welsh Choral Union will be under the direction of Mr. John Thomas.

The Earl of Powis has been appointed Lord-Lieutenant of Montgomeryshire, in the room of the late Lord Sudeley.

The National Congress of the Argentine Confederation was opened at Buenos Ayres on the 5th inst. The President, in his speech on the occasion, mentioned the economies effected in the public expenditure in order to balance the Budget and the redemption of the existing debts. He alluded also to the public works that had been finished, particularly the Tucuman Railway, which, though imposing heavy present charges upon the public treasury, were a sure pledge of future prosperity. The President spoke hopefully of the new political era inaugurated by the evident futility of the efforts made by Lopez Jordan to excite a rising in Entre Rios. The progress of Argentine manufactures was manifested by the success of the Industrial Exhibition opened on Jan. 15 last. The export trade was assuming greater extension, and the relations of the Confederation with foreign countries were satisfactory.

Among the War Maps recently published, one of the most excellent certainly is Stanford's large coloured Map of Turkey in Europe and her Tributary States, and the Kingdom of Greece, together with such parts of Russia, Austria, Turkey in Asia, and Persia, as are more immediately connected with the settlement of the Eastern Question. This Map embraces the whole theatre of interest. Mr. Stanford has also issued a Popular Map of the Seat of War in the East and Jankowski's Russo-Turkish War Map, each most serviceable in its way. Messrs. Bacon and Co. have brought out a Map of Turkey and Greece; a Panorama of the entire Seat of War, constructed to a regular scale of miles; and a large Map of the Seat of War, on the same scale and projection. Messrs. W. H. Smith and Son, 186, Strand, likewise have published a coloured War Map, showing the entire Russo-Turkish frontier in Europe and Asia.—Another map of interest just now is Mr. F. Jeppe's of the Transvaal Republic, published by Mr. J. J. Pratt, of Queen-street, City.

THE WAR: ENLISTING VOLUNTEERS FOR THE TURKISH ARMY IN ROUMELIA.
FROM A SKETCH BY ONE OF OUR SPECIAL ARTISTS.

EAST LONDON HOSPITAL FOR CHILDREN.

The new building for this institution, at Shadwell, was opened on Wednesday week by her Royal Highness the Duchess of Teck. Our illustration gives a view of this building, which has been erected from the designs and under the superintendence of the architects, Messrs. Henry and Charles Legg, of Bedford-row. The institution combines the two objects of an hospital for children and dispensary for women. It was founded by Dr. N. Heckford, in a warehouse at Radcliffe-cross, on Jan 28, 1868. A tablet in the new hospital declares that he "was born in Calcutta, April, 1842; died Dec. 14, 1871, aged twenty-nine. He lived for the institution, and died a few days after the site of this building was purchased." The new structure, with the price of the land, has cost between £14,000 and £15,000, and another wing has yet to be constructed; when finished, there will be a total of 180 beds. Since the establishment of the hospital it has had no less than between 50,000 and 60,000 patients—women and children. These were administered to at an annual expenditure of £3000, but the extended agency of the charity will entail an additional expenditure of £1500, making £4500 yearly. At Shadwell there was a general holiday on the opening day; the High-street was resplendent with triumphal arches and bunting, and an enthusiastic popular reception of the Duchess of Teck gave sufficient indications of East-End loyalty. The Duchess, accompanied by the Duke of Teck, arrived at the hospital at half-past two. A guard of honour of the Tower Hamlets Rifle Volunteers was in attend-

ance. Her Royal Highness was received by Viscount Enfield, the president, Mr. T. Charrington, the chairman, Mr. Prescott, the vice-chairman, Mr. E. G. Norris, the treasurer, and a number of governors. A procession was formed, in which the Bishop of London and several clergymen in their robes took part. The Duchess of Teck was conducted through the wards, on three of which she bestowed the names of "Princess Mary," "Enfield," and "Heckford." On arriving at the reception ward "God Save the Queen" was sung, and members of the board and officers were introduced by the president to the Princess. An address was presented to the Royal visitor, who declared the hospital opened. The Duke of Teck thanked the company for the kind reception they had accorded to the Princess. A number of ladies and children presented purses to her Royal Highness. This ceremony was supplemented by the gift of a check by the Princess herself. The Bishop of London offered prayer and pronounced the benediction. The Royal party soon afterwards left the hospital amid vigorous cheering from the people who lined High-street. The company adjourned to a large tent erected on a piece of ground upon which it is intended to build more wards as the necessary funds are forthcoming. About 400 guests sat down to luncheon, Lord Enfield presiding. After the usual loyal toasts, the "Health of the Duchess of Teck," with thanks for having so kindly presided, was proposed, and drunk with standing honours. In replying to the toast of "Success to the Hospital," the treasurer stated that, in spite of the expense of building, the institution was not in debt, although in want of funds. Subscription lists to the amount of

about £2000 were read by the secretary. Among the numerous toasts proposed was one to the memory of the late Dr. Heckford, who began the good work which has resulted in the foundation of the present hospital.

THE WINNER OF THE TWO THOUSAND.

The Two Thousand Guineas Stakes at the Newmarket Spring Races were won on Wednesday week by the French horse Chamant, belonging to Count F. de Lagrange. Our last week's chronicle of National Sports gave a sufficient account of this race. The winning horse was bred in France, and is a bay colt by Mortemer out of Araucaria. Last year he was not placed in the July Stakes at Newmarket, won by Warren Hastings, who beat Lady Golightly by a head, Covenanter being a bad third; The Rover (fourth), Pagnotee, and Orleans also ran. At Goodwood, 8 st. 10 lb., was second, beaten three quarters of a length by Shillelagh, 8 st. 10 lb., for the Levant Stakes; Collingbourne, 8 st. 13 lb., being a bad third; Saumur, Popkins, and Orleans also ran. At Lewes August Meeting, carrying 8 st. 11 lb., was not placed for the Astley Stakes, won by Placida, 8 st. 13 lb., who beat Chevron, 9 st. 4 lb., by three lengths; Shillelagh, 9 st. 7 lb., being third, beaten the same distance; seven others ran. At the same meeting, carrying 8 st. 12 lb., won the Priory Stakes by three parts of a length from Tribute, 8 st. 9 lb.; Dee, 9 st. 2 lb., being third, a length from the latter. The following also ran:—A filly by Hamlet-Yarra-Yarra, 8 st. 9 lb.; Father Mathew, 9 st. 5 lb.; Pride, 8 st. 9 lb.; Malta, 8 st. 12 lb.; Miss Ferriby, 8 st. 9 lb. At

THE EAST LONDON HOSPITAL FOR CHILDREN IN SHADWELL.

Doncaster September Meeting was not placed for the Champagne Stakes, won by Lady Golightly by six lengths, Monk being second, and Shillelagh third; Albert Edward and Norwich also ran. Same meeting, carrying 9 st. 3 lb., was third, a head behind the second, for the Two-Year-Old Sweepstakes, won by Plunger, 8 st. 10 lb., who beat Dee, 9 st., by three lengths. Avontes, Sleipnir, Ernest, and Helena also ran. At Newmarket Second October Meeting, carrying 8 st. 13 lb., won the Middle Park Plate by a head from Pellegrino, 8 st. 7 lb., Plunger, 8 st. 9 lb., being

third, beaten the same distance. The following also ran:—The Rover, 8 st. 6 lb.; Thunderstone, 8 st. 6 lb.; Voltella colt, 8 st. 6 lb.; Ipswich, 8 st. 6 lb.; Hadrian, 8 st. 6 lb.; Peterborough, 8 st. 6 lb.; King Clovis, 8 st. 6 lb.; Lady Golightly, 8 st. 13 lb.; Orleans, 8 st. 9 lb.; Filouse, 8 st. 6 lb.; Glen Arthur, 8 st. 6 lb.; Bay Julia, 8 st. 3 lb.; St. Anthony, 8 st. 6 lb.; King of Spades, 8 st. 6 lb. At Newmarket Houghton Meeting, carrying 9 st. 5 lb., won the Dewhurst Plate by half a length from Plunger, 8 st. 13 lb., who finished four lengths in front of Winchelsea, 8 st. 9 lb.

Ipswich, King Clovis, Polydorus, and Glen Arthur also ran. This year Chamant walked over for the Bennington Stakes at Newmarket Craven Meeting, and has now won the Two Thousand Guineas. Chamant is engaged at Epsom in the Derby, at Paris in the Grand Prix, at Ascot in the St. James's Palace Stakes, at Doncaster in the St. Leger and the Doncaster Stakes, at Newmarket First October in the Grand Duke Michael Stakes and the Newmarket St. Leger, at Newmarket Houghton in the All-Aged Stakes, and at Newmarket Second October Meeting, 1878, in the Champion Stakes.

CHAMANT, WINNER OF THE TWO THOUSAND GUINEAS STAKES AT NEWMARKET.

TO ALL INTERESTED IN CHILDREN.
 On the 15th of every month, beginning with May 15, will be
 issued, price 6d.,
MYRA'S MID-MONTHLY JOURNAL
 and CHILDREN'S DRESS.

This will take the place of the present Myra's Supplement. It
 will consist of 32 large pages, size of "Myra's Journal," illus-
 trated with a profusion of engravings.
 The contents will comprise Myra's Answers to her Corre-
 spondents, continued from the "Journal" of the last of the
 month.

A Diagram Sheet of accurate Patterns, cut by the first
 couturière of Paris, will accompany each number.
 A Coloured Fashion-Plate will also be included.
 Special novelties will appear in the department of Children's
 Dress. A large number of Engravings of Boys' and Girls'
 Costumes will appear in each number and be carefully described.
 A separate item Plate will also be occasionally prepared from
 New Models.

Number 1, of MYRA'S MID-MONTHLY JOURNAL will
 comprise, beyond the usual contents, a Braided Princess Dress in
 tissue, for a Little Girl. To buy this alone would cost several
 shillings.

Also, as a gift to the little ones, from the "Silkworm," there
 will be a Coloured Pattern of a Doll's Pair of Slippers, with the
 Canvas ready to work it.
 Patterns in red, white, and blue tissue of a Baby's Shirt,
 Petticoat, and Bib.

Number 2, of MYRA'S MID-MONTHLY JOURNAL and
 CHILDREN'S DRESS will begin on MAY 15. Price 6d.;
 postage, 2d.

Please order of your Booksellers and at the Bookstalls, or send
 subscriptions to the Publishers. Quarterly, 2s.; half-yearly, 4s.;

THE WAR: OUR ARTIST'S FIRST ENCOUNTER WITH A COSSACK—TRYING HIS METTLE.

RUSSIAN FIELD-GUNS COMMANDING THE DANUBE AT THE MOUTH OF THE PRUTH.
FROM A SKETCH BY ONE OF OUR SPECIAL ARTISTS.

RUSSIA AND THE EASTERN QUESTION.

We have already reviewed in this Journal the very interesting and instructive new book on "Russia," by Mr. D. Mackenzie Wallace, a resident during six years in that country, and a diligent student of its social, legal, administrative, and political conditions. It consists of two handsome volumes, recently published by Messrs. Cassell, Petter, and Galpin. At the present moment we feel sure that our readers will peruse with eager attention the following extracts from this important work, needing no further preface:—

"The aggressive tendencies of the Russians in the direction of Constantinople are nearly as old as Russian nationality and much older than the Russian Empire. The Russo-Slavonians who held the valley of the Dnieper from the ninth to the thirteenth century were one of those numerous border tribes which the tottering Byzantine Empire attempted to ward off by diplomacy and rich gifts; and by giving to the troublesome chiefs, on condition of their accepting Christianity, Princesses of the Imperial family as brides. Vladimir, Prince of Kiev, now recognised as a saint by the Russian Church, accepted Christianity in this way, and his subjects followed his example. Russia thus became ecclesiastically a part of the Patriarchate of Constantinople; and the people learnt to regard Tsar-grad—that is, the City of the Tsar or Byzantine Emperor—with peculiar veneration.

"All through the long Tartar domination, when nomadic hordes held the valley of the Dnieper, and formed a barrier between Russia and Southern Europe, the capital of the Greek Orthodox world was remembered and venerated by the Russian people; and in the fifteenth century it acquired in their eyes a new significance. At that time the relative positions of Constantinople and Moscow were changed. Constantinople fell under the power of the Turks, while Moscow threw off the yoke of the Tartars, the northern representatives of the Turkish race. The Grand Prince of Moscow and of all Russia thereby became the chief protector of the Greek Orthodox Church, and in some sort the successor of the Byzantine Tsars. To strengthen his claim, he married a member of the old Imperial family; and his successors went further in the same direction, by assuming the title of Tsar and inventing a fable about their great ancestor Rurik being a descendant of Caesar Augustus. The gradual emancipation of the Russian Church from the authority of the Byzantine Patriarch tended likewise in this direction.

"All this would seem to a lawyer or diplomatist a very shadowy title; and none of the Russian monarchs (except, perhaps, Catherine II., who formed the project of resuscitating the Byzantine Empire, and caused one of her grandsons to learn Greek in view of possible contingencies) ever seriously thought of claiming the imaginary heritage. But the idea that the Tsars ought to reign in Tsar-grad, and that St. Sophia, polluted by Moslem abominations, should be restored to the Orthodox, struck deep root in the minds of the Russian people. This idea is not yet quite extinct. When serious disturbances break out in the East the Russian peasantry begin to think that perhaps the time has come when a crusade will be undertaken for the recovery of the Holy City on the Bosphorus, and for the liberation of their brethren in the faith who now groan under Turkish bondage. This is the religious element in that strange attractive force which connects Russia with Constantinople.

"Very different from this religious element, yet often inseparably blended with it, is an ingredient which I may term, for want of a better word, the ethno-sentimental element. After the fall of the first Napoleonic Empire, a violent popular reaction took place all over Europe in favour of national independence and Republican institutions; and shortly afterwards the discoveries of comparative philology, together with other influences, suggested to political theorists certain grand confederations of peoples, founded on ethnological consanguinity. The existing European political units would, it was thought, group themselves into three categories, the Romanic, the Teutonic, and the Slavonian; and the principle of political federation, while satisfying the demands of ethnology, would leave to the individual nations a sufficient amount of local autonomy. This theory awoke new aspirations all over Europe. In the West, it could not take a very firm hold of the public mind, because all the Western nations, with the exception of Italy, enjoyed at least national independence, and knew nothing of foreign oppressors. If they had to suffer tyranny, it was not the tyranny of the foreigner, and therefore the patriotic feelings in their simplest form were not called into play. In south-eastern Europe, on the contrary, the effect was very different. Though the great masses among the Slavs knew nothing of the intellectual movements which agitated the Western nations, there were a few individuals who had thrown themselves into the general current of European thought; and through these men the new ideas penetrated into Slavonia. The effect which they produced among a people who had for generations lived under foreign domination, without forgetting their ancient freedom, may easily be imagined. Poets began to sing about the present woes and the departed glories of the race, and their impassioned words found a response in many hearts. From Slavonia, that had for ages borne her sufferings in silence, went up to Heaven a long, low wail, 'How long, Lord, how long?' The strain was plaintive, for it thrilled with the consciousness of humiliating bondage and the memory of a thousand wrongs; but the melancholy was not unmixed with consolation, and the consolation not unmixed with hope. God had not utterly forgotten his people, and would in his own good time send a deliverer. Predictions that a brighter and happier era lay in the future found numerous believers. We may imagine the fervour awakened in impulsive Slavonian hearts by songs which pointed to the day when the brave, long-suffering Slavs would arise, and free themselves from 'the remorseless tyranny of the German, the Hungarian, and the Turk.' From that wail of an oppressed race, recounting its ancient glories and looking with longing eyes for the advent of a brighter day, there was but one step to the conception of a Pan-Slavonic empire, with Constantinople as its capital.

"We have here a whole world of deep sentiments and wild aspirations, of which West Europeans are profoundly ignorant, and with which, if they knew it, they could scarcely be expected to sympathise; but it would have been strange indeed if this enthusiasm had found no response among the Russians, who are the only Slavonic people that has succeeded in realising these aspirations, and who are singularly sensitive to the infectious influence of grand misty conceptions. The wonder is that the response should have been so slight; all the more, as the hegemony in any Pan-Slavonic confederation would naturally devolve upon Russia. Among Russians in general the amount of Slavonic sentiment is, indeed, in ordinary times very small; but it exists to a large extent in a latent state, and is easily awakened by abnormal conditions.

"We come now to the third element in the force which draws Russia towards the Bosphorus, I mean the political. Here again, we come to the problem of territorial expansion. What reasonable motives has Russia for wishing to push forward her frontier in that direction?

"Two of the chief elements in the expansive tendency, as exemplified in the past, may be dismissed with a single sentence.

As the valley of the Danube and the Balkan Peninsula are already densely populated, they do not present a field for colonisation; nor does Russia require to make annexations in that region for the purpose of self-defence. If she has any views of territorial aggrandisement in that direction, they must belong to the category of motives which I have called high political aims.

"Russia has long aspired to be a great naval Power, and has consequently striven to reach the seacoast. To the north and north-east she succeeded, but neither the Polar Ocean nor the Baltic fulfilled satisfactorily the required conditions, and she naturally turned her eyes to the Mediterranean. With difficulty she gained possession of the northern and eastern shores of the Black Sea; but the design has been thereby only half realised, for the only outlet from the Black Sea to the Mediterranean lies through the Bosphorus and the Dardanelles, which the Turks can open and close according to their good pleasure.

"There can be no doubt that Russia would very much prefer having in her own possession the keys of this important passage. In many respects it is very disagreeable to her that the Turks should be able, without employing a single ship of war, to blockade effectually all her southern ports. Here is, I believe, the only real, reasonable motive which she can have for wishing to gain possession of Constantinople. All the others which are commonly quoted are more or less visionary. The idea of transferring the capital from the Neva to the Golden Horn is never for a moment entertained by any serious statesman. The oft-repeated, but seldom proved, assertion, that Russia might seriously embarrass our communications with India, and dispute with us the naval supremacy of the Mediterranean, scarcely deserves more attention. The possession of the Dardanelles gives naval supremacy merely in the Black Sea, and not in the Mediterranean; and, in the event of a war, it can matter little to us whether the Russian fleet is shut up in the Black Sea or in the harbour of Sebastopol. In either case, it is quite harmless so far as the Mediterranean and our communications with India are concerned.

"There remains, of course, the grandiloquent aphorism, attributed to Napoleon I. and other high authorities, that 'the power which possesses Constantinople must be mistress of the world.' If the Turks hold this doctrine, it may account to some extent for their inordinate national vanity. Certainly, many Christians hold it, and often use it as an unanswerable argument. For my own part, I have very frequently heard it enunciated; but I do not understand the language of transcendental politics, and, unfortunately, I have never found any one who could construe for me the mystic words into plain English. Still, whether true or not, it must be taken into account. A widespread conviction of this kind, which is commonly accepted by Western Europe, is pretty certain to influence Russian as well as British statesmen."

The author proceeds to review the action latterly of the "Slavonic Committee," a society established in three sections at Moscow, St. Petersburg, and Kiev, and regularly authorised by the Government; its ordinary purposes being to assist non-Russian Slavs settled in Russia, to contribute funds for popular education among the Southern Slavs, to educate young Bulgarians in Russia, and send money, or ecclesiastical vessels and vestments, to the Orthodox churches in Austria and Turkey. When the late insurrection broke out in Herzegovina, the Metropolitan of Serbia and Montenegro made appeals to the charitable in aid of the sufferers. These appeals were published in the Russian newspapers, and read by the parish priests in the churches, and very soon donations began to flow in. When Serbia and Montenegro openly took part with the insurgents, some Russian nobles determined to go and serve as volunteers, and General Tchernayeff took the command of the Serbian army. This was highly approved by the Slavonic Committee. The war in Serbia began, and the unequal struggle was watched in Russia with breathless anxiety. Several Russian officers fell in battle, and the enthusiasm increased, awaking a host of old memories and passions that had long been lying dormant. Then the Turks committed their "grand mistake." While all eyes were fixed on the Morava and the Timok, a cry was heard from the background; and all who had any human feeling in them stood aghast at the awful spectacle presented by the Bulgarian villages. The Russian peasant is profoundly ignorant of the details of the Eastern Question. He would not appreciate reports of the ordinary grievances suffered under Turkish misrule. But tales of a death-struggle with the Moslem—of massacres and ruthless destruction perpetrated among an Orthodox population by hordes of savage Mohammedans—these have upon him a very different effect. The old spirit of the Russian nation, which won the steppe, inch by inch, from the nomadic Tartar hordes, is not quite extinct. As, in old times, the moujik hastily took up his hatchet and ran to the rescue, when he heard the cry, "The Tartars are upon us—our people are being killed!" so the Russian of our own day is ready to lend a hand when the cry comes from his Orthodox brethren beyond the Danube. The educated classes in Russia have not this personal, traditional recollection of Tartar barbarities; but they have a very large fund of humanitarian sentiment, which produced, after the Bulgarian atrocities, the same effect. The consequence was that several thousand Russian volunteers went to Serbia, and the donations rose to about three millions of roubles, or £400,000. The Government of Alexander II. was, in the opinion of Mr. Mackenzie Wallace, sincerely averse to undertake a war against Turkey. There was certainly no present idea of gaining possession of the Bosphorus and the Dardanelles, or any such grand fantastic scheme. The Russian Government could not, of course, have prevented its subjects fraternising with the Slavs; but it could at once have closed all sections of the Slavonic Committee, prevented the enrolment of volunteers, and suppressed the popular demonstrations. And yet it must be confessed that the Russian Government was, in a certain sense, forced to take part in the movement. "In the Slavonic question there is a purely political, as well as a sentimental, element. The aspirations of the Southern Slavs, however visionary they may be, add in many ways to the influence of Russia; and no Russian Sovereign, who seeks to uphold and extend the influence of his country, can afford to overlook them."

In conclusion, says this well-informed and judicious author, "Beyond the Slavonic question lies the Eastern Question, in the wider sense of the term. The destinies of Asia are, to a great extent, in the hands of Russia and England. Though the field is wide enough for both, it would be too sanguine to expect that we shall never disagree. Let us always beware, however, of mistaking imaginary for real interests, and of fighting about a misunderstanding. Meanwhile, our duty is clear; we ought to know Russia better, and so avoid unnecessary collisions. It is in the hope of contributing, in some measure, to this desirable result that the present work has been written."

We must again commend the admirable work of Mr. Mackenzie Wallace to the attentive study of all who would form a correct judgment of the actual situation of the Russian Empire, the character of its nation and the policy of its rulers, at the present momentous crisis of its relations with Great Britain.

THE SEAT OF WAR IN ASIA.

Our Map of the territories of Georgia and Armenia, and neighbouring provinces, on the Asiatic frontier of the Russian and Turkish Empires, will be found useful to follow the reports of the campaign that has begun in that remote locality; the fortified towns of Kars and Erzeroum, situated one or two hundred miles inland, and the seaports of Batoum and Trebizond, are more especially to be observed in this map. The following general remarks upon the geographical position of the Russian provinces in that region of the East may here be quoted from an article in one of our contemporaries before the outbreak of the war:—

"Anyone examining a good map of the country lying between the Black Sea and the Caspian cannot fail to be at once struck with certain marked features of their physical geography. Stretching across diagonally from sea to sea, from the spit of land that forms the eastern boundary of the Straits of Kertch, at their north-eastern end, to a corresponding spit running out into the Caspian at their south-western end, the mountains of the Caucasus form a vast natural barrier between Europe and Asia—one which might well have seemed to hold in check even the most aggressive military Power. For one third of its length this great chain rises in height beyond the limits of perpetual snow. In place of valleys are to be found only fearful abysses, in which roll headlong torrents. Held by a hardy race of men, it would have seemed a task, if not impossible, at least of repelling danger, to penetrate and conquer such mountains as these. Yet, more than a hundred years ago, Russia began the task, and ere the nineteenth century had dawned, she had pierced the barrier with a road available for troops, and, under guise of aiding Georgia against the Persians, had incorporated it into the Russian Empire. Fifty years have passed since she made her peace with Persia, adding to the already annexed Georgia the basins of the rivers flowing thence into the Caspian, and a wide stretch of territory upon the shore of that sea. Scarcely twelve years have passed since the last sparks of resistance made by the hill tribes died away, for want of that fire which Schamyl's courage had so long supplied. Now those fair Southern slopes are all in Russia's hands. Here are their forests and productive soil. The cedars and the beeches, the oaks and pines of the upper regions, the crops of maize, of barley, wheat, and other grain that grow so freely on the terraced plateaux, the cotton and the flax of the lower plains, the wines, the silk, the iron, and the copper of this most marvellously rich province, are hers by right of treaty. Her frontier now nowhere remains within a hundred miles of the great snowy range. In most of its length it is full 200 miles away.

"Standing upon Mount Ararat, we are on the spot where the kingdoms meet of Sultan, Shah, and Czar. All round us is a tangled mass of mountains, upheaved by some later convulsions than that which built the great Caucasian range. At our feet, as we look northwards, flows in a south-easterly direction the river Araxes, forming till near its junction with the Kura, on the great Mogan plain, the Russo-Persian frontier. But the delta of the Kura is all in Russian hands, and her territory thrusts down a long wedge into Persia along the Caspian shore. Along the northern bank of the Araxes for nearly a hundred miles from Djulfa runs the main road from Tabriz in Persia to Erivan, a Russian fortified town north of us as we stand on Ararat, and thence again due north to Tiflis, the seat of Government of the province. Due west for some fifty miles the Russo-Turkish frontier follows the crest of the Ararat range, turns northwards, crosses the Upper Araxes Valley, follows the valley of the Arpa Tchai, and then, ascending another mountain range, runs north-west along its crest to the Black Sea. This coterminous boundary of Russia and of Turkey is some three hundred and fifty miles in length. On both sides of this Russian frontier lies a strangely tangled web of mountains and of streams in which at first it seems hard to introduce any idea of order, such as nature generally shows in all her schemes. Instead of rivers running down at right angles from the mountains, we find them running parallel to them. The Rion, which flows into the Black Sea at Poti, and the Kura which falls into the Caspian, run at the foot of the great Caucasian range. In Turkish Armenia the mountains seem to form a network, in which the streams are led into strange sources. Here we have the upper waters of the Euphrates flowing at first due west, as though they were going to empty themselves into the Mediterranean; while in between the Eastern and Western sources of the Euphrates, the head waters of the Araxes and of the Chorokh flow eastward; yet the one finds its outlet in the Caspian, the other in the Euxine. Clearly this must be a most difficult country for military operations, affording obstacles of a serious nature at almost every step.

"Turkey is superior upon the Black Sea, and can prevent Russia from using her Black Sea ports south of the Caucasus. Her military reinforcements and supplies must be brought into Trans-Caucasia by one of two routes—the first, the railway from Rostov, on the Sea of Azof, to Vladikavkas, north of the Kasbek Pass, and thence by road, 140 miles, to Tiflis; the second, by steamer from Astrakhan to Baku on the Caspian. Of these two roads the railway runs along the edge of the Circassian territory; the second, or sea route, ends at a port whence a road leads along the coast into the heart of the Daghestan country. Even if the subject tribes remain quiet, the difficulties which such long lines of communication involve are vast, and Russia has been making the utmost efforts to pour stores into Tiflis while peace left open to her the harbour of Poti, whence there is a railway direct to Tiflis, less than 200 miles in length. War commenced, and the port of Poti blockaded, Russia can count only upon the other two lines. In order to ensure safety for her base on the Sea of Azof, she has been for many months past strengthening Kertch, and, by guns and torpedoes, can now fairly call the Straits of Kertch impassable to an enemy's ships; while the line of railway itself is protected by the Caucasus against any attack from a force landing on the Black Sea coast. Still more absolutely safe from foreign aggression is the line from Astrakhan by the Caspian to Baku, for Russia is mistress of the Caspian. No other flag floats there but her own. There she has a fleet of steamers, and more than 300 smaller craft, while at least 500 steamers ply upon the Volga. Thus, if she can secure herself against internal revolt, these two lines of supply seem absolutely secure. Careful to provide for inter-communication between the points of arrival of stores and troops in Trans-Caucasia, Russia has constructed a good road from Baku to Tiflis and Poti; from which, at various points, branch off roads to the Turkish and Persian frontiers. She may thus mass her troops at either end or at any point of this line, and either try to turn or pierce the mountain groups which lie between Tiflis and Erzeroum."

A crowded meeting of tenants upon the Shaftesbury Park estate was held last Saturday evening, at which an emphatic protest was made against a contemplated rise in the rents.

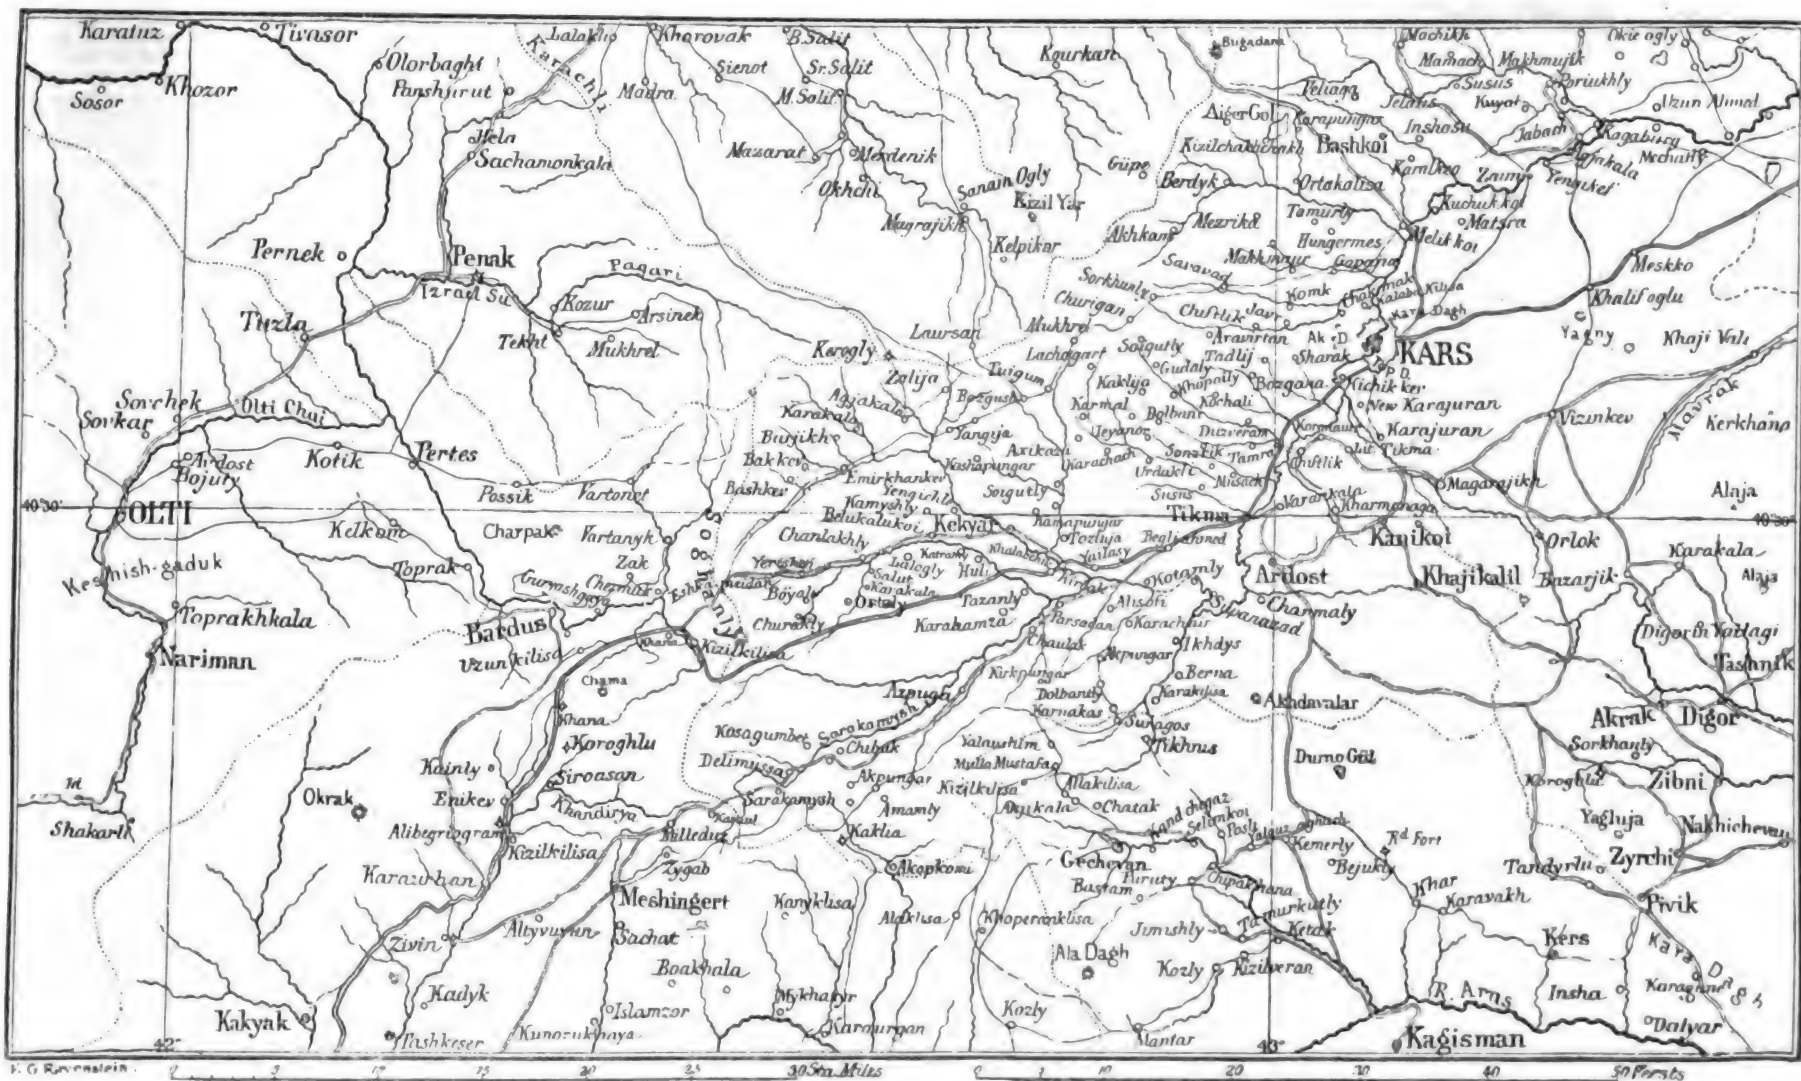

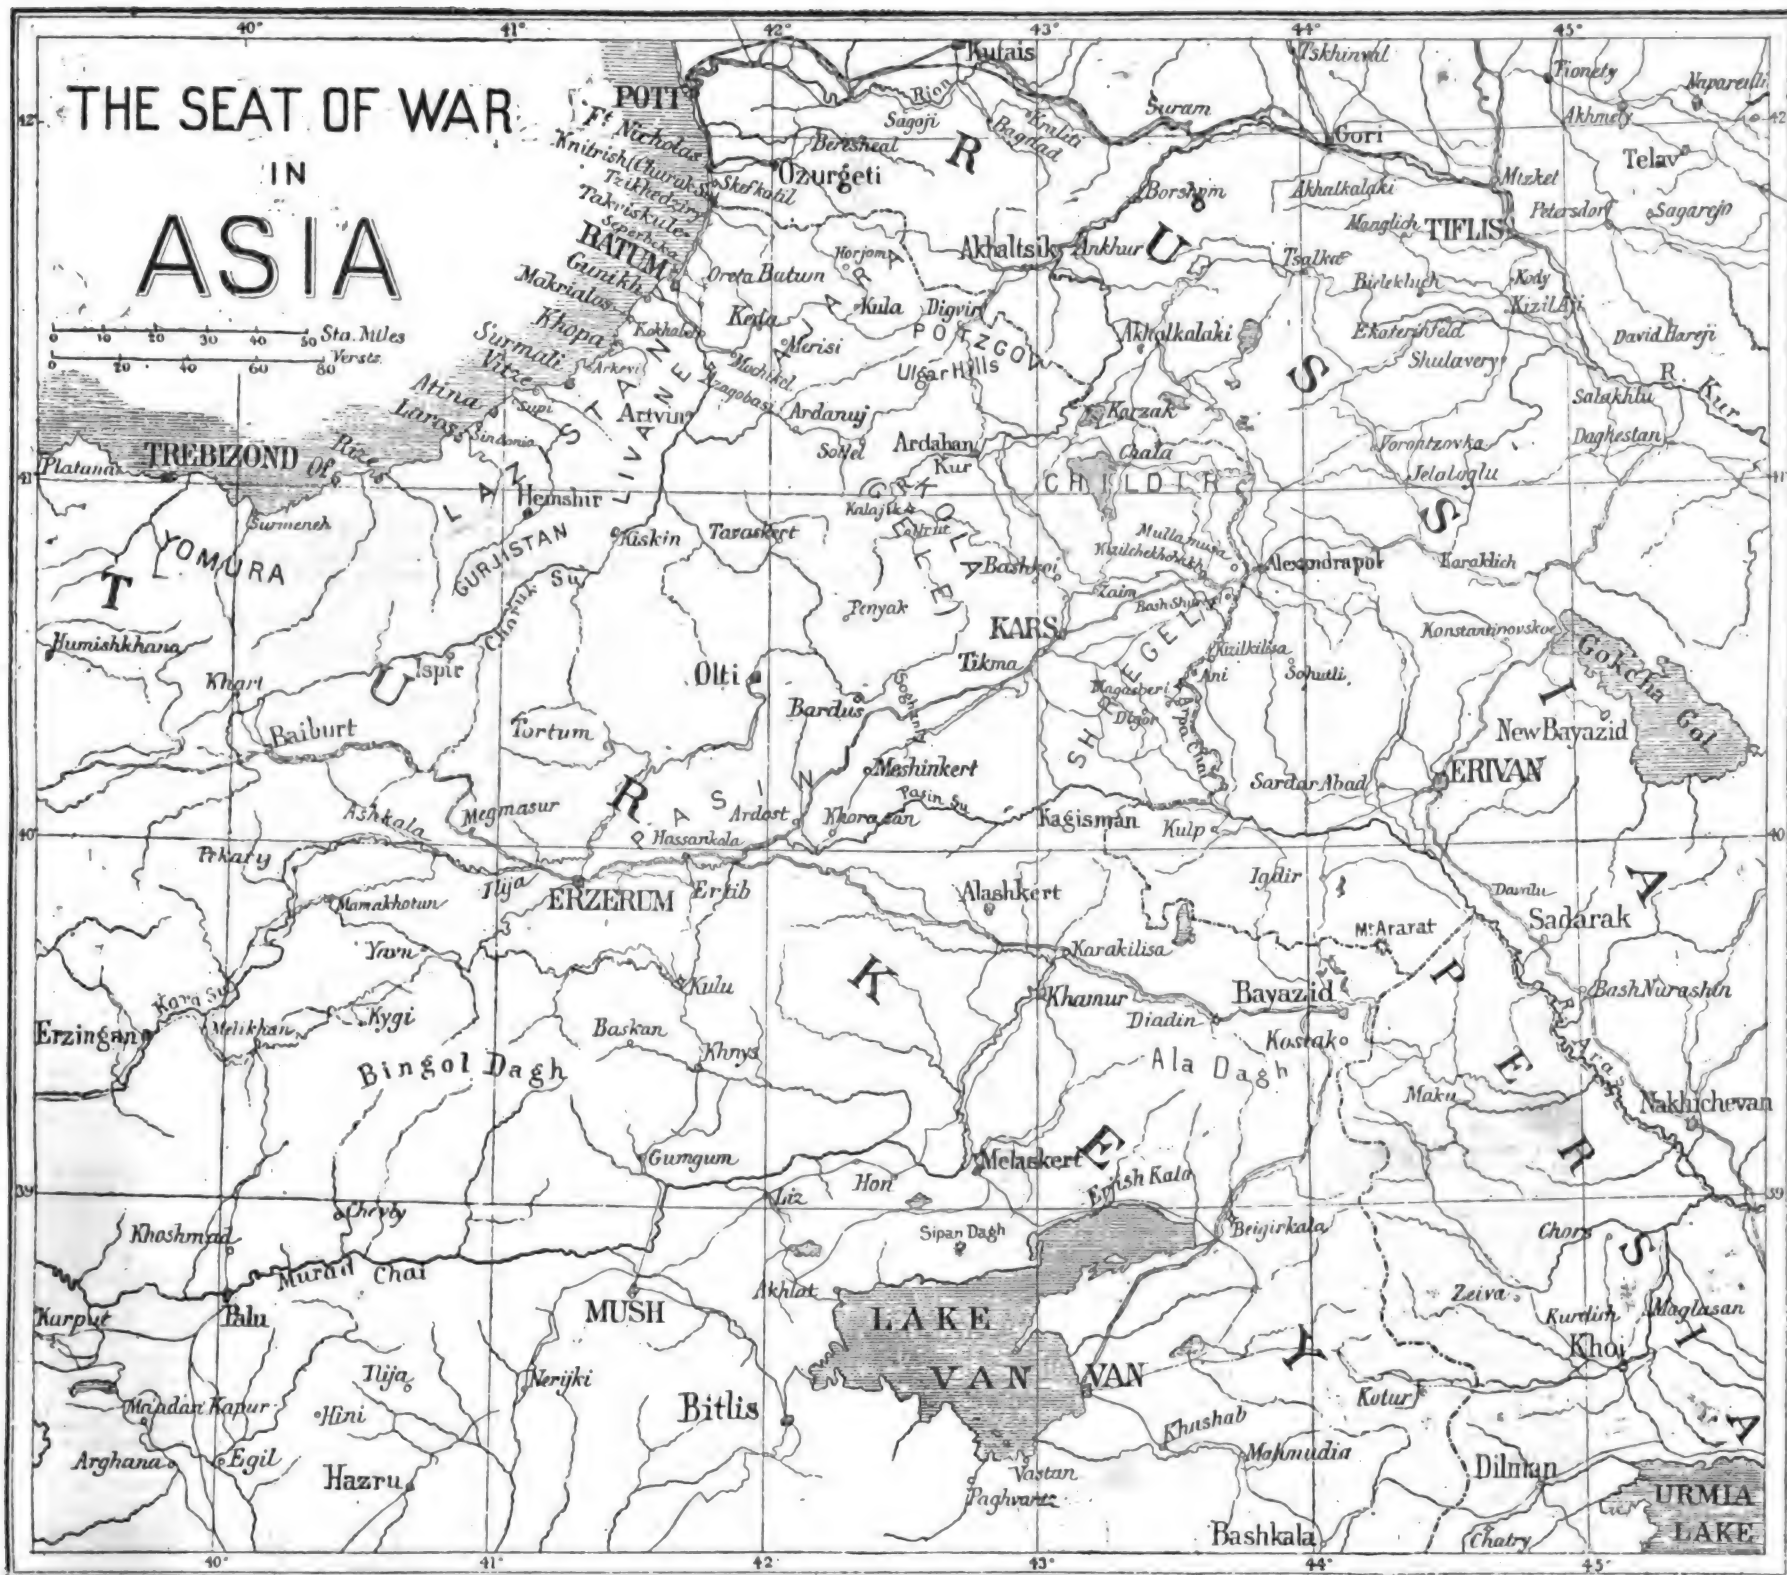

Dr. Brewer, chairman of the Metropolitan Asylums Board, in presiding over the meeting of that body last Saturday, laid before it a summary of its proceedings during the year. In this it was stated that the smallpox epidemic in London is now on the decline.

THE COUNTRY AROUND KARS.

COLONEL BAKER'S "TURKEY IN EUROPE."

The publication, by Messrs. Cassell, Petter, and Galpin, of Colonel James Baker's new book on "Turkey in Europe" is exceedingly well timed. There is, at the present moment, an eager desire amongst every class of English readers for the most recent and authentic information concerning the Sultan's Empire and its diverse races of people, whose political fate seems now committed to the stern arbitrament of a war, avowedly commenced for the purpose of changing the state of territorial dominion these four hundred years past in the south-eastern parts of Europe and the western peninsula of Asia. At such a momentous crisis, when the sympathies and interests of our own nation are too readily invoked by vehement partisans of one or other belligerent on the Danube and on the shores of the Black Sea, it is most desirable that we should receive the impartial testimony of any of our countrymen worthy of credit who may have resided long enough in the interior of the Turkish dominions to gain a personal acquaintance with the different classes of their population and with the administration of Turkish rule, the faults of which are generally admitted and condemned throughout the civilised world. Colonel James Baker went to Turkey in 1874, apparently with the object, which he has accomplished to his own satisfaction, of purchasing an agricultural estate. His local experiences seem to be confined to certain districts of Bulgaria, north and south of the Balkan, and to the neighbourhood of Salonica, where he found a permanent abode. At Burgas, on the western coast of the Black Sea, he visited the British Vice-Consul, Mr. Brophy, who afterwards became his travelling companion in a Bulgarian tour; and he also visited Captain St. Clair, whose residence was not far distant. Both those gentlemen have recently come before the public as joint authors of a book, "Residence in Bulgaria," which we noticed some months ago. Colonel Baker's work, in many particulars, will be found to confirm their statements, but from his own point of view, and in a candid and liberal spirit.

The author of this volume, besides having mixed a good deal with all sorts of people in Turkey, has studied the history of the Ottoman Empire. He has obtained a minute and accurate knowledge of its laws and methods of administration at the present day, and of the actual situation of its Christian subjects, at least in Bulgaria and in the country around Salonica. His judgment is, on the whole, favourable to the Turks, while he is decidedly friendly to the Bulgarian nation, of which he gives a very interesting account. The Bulgarians were doing very well, he says, and were making great progress in social improvement, till the machinations of Russia brought upon them such an outburst of Mussulman fanaticism and panic-stricken rage, as shocked all Europe in the summer of last year. Colonel Baker's testimony on this point should be taken in his own words:—

"In 1874 I was travelling through the whole of this country, and stopped in many of the villages which are now burnt and laid in ruins through the late melancholy means employed to quell imaginary rebellion. Wherever I halted, I was the guest of Bulgarians, and, on some occasions, of the schoolmasters of the towns and villages. In Bulgaria, if information is wanted, there is no man better capable of giving it than the schoolmaster. He is the pulse of the people, and by feeling it you can judge of the state of their health. I never saw a country which looked less like the seat of rebellion. The people were prosperous, peaceful, and contented, and their whole thoughts were concentrated upon education and progress. I learnt the force of the so-called rebellions of 1867-8, and was informed that foreign agents were still at work, but without the slightest hope of success, and that the only result of their labours was the occasional drinking of revolutionary toasts when heated with wine, by a few good-for-nothing Bulgarian youths, deficient in brains; that their number was so insignificant and their influence so infinitesimal that they were not worth mentioning. It was only eighteen months after this that the so-called rebellion occurred which resulted in the massacre of the inhabitants! The seeds of this disturbance—for I cannot call it rebellion—were sown by the same hands as in 1867-8, but the ground on which they fell was in a different state of preparation. In the first case the rest of the country was at peace. Midhat Pasha, a man of real energy and ability, was on the spot with a well-organised body of military and police, and the disturbance was crushed as soon as it had begun. In the second case, the country was plunged in civil war; the religious fanaticism of the Turks was roused by the rebellion of some of her Christian subjects in neighbouring provinces; their troops and police were scattered over the disturbed districts; their temper was irritated by the known machinations of one foreign Power, and the galling fetters placed upon them by others; they hourly expected Serbia to declare war in their front, and they were assured that Bulgaria was going to rebel in their rear. Financial shipwreck stared them in the face, and the whole machinery of government was in wild disorder; the Bulgarian people were in a state of terror at the alarming reports from the neighbouring provinces of Herzegovina, and at the events which were foreshadowed in Serbia. At this moment the match was put to the mine which was to explode in the Bulgarian rebellion, and there was no Midhat Pasha on the spot. The result was a panic amongst the Bulgarians and a panic amongst the Ottoman authorities. There is no combination of circumstances more favourable for cruelty and massacre than that of uncontrollable terror. A nation, like a man, in a panic is in a state of temporary insanity. Be it remembered that the orders in 1867-8 to the foreign agents who were to manufacture rebellion were to 'compel the peaceable Christian peasantry to join their ranks and rise against their oppressors.' The orders were the same in 1876; and in subject terror some few unfortunate Bulgarians did join the ranks of the many ruffians that gathered in the hope of plunder, and we know the sad result. But to call this wicked plot a Bulgarian rebellion is a cruel insult and reproach to that peaceful and would-be loyal people."

We hope, for the credit of human nature, that Colonel Baker is mistaken in believing that Russia foresaw and intended to provoke the barbarous massacres that were sure to follow the spurious Bulgarian insurrections hatched by foreign conspiracy with her secret connivance. He has heard, on what he considers good authority, with regard to the attempted rebellion nine years ago, that General Ignatieff had persuaded Sultan Abdul Aziz to agree to calling in the aid of Russian troops. The Bulgarians, according to this writer, are not disposed to rely upon the sympathy either of Russian or Greek fellow-Christians. Their own national Church has had a severe struggle to maintain for the assertion of its independence against the Greek Church and the Patriarch of Constantinople. None of its clergy, in order to achieve this object, are said to have threatened that they would become Roman Catholics, or English Protestants, if their claim to ecclesiastical liberty were much longer denied. It was, however, conceded by the Sultan's firman expressly recognising the privileges of the Bulgarian Church. This was the signal for a rapid advance in popular education, and in trading and industrial pursuits, of which Colonel Baker draws an agreeable picture. Schools,

colleges, and other beneficial institutions sprang up in this province. He proceeds to say, on the other hand, that some grievances still remained, which were naturally hard to endure:—

"We have seen how, by raising their voice and not their arms, the Bulgarians obtained an independent Church and national schools, and that general progress and contentment existed. But there can be no doubt that they inherit the remembrance, even in the present generation, of most wicked persecutions approaching near to slavery. The hardship they have now to bear is not the persecution of their governors, but the arrogance of their Mohammedan fellow-subjects who live by their side, and who, from being accustomed to see the Bulgarian Christians over-riden, treat them with contempt, and as though they were an inferior race. To their former persecution from the Ottoman authorities was added that of their Greek priesthood; and these two combined have produced a submission and a patience under suffering which is both pitiable and admirable."

"Some idea of what these poor people once suffered, and the reformation which has been made in their treatment within the last few years, may be formed by a description of what was going on in the district of Djumaa, on the upper Strymon, in the year 1859. This district contains thirty-two villages, of which twenty-seven are Bulgarian and five Mohammedan; most of the villages were the property of the Mohammedan beys or aghas (gentlemen) of the place, the land being cultivated by the Bulgarians, partly as labourers and partly as rayahs, on the metayer system. The district was governed by a Mudir (magistrate) and Medjliss (court), who sat at the town of Djumaa."

"The Medjliss was composed of Mohammedans, with one Bulgarian kogiabashi (headman) representative; but the latter did not dare to raise his voice on any subject. All the members of the Medjliss were the principal landowners in the district; consequently, in most of the questions brought before the Court they had to sit in judgment on themselves."

"The neighbourhood, being mountainous, was infested by brigands, composed of Turks, Albanians, and Christians; and the beys who sat on the Medjliss were said to afford a ready asylum to these robbers, and sometimes to share in the plunder. Under such circumstances the amount of justice received by the Bulgarians may easily be imagined. By the metayer system the landlord receives half the crop (after many deductions) as rent, and it is collected in kind. At Djumaa the beys and aghas employed brigands to collect not only their own share, but much besides, from the rayahs; and these Albanians, in their turn, plundered the villagers. The Poliak, or Albanian guard, in the service of one of the members of the Medjliss, was attached to a village called Logotash. They gathered together seven other evil spirits, and, going to a neighbouring village, broke into the cottage of a Bulgarian farmer and demanded plunder. The poor man, having nothing to give, was seized and held down while his body was seared with red-hot irons. This, of course, was not an everyday occurrence, and consequently made some sensation in the neighbourhood; and the Turkish Registrar for Title Deeds, of Sofia, happening to be at Djumaa at the time, heard of the barbarity, and, to his credit, called on the Mudir and had the Poliak arrested and brought before the Medjliss. At first the Albanians asserted their innocence; but the evidence was overwhelming and the Registrar firm, so they gave up that tack and made a clean breast of it, and declared that they acted under instructions from their master and other members of the Medjliss, or Court which was trying them. This made matters disagreeable, but the indignant Registrar still pressed the case to a higher Court. So off to Constantinople went the principal bey, the master of the Poliak, who was a man of considerable property, and consequently of considerable influence, and made interest there with the higher powers. The result was that an order came that the case was not to be pressed against him; and the indignant Registrar went on his way, but not rejoicing."

"This may be taken as a fair sample of the customs and administration of justice in a few of the country districts twenty years ago; but a great change for the better has been wrought of late years. I was at this very place, Djumaa, in 1874. It was then a tolerably clean and flourishing town, with the telegraph and an excellent highway road passing through it; brigandage was almost extinguished, and an advanced system of agriculture, chiefly tobacco, was practised. The same change has been realised in other districts throughout the country; and this, at all events, shows that the Crimean War was not fought in vain, and that it has brought some blessings to humanity."

We do not very clearly see how Colonel Baker is able to prove that the Crimean War did really cause the improved social prosperity of Bulgaria under Turkish rule for some time previous to the horrible occurrences of last year. But the fact of such prosperity, with a certain degree of individual and communal liberty, having been found compatible with the Ottoman dominion, is attested by many English residents in Turkey. It is very likely, indeed, that the secondary result of it was to make the Bulgarian, as he grew richer and was better educated, more sensitive to the insolence of his Mussulman neighbour, who was probably not a Turk, but a Moslem convert of the native Bulgarian race, as in Bosnia and Herzegovina. In any case, our best consideration is due to the claims of this people, and likewise of the Bosnians, in the future settlement of their provinces after the war that has just begun. We must desire to see them liberated from Turkish rule, but we cannot wish to see them placed under the Russian; and it would not appear at all impracticable, by a resolute and united policy of the European Powers, to establish Bulgaria and Bosnia as independent neutral States, guaranteed by a general treaty. This would be a far more satisfactory result than all which ever seemed to have been gained by the Crimean War."

The Bulgarians, it should be remembered, are not a Slav nation, akin to the Servians and Bosnians, but are of the Ugrian stock, more nearly related to the Finns and the Magyars. They came from Central Asia some time in the Dark Ages, and settled awhile on the banks of the Volga, from which their present name is derived. In the sixth century of our era they were driven southward by an invasion of Turks; they crossed the Danubian plains into Thrace, or Roumelia, approaching close to the walls of Constantinople. At the present time, both to the north and to the south of the Balkan range, in the interior of European Turkey, these people, who are of a pacific, patient, and laborious character, form the bulk of the inhabitants. They spread far inland, and go to seek work all over the neighbouring provinces. The efforts of Russia, on the one hand, and of Greeks on the other, to discourage their nationality, and to impose upon them an alien language and ecclesiastical connection, have been sturdily resisted. Colonel Baker has a much less favourable opinion of the Greek subjects of Turkey, who are found in the Fanar quarter of Constantinople, in the town and neighbourhood of Salonica, in Thessaly and Epirus, and the islands of the Ægean Sea. They are commonly called "Roum," or Romans, from their ancestors having been the dominant race in the Eastern Roman or Byzantine Empire. Their numbers at present in Turkey have

been much exaggerated, but they possess a very large share of wealth and political influence. By their unscrupulous practices of intrigue, according to Colonel Baker, they have contrived to injure the Bulgarians in various ways, and to excite mutual enmity between these and the Turks. The constant burden of our author's discourse is the shameful manner in which that innocent Bulgarian population has been abused and betrayed to serve Greek and Russian ambition. Yet it appears from his own showing, in the passage we have extracted, that the Bulgarians, as well as the Slavs and Greeks, feel bitter resentment and animosity towards the Turks, who treat them with intolerable haughtiness, and whose government, even in ordinary times, has never afforded them due protection against the acts of violence and extortion perpetrated by their Mussulman neighbours. The Circassians and other immigrants from Asia Minor, within the last twenty years, inhabiting the mountain slopes of the Balkan, were the immediate agents of those hideous massacres last year, which the Ottoman Government seems to have permitted in order to stamp out a Bulgarian revolt. The truth is, we should say, that political incompetence, indolence, and the absence of official integrity, are the besetting faults of that Government; and that the Turk himself is not such an inhuman monster as we have been led to fancy. He is only devoid of the almost superhuman virtue, skill, and wisdom that would be requisite for maintaining peace and good order, and equitable social relations, between three or four conflicting races among his subjects, from whose confidence and sympathy he is excluded by a difference of religion. It is therefore most necessary that the Turk should cease to reign over them, but not that we should hate the Turk, or wish him any kind of ill.

The composition of this book is a mixture, in alternate layers, of chatty anecdotes of travel, conversations with the natives, and instances of social or domestic manners in provincial Turkey, with chapters of ethnological or historical disquisition. The latter might have been compiled in any English or foreign library from standard works upon the subject. We cannot rate very high the amount of erudition and historical or critical insight shown by Colonel Baker; but some of his opinions ought to carry much weight. The reader who has leisure may here follow his account of the successive swarms of Turkish invaders which poured into Asia Minor and Europe from the tenth to the fifteenth century of the Christian era; the final capture of Constantinople by Mahomet II. in 1453; and the establishment of Ottoman sovereignty, supported by a system of military feudalism, in the countries formerly known as Thrace, Macedonia, Moesia, and Illyria, with Thessaly, Epirus, and Greece, situated between the Ægean and the Adriatic sea. It will be sufficient to observe, with regard to the effects of this conquest, that religious antipathy has entirely prevented any amalgamation of the Turks with the Bulgarians, the Slavs, and the Greeks under their yoke, though a portion of the upper class among the people of those subject nationalities, except among the Greeks, has long since adopted the Mussulman religion. The irreconcilable divisions, the jealousy, bigotry, pride, and hatred of different races and religions, and their respective attempts to injure one another, have defeated all projects of administrative reform in Turkey. But there has been social progress among the Christians, while the Mohammedans have lapsed into social decay, and the Sultan's Court, with the whole official organisation at Stamboul, has become extremely corrupt, losing more and more its control over the heterogeneous elements of the State. This is briefly the net result of the modern history of Turkey, and it is corroborated by all that Colonel Baker relates of what he saw in his long journeys through Bulgaria, Roumelia, and Macedonia, while rambling about in quest of an eligible landed estate, and by his subsequent experience as a fixed resident near Salonica. His descriptions, by-the-way, of the natural scenery, the geology, botany, and zoology, the agricultural and pastoral resources of the country, and the markets and factories in its numerous thriving towns, would be very pleasant reading but for our having learnt to associate those localities with hideous recent deeds of cruelty, of massacre, lust, and rapine, and with the anticipation of more slaughter in the havoc of the war just now commenced. There is, unhappily, small leisure to dwell upon those agreeable topics we have enumerated amidst the clash of two great military Empires, heading a group of hostile nationalities, in arms for the purpose of mutual destruction. Other matters of considerable interest and importance are discussed by Colonel Baker, which are likewise not much in the line of our pre-occupations at this moment. The system of taxation, the land laws, the opportunities for investment and employment in farming, would be subjects of desirable and valuable information in time of peace. Colonel Baker is an excellent authority upon these subjects; but we suppose few of his readers will be inclined, in these days of the impending martial struggle, to take note of such particulars; for there will be no temptation for Englishmen to emigrate to Turkey, or to risk any more capital in that country till the conflict with Russia has been decided. It is equally problematical whether any of our financiers can be induced to bestow their practical consideration upon the method proposed by our author for the adjustment of the Turkish national debt. In conclusion, we will quote the author's judicious and impartial remarks upon the characteristic vices of the Ottoman Government:—

"A broad distinction must be drawn between the Turkish people and their rulers. The former deserve much praise, and the latter great blame. But a large share of the blame is attributable to the corrupt reign of Sultan Abdul Aziz."

"The seeds of corruption have taken root in all parts of the empire. The machinery and organisation of the administration is all that could be desired, so that it is not necessary to pass new laws, but only to carry out with justice those which already exist. Mohammedans have suffered from the maladministration of justice just as much, and even more, than the Christians, but they have borne it with greater patience. The Turks themselves, high and low, have for some years past sighed over the state into which their country was sinking; and, as they truly said, it was not the fault of the nation, but of the corrupt and all-powerful head. I was talking to a highly-educated and exceedingly clever Turk a few months ago about the affairs of his country, and I asked him what he considered as its greatest necessity. He replied, 'Justice within and justice from without.'

"The Turkish administrators find themselves in the position of being in possession of an article—patronage—for which there is an eager demand, and they sell it to the highest bidder, and with it the interests of their country. But it is not venality alone that is the cause of the shortcomings of Turkey. There are other nations quite as venal, and yet they advance rapidly in civilisation. The apathy and procrastination in every department of the State, great and small, in every private house, high and low, in every transaction, however important or however trifling, are the causes which attenuate progress to such meagre dimensions. The Turkish official seldom refuses, but always postpones. If I had to devise a Turkish banner, I should inscribe on one side of it, 'Evet Effendim' (Certainly, Sir), on the other, 'Yarin' (To-morrow), and below, the motto, 'There is but one God, and backsliding is his Prophet.'

The introduction of telegraphs and railways to the greater part of Europe within the last few decades has produced a great change in our estimate of the relation between time and space; and the result is a rapidity of thought and a corresponding rapidity of action which gives a like velocity to the expectation that our wishes must be immediately realised. In the present day there is time to think, but very little time to reason; and yesterday is forgotten in the thought of tomorrow. The inventions which have produced this rapidity of thought and action have barely arrived in Turkey, and she therefore requires time before she can be expected to rush along the rapid stream of progress which is sweeping over Europe."

OBITUARY OF EMINENT PERSONS.

SIR JOHN S. RIBTON, BART.

Sir John Sheppey Ribton, Bart., of Woodbrook, in the county of Dublin, died on the 1st inst. at 48, Ebury-street, London, aged eighty-seven. He was the elder son of Sir George Ribton, second Baronet, by Mary, his wife, daughter of John Grogan, Esq., of Johnstown, and was grandson of Sir George Ribton, Knight, Lord Mayor of Dublin in 1759. Sir John succeeded to the title at his father's death, in 1807. He served for nine years in the Rifle Brigade, which, during the greater part of that time, was actively employed in Portugal, Spain, France, and America: he was four times wounded. He married, first, in 1818, Mary Anne, only daughter and heir of Jeremiah Hayes, Esq., of Killuragh, in the county of Limerick, and had a son, John Hayes, who died in 1844, aged twenty-five. He married, secondly, in 1841, Emily, only daughter of Thomas Quinan, Esq., and widow of Walter Hussey Hill, Esq., and had two daughters and three sons. Of the latter, the eldest, his successor, is now Sir George Ribton, fourth Baronet.

MR. R. H. TOWNELEY.

Richard Henry Towneley, Esq., only son of Colonel John Towneley, of Towneley, in the county of Lancaster, formerly M.P. for Beverley, by Lucy Ellen, his wife, daughter of Sir Henry Joseph Tichborne, Bart., died at Rome on the 25th ult., after a brief illness, aged twenty-eight. The death of this gentleman seems to involve the extinction of one of our grandest English families, that of Towneley of Towneley, which is stated by genealogists to possess an authenticated pedigree from the close of the ninth century, when Alfred reigned over England.

MR. COULSON.

Mr. William Coulson, the eminent surgeon, died on the 5th inst., after a short illness, at his residence in Chester-terrace, Regent's Park, in the seventy-eighth year of his age. Mr. Coulson, after pursuing his professional studies at St. Bartholomew's Hospital, became a member of the Royal College of Surgeons in September, 1826, and in 1843 was elected honorary Fellow. In 1851 he obtained a seat in the council, and in 1860 was appointed Hunterian orator. Mr. Coulson, who was consulting surgeon to St. Mary's and the German Hospitals, was a member of many learned and scientific societies at home and abroad, and contributed much by his literary labours to the advancement of surgical science. He was High Sheriff and a magistrate of his county.

The following deaths are also announced:—

John Merrifield, Esq., barrister-at-law, on the 1st inst., at Brighton, aged eighty-eight.

John Russell Reeves, Esq., F.R.S., of Woodhays, Wimbledon, and Huntsland, on the 1st inst., aged seventy-three.

Colonel Edward Holt Glegg, of Backford Hall, near Chester, on the 6th inst., in his sixty-eighth year.

Henry Seeds, Esq., an eminent solicitor of Belfast, on the 1st inst., in his sixty-second year.

Miss Frances Perceval, second daughter of the Right Hon. Spencer Perceval, Prime Minister (assassinated 1812), at The Manor House, Ealing, on the 29th ult., in her eighty-fifth year.

Colonel George William Horton, on the 1st inst., at Embaykirk, Yorkshire, aged eighty-five; he served in the Waterloo campaign with the 71st Highland Light Infantry.

The Rev. J. F. Flavell, M.A., St. John's College, Cambridge, Prebendary of Armagh, late Rector of Mullabrack and Rural Dean, on the 28th ult., at his residence, Mullabrack House, in the county of Armagh, aged seventy-three.

Mrs. Morris (Anne), wife of the Rev. Francis Orpen Morris, Rector of Nunburnholme, Yorkshire, the distinguished naturalist, and daughter and coheir of the late Charles Sanders, Esq., of Bromsgrove, on the 26th ult., aged sixty-seven.

The Rev. John Kenrick, of York, in his ninetyeth year. He was one of the vice-presidents of the Yorkshire Philosophical Society, and was curator of the department of antiquities in the museum. He was a Fellow of the Antiquarian Society, and was the author of learned works on ancient Egypt and Phœnicia, and many other literary productions.

Sir Walter Wyndham Burrell, M.P., has been appointed Provincial Grand Master of the Freemasons of Sussex, in place of Lord Pelham, who has retired.

The ship City of Agra, Captain Young, sailed from Gravesend yesterday week, bound for Maryborough and Brisbane, Queensland, having on board 314 persons.

The two-days' poll to determine whether or not the Public Libraries Act should be adopted in Bath closed on Thursday week, when the numbers were—For the adoption, 1644; against, 1808: majority, 164.

The Bristol Chrysanthemum and Spring Show Society, the Grand Yorkshire Gala Floral and Musical Exhibition, and the Royal Jersey Agricultural and Horticultural Society, have been admitted into union with the Royal Horticultural Society.

In addition to his previous donation of £1000 and the site, Mr. Charles E. Flower, chairman of the Shakespeare Memorial Association, has given £100 towards the erection of the library and picture-gallery in connection with the Shakespeare Memorial at Stratford-on-Avon.

Mr. E. D. Gray, Liberal Home-Ruler; Mr. J. S. Casey, Nationalist; and Mr. Spaight, Conservative, were on Monday nominated as candidates for the representation of the county of Tipperary. Mr. Spaight's nomination was, however, withdrawn at the last moment. The polling will take place on Monday next.—The writ for the election to the vacancy in the representation of Montgomeryshire Burghs was received on Tuesday morning, and the nomination fixed for the 11th, and the polling for the 15th inst. Viscount Castlereagh, the Conservative candidate, and the Hon. Frederick Hanbury-Tracy, the Liberal nominee, are prosecuting an active canvass.

CHESS.

TO CORRESPONDENTS.

All communications relating to this department of the Paper should be addressed to the Editor, and have the word "Chess" written on the envelope.

W H O (Manchester).—We do not reply through the post. Your analysis is correct. J B (Boxford).—We should be glad to receive a better specimen of your problem composition. The one in hand is not up to either your standard or ours. E B (Hamburg).—If Black plays 1. R to K 2nd, in reply to 1. K to Q 7th, we can see no mate in two more moves. We shall be glad to hear from you on this point. B S W (St. Louis).—We are sorry we cannot comply with your request, but it is not our practice to "exchange." A E C B (Huddersfield).—Both problems are too elementary for this column. G R D (Chichester).—The problem appears to be incorrectly described. It is, at all events, unintelligible. J W Chester and W E Whitehead.—We refer you to the answer to H Beumann in our last issue.

PROBLEM No. 1729.—H Beumann and W V G D have both failed to discover the proper defence to 1. B takes B. In reply to that move Black can play 1. Kt to Q 7th, threatening a check next move. Highfield (Southampton) is informed that if Black plays 1. B to B 6th, White continues with R takes K P, and then if B takes B, P mates, and if B to K 7th, mate is effected by R to B 6th, the Black Pawn being pinned.

CORRECT SOLUTIONS OF PROBLEM No. 1731 received from Latta, Highway Institute, W V G D, J B, E P Villamy, J Chisman, W H O, F Dennis, W Payne, W E Whitehead, C E Winter, and A E O Brook.

CORRECT SOLUTIONS OF PROBLEM No. 1732 received from H B Latta, J de Hon-teyn, Woolwich Chess Club, W Nelson, A G B, T R Y, American, Long Stop, 1 Leona and Leon, O D, S Western, W Lee, Con, Highway Institute, E L F, B H Brooks, Llansey, D H, Highfield, J E Morris, C Wood, F Dennis, Copiapino, J Chisman, Fitzroy Chess Club, H Res, E P Villamy, Mechanic, J S W, H Burgher, Black Knight, J Wontone, L S R, Tippet, B R Stone, A Wilson, O Crosby, A Wood, Maggie Irwin, Hereward, Paul's Wood, Harrobian, Triton, Only Jones, R Roughed, N F D, E Worley, Simplex, J Williams, W Alston, R T King, Amy and Percy S, Red Ink, Tallyho, U E, Checkmate, Dolly, W Leeson, P S Shenale, Alice, E Frau, Spalding, W V G D, J P Taylor, B Lewy, G H V, E H H V, East Marden, Cant, W S B, G R D, E Burkhard, and W E Whitehead.

SOLUTION OF PROBLEM No. 1731.

WHITE. BLACK. WHITE. BLACK.
1. Kt to K B 7th* K to B 4th
2. P to Q 5th Aught
* White may also play 1. Q takes R P, &c.

PROBLEM No. 1734.

By W. T. PIERCE.

BLACK.

WHITE.

White to play, and mate in two moves.

CHESS IN LONDON.

One of six Games played by Mr. BLACKBURN at the City of London Chess Club simultaneously, and without sight of the boards and pieces.

(Algaier Gambit.)

WHITE (Mr. B.)	BLACK (Mr. R.)	WHITE (Mr. B.)	BLACK (Mr. R.)
1. P to K 4th	P to K 4th	18. P to Q 5th	
2. P to K B 4th	P takes P		
3. Kt to K B 3rd	P to K Kt 4th		
4. P to K R 4th	P to Kt 5th		
5. Kt to K 5th	Kt to K B 3rd		
	This defence is now considered inferior to Herr Paulsen's invention, S. B to Kt 2nd; nevertheless, it should lead, we think, to an even game.		
6. Kt takes K P	Kt takes P		
7. P to Q 4th	Kt to Kt 6th		
8. B takes P	Q to K 2nd (ch)		
9. K to Q 2nd	Kt takes B		
10. B to K 5th	Q to Kt 5th (ch)		
11. K to B sq	B to K 2nd		
12. Kt to B 6th (ch)	K to Q sq		
	If 12. B takes Kt, he must submit to some loss either of force or position.		
13. Kt to B 3rd	P to B 3rd		
14. P to E 3rd	Q to Q 3rd		
15. Q Kt to K 4th	Q to K 3rd		
		WHITE (Mr. B.)	BLACK (Mr. R.)
		16. P to Q 5th	
		White has now a fine attack and pursues it in excellent style.	
		16.	
		17. Kt to P (Q 5th)	P takes P
		18. Kt takes B	B takes B (ch)
		19. P to Q Kt 4th	Q to K sq
		A necessary preliminary to Q to Q 4th, providing for the escape of the King should Black check with the Q at K 5th, and enabling White to drive the Kt from Q B 3rd should that defence be offered to the threatened coup.	
		19.	
		20. Q to Q 4th	P to K R 3rd
		21. Q to K 6th (ch)	P to Q 3rd
		22. B to Kt 6th (ch)	Kt to B 3rd
		23. Q to B 5th (ch)	K to Q sq
		24. Kt takes P (ch)	Q takes Kt
		25. Q takes Q	
			Black struck his flag.

CHESS IN LIVERPOOL.

The following Game was played recently at the Liverpool Chess Club between Mr. SCULLY and the Hon. W. A. LUNDAY.

(Two Knight's Defence.)

WHITE (Mr. S.)	BLACK (Mr. L.)	WHITE (Mr. S.)	BLACK (Mr. L.)
1. P to K 4th	P to K 4th	16. Q to Q 3rd	B takes K P
2. B to K B 4th	Kt to K B 3rd	17. Q takes P (Kt 3rd)	Kt to Q B 3rd
3. Kt to K B 3rd	Kt to Q B 3rd		
4. Kt to Kt 5th	P to Q 4th		
5. P takes P	Kt to Q R 4th		
6. P to Q 3rd	B to Q 3rd		
7. Castles	Castles		
8. Q to K 2nd	P to K R 3rd		
	We think Black should have taken off the K B with Knight before executing this manoeuvre.		
9. Kt to K B 3rd	P to K 5th		
10. P takes P	R to K sq		
11. Kt to Q B 3rd	B to K B 4th		
12. B to Q 3rd	P to Kt 3rd		
13. P to Q R 3rd	P to Q B 3rd		
14. P to K 5th	P takes Q P		
15. B takes B	P takes B		
		WHITE (Mr. S.)	BLACK (Mr. L.)
		18. Q to Q 3rd	B takes K P
		17. Q takes P (Kt 3rd)	Kt to Q B 3rd
		17. K to B sq	was obviously the right course at this juncture.
		18. B takes R P	Q to Q 2nd
		19. Q R to Q sq	R to K 2nd
		20. Kt takes Q P	
		A well-timed move that gives White a marked advantage of position.	
		20.	
		21. Kt to Kt 5th	Kt takes Kt
		22. P to Q B 4th	K R to K sq
		23. P takes Kt	Q to Q 2nd
		24. P to K B 4th	Kt to Q 5th
		25. K to R sq	B to K B 3rd
		26. Q to R 7th (ch)	K to B sq
		27. Kt to K 6th (ch)	R takes Kt
		28. P takes R	Resigns.

CHESS IN INDIA.

An interesting Skirmish that occurred at Bombay, between Colonel L. and MUL RAJ PANJABI, a Hindoo player of considerable force.

(King's Gambit declined.)

WHITE (Col. L.)	BLACK (M. R. P.)	WHITE (Col. L.)	BLACK (M. R. P.)
1. P to K 4th	P to K 4th	14. R to Q B sq	P to Q B 3rd
2. P to K B 4th	B to B 4th	15. B to R 6th	
3. Kt to K B 3rd	P to Q 3rd		
4. P to Q 4th			
B to 4th is the best move at this point. The advance of the Pawn is premature.			
4.	P takes P		
5. B to Q B 4th	B to K Kt 5th		
6. Castles	P to Q 6th		
	(dis. ch)		
7. K to R sq	P takes P		
8. Q takes P	B takes Kt		
9. R takes B	Kt to Q 2nd		
10. B to K 3rd	Q to K 2nd		
11. Kt to B 3rd	B takes B		
12. R takes B	Castles		
Castling on this side was injudicious, to say the least of it, in view of the open Q B file.			
13. Kt to Q 5th	Q to B sq		
	The only square for the Queen. If Q to K sq instead, then follows K takes Q B P.		
		WHITE (Col. L.)	BLACK (M. R. P.)
		and, should K take Kt, White wins the Queen by B takes K P (dis. ch) &c.	
		14. R to Q B sq	P to Q B 3rd
		15. B to R 6th	
		A very clever conception.	
		15.	
		16. B takes P (ch)	Kt to B 4th
		17. P to Kt 4th	K takes B
		18. P takes Kt	P takes Kt
		19. P takes P	P takes B P
			R takes P
		Black was of opinion that he should not have retreated the K to B sq, and we agree with him.	
		20. Q to Kt 3rd (ch)	K to B 3rd
		21. Q to R 4th (ch)	K to Q 3rd
		22. Q to R 5th (ch)	K to B 2nd
		23. Q takes P (ch)	K to Q 3rd
		24. R to Kt sq	Kt to K 2nd
		25. R takes Kt	Q to Q 3rd
		26. R to Kt 6th (ch)	Q takes K
		27. Q to Q 7th. Mate.	

WILLS AND BEQUESTS.

The will and codicil, dated Sept. 4, 1865, and June 2, 1870, of Mr. Henry Dumbleton, late of Thorn Hill, Southampton, who died on March 9 last, were proved on the 30th ult. by Horatio Dumbleton, and the Rev. Edgar Norris Dumbleton, sons of the deceased, the acting executors, the personal estate being sworn under £120,000. The testator gives to his wife, Mrs. Ellen Dumbleton, £500, furniture to the value of £1000, and such annual sum as, with the amount she is already entitled to, will make up her income to £2000 per annum; and there are legacies to children. The residue of his property, real and personal, is to be divided between all his children, except his eldest son, Henry, who is already provided for.

The will with one codicil, dated July 19, 1872, and Nov. 9, 1876, of Mr. Thomas Jones, late of No. 1, St. Alban's-road, Kentish Town, who died on March 16 last, was proved on the 21st ult. by Mrs. Mary Ann Jackson Jones, the widow, the sole executrix, the personal estate being sworn under £60,000. The testator bequeaths to his wife all his household furniture and effects, and legacies of £100 each to his sisters Anne and Alice; the rest of his personality and all his real estate he gives to his wife for life. On her death various devises and bequests in favour of his children take effect, and the residue is given among all his children.

The will and two codicils, dated March 9, 1869, Feb. 1, 1872, and June 5, 1875, of Mr. Charles Gregory, late of Rosslyn-grove, Hampstead, who died on the 2nd ult., were proved on the 20th ult. by Thomas Gregory and George Gregory, the nephews of the deceased, the executors, the personal estate being sworn under £45,000. The testator leaves several legacies, and the residue of his property between his nephews and nieces, and the daughter of a deceased nephew, the children of his brother Thomas.

The will, as contained in two papers dated respectively Aug. 25, 1864, and March 16, 1875, of Sir William Ferguson, Bart., F.R.C.S., late of No. 16, George-street, Hanover-square, who died on Feb. 10 last, was proved on the 28th ult. by George Alfred Gadsden and John Ord Mackenzie, the executors, the personal estate in the United Kingdom being sworn under £30,000. The testator leaves to his children's nurse, Isabella Cairns, an annuity of £20 for life; to his butler, William Hutt, £80; upon trust for each of his three daughters £7000, and they are to receive, while unmarried, the rents of his mansion house, Bromlee Lodge, Scotland; to his son Charles Hamilton Ferguson £7000; and the remainder of his property to his son James Ranken Ferguson.

The will, dated March 19, 1875, of Mr. Henry Baskerville, formerly of the H.E.I.C. service, Madras Establishment, and late of Crowsley Park, Oxfordshire, who died on Feb. 6 last, was proved on the 11th ult. by John Baskerville, the son, William Dalziel Mackenzie, and North North, the executors, the personal estate being sworn under £25,000. The testator gives legacies to his children, and the residue of his personal estate to his wife, Mrs. Mary Anna Baskerville, for life; all his real estate he gives to his said son John, who also succeeds to the Crowsley Park estate.

The annual Royal Academy banquet took place last Saturday evening, at Burlington House. Sir Gilbert Scott presided, in the absence (through illness) of Sir Francis Grant, the President. The Duke of Connaught replied to the toast of "The Royal Family;" the Duke of Cambridge responded for the Army; and Sir Stafford Northcote for her Majesty's Ministers; Mr. Gladstone acknowledged the toast of "The Interests of Literature," and Dr. Hooker that of "The Interests of Science." Among the speakers were Dr. Schliemann, the Archbishop of Canterbury, and Mr. Russell Gurney.

The fifteenth report of the Royal Commissioners of the Patriotic Fund states that the total amount of contributions to Dec. 31, 1875, was £1,460,861. The total invested fund amounted to £415,140, and the annual income, including annuities amounting to £26,402, was £44,017. During the year four widows of officers were placed on the books, making the total number in receipt of allowances 123. Twenty-two widows of officers had re-married. Nine children of officers were placed upon the books, raising the total to eighty-five; and there were thirty-seven other children of officers in receipt of educational allowances. Down to the end of the year 3033 widows of non-commissioned officers and privates in the Army had been placed on the books for relief, and 746 widows of seamen. Of these, 2128 had married a second time, and 136 a third time. The total numbers of children placed on the books were:—Army, 3944; Navy, 1164; and of these 659 had died, and 4236 had ceased to receive allowances on account of age. The number of children in boarding institutions at the end of the year was 800, inclusive of those in the Royal Victoria Patriotic Asylum for Girls. The total sum expended in relief to Dec. 31, 1875, was £1,414,537. With the view of making provision for the clothing, maintenance, and education of Roman Catholic orphans of soldiers, seamen, and marines of her Majesty's Army and Navy, the finance committee has been empowered to set aside for that purpose £32,500.

The "Quarterlies" contain some articles upon the current topics of popular interest. In *The Quarterly* will be found a review of Mr. Mackenzie Wallace's book on Russia, an essay on the Russian military power in Central Asia, and one on the "Balance of Power," besides the inevitable paper on Turkey. The other subjects discussed in Mr. Murray's standard critical organ are, the Rev. Whitworth Elwin's edition of Pope, the biography of Lord Palmerston, Mr. Leslie Stephen's history of English philosophy in the eighteenth century, the life and romances of George Sand, Miss Martineau's life, and the modern English gentleman's kitchen and cellar. The *British Quarterly*, likewise, has its opinions to set forth with respect to Turkey and Russia; and it also presents an estimate of "The Genius of Islam," which naturally bears close on the impending conflict of Eastern races and religions. It is further occupied with a comparative view of English and Scottish Universities, the archaeological discoveries of Mr. J. T. Wood at Ephesus, Indian public works, and Captain Cameron's journey across Africa. We find in the *Church Quarterly*, as in preceding numbers, several articles of profound philosophical inquiry, but aiming at the admission of theological truth. "Pantheism, from the Vedas to Spinoza," "The Relation of Mind and Body," and "The Other World" are themes here explored in a spirit of reverential earnestness. There is also a paper on some of the contested writings of Justin Martyr; one concerning the decline of sculpture as an art consecrated to the expression of Christian ideas; one treating of the moral tendencies of recent fiction; a notice of the late Rev. Canon Kingsley's life, an article on the First Napoleon, and an account of the English Church in India. The *New Quarterly* has two contributions of special mark. Mr. George Meredith's brilliant lecture on comedy, and a bright, lively story by the editor, displaying love in conflict with the philosophical pessimism of which we have lately heard so much. The remainder of the contents are not remarkable.

NOTICE.—LINOLEUM.—OETZMANN
and CO. have now received all the new PRIZE DESIGNS
in this favourite Floor Covering, warm, soft, and carpet-like in
appearance. In response to a visit of inspection solicited.
OETZMANN and CO., COMPLETE HOUSE FURNISHERS,
67 to 79, HAMPTSTEAD-ROAD, near Tottenham-court-road.

EPPS'S COCOA.

"By a thorough knowledge of the natural laws which

govern the operations of digestion and nutrition, and by a care-

ful application of the fine properties of well-selected cocoa, Mr.

Epps has provided our breakfast-tables with a delicately

flavoured beverage which may save us many doctors' bills.

It is by the judicious use of such articles of diet that a consti-

tution may be gradually built up until strong enough to resist

every tendency to disease. Hundreds of subtle maladies are

floating around us ready to attack wherever there is a weak

point. We may escape many a fatal shaft by keeping ourselves

well fortified with pure blood and a properly nourished frame.

THE WAR: RUSSIAN SOLDIERS OF THE LINE LEAVING THE BARBOSCHI STATION FOR BRAILA.
FROM A SKETCH BY ONE OF OUR SPECIAL ARTISTS.

Turkey is nothing to us, nor we to Turkey, where British interests are not placed in peril. She has chosen her own lot. She has provoked her own doom. So far as she is concerned, the obligations which rested upon us have ceased to be binding.

But how about the present? Here also, if we look to the debate rather than to the amendment in the adoption of which it ended, there is a virtual agreement between all parties. Absolute neutrality in the present conflict between Russia and Turkey is the landmark towards which the vessel of State must be steered. We are to take no part with Russia—still less, if possible, with Turkey—in the struggle which they are waging with the whole force of their respective Empires. Circumstances may make it more difficult than it at first seems to maintain this position, but we shall do this in harmony with the other Christian States of Europe. Nor will this prevent our watching for the first suitable opening that may present itself for tendering our good offices with a view of shortening the conflict. With this limitation, however, if limitation it can be regarded, we have given the world an assurance that we will treat both combatants with strict impartiality. Some men's sympathies may tend in one direction, some in the opposite one; but as regards the action of our Government and the application to the belligerents of International Law, Rights, and Usages, the Proclamation of Neutrality issued by the Queen will, to all intents and purposes, be treated with due homage. The Turk can hardly understand this as yet. He has not wholly given up his hope that England may even yet be induced, for the sake of her own interests, or what is imagined she supposes to be such, to come to his aid against the colossal foe. But this the course of the debate showed to be impracticable. Public opinion in Great Britain has been so strongly pronounced that any deviation by the Government from absolute neutrality, however subtle, would be sure to be promptly detected and speedily denounced.

Then with regard to the future. This war will come to an end. If the issue of it be in favour of Turkey (which is hardly conceivable) Europe will have to groan for some few years onward over a state of things which she strongly reprobates, only to assume, at some not distant period, a tone of authority to which the Ottoman Empire, willing or unwilling, will be compelled to yield. If, however, which is far more likely, the might of Russia should give her the advantage over her adversary, then we are not to be alarmed by the changes that may ensue. As the Marquis of Hartington truly and picturesquely remarked, "There is no power which can restore the sap and vigour to the lifeless trunk, and there is no power which can check the growth of the living, although struggling, tree. The Turkish domination is the lifeless trunk, the struggling Nationalities are the living tree; and this House is asked to assert that with these Nationalities, and not with the remnant of a shameful past, are the sympathies of the British Nation." When the United Powers of Europe come to deal with the results of the war, as most probably they will, this, we trust, will be borne in mind. Life cannot be given to the dead by any human intervention. But the aspirations, political and social, of living peoples may be aided by wise counsels and guided to beneficial ends. The problem tends to solve itself. The debate in the House of Commons will, when the time comes, be found to have cast upon it a new and varied light. All concern for British interests will, perhaps, by the end of the war, have merged itself into a broader view of the interests of Europe and of humanity; and the richest Provinces in the South-Eastern quarter of the Continent will be judged worthy of such a political and administrative Government as may serve to develop, educate, and consolidate the highest qualities of which its population can boast.

THE COURT.

The Queen attended Divine service on Sunday in the private chapel of Windsor Castle. The Rev. H. Montagu Butler, D.D., Head Master of Harrow School, officiated. The Duchess of Edinburgh came to London and attended Divine service at the Russian Chapel, Welbeck-street, and afterwards visited the Prince of Wales at Marlborough House, returning to Windsor in the afternoon.

Her Majesty held a Council on Monday, at which were present Prince Leopold, the Duke of Richmond and Gordon, the Earl of Beaconsfield, Earl Beauchamp, and the Earl of Bradford. The Duke of Richmond and Gordon and the Earl of Beaconsfield had audiences of the Queen. Princess Beatrice came to London and was present at the Philharmonic Society's morning concert at St. James's Hall, after which she returned to Windsor. Prince Leopold was present in the evening at the Wagner Festival at the Royal Albert Hall. He returns to Windsor the next day.

Princess Christian Victor and Albert and Princesses Victoria and Louise, children of Prince and Princess Christian of Schleswig-Holstein, visited the Queen on Tuesday. The Judge Advocate-General had an audience of her Majesty.

The Duchess of Edinburgh and Princess Beatrice visited St. Andrew's Convalescent Hospital at Clewer on Wednesday. The Queen has paid daily visits to Princess Christian at Cumberland Lodge.

Her Majesty has received at dinner during the week Prince Christian, the Earl and Countess of Ellesmere, Earl and Countess Grosvenor, the Countess of March, the Countess of Gainsborough, the Earl of Carnarvon, Earl and Countess Sydney, Viscount Harwarden, Lady Waterpark, Lieutenant-General Sir T. M. Biddulph and the Hon. Lady Biddulph, (Colonel) the Hon. and Mrs. William Edward Sackville West, Lord Bloomfield, Captain Lord Algernon Gordon-Lennox

(Grenadier Guards), Captain Sir William Hewett, Mr. John F. Campbell of Islay, and Captain and the Hon. Mrs. Haig.

The Duke of Connaught and Strathearn visited her Majesty on Thursday week, previous to his departure for Dublin. The Prince Imperial also visited the Queen.

The Duchess of Edinburgh and Princess Beatrice came to London on Saturday last and visited Princess Louise of Lorne at Kensington Palace, after which they were present at the concert given by Herr Wagner at the Royal Albert Hall.

The Queen has directed that a pension of £75 per annum should be granted to each of the three Misses De Foe, the lineal descendants of the author of "Robinson Crusoe."

Lady Waterpark has succeeded Lady Churchill as Lady in Waiting to the Queen.

Her Majesty's birthday will be kept on Saturday, June 2. The Prince of Wales will hold a Levée at St. James's Palace, on behalf of her Majesty, on Thursday, June 7. State concerts will be given at Buckingham Palace on Wednesdays, June 6 and 27. State balls will take place at Buckingham Palace on Wednesday, June 20, and on Friday, July 6.

THE PRINCE OF WALES.

The Prince of Wales, accompanied by Princess Louise of Lorne, went to Windsor on Thursday week and lunched with the Queen. The Duchess of Edinburgh lunched with the Prince on Sunday at Marlborough House. His Royal Highness was present at an evening party given by the Duchess of Westminster on Monday at Grosvenor House. On Tuesday the Prince, president of the Royal Commission for the Paris Universal Exhibition of 1878, presided over a meeting of the finance committee of her Majesty's Commissioners at Marlborough House. On Wednesday his Royal Highness was present at the meeting of the Coaching Club in Hyde Park, and accompanied Lord Arthur Somerset on his drag to the Orleans Club, Twickenham; and in the evening he went to the Criterion Theatre. The Prince, with Prince Leopold, Princess Louise of Lorne and the Marquis of Lorne, the Duke of Cambridge, and the Duke and Duchess of Teck, has been present at the several Wagner concerts at the Royal Albert Hall. His Royal Highness, accompanied by Princess Louise and the Marquis of Lorne, has inspected Mr. Frank Dillon's collection of Japanese drawings at Messrs. Agnew's Gallery, in Waterloo-place; and also Mr. Marsden's galleries, to view Mr. Millais's picture of "Effie Deans." Sir Noel Paton's picture of "Christ, the Good Shepherd," has been submitted to the Prince.

Princess Christian of Schleswig-Holstein has so far recovered that no bulletins have been issued since Tuesday.

Princess Louise (Marchioness) and the Marquis of Lorne dined with the Duke and Duchess of Westminster on Saturday at Grosvenor House. The Princess, accompanied by the Marquis of Lorne, on Tuesday formally opened a fancy sale, held at the Riding School, Knightsbridge, by permission of the Duke of Wellington, in aid of the funds of the National Hospital for the Paralysed and Epileptic, Queen-street, Bloomsbury. On Wednesday the Princess reopened the Royal Infirmary for Children and Women in Waterloo Bridge-road.

The Duke of Cambridge dined with the Duke and Duchess of Cleveland on Saturday last at Cleveland House.

His Excellency Count Beust had a dinner party on Saturday at the Austrian Embassy, Belgrave-square.

The Marquis and Marchioness of Salisbury had a dinner party on Saturday at the family mansion in Arlington-street, after which the Marchioness had an assembly.

The Marchioness of Lansdowne held a reception on Tuesday night, at Lansdowne House, Berkeley-square.

A reception at the Foreign Office on Wednesday night was very numerously attended. In the absence of the Countess of Derby, who, with Lady Margaret Cecil, is abroad, the guests were received by the Earl of Derby and the Countess of Galloway, representing her mother.

The Somersetshire ball took place at Willis's Rooms, on Monday. Upwards of 330 guests were present.

The annual grand Caledonian fancy-dress ball is appointed to take place on June 25, at Willis's Rooms.

THE TRANSVAAL PROVINCE.

The very recent annexation of this large South African territory, which was lately an independent Dutch Republic, to the dominions of her Majesty Queen Victoria, including the Cape Colony, with the Eastern Province, British Kaffraria, Natal, and Griqualand, is a rather important event. We have described the Transvaal country, which is situated quite inland, with its eastern boundary nearly a hundred miles from the seacoast of Delagoa Bay. Its southern boundary, formed by the Vaal River, divides it from the Orange Free State, next to which lie the provinces of Basutoland and Natal, under British rule, and the country of the wild Zulus, bordering on the Natal province. It is the inability of the Dutch Boers, in the Transvaal, to defend themselves against the Zulu Kaffirs, whose hostility they had rashly challenged, that has obliged the British Government to take charge of this additional territory. In the House of Lords on Monday evening the Earl of Carnarvon read a despatch just received from Sir Bartle Frere, Governor of the Cape Colony, dated the 25th ult., announcing the terms of the annexation, which had been arranged by Sir Theophilus Shepstone, the British Commissioner. His proclamation in the Transvaal was issued on the 12th ult., in which he first recites his commission and sketches the history of the existing disorder and anarchy; and then refers to the wishes of the inhabitants that the country be taken under British protection. He declares the territory henceforth British, but continues the existing Courts. The Transvaal will remain a separate Government. The Queen's new subjects are to enjoy reasonable legislative privileges. Arrangements will be made for optional use of the Dutch language; existing laws are to remain until altered by competent legislative authority. Government officers able and willing to serve are continued in office; bona-fide concessions and contracts of State to be honourably maintained; payment of State debt to be provided for. Another proclamation notifies his assumption of office as Administrator of Transvaal. The inhabitants are reported to acquiesce willingly in the new order of things. The necessity for annexation seems to be generally recognised as the inevitable result of disorganisation in the Republic. It appears that the proclamation was recognised as being in a conciliatory spirit, and that the state of affairs in the Transvaal was one of quiet. The proclamation was publicly read at Pretoria, Potchefstroom, Leydenburg, Rustenburg, and Middleburg. The late President of the Republic, Mr. Burgers, has recorded a solemn protest, and two of the Dutch citizens are sent to England by the Opposition party, to remonstrate with the British Government against the annexation. Our illustrations present views of the scenery of the Speckboom and Crocodile rivers, in the Transvaal territory; we shall give some others next week.

THE CHURCH.

PREFERRMENTS AND APPOINTMENTS.

Allott, Joseph, to be Rector of Croombe.
Bene, William, Perpetual Curate of Lamsford.
Bradshaw, William, Perpetual Curate of Smalley.
Brown, Edgar, Vicar of Cadney-cum-Howham.
Cargill, R. J.; Vicar of High Offley, Staffordshire.
Cholmondeley, H. P.; Honorary Canon of Gloucester.
Cooper, Asley; Chaplain of Hickey's Charity, Richmond, Surrey.
Croft, R. C. W.; Vicar of Blachard.
Day, Alfred George; Rector of Melton St. Mary and All Saints', Norfolk.
George, J. Bethel; Vicar of Peasenhall, Suffolk.
Graham, Thomas; Vicar of St. James's, Bristol.
Griffith, John, Rector of Neath; Archdeacon and Canon of Llandaff.
Grison, W. S.; Rector of Whitbergh-with-Westfield, Norfolk.
Haaleburt, Richard K.; Rector of West Felton; Rural Dean of Eilemere.
Jackson, E. H.; Vicar of St. Paul's, Worcester.
Johns, Thomas; Vicar of Llanwnda, Pembroke.
Knight, Joseph; Vicar of Morland, Westmoreland.
Ley, Arthur James Merriman; Perpetual Curate of Barmer, Norfolk.
Lysons, Daniel George; Rector of Rodmarton.
Morgan, Hugh, Vicar of Rhyl, Flintshire; Archdeacon of St. Asaph and Residential Canon in St. Asaph Cathedral.
Morgan, John; Vicar of Humberstone.
Morris, Ambrose; Rector of St. Thomas's, Woolwich.
Norgate, Edward; Rector of Bardlow, Cambs.
Plant, Samuel; Vicar of Weston-on-Trent; Rural Dean of Stafford.
Ricketts, R. R.; Vicar of St. Matthew's, Hayfield.
Roworth, L. D.; Vicar of Clarendon-with-St. Saviour, Clarendon.
Seabrook, J. Fledger; Chaplain to H.M. Forces.
Sedgwick, Gordon; Perpetual Curate of St. Mark's, Coventry.
Seymour, Albert Eden; Vicar of Barnstable.
Spencer, William; Perpetual Curate of St. Paul's, Stratford.
Symonds, A. R.; Curate in Charge; Vicar of Walmer, Deal.
Thoyts, Ernest; Vicar of Honington, Warwick.
Tye, Charles Brandon; Honorary Canon of Gloucester Cathedral.
Vyvyan, Vyell Donnithorne; Rector of Withiel, Cornwall.
White, Joseph Henry; Vicar of Weybread, Suffolk.
Williams, Thomas Vincent; Perpetual Curate of St. John the Evangelist, King's Lynn, Norfolk.
Wordsworth, Christopher; Rector of Glaston.—*Guardian*.

The Right Rev. Dr. T. L. Claughton, Bishop of Rochester, is gazetted to the newly-founded bishopric of St. Albans.

The Rev. R. J. Cargill has received from the parishioners of Barton-under-Needwood, on his leaving the curacy, a silver salver and a purse containing £100.

A reredos, designed by Mr. Withers, spanning the whole width of chancel, has been added to the east end of the parish church of Biggleswade.

The clerestory windows on the south side of Cheddar church, each containing two lights, have been filled with painted glass, the gift of Miss Mules, daughter of the late Rev. John Mules, for many years the highly respected Vicar of Ilminster. The glass is by Mr. A. Gibbs.

Tuesday's *Gazette* announces the appointment of the Rev. Edward Tucker Leeke, M.A., to the chancellorship founded in the cathedral church of Lincoln, and to the second canonry of the cathedral church of Lincoln, void by the promotion of Dr. Benson to the bishopric of Truro.

The parish church of Ashby-de-la-Zouch is to be restored. Mr. Abney Hastings, the lord of the manor, has offered £1000 for this purpose; and at a meeting held, under the presidency of the Earl of Loudoun, on Monday, the list of subscriptions was increased to £2678.

The corner-stone of a new church at Lottisham, in the diocese of Bath and Wells, was laid on the 5th inst., by the Rev. A. Goldney, Rural Dean, and patron of the benefice. The site was given by the Rev. Dr. Jenkins, who is also a liberal contributor to the building fund.

St. Leonard's, Exeter, was reopened on Sunday, the 6th inst., after receiving the addition of a new chancel, the foundation-stone of which was laid by the Earl of Northbrook in August last, in remembrance of his safe return from India. A friend of the Rector has promised £1000 towards the further improvement of the church, which Lord Northbrook pronounced on the occasion in question to be "the bloom of ugliness."—On the 8th inst. a new chancel was consecrated at Crookham by the Bishop of Guildford.

The Rev. Arthur Tooth, who was inhibited from the performance of Divine worship at St. James's, Hatcham, until he should signify his obedience to the judgment of the Court of Arches, returned from the Continent last week, and on Saturday wrote to his churchwarden that he would celebrate the communion in St. James's Church at eight o'clock on Sunday morning. This was the means of assembling a large congregation, before whom Mr. Tooth officiated in highly decorated vestments, and with all the usages of the Ritualistic party. Towards the close of the service, Mr. Fry, the people's warden, arrived with two constables, and some interruption occurred, but the service was continued to the end.

Judgment was given by the Judicial Committee of the Privy Council on the Folkestone Ritual Case last Saturday. The decisions of the Arches Court against the use of vestments by the parochial clergy, and the employment of the crucifix under circumstances which suggest the danger of superstitious reverence, were confirmed; but the decree of the Judge was reversed so far as concerns both the eastward position and the use of wafer bread. The Committee have decided that the priest may adopt the eastward position without penal consequences if he so stands as to allow communicants to see, if they wish, the breaking of the bread; and that though the wafer, properly so called, would be illegal, there is no prohibition of the use of bread made in the form of circular wafers.

THE UNIVERSITIES AND PUBLIC SCHOOLS.

At Oxford the Stanhope Prize for a historical essay (subject, "The Marquess Wellesley") has been awarded to C. H. Firth, Scholar of Balliol. The subject for next year is "The Political Theories of Dante." The Lothian Prize, for an historical essay upon "The Place of Iceland in the History of European Institutions," has been awarded to Mr. C. A. B. Conybeare, B.A., Junior Student of Christ Church; Mr. T. F. Tout, Scholar of Balliol, being recommended for a present of books.

At Cambridge the Adams Prize has been awarded to E. J. Routh, M.A., of St. Peter's College. The gaieties of the May Term began on Tuesday with the flower show in the Trinity Paddock in the afternoon, and the boat-races began on Wednesday evening. The members of the Senate have received from the syndicate appointed to conduct the higher local examinations a report to the effect that the examination in religious knowledge is shirked by a large proportion of the candidates. They recommend a change, so that this examination shall affect the general success of the candidates.

At Durham the University Association History Prize (History of the First Century in its Bearing on Christianity) has been awarded to W. D. Lawson, University College. Proxime accessit, F. H. J. Williams, University College.

The Dean and Chapter of Durham have conferred the mastership of Northallerton School upon the Rev. W. E. Scott.

Mr. G. Wotherspoon has been appointed to the second mastership of the Carmarthen Grammar School.

Messrs. John David B. Faber, Mark Pole, and Henry Philpote Henderson, have been appointed inspectors of schools.

THE WAR: THE FIRST CANNON-SHOT ON THE DANUBE.
FROM A SKETCH BY ONE OF OUR SPECIAL ARTISTS.

THE WAR: TURKISH PRISONER ON THE ROAD FROM THE PRUTH TO RAGATZ.
FROM A SKETCH BY ONE OF OUR SPECIAL ARTISTS.

THE WAR.

Since our last week's record of the progress of the great struggle, as yet only just commenced, between Russia and Turkey, there have been several important, or at least startling, events reported to us by telegraph. We have thus been informed of the destruction of a Turkish monitor on the Danube, a sharp engagement near Batoum on the Black Sea, and the invasion of the Russian coast, at Soukhoun Kaleh, by a party of exiled Circassians, with some Turks, to stir up an insurrection in the Caucasus. The following is an account, by the special correspondent of the *Daily News*, of the first-named event:—

"On Friday afternoon the Turkish turret-ship, the same which passed up the stream recently terrified Galatz, steamed out from Matchin, followed by two gun-boats, and at half-past three was stationary under cover of the wooded end of the island, with its three masts visible above the trees. The Russian gunners from the batteries close to Braila, below the Roumanian barracks, opened fire from their light guns, the range being about four kilometres, but without effect. The general officer present gave directions for two 8-in. guns of position, mounted in the battery, to come into action. The first shot had no effect. The second shot, fired at a high elevation with a low charge, dropped on the deck of the turret-ship, and must have crushed down into the powder-magazine. Immediately a tremendous flash and glare shot up from the interior of the doomed craft, followed by a heavy white smoke which hung like a pall. Through this white cloud there shot up to a great height a spurt of black fragments of all shapes and sizes. When the smoke drifted away all that was visible of the turret-ship was her stern, with the mizenmast standing, whence still fluttered the Turkish flag. The ship had gone down by the head in shallow water. The fore and main masts were blown out at once. Two Russian steam-launches put off from Braila, boarded the wreck, gained the flag, gathered some of the debris, and picked up two men, the fireman and the engineer, both severely injured. One has since died. The other is still alive in the hospital. He reports the turret-ship to have had a crew of 200 men, under the command of Kezim Bey. Fragments of the wreck were picked up down the stream at Galatz. The Russian enthusiasm in the battery was intense, and the officers embraced each other."

Other accounts contend that the Russian shell had nothing to do with the destruction of the ship, which, it is affirmed, blew up owing to accidental explosion in the gunner's store-house; but as only one man survives, all that is clear is that the ship is blown to pieces. The name of the turret-ship was the *Lutidiel*. Its armament was five guns. The captain was on shore. The flag of this Turkish ironclad sunk off Braila has, at the Czar's request, been forwarded to St. Petersburg, where it will be placed in the chapel of the palace as the first trophy of the war.

Of the battle in Asia Minor the correspondent of the *Daily Telegraph*, who says he was an eye-witness throughout its progress, forwards the following descriptive despatch dated Batoum, Friday, midnight:—"At about five o'clock this morning the Russian forces, which had been largely augmented for the purpose, advanced with batteries of field artillery, and made a furious attack upon the heights defending Batoum on the land side, which were occupied by Bashi-Bazouks. The Ottoman troops were intrenched in their usual effective manner upon the slopes and ledges of these hills, and on the advance of the enemy they opened on his columns a terrible and well-sustained fire of cannon and musketry, which literally mowed the Russians down in swaths. They fell by scores and hundreds on the plain below the Turkish positions, and during their attempts to make way against this fire a body of Turkish horse and foot, taking advantage of the thick forest on the mountain side, broke forth upon the flank of the Russian column, and effected a great slaughter—the Muscovites being upon ground perfectly open, and having no choice but to fight or fly. In a short time the spot which was the scene of this flank movement became covered with dead and dying Russians; but the enemy quickly brought up reinforcements, and the battle was renewed with much determination. For many hours the efforts of the assailants were desperately maintained, but towards midday their artillery fire gradually slackened, and they at length withdrew after suffering very considerable losses. I was myself an eye-witness of this important engagement from first to last; and I can testify that the Ottoman soldiers behaved with a gallantry which was most admirable. They had, however, during a great part of the action the advantage of their intrenchments on the high ground, and it is due to this fact, no doubt, that their losses, compared to those inflicted upon the enemy, were insignificant."

With regard to the affair of Soukhoun Kaleh, which is a Russian seaport and fort on the east coast of the Black Sea, a hundred miles north of Batoum, it is certain that a Turkish squadron of ironclads, under Hassan Pasha, bombarded the place on Sunday last, and that a landing was effected. The Russian despatches, however, say that the Turks were repulsed; the despatches on the Turkish side affirm that the attack was successful, that the town was burned, and that the Abkhasian native population have joined the Turks against the Russians. The following account is sent by the *Daily Telegraph* correspondent in Turkey:—

"About three weeks ago five leading Circassian chiefs started from Constantinople for Batoum. Their names were Hadji Hussein Bey, Mandkambek Bey, Manemin Bey, Hadji Ali Bey, and Mehemet Bey. They had arranged a carefully considered plan of action with the Ottoman authorities and their own countrymen. Arrived at Batoum, they went on board the squadron of Hassan Pasha, who forthwith sailed with five ironclads for the Russian port and fortress of Soukhoun Kaleh. The Turkish men-of-war made their destination in the darkness of early morning, casting anchor a little after three o'clock a.m. They at once landed the Circassian chieftains, with a party of men carrying 600 muskets and ammunition, which were speedily distributed among the expectant and willing people. The neighbouring country was so thoroughly and quickly roused that by broad daylight the Beys had got together as many as 3000 Circassians. Hassan Pasha then landed an additional force, composed of other Circassians, Kurds, Lazis, and Turks; and, while the ironclads opened a vigorous cannonade upon the fortress, the Beys, with their volunteers and auxiliaries, attacked the place with desperate resolution. The Russians offered a determined but vain opposition, losing terribly. After this the insurrection is described as having spread like wildfire. The inhabitants of the surrounding districts gathered by thousands, with weapons of all sorts, to the Turkish standard. They drove the Muscovite garrison and road guards all over the district, chasing them to Gangara, which they also destroyed. When these successes were reported, Hassan Pasha landed a new supply of rifles and cartridges to equip the Circassians, and a formidable local force was organised to march upon the railway line to Tiflis, aiming at the direction of Kutais. Another large band was dispatched to raise the country in the rear of the Russian

columns which are attacking Batoum. When Hadji Hussein Bey left Soukhoun Kaleh to bring this great news to Batoum, which is now six days ago, the whole country had revolted from Muscovite oppression. The insurrection had spread along the seashore and into the mountains with great rapidity, in consequence of the large supplies of arms and equipments sent by the Turks."

The Russian Army of the Caucasus is suffering from want of provisions, and its onward progress is stopped by the deep snows, which still cover all the mountain gorges. A correspondent at Erzeroum, telegraphing from that place on Monday night, reports that the Russians in great force having advanced to Karakalessa, and the Turks being in front of them at Toprakala, both armies were preparing for a pitched battle. We have further details respecting the Russian forces in European Turkey. The Grand Duke Nicholas has at his disposal six corps. Four of these constitute the Army of Operation, and the other two the Army of Odessa. Their total strength is 216,000 men, 49,200 horses, and 648 guns. Three more corps have been mobilised, and are being moved into Bessarabia to take the place of those sent forward. These corps constitute a further strength of 108,000 men, making a grand total of 324,000 men.

No confirmation has been received of the news that the Russians had crossed the Danube in force, had entered the Dobrukscha, and that an engagement was proceeding. On Tuesday the Russians erected fresh batteries at Braila, armed with heavier guns. The Turkish monitors opened fire on them, but without result. This was also the case with the return fire of the Russians. The cannonading lasted three hours.

The Egyptian contingent with the Turkish army will be raised to 18,000 men. The Khedive has received a telegram from the Sultan thanking him for his promised assistance during the war. The Egyptian troops will form a distinct corps, under the command of the Minister of War. On Wednesday the British Mediterranean fleet arrived at Port Said, the entrance to the Suez Canal.

The Russian squadron on the Pacific coast of North America has put to sea under sealed orders.

The Russian Government proposes to raise a considerable sum, the precise amount of which is not stated, by private loan from the Imperial Bank of Russia, to cover which Treasury bills paying 5 per cent interest will be issued. No subscription list will be opened, and the whole of the money is to be raised in the country. It is the intention of the Russian Government to raise the duty upon imported tobacco, which now yields about 10,000,000 roubles in the year. The tax upon home-grown tobacco is to be reduced, with a view to encouraging home cultivation.

Our Special Artists on the Danube have furnished a variety of sketches for the Illustrations published this week. The Russian military post and encampment at the Barboschi railway bridge over the Sereth, just above Galatz, with the Danube and Braila seen in the distance, is shown in one of these sketches; another represents the hurried departure of soldiers, by the railway, from the Barboschi station to reinforce the position of Braila. An escort in charge of some unfortunate Turkish prisoners, one, at least, of whom has since been shot as a spy, is the subject of a passing sketch on the road. Two of the others represent scenes at Jassy, the chief town of Moldavia, with Russian troops at the railway station there; and at Bucharest, the capital of the whole Roumanian Principality, where the populace seem to be diverted with comic placards and caricature pictures of the Muscovite and the Turk displayed on the walls in the city streets. Views on the Danube, near Braila, and of the Turkish fort of Adeh Kaleh, with the incidents of seeing the first cannon-shot fired by a Turkish gun-boat at Reni, and the arrival of the Grand Duke Nicholas at Galatz, make up our Illustrations for the present Number.

THE GRAND DUKE NICHOLAS.

The Russian forces on the Danube, as our readers know, are placed under the chief command of the Emperor's brother, the Grand Duke Nicholas, while another of his brothers, Grand Duke Michael, commands the army in Asia. The first-named Prince of the Imperial House is nearly forty-six years of age, having been born in July or August, 1831. He married, in 1856, Princess Alexandra of Oldenburg, and has two sons, Nicholas and Peter, the former about twenty years of age, the latter a boy of thirteen. The Grand Duke Nicholas is in the full vigour of life, a strongly-made, muscular, soldierly-looking man, with a melancholy Romanoff face. He is General of Engineers and Aide-de-Camp General to the Emperor, Inspector-General of the Engineer Corps, of the Imperial Guard, and of the Cavalry, Commander-in-Chief of the Military District of St. Petersburg, President of the Supreme Committee on the Organisation and Instruction of the Army, Chief of a Grenadier regiment, of the regiments of Dragoons of Astrakhan, of the Alexander Hussars, and of the first battalion of Sappers of the Caucasus, Proprietor (Colonel-in-Chief) of the Austrian Hussars, No. 2, and Chief of the 5th Regiment of Prussian Cuirassiers. His adjoint in charge of the Engineers is General Totleben. The Army of the South, which was formed in September, under the command of the Grand Duke Nicholas, with General Niepoldigski as chief of the staff, comprises four complete army corps, each with two divisions of infantry, one of cavalry, and artillery in proportion, four battalions of chasseurs, two divisions of Don Cossacks, four regiments of light Cossacks, and three battalions of sappers; making 36,000 men to each corps. But the actual number of the forces brought in Roumania does not exceed 180,000. One of our Special Artists' sketches of the war shows the arrival of the Grand Duke Nicholas at the Villa Antachi, in Galatz, on Sunday week, after visiting Reni, where he was exposed to a bombardment that afternoon from the Turkish gun-boats in the river. The Grand Duke and his suite and the open carriage in which he sat were covered with dust; and there was no pomp or parade at his arrival, but crowds of the townsfolk pressed to see him. He drove on to the camp of the Cossacks, at the Barboschi railway bridge over the Sereth, just above Galatz, and thence to Braila, a few miles higher up the Danube. He has latterly fixed his headquarters at Ploesti, two hours' railway journey north of Bucharest, and has exchanged visits with Prince Charles of Roumania in that city.

Our Portrait of the Grand Duke Nicholas is from a photograph by Bergamasco, of St. Petersburg.

The city of Iquique, in Peru, is reported to have been destroyed by an earthquake on the 12th inst. The population of Iquique is stated at about 1000.

According to a telegram from Alexandria to the *Daily News*, Mr. Dixon's agent has obtained possession of Cleopatra's Needle, and the operations for its removal have begun.

A review of the Household troops was held on Monday under the command of Major-General Stephenson, on Wimbledon-common. The troops, infantry and cavalry, numbered between 3000 and 4000 men.

FOREIGN AND COLONIAL NEWS.

FRANCE.

The Ministry has resigned in consequence of a letter addressed to M. Jules Simon by Marshal MacMahon complaining that his action in the Chamber with regard to the repeal of the press law of 1875 was not in harmony with a resolution taken by the Cabinet. (The Chamber of Deputies on Tuesday passed the bill repealing the press law of 1875.) Marshal MacMahon also complains that the Chamber, a few days previously, adopted some clauses of the Municipal Bill, the danger of which M. Simon had himself acknowledged in the Council. In conclusion, the Marshal says that although he is not, like M. Simon, answerable to Parliament, he is responsible to France, and that an explanation is indispensable. In consequence of this letter M. Jules Simon at once resigned, and all his colleagues did the same. The President then sent for the Duc d'Audiffret-Pasquier.

A meeting of the four sections of the Left on Wednesday was attended by 290 deputies, and a resolution was unanimously adopted declaring that the Chamber will only place confidence in a Cabinet which is free in its action and resolved to govern in accordance with Republican principles, which can alone secure order and prosperity at home and peace abroad.

The *Official Journal* of Thursday, in announcing the resignation of the Cabinet and Marshal MacMahon's acceptance of it, states that the Ministers will continue at the head of their respective departments pending the appointment of their successors.

Marshal MacMahon, accompanied by several Generals, inspected the new forts round Paris on Monday.

The Senate held a short sitting on Monday, at which the first reading of the Rural Code was voted.

M. Ernest Picard, a life member of the Senate, died on Sunday. He was known as one of the famous five members who so long constituted the Opposition to the Imperial Government in the French Chamber. He was Minister of the Interior under M. Thiers after the war.

The annual dinner of the English Club in Paris, which has completed its first year, took place last Saturday.

The editor of the *Radical* has been sentenced to two months' imprisonment and a fine of 2000*fr.* for having insulted the army. A similar sentence has been passed on the editor of the *Lanterne* for articles tending to subvert social order.

A fatal explosion occurred last Tuesday on board the French frigate *La Revanche* as the squadron was about to sail from Villafranca. Two men were killed, and twenty others are said to have been fatally wounded.

The well-known chemist M. Caventou, the discoverer of quinine and honorary president of the Academy of Medicine, died recently in Paris, at the age of eighty-three.

The trial of Moyaux for forgery, the murder of his daughter, and the attempted assassination of his wife, concluded on Tuesday. The jury found him guilty on all three counts, but, as usual with French juries, they gave the benefit of extenuating circumstances. The Judge sentenced him to hard labour for life.

SPAIN.

A Royal decree has been published in the *Madrid Gazette* enjoining Spanish residents abroad to observe absolute neutrality towards Turkey and Russia.

Don Carlos has written a letter protesting against the application of the law voted by the Cortes last July, intended to abolish the privileges of the Basque and Navarrese provinces.

BELGIUM.

The annual exhibition of works of art by the Cercle Artistique et Littéraire of Brussels was opened last Saturday by the King and Queen. The exhibition comprises 275 objects, for the most part paintings.

GERMANY.

The Emperor, in a letter dated Metz, May 9, has commanded the Chief President of the Administration of Alsace-Lorraine to convey to the population of the new provinces his Majesty's thanks for the cordial reception he met with everywhere during his recent visit. "The Emperor," the letter says, "had undertaken the journey to Alsace-Lorraine in order to see the country under its altered circumstances with his own eyes, and to fulfil the grave duty imposed on him as Prince and Sovereign. His visit to the new provinces of the Empire was to him a source of pleasant reminiscences and lasting and agreeable impressions. The Emperor, on taking leave of the new provinces, carried with him the consciousness that his sojourn there would contribute to the consolidation and beneficial development of the relations between Alsace-Lorraine and the Empire."

William of Prussia, the eldest son of the Crown Prince, will attend lectures at Bonn University this summer.

The engagement is announced of Prince Kita Shira Kawa, uncle of the Emperor of Japan, and a Major in the Prussian Dragoons, to Baroness Bertha von Tettau, widow of the late Baron Tettau, and daughter of Baron Bredow Wagenitz.

SWEDEN.

A grant has been made by the Chamber for measures defending the neutrality of Sweden.

AMERICA.

President Hayes opened the Permanent Exhibition at Philadelphia on Thursday, the 10th inst., and was loudly cheered. Ex-President Grant, several members of the Cabinet, the Governor of Pennsylvania, many foreign Ministers, Congressmen, and officers of the army and navy were present. It is estimated that 100,000 people were in the building; flags were displayed throughout the city, and all business was suspended in the afternoon.

General Grant was to leave Philadelphia for England last Thursday.

Forest fires have taken place in the States, many mills and dwelling-houses having been destroyed.

CANADA.

We learn from Ottawa that Mr. William Annand, ex-Premier of Nova Scotia, has been appointed Agent-General for the Dominion in London.

Intelligence received at New York announces that a disastrous fire has occurred at St. Stephen's, New Brunswick. Seventy buildings were burned, and forty-three families rendered homeless.

AUSTRALIA.

According to a Melbourne despatch of Saturday's date, the elections in Victoria have resulted in the return of a Protectionist majority.

The committee of the Melbourne Athenæum, in their report for last year, state that "there is every cause for satisfaction as regards the prospects of the institution, which seems to have entered upon a career of usefulness and prosperity such as its warmest well-wishers could desire."

JAPAN.

With reference to the insurrection in Japan, a telegram has been received in London which states that another army corps has reached Kagoshima. More than one battle has been fought there, and a large portion of the town has been burned. The Imperialists are reported to have been victorious.

METROPOLITAN NEWS.

Drury-lane Garden has been reopened to the public under new regulations.

A bazaar in aid of the funds of the National Hospital for the Paralyzed and the Epileptic, in Queen-square, Bloomsbury, was on Tuesday opened at the Riding School, Knightsbridge, by Princess Louise.

Mr. Colvin, the Slade Professor of Fine Art in the University of London, gave on Monday, in the rooms of the Society of Arts, the last of five "Cantor" Lectures, on the Connection of Greek and Roman Art with the Teaching of the Classics.

At the invitation of the trustees of the National Penny Bank, the Lord Mayor went in state, accompanied by the Sheriffs, from the Mansion House, on Tuesday, to lay the foundation-stone of the Shoreditch branch of the bank in Great Eastern-street.

At a meeting of the Royal Humane Society, held on Wednesday at the offices, Trafalgar-square, several cases of gallantry in saving, or attempting to save, life in various parts of the world were investigated by the committee, which conferred the society's awards.

Mr. John Birkett, of Green-street, Grosvenor-square, senior vice-president of the Royal College of Surgeons, has been unanimously elected consulting surgeon to Guy's Hospital; and Dr. Goodhart, M.D. Aberdeen, M.R.C.P. London, has also been appointed assistant physician.

The Clothworkers' Company have voted £1000 to the textile department of the Glasgow School of Science; and the Goldsmiths' Company have voted £500 towards the effort now being made to increase the endowment fund of the Clock and Watchmakers' Asylum, New Southgate.

Mr. E. J. Reed, M.P., speaking at a meeting of the Royal Colonial Institute on Tuesday evening, advocated the establishment of a naval station and dockyard in the Southern Seas, and said he believed that the colonies would take an important part in the establishment of such a station.

There was a very successful flower show at the Crystal Palace last Saturday, and the annual rose show at this place will be held next month. A new railway station, occupying the site of the old wooden shed which has done duty since the opening of the palace in 1854, was opened last Saturday.

A change in the internal management of the Consumption Hospital, Brompton, is said to be contemplated by the committee, who propose to appoint a lady superintendent, with a housekeeper, by whom the nursing and domestic arrangements will be managed, instead of by a matron, as heretofore.

A Parliamentary Return issued on Tuesday states that the balance due at the close of 1876 to depositors in the Post-Office Savings Banks, inclusive of interest, was £26,996,350 10s. 3d. The deposits during the year amounted to £8,982,350 4s. 11d., and the interest to £219,331 10s. 7d. The repayments amounted to £7,992,477 2s. 11d.

The concluding session of the Congregational Union took place in the Memorial Hall yesterday week—Mr. H. Richard, M.P., presiding at the morning meeting, and Mr. Barran, M.P., in the evening. At the former of these a petition to Parliament was adopted, setting forth various objections to the Government Burials Bill.

In presiding at the spring meeting of the National Rifle Association on Wednesday the Duke of Cambridge announced that the Wimbledon meeting will begin on July 9, the camp being ready for occupation two days previously. The programme shows few changes, the most important being the increase in value and number of the aggregate prizes.

At the meeting of the Metropolitan Board of Works yesterday week it was stated that the amount of compensation to be paid for the slaughter of cattle in London since the beginning of the year, under the cattle plague regulations, was £6157, against which a large sum had been received for the sale of what proved to be sound meat; so that the loss was only £2177.

On Tuesday afternoon the eighth meeting this year of the fruit and floral committees of the Royal Horticultural Society, together with an exhibition of fruit and flowers, was held at the society's gardens, South Kensington; and on Wednesday the first summer exhibition of the season in the Royal Botanic Society's gardens was held—the display being held by competent judges to be the finest ever held in these gardens.

Lord Shaftesbury presided on Wednesday at the annual meeting of the Working-Men's Lord's-Day Rest Association. They had, he remarked, heard much of education, but he more and more felt the need of moral education and of domestic purity; and, with their domestic life cherished and preserved, he was little apprehensive of the future. The honour, the peace, the security, the dignity of England depended upon her domestic life, and no danger could come to us as long as the people revered the Sabbath.

A meeting was held last Saturday at the Artisans' Institute, Castle-street, to take into consideration the subject of technical education—what is needed to make it practical and thoroughly efficient. The Rev. H. Solly presided, and several members of the City guilds attended to hear the opinions entertained by skilled workmen in reference thereto. A general opinion was expressed in favour of the establishment throughout the metropolis of schools for imparting technical instruction, controlled by a central college or university.

By order of the War Office, a brigade field-day of metropolitan volunteers was held last Saturday in Bushey Park, when the new system of attack, which has for some time past been practised at Aldershot and other military stations, was introduced, with much pains and attention, to the citizen troops, by Colonel Burnaby, Grenadier Guards, who had been deputed by the Horse Guards to attend, he being accompanied by Captains Ricardo and Primrose, of the same regiment, as brigade-major and aide-de-camp.

According to a report made by Dr. Frankland, all the water delivered from the Thames to the metropolis and its suburbs during April, except that supplied by the Middlesex Company, was more or less turbid, and was unfit for dietetic purposes, being much polluted with organic matter. The water supplied, principally from the Lea, by the New River and East London Companies, was very superior to that of the Thames, and was efficiently filtered. The deep-well waters supplied by the Kent and Colne Valley Companies, and by the Tottenham Local Board, were of their usual excellent quality.

The Royal Commission appointed to inquire into the origin, objects, present constitution, customs, and usages of the London Stock Exchange has been gazetted. The members of the Commission are—Lord Penzance, Baron Blackburn, the Right Hon. Spencer Horatio Walpole, the Right Hon. Edward Pleydell Bouverie, the Hon. Edward Stanhope, Sir Nathaniel Meyer de Rothschild, Mr. Henry Hicks Gibbs, Mr. Benjamin Buck Greene, Mr. John Hollams, Mr. Coleridge John Kennard, Mr. Septimus Richard Scott, and Mr. John Reginald Yorke. Mr. R. G. C. Mowbray, barrister, is appointed secretary.

The centenary of the Gaelic Society is announced to be celebrated by a dinner at St. James's Hall on June 6, with the Marquis of Huntly (chief) presiding. The Celtic choir, recently established, and so entitled by reason of its connection with the first-named society, gave its inaugural concert in the new rooms of the Academy of Music on May 29.

A public meeting for the purpose of making known the objects and work of the London Society for the Extension of University Teaching was held on Wednesday night at the Shoreditch Townhall, when resolutions were passed in support of the society. Sir Charles Reed, chairman of the School Board for London, presided; and amongst the speakers were Mr. Goschen, M.P., the Marquis of Lansdowne, Lord G. Hamilton, M.P., and Mr. T. Hughes.

It may interest shopkeepers to know that a tradesman of Bishopsgate-street has been summoned before Sir Robert W. Carden for unlawfully defacing a half-sovereign. The complainant stated that she went to the defendant's place of business to pay some money and tendered a good half-sovereign. The clerk broke it into three pieces and gave it to her back, saying it was bad. She maintained that it was good, but ultimately left, when the clerk followed her home, abused her, and accused her of trying to pass counterfeit coin. Sir Robert Carden ordered the defendant to replace the half-sovereign and to pay the complainant 12s. costs.

The first meet of the Coaching Club took place in Hyde Park on Wednesday morning, when twenty-eight coaches met at the Powder Magazine. In the absence of the Duke of Beaufort, president of the club, his coach was driven by Lord Arthur Somerset, who had with him on the box-seat his Royal Highness the Prince of Wales, who rarely fails to be present on these occasions; Lady Westmorland and Lady Emily Kingscote were also upon this coach. After the start the coaches drove round the park, and made their way by Hyde Park and Princes-gate to the Orleans Club at Twickenham, where it was arranged they should lunch.

An old man named George Stanley has been committed for three months as a rogue and vagabond for loitering about King William-street, Strand, with a felonious intention. The prisoner had made himself up to look like a clergyman, and it was his habit to walk about in a slow and apparently contemplative manner, with an umbrella partially open in his hand. Several women, well-known thieves, were his associates, and when they succeeded in stealing a watch, piece of jewellery, or a purse, the stolen property was quietly dropped into the umbrella as he passed. A former conviction was proved, and Mr. Flowers sentenced the prisoner to three months' hard labour.

The weekly return of metropolitan pauperism shows that the total number of paupers last week (the first week of May) was 82,161, of whom 37,786 were in workhouses and 44,375 received outdoor relief. Compared with the corresponding week in 1876, these figures show an increase of 1195, but a decrease of 7191 and 15,767 respectively compared with 1875, and 1874. In the number of indoor paupers there is an increase of 2925, 3565, and 3428 over that of the corresponding weeks in 1876, 1875, and 1874, and a decrease in the number of outdoor paupers of 1730, 10,756, and 19,195 respectively. The number of vagrants relieved at the end of the week was 606, of whom 402 were men, 180 women, and 24 children under sixteen.

Last week 2378 births and 1613 deaths were registered in London. Allowing for increase of population, the births exceeded by 11 and the deaths by 179 the average numbers in the corresponding week of the last ten years. The deaths included 78 from smallpox, 45 from measles, 24 from scarlet fever, 4 from diphtheria, 58 from whooping-cough, 16 from different forms of fever, and 20 from diarrhoea. These deaths exceeded by 15 the corrected average number from the same diseases in the corresponding week of the last ten years. The deaths referred to diseases of the respiratory organs, which had been 349 and 327 in the two previous weeks, were 355 last week, and exceeded by 109 the corrected average weekly number: 203 resulted from bronchitis, and 106 from pneumonia. Different forms of violence caused 53 deaths. Last week the mean temperature at the Royal Observatory, Greenwich, was 49 deg., or 2 deg. below the average.

Mr. John Morley, in presiding at the annual council of the National Agricultural Labourers' Union, which was opened on Tuesday, pointed out that, notwithstanding all that had been done to ameliorate the condition of the working classes, it was a deplorable fact that in many respects the labourer was worse off now than he was a hundred years ago. In the course of the day a resolution was passed recording the opinion of the council in favour of Mr. Arch becoming a candidate for a seat in the House of Commons.—Mr. Bright presided on Wednesday over a conference attended by 2200 agricultural labourers in Exeter Hall, to advocate the assimilation of the county to the borough franchise. Resolutions in favour of the objects of the conference were passed after addresses by several members of Parliament, Mr. Arch, and other leaders of the agricultural labourers. In the evening a crowded and enthusiastic meeting, presided over by Mr. Cowen, M.P., was held in St. James's Hall for a like purpose.

Captain Shaw, chief of the Metropolitan Fire Brigade, was a witness on Monday before the Select Committee which is inquiring into the best means of protecting London from fires. Instituting a comparison between London, Paris, New York, and Chicago, he showed that the cost of the brigade was less in London than in either of the other three cities. With regard to salvage, Captain Shaw said he believed that, if the police were made a salvage corps to protect uninsured property, the cost should fall upon the owners of that property. He called attention to the extreme danger of having the safety of the metropolis intrusted to too many organisations. Captain Shaw recommended that there should be telegraphic communication between the police and the brigade stations. He further recommended that there should be barriers in the passages of theatres, and that there should be a fireproof curtain in all theatres, which should be immediately let down on a fire breaking out behind the scenes.

Mr. Humphreys, Coroner for East Middlesex, held an inquest on Monday, at Dalston, on the body of Horace A. Bullock, who on Thursday evening last week shot Mr. W. T. Clements, in Highbury New Park, through the head, and afterwards committed suicide. Bullock was a clerk in an accountant's office, and had been engaged to a young lady of Highbury-quadrant, but her parents had caused the match to be broken off, and she had become engaged to Mr. Clements. Before this occurred Bullock's family had noticed that he had been in a depressed state of mind, and since his rejection symptoms of melancholia had increased. It was stated that he was a regular attendant at church and a teacher in a Sunday school. His employers gave him an excellent character, and said that his salary had been twice raised during the past year. They had noticed during the last month or two that he appeared depressed. The jury found that he committed suicide while of unsound mind.—An inquest has been held on the body of Mr. Clements with the same result.

At a meeting of the Royal Geographical Society on Monday evening—Sir Rutherford Alcock in the chair—a paper by Captain H. Trotter, R.E., was read by Mr. Markham, describing a journey made through Eastern Turkestan by the Pandit Nain Singh, to whom the council have awarded one of the medals of the year. Captain Trotter had intended to give the paper a wider scope by adding an account of a journey through Western Turkestan, but he had been called away on duty to the East, and had not been able to finish the paper. The Pandit had in his journey to contend with many difficulties, all his baggage having to be carried on sheep, which, in that pastoral country, make excellent beasts of burden. He started with twenty-six sheep from Lassa, in Thibet, and proceeded through Turkestan to the frontiers of China and Assam, visiting in the course of his journey several important lakes, and returning along the course of the Brahmapootra to Calcutta. He had made useful surveys of the country which he had traversed. The president, after the paper had been read, said there was no doubt that every part of Central Asia was becoming, both politically and commercially, of greater interest, and the steps taken to extend our commerce made these journeys of more moment. Such explorations claimed from us, as a commercial people, a feeling of deep gratitude to those who undertook such work, and he felt that it was difficult to express the gratitude due to the explorers.

BENEVOLENT SOCIETIES.

At the annual festival of the girls' schools founded by the "Ancient, Free, and Accepted Masons of England" for the daughters of the deceased and decayed brethren, held last week at the Freemasons' Hall—Lord Suffield, the Right Worshipful the Provincial Grand Master for Norfolk, presiding, subscriptions amounting to £9757 were announced, of which £5228 came from London lodges, West Yorkshire sending £840, and Middlesex £745.

Yesterday week the annual dinner in aid of the Railway Benevolent Institution took place at the Freemasons' Tavern—Lord Houghton in the chair—when £1450 was subscribed.

The dinner in aid of the benevolent fund of the Pharmaceutical Society of Great Britain was held at the Freemasons' Tavern on Tuesday evening, when about £1400 was collected. This society held its annual conversazione at South Kensington Museum on the following evening, when the whole of the building and the picture-galleries were thrown open to the guests, who numbered about 2500.

The thirty-first anniversary of the Seamen's Christian Friend Society Mission was held at the institution, near Well-street, London Docks, on Tuesday, under the presidency of Colonel Brockman. The report stated that much good had been accomplished by means of missionaries, Bethels, reading-rooms, schools, and the distribution of the scriptures, books, and tracts; and also that the income had increased to £1003 19s. 1d.

The 223rd anniversary festival of the Corporation of the Sons of the Clergy was held on Wednesday in St. Paul's Cathedral, the Rev. Ernest Wilberforce being the preacher. In the evening the Lord Mayor presided at the annual dinner, when the Archbishop of Canterbury and the Bishops of London and Winchester spoke warmly of the value of the society. The collection in St. Paul's Cathedral amounted to £212; the subscriptions at the dinner in the evening were £1500; and the result of the anniversary from all causes reached £7000.

On Wednesday evening, at the Freemason's Tavern, the Right Hon. Sir Alexander Cockburn (Lord Chief Justice of England) presided over the fiftieth anniversary dinner of the Royal Free Hospital, Gray's-inn-road. The subscriptions amounted to £1500.

Sir Henry Thompson took the chair at the annual dinner in aid of the North London or University College Hospital, which took place at Willis's Rooms on Wednesday. Subscriptions amounting to £1400 were announced.

THE POPE'S JUBILEE.

The Pope has been giving audience to pilgrims from many countries.

Early on Thursday morning, the 10th inst., the English pilgrims, numbering about 200 laymen and ninety ecclesiastics, assembled at St. Peter's, where they heard mass and received communion from the hands of Cardinal Howard. At noon they were received by the Pope, when a beautifully illuminated address, sent by the Catholics of England, was read by the Bishop of Clifton, and presented, together with one signed by the Cardinal Archbishop of Westminster and his twelve suffragans, and others from various Catholic dioceses and institutions, accompanied by an offering of £15,000 and a number of ecclesiastical vestments and church ornaments, chalices, &c., such as the Pope gives to the poor missions and dioceses, the offerings being presented by the Duke of Norfolk. The Pope, who was attended by Cardinal Howard and eleven other Cardinals, replied to the address, standing in front of the throne. His Holiness expressed his gratification at seeing around him the best and truest Catholics of a nation which had given so much liberty to the Church, and referred to the splendid gifts they had brought him as proofs of the feelings by which the pilgrims were animated. Next morning the English pilgrims visited the Basilica of St. Paul, where mass was celebrated by the Bishop of Clifton. The address sent to the Pope from England bears 466,158 signatures.

His Holiness gave audience yesterday week to the French Canadian pilgrims. They were led by the Bishop of Sherbrooke, who read an address and presented a considerable sum of money, together with a valuable chalice, given by the Canadian contingent of the Pontifical Zouaves. The pilgrims of Rhodes were received at the same time.

The Scotch pilgrims to Rome were received last Saturday. They were introduced by Bishop Strain, Vicar Apostolic of Edinburgh. Mr. Monteith of Carstairs, on behalf of the pilgrims, presented £2000, with a number of ecclesiastical vestments, chalices, and other articles of church furniture.

The Marchioness of Lothian died at Rome on Sunday afternoon, after three days' illness, from an attack of pleurisy, caught by being exposed to the draught of an open window at one of the receptions given by her to the English pilgrims on the previous Thursday. As she was unable, therefore, to go to the Vatican, the Pope sent her a special benediction. Her funeral took place on Tuesday afternoon in the Campo Varano. The burial service was celebrated in the Church of St. Lorenzo by Monsignor Clifford. Cardinal Howard and many English people were present.

The Pope on Tuesday morning received the Dutch pilgrims, who were led by the Archbishop of Utrecht. After his Holiness had replied to the two addresses presented, a large sum of money from the various dioceses of Holland was offered, together with other sums from individual members of the pilgrimage.

Cardinal Cardoso, the Patriarch of Lisbon, has left for Rome with a number of Portuguese pilgrims, to attend the Pope's jubilee. About 400 pilgrims from Portugal are expected to visit Rome on that occasion. The total amount of their offerings in money to his Holiness reaches £8000.

PARLIAMENT.

LORDS.

Ministerial statements in the Lower House have made it clear up to what point the Government will remain neutral in the war in the East. Yet the minds of noble Lords continue to be perturbed by the complications of the Eastern Question, which has still occupied the principal place in their discussions. Yesterday week, after the Duke of Richmond and Gordon had endeavoured to bribe the House with the promise of adjournment for the Whitsuntide holidays on Thursday if the debate on the Burials Bill should be concluded that night, and after the Duke of St. Albans had vainly advocated the restriction of the labours of railway servants to twelve hours a day, the Earl of Derby informed Lord Stanley of Alderley that there could be no truth in the rumour that "Mr. Layard informed the Porte that England had guaranteed the integrity and independence of the Ottoman Empire only under conditions laid down by treaties stipulating for the exercise of control by the Powers." Again, on Monday, when the Earl of Carnarvon had announced the receipt of a telegram from Sir Bartle Frere giving a summary of the proclamation of Sir T. Shepstone annexing the Transvaal with the acquiescence of the people, the inevitable Eastern Question cropped up once more in the shape of a debate on the Tripartite Treaty. The Earl of Rosebery, wished to know whether the time had not arrived for England, France, and Austria to cancel the obligations they had incurred in signing this treaty. Arguing in the affirmative, the noble Earl entered into what Lord Houghton called "an elocutionary duel" with the Foreign Secretary. Lord Bury supported the Government that had raised him to the Peerage with zeal, and was confident the honour of England was safe in their hands. A few other noble Lords joined in the conversation, some branching off into comments on the general policy of the Government in the East. Lord Derby spoke with customary plainness and point. His Lordship thought there was little probability of either Austria or France calling upon England to fulfil her part of the joint engagement entered into through the medium of the Tripartite Treaty for the preservation of the integrity of the Turkish Empire. He was of opinion, however, that this was not the right moment to withdraw from the treaty; but that we should wait until the war is over to enter into a resettlement of the matter. The Duke of Argyll urged that Turkey had brought her troubles upon her own head by repeatedly refusing the reforms recommended by the Great Powers. A reference made by the noble Duke to the Protocol brought Lord Derby to his feet again with a vigorous defence of the action of the Government in the matter, and the subject dropped after a few words from Earl Granville in support of the Duke of Argyll's criticisms.

The Earl of Carnarvon on Tuesday persuaded the House to agree to a new clause in the South Africa Bill giving power to the Queen by an Order in Council to add any territory which might belong to her Majesty either to the Cape or to Natal. The Secretary for the Colonies explained that the ultimate object of the measure was federation, and promised bluebooks which would give a complete account of recent events in South Africa. The Earl of Kimberley having pleaded that the wishes of the Dutch inhabitants of the lately annexed State should be considered before any further step was taken, the report of the amendments to the bill was adopted.

The Royal Assent was given by Commission on Thursday to the following bills:—Customs and Inland Revenue (Duties on Offices and Pensions) Judicial Proceedings, Rating, Drainage, and Improvement of Lands (Ireland), Provisional Orders, Local Government Provisional Orders (Horbury, &c.), and likewise to a number of private bills. The Lords Commissioners were the Lord Chancellor, the Marquis of Hertford, and the Earl of Bradford. Their Lordships were occupied until an unusually late hour in the consideration of the Burials Bill, although the 74th clause—the one that provoked so much controversy—had been withdrawn.

COMMONS.

The Liberal party in the House of Commons, as if anxious to disavow the soft impeachment that they feared their fate too much, have at length put it to the test of a division against the supporters of the Ministerial policy on the Eastern Question. The Marquis of Hartington, who advanced sound reasons for the somewhat Fabian tactics of the Opposition chiefs, rather implied than actually asserted that it was with some degree of diffidence he brought himself to countenance even the curtailed edition of Mr. Gladstone's Resolutions. Whether or not the result of the division proved the wisdom of his counsel, it is incontestable that the whole debate on the first of those Resolutions was, generally speaking, of a high character. Mr. Courtney, to wit, on Thursday week, materially improved the position he has taken in the House by the able address in which he in plain terms advocated the coercion of Turkey; and if the hon. member for Liskeard would only divest himself of an inordinate gravity of manner which suggests some resemblance to the proverbial being who looked wiser than it was possible for any man to be, his success as a Parliamentary debater might be further increased. Mr. Forsyth, as usual, raked the Treasury Bench fore and aft from his eyrie below the gangway on the Ministerial side; but, while approving Mr. Gladstone's Resolutions, oddly enough, said he should vote with the Government. Sir Robert Peel possesses one quality which renders his speeches generally acceptable, if they do not throw much light upon the subject under discussion. That quality is aplomb. As in private life, the vigorous and emphatic assertion of an opinion, however trivial and puerile that opinion may be, is not infrequently accepted as the acme of wisdom by those with whom sound is synonymous with sense, so in the House of Commons a confident appeal to the prejudices of the majority, especially when flavoured by a spice of personality, never fails to elicit a volley of the peculiar ejaculations which pass for cheers in our legislature. The truth was exemplified by Sir Robert Peel, who (speaking from a back bench on the Ministerial side) accused Mr. Gladstone of being ungenerous, lustily defended the Government, spoke in terms of suspicion of Russia, was confident that neutrality would be maintained as long as it could be by Lord Beaconsfield, felt sure that the "pristine valour of our race" would be displayed were we to drift into war, and compared the Opposition to a herd of hungry wolves without a shepherd. "We may be hungry, and we may be wolves, but it is not likely, being wolves, that we should have a shepherd," retorted Mr. Forster, who spoke of Sir Robert's speech as "chaff," and sent it to the winds, accordingly. Dealing with this subject in a more statesman-like manner, Mr. Forster argued that the acceptance of the Resolution, approving, as it did, a despatch of Lord Derby, would rather strengthen than otherwise the hands of the Government. Though he condemned the harsh terms used in the last despatch of the Foreign Secretary to Prince Gortschakoff, and submitted his reasons for objecting to its tone, the right hon. member for Bradford was glad to hear the Home Secretary's definition of the "British Interests" we might be called upon to protect; but, alluding to England's interest

in Egypt, hoped the Ministry would practise forbearance towards Russia, seeing that Egypt, as part of the Ottoman Empire, was assisting Turkey. Mr. Forster confessed he could not agree to the third and fourth Resolutions, because he was in favour of the absolute neutrality proclaimed by her Majesty. The right hon. gentleman concluded his characteristically clear and outspoken speech with a sturdy declaration that, while all would be anxious to protect British interests, if really endangered, there would be a large majority in the nation determined not to sacrifice our money and the blood of our soldiers for any wars waged on "fancied fears and panic-stricken sentiments." It would be simply to repeat what has been said over and over again from the Treasury Bench to enumerate all the points made by the hard-worked Under-Secretary for Foreign Affairs, in resuming the debate yesterday week, when an inordinate number of members strove to catch the Speaker's eye. Mr. Walter had reasonably reminded these anxious speakers that brevity was the soul of wit. As the onerous task of defending Lord Derby had been thrown upon Mr. Bourke, it was not to be supposed for a moment that the latter would, if he could, act upon Mr. Walter's suggestion. The Under-Secretary for Foreign Affairs insisted that the Government had done the best they could to persuade the Porte to govern its Christian subjects justly; stated that none of the European Powers, except Russia, favoured the idea of coercing Turkey, or of co-operating in a military occupation of her provinces; and, arguing that Lord Derby's despatch to Prince Gortschakoff was justified by the necessity of relieving the Government of any responsibility whatever in Russia's declaration of war, finished a speech, not without ability as far as its matter went, by reverting to the policy of Mr. Canning in support of the course pursued by the Government in advocating the non-coercion of Turkey. Sir R. Anstruther, Mr. Anderson, Mr. Newdegate, Mr. Shaw Lefevre, Sir J. Lubbock, Mr. Walter, and Mr. Goschen declared for the Resolution, against which spoke Lord Elcho (his soul in arms, and eager for the fray, as Russia would be in Adrianople by the first week in July, and at Constantinople a month later!), Mr. R. Yorke, Mr. Grantham, and Dr. Kenealy.

On Monday Mr. Waddy took up the thread of the debate, and with his usual gusto pronounced himself in favour of Mr. Gladstone's Resolutions in their entirety. Of the luminaries who succeeded him Sir William Harcourt declaimed on the same side with the vigour of a Boanerges, and demonstrated, to his own satisfaction, how the Government might have coerced Turkey; Mr. Fawcett lifted himself into his pulpit, and, in a strain of pulpit oratory, threatened to sit till Christmas rather than allow hon. members on the Ministerial benches to precipitate this country into a war; the Marquis of Hartington expressed his views, which were in favour of the Resolution, with the logical precision and directness characteristic of his speeches; and the Chancellor of the Exchequer, summing up the debate on behalf of the Government, replied much to the same effect as the Home Secretary did on the opening night, but with more reticence and with less direct antagonism to Russia. Coming to the critical question of what were the British interests that England might be called upon to defend by force, Sir Stafford Northcote did not particularise them so minutely as Mr. Cross did; but he said—

I would point out that there are interests which we have in common with other nations, and also those which we consider interests more peculiar to ourselves. As regards the former, I see no reason why we should put ourselves forward to fight alone the battle which other nations may fight if they consider it their interest; but we shall not be wanting in taking our part in conjunction with other nations if those common interests are endangered. But there are other interests which are peculiar to ourselves, and I refer especially to the road to India. It is of great importance to us that that road should be kept open and safe, and we do not intend to allow the matter to escape our vigilant attention; and we attach great importance to the points of that route to the Suez Canal and to Egypt, &c. Now, I hope I have sufficiently indicated what the present policy of the Government is. We desire to maintain a strict neutrality; to watch over the interests of England, and in the maintenance of those objects we desire to be vigilant, but we do not desire to be over-hasty. Care must be taken to keep everything in our eye, to act, but not prematurely, so as to provoke a contest by unwise or hasty conduct on our part.

Mr. Gladstone, late though the hour was (past twelve), showed himself at his best in replying on the whole case—if the expression may be permitted. The right hon. gentleman, who had been sitting between Mr. Bright and Mr. Goschen, in earnest consultation with them on a certain point of Sir Stafford Northcote's speech, which was apparently to be controverted, rose to a full House, which greeted him with the usual tribute of cheers. His speech was a model of debating power. He had shaken himself free for the moment of the circumlocution which is his bane. Absolutely master of the details of the weighty subject he had invited the House to pronounce a decision upon, Mr. Gladstone was at his best. With an eloquence which never for an instant failed him, animated and quick as lightning in repartee, ironic to perfection when he commented on the power of Conservative lungs, which it would be fruitless for him to contend against, the right hon. member for Greenwich displayed by turns almost every variety of oratorical art in this remarkable speech. It was a trenchant exposure of what he alleged to be the inconsistencies of the Government policy throughout the Eastern imbroglio; it cited numerous instances in which foreign intervention in other countries had not been followed by war, and even cited cases (notably that of Turkey herself with regard to the Damascus massacres) in which coercion had been used without being resented by force; and the address was brought to a close by a peroration delivered in subdued tones that added to its effectiveness:—

I believe that this debate has been eminently conducive, and will hereafter be more conducive, to the prevalence of the best influences which are to be found in the councils of the Cabinet. The time is running by fast—the hour-glass is fast running out—and the longer you delay the more difficult will it be to make arrangements favourable to the objects which you have in view. If Russia should fail, her failure will be disastrous to mankind, because it will leave the condition of the Christian people of Turkey, on whose behalf you have interested yourselves, worse than it was before. If Russia should succeed, that Power, notwithstanding all your jealousies, if its conduct be honourable, or even prudent, cannot fail to observe a moderation which will secure for her undying renown in consequence of the accomplishment of the work she has taken in hand. When that work is accomplished by her, and not in the way I at least should have wished to see it accomplished—as an Englishman I may hide my head, but as a man I must rejoice. Never to the end of my life can I do otherwise than exclaim, "Would to God that the voice of the nation had been permitted in this great crisis to prevail—would to God that in so holy a work England had not been refused her share!"

The House was moved to loud laughter by Major O'Gorman's quaint explanation of the composition of the Bashi-Bazouks, and then divided, with the following result:—

For Mr. Gladstone's First Resolution	223
Against	854
Majority	181

We gave the whole of Mr. Gladstone's Resolutions in our last Number. The first (negated by the above vote) was:—"That this House finds just cause of dissatisfaction and complaint in the conduct of the Ottoman Porte with regard to the despatch written by the Earl of Derby on Sept. 21, 1876, and relating to the massacres in Bulgaria." Sir Henry Drummond Wolff's amendment (which was agreed to without a division) was couched in terms suggested by the Chancellor of the Exchequer, and ran thus:—"That this House declines to entertain any resolution which may embarrass her Majesty's

Government in the maintenance of peace and the protection of British interests without indicating any alternative line of policy."

As if the Eastern Question had not been exhaustively and exhaustingly discussed in last week's debate, Mr. E. Jenkins and other hon. members (who seem to sleep with one eye open for any Ministerial oversight with regard to Turkey) have returned to the charge with questions as to whether the Government are aware of this or know that. Proceeding at last to business, the House on Tuesday passed clauses 17 to 22 on the Oxford and Cambridge Universities Bill, with one or two amendments; and on Wednesday rejected Captain Pim's County Training-School Ships, by 83 to 11; threw out the gallant Captain's Mercantile Marine Hospital Bill, by 212 to 11; and negatived Sir C. O'Loughlin's bill for enabling Irish poor law guardians to be elected by ballot by 174 to 109 votes.

The proceedings on Thursday were inaugurated by the appearance on the floor of the House of the newly-appointed Gentleman Usher of the Black Rod, General Knollys. Although betraying a little nervousness under the ponderous "greatness thrust upon him," it is but due to the gallant gentleman to say that in summoning the Speaker and the members generally to the House of Lords to hear the Royal Assent given to certain bills he executed his responsible and peculiarly solemn function in a dignified and becoming manner. The inquisitorial period of the evening commenced with something like "a scene," which at one moment assumed rather a threatening aspect. Mr. Henry, having placed on the notice paper an inquiry having three branches respecting the late Arctic Expedition, intimated his intention to withdraw the first. He then proceeded to put the second—namely, "Whether the Report of the Committee published in the *Times* of the 16th inst. is the original Report, or whether it has been in any respect modified or mitigated in consequence of a pressure from the Admiralty or from any other official quarter?" Mr. Ward Hunt, waxing wroth at this interrogatory, indignantly observed that as the hon. gentleman had thought proper to withdraw his first question he could withdraw the second, because he regarded it as conveying an insult both to the Committee and the Board of Admiralty, and he therefore declined to make any reply to it. Mr. Henry protested that he had never intended any offence, and denied that his words conveyed such. Amid the temporary excitement caused by this unexpected episode, Mr. Butt moved the adjournment of the House, for the purpose of having the opportunity of protesting against the groundless assumption of the right hon. gentleman that the language of the inquiry was insulting, and insisting upon the right of the member for Galway to obtain the information for which he sought. Mr. W. Hunt, reiterating his observation, the words *temper* increased considerably in violence. The Chancellor of the Exchequer, however, interposing, by his genial influence once dispelled the angry element and produced an amiable calm in the temperature of the House. Dr. Lyon Park taking up the inquiry that had occasioned such intemperance in the mind of the First Lord of the Admiralty, put the question shorn of its supposed offensive insinuation. Mr. Ward Hunt, then resuming his wonted equanimity of temper and tranquillity of manner, replied that the report laid on the table of the House was the only one he had seen or heard of. There was no intimation from the Admiralty to the Committee except thanks for the pains they had taken. Mr. Butt withdrew the motion for adjournment, and the subject dropped. Numerous questions on a variety of subjects having been asked and answered, the motion of the Chancellor of the Exchequer to adjourn from to-night until the 31st inst. was agreed to, and the House went into Committee on the Universities Bill.

The Queen has been pleased to approve the selection of Suva, on the south coast of the island of Viti Levu, to be the future capital of Fiji.

The *York Herald* hears that an experiment is shortly to be made in introducing "Chinese domestic labour" into England. Shiploads of Chinese labourers are about to be imported by a London firm of shippers, and a Chinese laundry is being erected in Holland Park.

Saunders's News Letter, one of the oldest of Irish newspapers, has ceased to exist. Its last number (42,250) was printed on Friday, May 11. It was established in 1688 as the *Dublin News Letter*, and changed its name in 1755 to the title by which it has since been known. It was bought in the Irish Bankruptcy Court on Tuesday by Mr. T. W. Burnside, for £600.

Two handsome, clearly-printed editions of the Bible, in strong binding, for the use chiefly of teachers and students—one being in crown 8vo and the other in demy 16mo—have recently been issued from the Oxford University Press Warehouse, Paternoster-row. A large amount of condensed information is appended, consisting of notes analytical, chronological, historical, and geographical, a Biblical index, *Cramer's Concordance*, a dictionary of Scripture names, and maps.

Mr. Gray, Home Ruler, was elected for the county of Tipperary, on Monday, by a large majority over Mr. Casey, a Nationalist; the numbers being—Gray, 3852; Casey, 1344. Next day the Hon. F. Hanbury-Tracy, the Liberal candidate for the Montgomeryshire Boroughs, was elected by a majority of 329 over Lord Castlereagh, who had come forward in the Conservative interest; the numbers polled being—Hanbury-Tracy, 1447; Castlereagh, 1118.

The inquiry into the colliery explosion at Tyldesley, which has lasted three days, was concluded on Wednesday. The jury returned the following verdict:—"That the deceased's death was caused by the effect of a blown-out shot improperly planted. They are also of opinion that reasonable precautions had been taken by the owners and managers of the pit to insure the safe working of the pit. They recommend that wooden doors should be used, where practicable, by the shot-lighter, and that the coal should be properly cut and holed."

Sir Charles Reed, in presiding last Monday over the first public meeting of a society which has for its object the provision of Christian homes for the deaf and dumb children of tender years who are being educated in board schools, directed attention to the merciful nature of its work, which was especially one for the Christian ladies of England.—Lord Aberdeen presided on Tuesday over the annual meeting of the Home Teaching Society for the Blind, which was held at Willis's Rooms. The report recorded the fact that fifty-six associations had been formed throughout the United Kingdom, and that the work of teaching the poor to read through the agency of Moon's type was making satisfactory progress.—A concert in aid of the funds of the Royal Normal College at Upper Norwood was given on Tuesday, by permission of the Earl and Countess of Dudley, at Dudley House, which was largely attended by those interested in the welfare of the blind. Many of the pupils of the college sang both part-songs and solos with considerable truth and refinement, and a few joined with some professional players in the performance of a selection of instrumental music in a style which evinced careful training and a good amount of artistic taste.

NOVELS.

Many readers will recognise a chip of the old block and an undeniable transmission of paternal genius in *Garth*, by Julian Hawthorne (Richard Bentley and Son), a novel, in three volumes, in each and all of which there are conspicuous evidences of the imaginative faculty, seconded by great power of expression and great vigour of execution. Both characters and scenes, moreover, are remarkable for novelty of handling as well as of conception; and that refreshing element is improved in flavour by a judiciously moderate intermixture of quaint American phraseology. It may be that in that sustained interest with which a reader is sometimes skilfully led on to follow with breathless anxiety the career of a hero or heroine, or of both, from start to finish, the story will be considered to be a little deficient; but, if the tale be regarded as a drama divided into various acts and scenes, each act and scene, tortuous and attenuated as the thread of connection may be, and wearying rather than stimulating as the constant shiftings of the apparently inevitable catastrophe may be found, cannot fail to produce their individual effect and leave upon the reader a deep impression. The author has exhibited extraordinary force and fire; and yet he has depicted his bland villain with as happy a touch as that with which he sketches the personages whose every deed is done under the influence of the more violent passions. And he is as picturesque as he is forcible; he knows well how to manage contrasts, as will be acknowledged by anybody who observes the skill with which he places the ingenuous small boy with the red tippet among the actors and actresses in the tragic skating-scene towards the conclusion of the third volume. *Garth*, the hero, a Puritan and the son of a Puritan, or of one who would and should have been a Puritan if he had not been a philosopher, is in many respects a noble conception nobly worked out; and he is, apparently, intended to illustrate, after a fashion, certain phases of heredity, tempered by training. Madge Danver, who may claim to be considered the heroine, is an indescribable being. Flesh and blood, indeed, she is; and, perhaps, rather too much of both; but she is more fantastic and capricious than the winds that blow wheresoever they list. She is beautiful as a dream, and as deceptive withal. She likes to be wooed, but she prefers to be wooed fiercely and by a man of physical powers and physical courage beyond the ordinary race of men; and, if he should have a screw loose in his character and be naturally prone to crime, the more chance, as it seems, he would have of winning her love. A Bash-Bazouk of a superior stamp (if there be any superior stamp of that human article) is the sort of husband she would be inclined to select for her. Still, it was not only natural, but, for the purposes of the story, unavoidable, that the heroic *Garth* should fall a victim to her charms and her vagaries. What is the issue of their loves and their quarrels and their renewals of love shall not be here divulged, for fear of discounting the pleasure which cannot fail to be derived from a perusal of the narrative. The author's name might create apprehensions of something more mystic and transcendental than readers in general can comfortably digest; but all apprehensions on that score may be scattered to the winds. There is only just enough of the mysterious, the fanciful, and the speculative to invest the persons and the incidents with a certain rarity and elevation; they are within the comprehension and appreciation of the most practical nature. The colouring is vivid; and some very striking effects are produced by the manner in which the author, working, for the most part, on Transatlantic soil, has grouped the native Indian and the half-breed among the pure whites of his romance. That the conclusion should wear an appearance of comparative tameness and bear some resemblance to an anticlimax will occasion no surprise; for it would have been almost impossible to carry out to the bitter end the awful catastrophe from time to time, apparently, foreshadowed, and yet to escape the charge, which was once so common, but which is now, happily, less frequently urged, of sacrificing the reader's better feelings at the shrine of the sensational Moloch.

So much interest is taken by an average country town in its reigning beauty, that Mrs. Eiloart makes certain of arresting the attention of her readers when she opens her latest novel with these words: "Pauline Lynton was the very prettiest girl in Waterhurst." Thus attractively introduced in the first chapter of *His Second Wife* (S. Tinsley), this "pale brunette, with deep-red lips and eyes whose bright darkness was something wonderful," is the daughter of a doctor having a comfortable practice and a good position in Waterhurst, until a grateful patient leaves him a legacy, which is successfully disputed by the relatives of the deceased. Not many pages, however, are devoted to poor Dr. Lynton and his fate. Pauline is the centre of interest. She has three admirers at her feet at the same time, but it is true to one, Hartley Bertram, to the last. Even when estranged by the readiness with which she, in the buoyancy of her heart, dances with a dashing young guardsman, he withdraws from his engagement and marries for money, Pauline still loves him; and it is she who eventually proves "His Second Wife." The various phases of the plot ought not, however, to be divulged. Mrs. Eiloart's new novel is to be commended for the same features which won favour for "Jacob Ebsleigh, M.P.," and the earlier fictions of this popular writer. The characters to be met with in the professional circles of a provincial town are portrayed to the life. Loose-jointed sentences now and then cause the reader to stumble; and ere and there, possibly, objection might be taken to the freedom with which a spade is called a spade. But there is undeniable merit in the fidelity with which a great variety of familiar types are limned, and the petty conventionalities of a certain grade of provincial society described in the course of the three volumes which relate how with "the very prettiest girl in Waterhurst" the course of true love ran by no means smoothly.

Last Saturday the members of the Royal Yacht Squadron dined together at the Pall Mall, Regent-street—Commodore the Earl of Wilton presiding.

The parish church of Overton, Wiltshire, which is in a dilapidated state, is about to be rebuilt and enlarged, at a cost of between three and four thousand pounds. The trustees of Sir H. Meux, Bart., have contributed handsomely.

At an early hour last Saturday morning Gordon House, Isleworth, the residence of Lord Kilmorey, situated on the banks of the Thames, was entered by thieves, and silver plate valued at between £300 and £400 carried off.

At the weekly meeting of the London School Board on Wednesday it was resolved to borrow a further sum not exceeding £90,000, making up to the present time £2,491,580 to be borrowed in all from the Public Works Loan Commissioners. The superintendents of visitors were authorised to recommend the remission of fees in certain cases, and thereby retain the children in school until the matter shall have been brought before the divisional committees. The works committee were instructed to secure a building for a transient school, capable of accommodating fifty boys. The board adjourned till June 6.

The Extra Supplement.

"THE PHYSICIAN."

The visitation of healing mercy and beneficent skill, in a village of those countries in south-eastern Europe, where pestilence and famine are too likely to follow in the train of war, is a subject worthy of the artist's serious conception. Mr. Wallis has treated a similar theme, in the picture we have selected from the Royal Academy Exhibition for one of our Engravings, so forcibly, and with so much truth of feeling, as to convey a high moral lesson of the beauty of charity, in the gracious and winning performance of its holy behests. The attentive docility and expectancy of the waiting crowd, amongst whom are several patients, or fathers and mothers of younger patients, about to seek the aid of the foreign physician, is well expressed by their various attitudes, and by the countenances with which they regard him. As he stands by the open window, ministering some potion of medicinal virtue to a sick woman of the household within, his noble figure is set off to much advantage by the flowing robe and head-dress of an Oriental costume. The maiden who attends his steps, bearing a little store of the drugs he is accustomed to use, may be supposed to be the physician's daughter; and her employment in this sacred service does not fail to enhance the particular interest of the scene.

MUSIC.

ROYAL ITALIAN OPERA.

The operatic event of this week has been the return of Madame Adelina Patti, which took place on Tuesday, as Dinorah, in Meyerbeer's opera so entitled. The great artist met with the usual enthusiastic reception, and sang with all her accustomed charm and brilliancy. Among other special effects was, as heretofore, the delivery of the bravura "Shadow song," which received the accustomed encore. The cast of the opera was otherwise also as before, having included Madame Scalchi as the principal Goatherd, Signor Marini as Corentino, Signor Graziani as Hoel, &c.

On Monday "Un Ballo in Maschera" was repeated; and on Wednesday "Lohengrin" was given, for the first time this season, and with a repetition of that exquisite impersonation of Elsa by Mdlle. Albani which was so memorable a feature in the first production of the opera here, in 1875, and in after performances. The representative of Lohengrin was Signor Carpi, who had previously filled the character, this having been his first appearance this season. The other principal characters were also cast as before:—Ortruda, Mdlle. d'Angeri; Telramondo, Signor Cotogni; the Herald, Signor Capponi; the King, Signor Scolara, &c.

On the previous Saturday "Rigoletto" was given for the first time this season, and with a repetition of that charming impersonation of Gilda by Mdlle. Albani which has heretofore been a feature in the cast of the opera at this house. As the jester, Rigoletto, Signor Pandolfini made his first appearance here, and met with considerable success. He possesses a baritone voice of good quality, sings artistically, and acts well. Signor Gayarré, who was the Duke, was encored in his canzone, "La donna è mobile."

For Thursday "Les Huguenots" was announced; for yesterday (Friday), "Don Giovanni" with Madame Patti as Zerlina; and for this (Saturday) evening, "Lucia di Lammermoor," with Mdlle. Albani as Lucia.

HER MAJESTY'S THEATRE.

The second appearance this season of Madame Christine Nilsson—announced for the 10th inst.—was postponed to Thursday last, in consequence of indisposition; and Mdlle. Alwina Valleria proved her ready efficiency by suddenly replacing the great singer in the character of Lucia.

Last Saturday "Il Trovatore" was given, with the resumption by Mdlle. Titens and Signor Fancelli of their respective characters of Leonora and Manrico—the result having been a vast improvement on the performance of the opera recently commented on, when first appearances were made in those parts by singers hitherto unheard of here.

Four performances were announced for this week—a repetition of "Un Ballo in Maschera" on Monday, "La Figlia del Reggimento" on Tuesday, with Mdlle. Mila Rodani as Maria; "La Traviata" for Thursday, cast as recently noticed; and "Lucrezia Borgia" this (Saturday) evening, with the return of Madame Trebelli-Bettini as Maffio Orsini, and of M. Faure as Alfonso, the first appearance in England of Signor Carrion being promised as Gennaro.

THE WAGNER FESTIVAL.

The third of the performances at the Royal Albert Hall—on Saturday afternoon—as already mentioned, consisted of selections from "Tannhäuser" and "Die Walküre." The extracts from the former work, however, were suddenly changed, "by special desire," and consisted of the overture, Wolfram's first song at the contest of singers, his song to the evening star, the introduction and entrance of Elisabeth, the great duet between that character and Tannhäuser, the solo of the Landgrave Hermann, and the reception of the guests at Wartburg, including the well-known march. In this part of the concert, the solo music of Elisabeth, that of Tannhäuser, and of Wolfram, was very finely sung, respectively, by Madame Materna, Herr Unger, and Herr Carl Hill; the few incidental passages for the Landgrave having been well declaimed by Herr Chandon.

The selection from "Die Walküre" began with "The Ride of the Walküres" (for orchestra), which was followed by the scene between Brünhilde and Siegmund, from the second act; and the closing scene of act iii., including the incident of the magic fire. Here the vocalists were Madame Materna (Brünhilde), Herr Unger (Siegmund), and Herr Carl Hill (Wotan).

The programme of Monday evening's concert, like that of Saturday afternoon, was suddenly changed "by special desire." It included the "Huldigung's Marsch" and the scene from "Götterdämmerung" between Brünhilde and Siegfried, where the latter character departs from the home of the Valküres, instead of some of the promised selections from "Siegfried." Madame Materna was the Brünhilde and Herr Unger the Siegfried, the latter singer having laboured under the disadvantage of an attack of hoarseness. The "Valkyrie Ride" was repeated (from Saturday's programme) and encored, the first part of the concert having comprised a selection from "Lohengrin." In these the solo vocalists were Madame Materna (Ortruda), Mdlle. Sadler-Grün (Elsa), and Herr Carl Hill (Telramund).

The first portion of Wednesday evening's programme was devoted to a selection from "Die Meistersinger von Nürnberg," the opera which followed "Tristan und Isolde," and immediately preceded "Das Rheingold." The selections from "Die Meistersinger" were the overture, the introduction to the third act (encored), the quintet, the "Preislied," and other pieces. From "Götterdämmerung" the extracts com-

prised the orchestral introduction to the third act, the fine scene of Siegfried's death and funeral procession, and the closing music in that of Brünhilde's sacrifice. Madame Materna was the principal singer, Mdlle. Grün and Herren Chandon and Schlosser having co-operated. Herr Unger and Herr Carl Hill were unable to appear in consequence of indisposition, and Mr. B. Lane rendered some serviceable assistance in the emergency. As before, Herr Wagner and Herr Richter divided the duties of conductor.

The closing performances of the festival will take place this (Saturday) afternoon.

Two young lady instrumentalists made successful first appearances at the third of this year's New Philharmonic Concerts, at St. James's Hall, on Saturday afternoon. Mdlle. Pommerereuil was very favourably received in her performance of Max Bruch's concerto for violin, as was Mdlle. Cognetti in her spirited execution of Weber's "Concertstück" for pianoforte—each with orchestral accompaniments. The other items of the programme call for no special mention.

The sixth concert of the Philharmonic Society's present season took place, at St. James's Hall, on Monday afternoon, when the selection included Mozart's concerto for harp and flute (with orchestral accompaniments). The solo performers were Mr. John Thomas and Mr. Oluf Svendsen, and their execution of their respective portions of the work was of a very high order of excellence. Signor Papini played with great effect a sonata for violin by Rust, accompanied on the pianoforte by Mr. Cusins, the conductor of the concerts. The orchestral pieces were Beethoven's fourth symphony (in B flat), Brahms's variation on a theme by Haydn, and Mendelssohn's "Isles of Fingal" overture. Vocal solos were contributed by Mdlle. Redeker and Miss Robertson.

The last but two of Herr Rubinstein's pianoforte recitals was given at St. James's Hall on Wednesday afternoon, with an interesting and varied programme.

Mr. Charles Hallé's third recital took place at St. James's Hall yesterday, when his programme included Brahms's pianoforte trio, op. 8; that by Beethoven in C minor from his op. 1; Chopin's solo sonata in B flat minor; and other pieces.

Whit Monday's proceedings, both at the Crystal Palace and the Alexandra Palace, will include music. At the former place a great military and vocal concert is to be given; at the latter, a selection of patriotic music.

The engagements of the solo singers for this year's Handel Festival at the Crystal Palace have been completed, and the list comprises the following names:—Madame Adelina Patti and Mdlle. Albani, Miss Edith Wynne and Madame Lemmens-Sherrington, Madame Patey, Mr. Vernon Rigby, Mr. W. H. Cummings, and Edward Lloyd, Signor Foli, Herr Henschel, and Mr. Santley. Madame Patti has not sung at the Handel Festival since 1865; and Mdlle. Albani, Miss Edith Wynne, and Herr Henschel will appear for the first time at this great triennial musical gathering. Mr. W. T. Best will be solo organist, Mr. Willing organist, and Sir Michael Costa will conduct, as heretofore.

The concert given last week by Mr. J. B. Welch—the well-known professor of singing—included the special feature of having brought forward, for the first time in public in London, Schumann's "Requiem." The work belongs to the composer's later period, being classed as op. 148, and contains much that is specially characteristic of his individuality of style. It was rendered with a powerful chorus of about 200 voices, directed by the concert-giver; the solo singers having been Miss Anna Williams, Mrs. Bradshawe McKay, Mr. D. Strong, and Mr. E. Wharton. Another specialty, although no novelty, was Mendelssohn's hymn, op. 96, for contralto, solo, and chorus, in which Miss Bolinbroke was the soloist. There were many other points of interest in the concert, among them having been the refined pianoforte playing of Mr. Franklin Taylor in Handel's variations on "The Harmonious Blacksmith," and Mendelssohn's caprice in E minor (from op. 16); and Mr. Santley's fine singing in Mr. Arthur Sullivan's song "Thou'rt passing hence" (accompanied by the composer), and Gounod's "Nazareth"—both having been encored.

Mr. Richard Blagrove's sixth concertina concert of the season was held last Thursday in the new concert-room, Royal Academy of Music.

Four opera and promenade concerts are to begin to-night (Saturday) at the Royal Aquarium, the names of several eminent artists of Her Majesty's Theatre being announced as solo vocalists.

A series of promenade concerts is also to open this (Saturday) evening at the Queen's Theatre, under the direction of M. Rivière, who is to be the conductor, assisted by Mr. Alfred Cellier.

THEATRES.

The comedy of "Mammon," adapted from the French by Mr. Sidney Grundy, was on Saturday placed on the stage of the Strand for a permanence, and was again received with approbation. The part of Sir Geoffrey Herriott is sustained by Mr. W. H. Vernon, that of Mark Chinnery by Mr. H. Cox, that of George Sorrel by Mr. J. G. Grahame, and that of Parker by Mr. Chamberlaine; Lady Herriott was well acted by Miss Ada Swanborough, Mrs. Chinnery by Miss Fanny Hughes, and Violet by Miss Maud Taylor. "Toodles" and "The Trial by Jury," assisted by Mr. J. S. Clarke's comic talents, concluded the entertainment.

Mr. Creswick is giving a series of farewell performances at the Surrey, previous to his departure for Australia. He appeared in Hamlet last Saturday, and on Tuesday in Petruchio, and was admirably received.

At the Opéra Comique, Mr. Charles Mathews appeared on Monday in the clever play of "Used Up." The farce of "A Cosy Couple" was likewise performed.

An amateur dramatic entertainment was given on Tuesday at the Royal Aquarium Theatre, by members of the St. Martin's and Covent Garden Division of the Queen's (Westminster) Rifle Volunteers.

The Lyceum reopens to-night with "The Courier of Lyons," Mr. Henry Irving performing the dual character of Lesurquet and Dubosc.

The new comedy "Mammon" was played on Thursday afternoon at the Alexandra Palace by Miss Ada Swanborough and the members of the Strand Theatre Company. On Saturday (to-day) the same company perform "A Lesson in Love" previous to the concert.

Mr. Hollingshead announces the advent of the French Plays, which are to begin their season on Monday next, at the Gaiety Theatre, with "L'Ami Fritz."

An amateur theatrical performance, under the patronage of Princess Christian, will be given by the Philotheopian Club, at St. George's Hall, on the 31st inst., in aid of the Home for Incurable Children, 33, Maida-vale.

PERFORMING BEAR IN A RUSSIAN VILLAGE.

THE WAR: A WALLACHIAN VILLAGE.
FROM A SKETCH BY ONE OF OUR SPECIAL ARTISTS.

THE WAR: ON THE DANUBE, NEAR BRAILA.
FROM A SKETCH BY ONE OF OUR SPECIAL ARTISTS.

THE LOWER DANUBE.

Our illustrations of the scenery of the Danube near Braila or Ibraila, and of a Wallachian village in the neighbourhood, with the assistance of our Map, will give some idea of the region where Turkish and Russian soldiery now confront each other, in fierce hostility, on the opposite banks of a great river. The Danube is, obviously and notoriously, Turkey's first line of defence against the Russian attack; and its geography and topography should be carefully studied from a strategical point of view. Our present observations must be confined to the lower part of its course, where it approaches the Black Sea. The portion of its Delta lying on the right bank of the river, and partly inclosed by a great northward bend of the Danube, with the Black Sea coast on its eastern side, is called the Dobrudscha. It was supposed, till within a few days, that the Russian intention was to effect the crossing into the Dobrudscha, and to do this at several points, as must be desirable with a large army. Hirsova, Braila, Galatz, Reni, and Ismail are points which offer facilities for this, of which the Russians have availed themselves before. The defence of a river line some 500 English miles long is, in no circumstances an easy task. Of this line the Dobrudscha forms about one third, and this part of the line is on the extreme right, connected only with the rest by the narrow neck of land over which the railway runs from Tohernavoda to Kustendji. It was, therefore, omitted from the original plan of campaign formed by the Turks, and little or no effort was made for the defence of that part of the Danube line. The few troops stationed there were to fall back, merely committing it to the care of the Monitors from the river.

South of Hirsova the mountains of the Dobrudscha lie close to the Danube, and are difficult to cross, while all approach to the left bank of the river is prevented by the swampy island of the Balta, in some places ten miles broad. On the heights is the third of Trajan's walls,

THE LATE V. W. BROMLEY, ARTIST.

parallel with the railway from the river to the Black Sea. Still further south, the middle of the Dobrudscha forms a hollow between the above-mentioned heights and the spurs of the Balkan, and where this hollow approaches the Danube lies the famous old fortress of Silistria, opposite the Roumanian town of Kalarasch, which lies about six miles distant from the river.

The position of Giurgevo, opposite Rustchuk, sixty or seventy miles above Silistria, is of much greater present importance. Rustchuk, the capital of the Danube provinces, is a Turkish creation, and till its obstinate defence against the Russians, under Count Nicholas Kamenaki (1810), had played no part worth mentioning. In 1812 Kutusoff destroyed the fortifications; in 1828 and 1829 the town was not molested, but in 1853 the battles for the island of Mogan took place. The fortress stands on the plateau, which rises abruptly fifty to a hundred feet high from the river at twenty to eighty paces from it. Inclosed by a wall, and in some places by moats, it appears hardly capable of any great resistance; but it is rendered unapproachable in the west by the Balta (lake) Mairu, on the Roumanian bank of the Danube, which runs here from south-west to north-east, and also by the river itself and its tributary, the Lom (not to be confounded with the river of that name in West Bulgaria). It can, therefore, only be attacked from the north-east and south, and there well-armed fortifications are in course of construction, pledges of an obstinate resistance hereafter. A strong citadel serves to protect Rustchuk; it commands the whole town, the Danube with its islands, and even the low-lying portions of Giurgevo, on the Roumanian shore.

Giurgevo, connected by a railway and highway with Bucharest, is twenty-two miles distant from the Roumanian capital, and numbers about 20,000 inhabitants. In 1416 it was conquered by Mohammed I., and belonged till 1829 to Turkey. Till then it was the fortified *île de pont* of Rustchuk, but in 1829 the fortifications were razed to the ground by the Russians.

WRITING, BOOK-KEEPING, &c.

Persons of any age, however had their writing, may in Eight easy Lessons acquire permanently an elegant and flowing style of penmanship, adapted either to professional pursuits or private correspondence. Book-keeping by double entry, as practised in the Government, Banking and Mercantile Offices, Arithmetic, Short-hand, &c.—Apply to Mr. W. SMART, at his sole Institution, 7th, Quadrant, Regent-street.

BACKWARD CHILDREN.—There are a

few VACANCIES in an Establishment near London for the Education of Children of the Upper Classes who are backward in Intelligence. Address, ALPHA, care of Mr. Henry Reed, 87, Oxford-street, W.

PARCELS for INDIA.—Lowest Rates per

ANGLO-INDIAN PARCELS EXPRESS: Small Parcels, from 3s. 6d. each; Large Packages, 2s. per cubic foot. Full particulars, apply Messrs. RHODES and CO., 31, Nicholas-lane, London, E.C.

HOUSE PROPERTY and INVESTMENT

COMPANY (Limited), 92, Cannon-street, London, E.C. (seven doors east of the Cannon-street Station). Capital One Million, in 40,000 fully paid-up shares of £25 each. For the Purchase and Sale of Productive and Progressive House Property and Improving the Dwellings of the Working Classes on the self-supporting principle. Registered March 15, 1876.

DIRECTORS.

Henry Arle, Esq., 8, Trinity-square, Tower-hill, and Castle-hill Lodge, Upper Norwood (Chairman London Corn Exchange). William Macdonald Baskin, Esq., 11, Great St. Helen's, and Lloyd's. William Sutton Gover, Esq., 4, Queen-street-place, E.C., and Haverling House, Blackheath (Member of the London School Board).

FOUNDAIN John Hartley, Esq., Adle-street, E.C. (Hon. Secretary London Sunday School Union). William Smith, Esq., Oak Lawn, Benthall-hill, Upper Norwood. Robert Parker Taylor, Esq., 10, Adelaide-place, London Bridge, (Director Lambeth Baths and Wash-Houses Company). Edward Bean Underhill, Esq., LL.D., Hampstead (Hon. Sec. Baptist Missionary Society).

THOMAS WHITE, Esq., Upper Thames-street, E.C. SOLICITOR.—HARRY GOVER, Esq., 40, King William-street, E.C. SECRETARY.—MR. W. H. BAXTON, Esq., 12, Cannon-street, E.C.

AUDITORS.—John Thomas Bedford, Esq., 12, King-street, Snow-hill, and Mecklenburgh-square (Chairman West Ham Park Committee). James Clarke, Esq., 1, Colarose-road, Clapham, and 13, Fleet-street, E.C. (Editor and Proprietor of "The Christian World"). Charles Kemp Dyer, Esq., J.P., St. Albans, Herts, and Lloyd's.

BANKERS.—London and Westminster Bank, Lothbury.

1. The first issue of 4000 fully paid-up shares of £25 each at par, and the second issue of 4000 at £1 premium, have been allotted.

2. Applications are now being received for the third issue at £2 per share premium, 25 of which have been allotted.

3. Sixty-eight estates purchased at a cost of £216,988, and other purchases are in course of negotiation.

4. After making a full allowance for all rates, repairs, loss of rent, and diminution of term in case of leaseholds, the income from the estates already purchased is expected to amount to nearly 8 per cent. besides profits on re-sales.

5. Shareholders, in addition to 5 per cent. interest, will participate in the periodical bonuses, which, it is expected, will be declared by the Company from time to time.

6. Owners of eligible House Property, wishing to sell at a moderate price, should send the particulars to the Secretary.

7. As the estates purchased will yield a good profit revenue, it has been considered necessary, in order to protect the interests of existing shareholders, that the third issue shall be offered to the public at 25 per share premium.

For full information apply to W. H. Baxton, Secretary, of whom may be obtained approving notice of the press and an explanatory pamphlet, entitled "Five Minutes' More Talk about the House Property and Investment Company (Limited)," prospectus, and share application forms.

LAND'S END.

THE FOLLOWING ESTATES will be

SOLD BY AUCTION, at PENZANCE, on FRIDAY, JUNE 8 next:

THE MANSION HOUSE OF MAYON, with Gardens and

Stables.

MAYON COTTAGE.

ROBUNTOW and CHYNALLS, 136 acres.

RENNEN COVE, with PUBLIC HOUSE and COTTAGES.

TREVE FIELDS.

MAYON BARN, upwards of 400 acres.

PART OF EXALLES.

TREVELLY and PART OF TREVESCAN, 91 acres.

PART OF RONNAN.

The whole of the above estates lie within two miles of the Land's End, the most beautiful of Penzance, with which place there is daily communication.

They include Mayon Cliff Castle, Pordennack Point, and Zawa Pig. There are on them several fowling-pools with shooting-birds. They afford excellent rock and snipe-shooting; and the village of Penzance, which lies in the midst of them, is a favourite resort for the "Western" Foxhounds.

For further particulars and conditions of sale, apply to

RODD and COBURNISH,

Solicitors, Penzance.

SOUTHSEA.—The Healthiest Town on

the South Coast. Winter Registrar - General's Return.

Southerly Aspect. Winter Registrar - General's Return.

Isle of Wight—the summer residence of Her Majesty the Queen.

SOUTHSEA.—Excellent Bathing and Boating. Good Hotels

and Lodging Houses. Promenade Pier, with Military Bands

and numerous amusements. Concerts and Balls. The

Soleat. Direct communication with London by four lines of

rail.

BELGIUM.—NAMUR SUMMER

SEASON.—By its exceptional situation, the city of Namur,

with her beautiful valleys, is the indicated centre for charming

excursions.

Woody mountains, steep rocks, surround the city, and present

picturesque views which recall to the mind the banks of the

Rhine.

Beautiful walks in the environs, parks, and squares. Excursions

by steam, in boats and carriages; all railway lines. Reading

and Conversation Rooms: Newspapers and Reviews from all

countries; Public Library, Archaeological Museum, Exhibition

of Beaux-Arts, great Fair in July, Swimming School, Baths of

the Meuse, well recommended; Hydrotherapeutic Establishment.

First Class Societies.—The Casino, the Cercle Artistique and

Littéraire, the Champs Elysees, the Royal Nautical Club, the

Shooting Rink, Jeu de Croquet, Cricket, &c.

A series of Festivals are offered to the Visitors during the

Season by the Authorities of the City, from May 15 to Oct. 1.

Numerous Concerts, Balls, and Games for Children, Tombolas,

Music, Games, Illuminations, Fireworks, &c.

First-Class Hotels at moderate charges.

THERMAL ESTABLISHMENT

OF

VICHY.

Department of Allier, France. Property of the French Govern-

ment.

At the Establishment of Vichy, one of the best in Europe,

Baths and Shower Baths of every description are given for the

treatment of Stomach, Liver, and Bladder Complaints, Dia-

betes, Gout, Urinary Calculi, &c. Programme of amuse-

ments.—Every day, from 10 to 12, Theatre and Concerts in

the Casino, Music in the Park, Ball, Concert,

Reading, Billiard, Card, Smoking, and Drawing Rooms. Rooms

reserved for Ladies. The Theatre can contain 1100 people, and

every day Theatrical and Lyrical representations are given by

the first artists of Paris.

Vichy is visited every year by 30,000 Tourists and Invalids.

All information respecting the Journey to Vichy, hours of

Bathing, Hotels, Boarding Houses, and prices of same is sent

free of charge to Paris, 23, Boulevard Montmartre, or to the Estab-

lishment at Vichy (Allier).

BLACKPOOL PIER, Grand New Head,

11 acres. Indian Pavilion, seating 1500; Large Square, Band

Kiosk, Refreshment-Rooms, Shops, Lavatories, Terrace Promen-

ades. Recent cost, £10,000. The Pier is now the finest in

Europe. Musical Director, Mr. De Jong, with splendid Full

Band of about Forty PERFORMING CONCERT, JUNE 11. Con-

certs Daily afterwards. Whit-week, a Military Band.

CLEARANCE SALE of HARMONIUMS and ORGANS.

Messrs. CHAPPELL and CO., for reasons above stated, now offer their large stock of Alexandrian Organ-Harmoniums, American Organs, Alexandrian Organs, and Pipe Organs, at an immense reduction for cash, for Annual Hire, or on THE THREE YEARS' SYSTEM of HIRE.

PIANOFORTES of every description by all the most celebrated makers from Two Guinea a Quarter.

SECONDHAND HARMONIUMS.

No. 50, NEW BOND-STREET.

CHAPPELL'S ENGLISH 20-GUINEA or SCHOOL-ROOM PIANOFORTE, with Check Action, in Canadian Walnut or Mahogany. This instrument combines good quality of tone and excellence of workmanship. Capable of enduring hard practice without going out of order. In solid Oak or White Ash, 22s.; Rosewood or Walnut Case, 27s.

CHAPPELL and CO'S ORIENTAL MODEL PIANOFORTE, Iron Frame, Trichord throughout, Check Action, Seven Octaves, Solid Walnut Case. FIFTY-FIVE GUINEAS; or in Solid Mahogany or Black Walnut Case, and Check Action, FORTY-THREE GUINEAS; with Plain Action, THIRTY EIGHT GUINEAS.

Made expressly to withstand the heat and moisture of extreme climates. Every part is gilded and secured with screws. The felt on the hammer, &c., is fastened with pins. The back and the silk frame are lined with perforated zinc to keep out damp and insects; and every precaution taken that has been suggested by persons who have had many years' experience in the care of musical instruments in India and China. Testimonials of the durability of these instruments can be seen at 50, New Bond-street.

The price includes—1. Packing-cases of tin and wood; 2. A suitable tuning hammer or key; 3. A tuning fork; 4. Some additional strings; 5. A Book on Tuning and Preserving the Instruments; 6. And the Carriage to the Docks.

Show-Rooms, 50, New Bond-street.
Factory, Chalk Farm-road.

CHAPPELL and CO'S MIGNON

IRON GRANDS, with Transverse-String Base, 75s. to 85s. The smallest Horizontal Piano made; length only 5 ft. 9 in.

THE OLD CHURCH CHIMES. Vocal

Duet. Words by Fredk. E. Weatherly. Music by BRINLEY RICHARDS. Price 2s. net.
— There is (so the story goes) not far from Llandudno, a ruined church at the bottom of the sea, not indeed built by the sea-fairies, but simply wrested from the land by the encroachment of the tide. On a calm day, when the sun or moon is bright, the ruins are visible to one sitting in a boat and looking down through the waters.

THE WAR: RAILWAY BRIDGE OVER THE SEETH AT BARBOSCHI—VIEW FROM THE PLATEAU OF ZIGHINA, THE DANUBE IN THE DISTANCE.
FROM A SKETCH BY ONE OF OUR SPECIAL ARTISTS.

THE ROYAL ACADEMY EXHIBITION.

[THIRD NOTICE.]

The versatile and prolific pencil of Mr. P. H. Calderon, R.A., has not often been seen to greater advantage than in the picture illustrative of Tennyson's beautiful verses beginning "Home they brought her warrior dead" (215). Invention has not to any great extent been called upon, so far as the painter is concerned, for the arrangement of the drama here presented on canvas; since the poet has, with the graphic force and the felicity of expression so characteristic of his genius, set out the whole *mise-en-scène*. The warrior-knight has ridden forth from his donjon keep to the fray; and he has been killed. His faithful henchmen have brought his body home, and it has been laid, clad in the steel panoply in which he fell, on the state bed. His bereaved wife, who at first neither swooned nor uttered a cry, has had her child brought to her by "the nurse of ninety years;" and, clasping her darling to her breast, she has found relief in weeping. The story is in the highest degree picturesque, pathetic, and romantic. It is scarcely realistic. Realism—which in this case might be accused of hypercriticism—would point out that, the warrior being dead, his armour would be removed from his limbs; and that again, after a deadly fight, his steel encasement would not present the smooth and polished appearance given to it by Mr. Calderon. For the rest, the work is full of ability. The drawing is very good, the colour rich and harmonious, and the execution bold but careful. As an effort of historic *genre* of an undefined period we willingly concede to it a high place; and in a kindred style, but with a story pertaining to a fixed and ascertained time, we find an equally important and interesting production by Mr. A. Elmore, R.A., "Mary Queen of Scots and Darnley at Jedburgh" (282). This represents what was virtually the last interview between Mary and her infatuated husband, and the last effort made by the Queen to win back the love and confidence of one of the most selfish and the most irresolute of mankind. The earnest, pleading, soul-full, all-womanly expression in Mary's face and attitude has been rendered by Mr. Elmore with equal genius and executive skill. He seems to have pondered deeply over those mournful lines inscribed in the unhappy Queen's own hand in the missal yet preserved in the Imperial Library at St. Petersburg. "Ce livre est a moy, Marie Reyne, 1553," is written on the flyleaf; and further on comes this dolorous quatrain—

Un cœur que l'outrage martire
Par un mépris ou d'un refus
A le pouvoir de faire dire
Je ne suis pas ce que je fus.

Read between the lines, there is in these verses a terribly significant foreshadowing of the tragedy of the Kirk of Field. Mr. Elmore's picture, likewise, is eminently and eloquently suggestive of the heart martyred by outrage, and of the spurned woman who soon will be "no longer that which she has been."

Although Mr. E. M. Ward, R.A., has done very well indeed in "William III. at Windsor" (197), in which the Protestant hero is shown patting on the head the chubby little son of one Mistress Elizabeth Edwards, to whom his Majesty has granted permission to open a milliner's shop in the gateway of the lower ward, the picture as a drama cannot be acquitted of triviality in incident; but it has, nevertheless, afforded Mr. Ward an opportunity, of which he has made the most, of painting a very lifelike similitude of one of the most patriotic and the most unpopular kings that ever sat on the English throne, and of giving us a graphic notion of the appearance of the Castle Yard, Windsor, at the close of the seventeenth century. Among Mr. Ward's numerous productions (he has five in the Academy) we prefer, however, "The Last Interview between Napoleon I. and Queen Louise of Prussia, at Tilsit, 1808" (408). The historical epoch illustrated is one with which no living artist is better qualified to deal than is Mr. E. M. Ward; and, although in the attitude of the poor Queen of Prussia he may have insisted somewhat too forcibly on the external symptoms of disease of the heart (the malady which proved fatal to her very shortly after the Tilsit interview), the whole work is full of animation and dramatic vigour. The retreating figure of the victorious but ungallant Emperor of the French is admirably drawn, as is also the typically composed and dignified portrait of the father of the present Duke of Sutherland, who, as Lord Gower, was present at the Tilsit "festivities"—festivities which were the death of at least one of the guests. The colour in this otherwise fine work is far from pleasing. Yet another Academician claims notice, in the person of Mr. T. Faed. By this gentleman there are three pictures, none of them certainly deficient in ability, but failing to reach that very high level of conception and capacity which we have a right to expect that such an artist as Mr. T. Faed, R.A., would sustain. For example, "Little Cold Tooties" (105), a mother-and-baby picture, the subject of which might recall Victor Hugo's famous allusion to "children's little pink heels, which throw others into ecstasies," is very charming both in design and handling; but it is a mere prettily pleasant puerility amplified to thrice what should be its proper dimensions. Again in "A Runaway Horse" (448), representing a whole village and its inhabitants thrown into the wildest state of commotion by the vagaries of an errant pony, we see a vast amount of excellent painting, ingenuity in posture, and vigour of expression substantially thrown away on a purely farcical incident. A painter of Mr. Faed's calibre has no right to descend lower than comedy. We prefer him in his pathetic moods; but in laughing he should halt at the humorous stage of jocosity. His admirers would be reluctant to see him become a "funny" painter. This good artist is, however, true to himself in "In Time of War" (266), a Highland interior and a Highland family, painted with all the old fire and expressed with all the old pathos. The work only misses the foremost rank among its companions through a vague irresolution of purpose which seems to have flitted across Mr. Faed's mind in scheming out his drama. It is as though the artist, ranging far afield to see what the open and what the covert would yield, had brought down the Russo-Turkish war, and the potential contingency of England being embroiled in that deplorable struggle, by a very long shot indeed. Otherwise, the picture is replete with the acknowledged excellences of the master. There need be no injustice either to Mr. T. Faed or to M. Gaetano Chierici, a new acquaintance at Burlington House, if we contrast "In Time of War" with M. Chierici's "The Widow's Dinner" (1342). The husband deceased has been, we apprehend, a Neapolitan or Calabrese fisherman. There is an unmistakable aroma "di pescatore ignobile" about the whole scene. The interior of the poor cabin, the widow, her child, the table and its accessories, are all painted with a vigorous grip and dash of handling that almost impel us to qualify M. Gaetano Chierici as a kind of "Mr. Faed in the Mediterranean." In the breadth of his details, and in the startling, yet not empirical, juxtapositions of strong lights and stronger shadows, he reminds us, however, as closely of the renowned French painter Isabey, one of the instructors, if we mistake not, of Miss Clara Montalba. In any case, M. Chierici's powerful "Widow's Dinner" is a very welcome acquisition to the walls of the Royal

Academy. Let us likewise direct attention to "Goldsmith in his Study" (1326), by Mr. John Faed, F.S.A. The picture turns on the hackneyed anecdote of Sir Joshua Reynolds calling on the poet one day and finding him doubly occupied in turning a couplet and teaching a pet dog to sit on his haunches. Why should not poor Oliver have varied the tedium of writing "copy" by teaching tricks to his dog? Latude has his rats in his Bastille dungeon; and Sir Joshua himself and to take snuff plentifully while he was painting. Mr. John Faed's conception of Goldsmith, and of the splendid untidiness in which the careless poet lived when he was at the meridian of his fame, is clever, but slightly too conventional. The figure of Sir Joshua Reynolds is weak; but the painting of the morocco-leather covered chair and the dog in the foreground are decidedly the best portions of the work, and are simply admirable. Close to "Goldsmith in his Study" hangs M. Adrien Moreau's large, elaborate, and thoughtfully treated "Dancing Bear" (1325), a mediæval composition, the humour of which has more of the savour of Montaigne than of Rabelais, and the quaint, dry treatment of which reminds us now of the late Baron Leys and now of the happily extant M. Alphonse Legros. The drawback to M. Moreau's meritorious performance lies in the circumstance that it is too dry, and verges in handling on the harsh and stringy; and, whether from some technical fault in the medium employed in painting or some misconception in the artist's eye of the canons of aerial perspective, the foreground, which is crowded with figures, seems to have lost its due prominence, and to have become absorbed in the buildings of the middle distance. Another Continental artist (we suppose), M. Francesco Vinea, sends a lively scene in a wine-cellar, entitled "An Insinuating Wretch" (1327), full of bright colour and vivacious handling, but somewhat too typical of the oleographic style of art now so popular in the shop windows.

Mr. I. C. Hook, R.A., was crowned long ago, not precisely with a robe of ice and a diadem of snow as Monarch of Mont Blanc—those regalia belong indisputably to Mr. William Beverly—but with a robe of cerulean blue, turned up with sparkling spray, and with a diadem of seaweed enriched by cockle-shells, nautilus, anemones, and hermit crabs. In "Word from the Missing" (126)—a bottle, with news about a wreck in it possibly, picked up on the seashore—Mr. Hook is in a dramatic and a pensive mood. In "The Gull-catcher" (182) he is breezy, racy, and as salt as salt can be. "He Shot a fineshoot" (337), is a delightful tableau of rural life, in which, however, the background fails, somehow, to harmonise with the group of dead game—wonderfully well painted as it is—in the foreground. "Friends in Rough Weather" (380) is a very stirring and broadly effective seascape, based on the custom prevalent in some parts of Devonshire of training dogs to swim through the surf to boats returning to shore in rough weather and bring to shore a rope by which those on land haul the craft to the beach.

Had Mr. Briton Rivière's pabulum of work been confined to the tenderly imagined and as tenderly executed "Legend of St. Patrick" (70), that distinguished artist would have done enough, this year, to vindicate the high position which he holds in his own walk of art. Touchingly beautiful as is, however, the St. Patrick fondling the little fawn which he has preserved from the hunters, Mr. Rivière's second picture, "Lazarus" (589), is calculated to awaken in an enhanced degree the curiosity and the admiration of the public. The sacred story of Lazarus has been treated realistically by the painter, but not with realism so exaggerated as to detract from the strength of the devotional associations connected with the episode. The beggar-man lies in the rich man's gate, and the dogs—precisely such deplorable curs as the tourist finds swarming, to his discomfort, in the streets of Eastern towns—are licking his sores. The fidelity to nature in the expression of the animals is really marvellous, and the *ensemble* of the picture is as solemn as it is graphic; yet some slight exception might be taken to the recumbent figure of the mendicant, who is a youth almost good-looking, his lower limbs swathed in drapery which is assuredly not ragged enough in texture, while it is too rich in hue, and who presents, on the whole, much more the appearance of being absorbed in pensive meditation than of being steeped to the lips in misery and destitution.

Mr. J. Pettie, R.A., who is an exhibitor of four pictures this year, has made a remarkable gratifying display of his strength. His most popular picture will probably be the majestic portrait of the "Black" knight, discreetly called in the catalogue "A Knight of the Seventeenth Century" (96); but this portrait—albeit eminently striking—is by no means Mr. Pettie's most important contribution to the exhibition. "Hunted Down" (28), the gaunt Highland cateran taking refuge from his pursuers among rocks as savage as himself and with his claymore in his hand, preparing to sell his life as dearly as he can, is undeniably powerful in drawing, composition, and colour; but it is not strongly characteristic of Mr. Pettie's manner, containing as it does a preponderance of landscape, whereas it is in the delineation of the figure, dramatically and picturesquely treated, that the artist most especially shines. "A Lady of the Seventeenth Century" (272) is a daring and successful imitation of Vandeyck, very magisterial in its handling and lustrous in its shadows; but, to our mind, the best example of the artist here is "The Sword and Dagger Fight" (203). The composition, the attitude of the combatants in the deadly fray, and the skilful play of light and shade are worthy of Meissonier; but our English painter surpasses the renowned Frenchman in breadth of execution and vigour of effect. While Mr. Pettie may be said, this year, to have surpassed the efforts of the last three or four seasons, it can scarcely be said that Mr. W. G. Orchardson, A.R.A., who sends only two pictures, comes fully up to his accustomed mark. "Queen of Swords" (174), an eighteenth century rendering of the climax of a country dance is, as a piece of grouping, worthy of all praise; but the countenances of the dancers, who ostensibly should be at the acme of sprightliness, are wan and mournful; their very apparel, even, looks faded and threadbare; the ball-room itself is shabbily furnished, and the entire scene wears a dejected and indigent aspect. Why should Mr. Orchardson's pictorial mind thus be sickled o'er with the pale cast of thought—or of raw umber? "Jessica" (1388), a scene from "The Merchant of Venice," is a much finer picture; but it can scarcely be qualified as an unmingled success. It is too crudely yellow in tone, and altogether too sketchy. From this last drawback the chief among the four pictures sent by Mr. W. F. Yeames, A.R.A., is certainly free. "Amy Robarts" (1027) is a work of very large dimensions, very grandly and solidly treated. The episode in the life of Leicester's hapless wife selected by the painter for illustration is where the infamous Tony Forster and his accomplices enter in the dead of night the poor lady's chamber, stifle her in bed, and fling her body downstairs, "thereby believing the world would have thought it a mischance, and so blinded their villany; and the morning after, with the purpose that others should know of her end, did Forster, on pretence of carrying out some behest of the Countess, bring a servant to the spot where the body lay at the foot of the stairs." Thus writes Aubrey in his

"History of Berkshire," and of that quaint chronicler Mr. Yeames has approved himself a most powerful interpreter. The action of the drama is, it must be admitted, far from agreeable; but the same may be said of many of Pan Delaroché's most moving scenes drawn from the Tudor and Stuart periods in our history. Mr. Yeames takes his art, as he has a right to do, *au grand sérieux*. It is essentially tragedy which he has chosen to paint, and he has treated it from beginning to end in a duly tragic style. The drawing throughout is extremely able, and the entire work is nobly creditable to the school of which Mr. Yeames is so accomplished an exponent.

THE DORÉ GALLERY.

To the Doré Gallery, New Bond-street, where the works of the most prolific, the most vigorous, and the most imaginative of modern French painters constitute a permanent element of attraction to a very large and influential section of the public, a fresh feature of undoubted interest has recently been added in the shape of a colossal picture in oil illustrating, in M. Gustave Doré's most grandiose manner, the miracle of the Brazen Serpent. The supernatural event recorded in the twenty-first chapter of Numbers is, albeit its innermost enshrouding one of the most recondite of doctrinal mysteries, narrated with such sublime simplicity as to commend itself at once to the painter who would strive to interpret its outward semblance; and this M. Doré has done with all the graphic force and fervour of which he is so approved a master. Nicolas Poussin and Lebrun have already essayed to treat this exalted theme, but their pictures did not go much beyond the standard of academic accuracy and conventionality. M. Gustave Doré, one of whose essential conditions of artistic existence is his thorough originality, has grappled with the subject in his own manner, and has imparted to it a characteristic *cachet* unmistakably peculiar to a painter who is bold enough to think for himself, and whose thoughts are, as a rule, noble and just. The immense canvas is crowded with figures, exhibiting a seemingly inexhaustible variety of attitude and gesture; and, although the scenes of horror and of subsequent deliverance delineated might without difficulty be made to lend itself to an exaggerated mode of treatment, the general ordinance of the picture is full of nobility and dignified gravity. Altogether "The Brazen Serpent" is fully worthy to be hung in a gallery which contains among others such renowned works from Gustave Doré's hands as "The Prætorium," "The Entry into Jerusalem," and "The Dream of Pilate's Wife."

Among the art-occurrences of the week—occurrences which at this season of the year come pressing one on another thick and fast as the procession of the regal *plumes* in "Macbeth"—must be mentioned the exhibition, at Messrs. Agnew's old galleries in Waterloo-place, of a highly interesting series of water-colour drawings of the scenery and *costume* of life of Japan, executed by Mr. Frank Dillon. The accomplished sculptor Count Gleichen, having completed his *statue* of Alfred the Great, has permitted the critics to inspect his work at his studio at St. James's Palace prior to the statue being sent to its destination at Wantage. Of Mr. Gleichen's Japanese drawings, and of Count Gleichen's memorial of the illustrious Saxon king, we hope to be able to speak more in detail next week; we furthermore notice that on May 25, at Sir Noel Paton's picture of "Christ the Good Shepherd" dedicated by special permission to her Majesty the Queen, will be submitted to private view at Mr. Richardson's Gallery in New Bond-street; and, finally, we have to remark that throughout the week the connoisseurs who have the eye at Christie's have been admiring the singularly representative collection of water-colour drawings formed by Mr. John Knowles, of Manchester, which will be brought to the hammer at the great sale-rooms in King-street, St. James's, this instant Saturday. Mr. Knowles's collection comprises specimens of almost every renowned water-colourist of the English school; and it is especially rich in examples of Clarkson Stanfield, William Hunt, Bonington, Burton, David Roberts, J. F. Lewis, Sir John Gilbert, J. E. Millais, and last, but not least, J. M. W. Turner.

Messrs. Christie, Manson, and Woods sold the remainder of Mr. George Fox's pictures last Saturday. The day's sale realised £20,800, making a total for the collection of £33,614.

A sale of a large collection of the works of George Cruikshank was held on Tuesday at Messrs. Sotheby and Co.'s rooms, Wellington-street, and the lots comprised many of his rarest productions. High prices were realised.

The portrait of the late Earl of Derby which was presented a short time ago to the Mayor and Corporation by Lord Skelmersdale and others, who were acting as a committee, has been hung in the Manchester Townhall.

The late Mr. Jabez Burns, D.D. and LL.D., memorial committee has resolved to set up a bust of the late doctor in Sicilian marble, on a pedestal of the same material, and has unanimously selected Mr. Belt to execute the work.

The annual meeting of the Sunday Society took place last Saturday afternoon at the Freemasons' Tavern. Its object is to obtain the opening of museums, art-galleries, libraries, and gardens on Sunday. The Dean of Westminster presided, and advocated the views of the society in an address of considerable length. Among the other speakers were Professor Tyndall, Professor Huxley, Professor Morley, Dr. Richardson, the Rev. J. Oakley, the Rev. M. Wilks, and Mr. Joseph Arch.

Mr. Gladstone presided at a lecture given last Saturday at the London Institution, before the Cymmrodorion Society, on the Potter's Art in Britain. After an instructive lecture by Professor Rudler, the right hon. gentleman, in proposing a vote, spoke at some length on ancient pottery, on the characteristics of the several porcelain factories established during the last century in England, expressing, in conclusion, his opinion that porcelain work was a branch of fine art, characterised by the peculiarity that, within certain limits of size, it might be applied to the production of the human figure, in groups, and with a free use of colour, to an extent beyond any other description of art.

At the sixty-second annual dinner of the Artist's General Benevolent Institution, which was held at Willis's Rooms last Saturday evening, Sir W. Harcourt, M.P., presided. In the course of his speech he referred to the intense study and the careful attention required for the proper understanding and appreciation of art; spoke of the amount and the variety of art-criticism in the present day; and pointed out that not in art alone, but in many other subjects, the faults to which people were prone were a spirit of exaggeration and of sentimentalism, and a love of excitement of thought. Subscriptions to the amount of £2200 were announced.

There have been potato riots in the county of Mayo. At Castlebar on Saturday the "forestallers," as the buyers for export are termed, were watched, and if a purchase was made the bags were cut and the potatoes scattered about.

ROYAL INSTITUTION LECTURES.

EXPANSION BY HEAT.

Professor Tyndall began his fourth lecture on Thursday, the 3rd inst., by proving that putrefaction is a phenomenon of life. The microscopic animalcules termed bacteria, swarming in an infusion of cucumber, had, by slow oxidation, consumed all the oxygen of the air in the flask, leaving behind nitrogen and carbonic acid. He then proceeded to illustrate, by experiments, the augmentation of the volume of bodies by heat, which he explained to be due to the increase of the motion of the atoms of the substance. The range of this atomic vibration differs in different bodies, being twice as great in lead and zinc as it is in iron. Thus, the expansion of brass, an alloy of zinc and copper, was shown to be greater than that of iron. By a most ingenious arrangement, the slight expansion of a bar of lead, when clasped by a warm hand, was made visible to the audience; while, on the other hand, a steel bar was broken by the force of heated iron contracted by pouring cold water upon it. The Professor also explained how these forces of expansion by heat and contraction by cold had been utilised, especially in restoring bending walls to the upright position. After defining the liquid condition of matter to be that in which the atoms are so far unlocked as to be enabled to glide and roll round each other, yet still retaining a strong power of cohesion, he stated that liquids, as a general rule, expand by heat more than solids. This property is employed in thermometers. It differs in various liquids. Thus alcohol expands more than water, as was shown. The remarkable fact that water contracts by cold till the temperature falls to between 38 deg. and 39 deg. Fahrenheit, when it begins to expand, and continues to do so, till at 32 deg. it crystallises and becomes ice, was exhibited in a beautiful manner. There is, therefore, a certain point in the temperature of water at which, if it be heated, expansion sets in, and, if it be cooled, contraction sets in. This point corresponds with the "maximum density" of water. These phenomena were explained in accordance with the theory of atomic polarity, illustrated by models. Several stout iron bottles, broken during the lecture by the expansion of water in them, congealed by being placed in a freezing mixture, were exhibited. Various illustrations were then given of the expansion of gases and vapours. Thus a bladder containing a little air swelled out when placed over gas flames. The principle of ventilation was also illustrated. The flame of a candle in a glass receiver with an open shaft became dimmer and dimmer as the oxygen was consumed and carbonic acid formed, but resumed its brightness when fresh air was supplied and the results of combustion withdrawn, by dividing the shaft vertically.

MINUTE AND LOWLY FORMS OF LIFE.

The Rev. W. H. Dallinger, at the evening meeting on Friday, the 4th inst., gave an account of some recent researches into the origin and development of minute and lowly forms of life. He began by affirming that to-day presents us with a magnificent generalisation based upon absolute truth; that which lies within it and forms the fibre of its fabric being the establishment of a continuity, an unbroken line of unity running from the base to the apex of the entire organic series. That this continuity does not stop on the outmost border of the organic world, but pushes its way down and onward into the not-living and unorganised until all nature is a continuous whole, Mr. Dallinger said cannot be doubted; but the statement that we have found it, and that facts have been presented showing us how the not-living passes into the living, is without foundation: the life-history of the minute septic organisms which are supposed to originate "spontaneously" is unknown. The necessity for working out the developmental history of typical groups in this debateable ground, by which their mode of origination would be made plain, led Mr. Dallinger to employ the best and most powerful lenses for watching the same form ultimately through all its transformations without intermission, and to devise a means for preserving a drop of the putrescent fluid from evaporation for an indefinite time, and yet allowing of its examination with the highest powers continuously. In this important inquiry he was warmly aided by Dr. J. Drysdale, of Liverpool, whereby mutual confirmation and continuous observation were secured. They began on the Monads, a group of putrefactive organisms closely allied to Bacteria, and in the course of four years worked out exhaustively the entire development of six forms. The lecturer described the history of two of these forms, the largest and the smallest, illustrated by transparencies drawn by himself from nature by a simple method of his own, whereby all the phases of their lives were clearly displayed. The issue of the work was that, whilst all the six forms multiplied by self-division of "fission," they were in every case proved to be dependent ultimately upon vital parental products, such as sporules or ova. These genetic products or eggs were proved to be capable of developing after exposure to heat twice as great as that which would kill the adults. This showed that the appearance of these septic organisms in closed flasks after the contained infusion had been exposed to temperatures killing adults is no proof that these organisms had arisen "de novo," or spontaneously; the given heat had simply not destroyed the ova. Mr. Dallinger also ascertained by experiments, that when known monad-germs are diffused through a closed chamber, such as those by which Professor Tyndall has shown that the presence of motes in the air is needed before boiled filtered infusions can be smitten with putrescence, the known monad germs behave precisely like the supposed germs of Bacteria. That is to say, when the germs of monads obtained from a dried infusion were diffused through the chamber, and their presence demonstrated by the lime-light, if suitable fluids were exposed where the motes fell, the monads invariably appeared; but if the chamber were allowed to become "optically pure," to have no motes in its atmosphere, no monads appeared when the fluid was exposed. This points to a confirmation of the inference that the motes which are precursive of putrescence—the origination of Bacteria—in Professor Tyndall's experiments on these organisms, are germs of Bacteria.

BABYLONIAN SCIENCE, LAW, AND TRADE.

The Rev. A. H. Sayce began his third and concluding lecture on Saturday, the 5th inst., with an account of the state of scientific knowledge in ancient Acad or Babylonia, which has been truly described as the birthplace of astronomy, astrology, and, necessarily, of the mathematics. In Chaldean arithmetic the unity was 60 and the fractions were duodecimal; and in the British Museum exist tablets containing traces of what may be termed a "Euclid." Astronomical observatories were founded in every city, and fortnightly reports were sent to the King. The "Observations of Bel" (the middle part of the heavens), a standard work, translated into Greek by Berossus, contains notices of the movements of the sun and the planets; and a comet, which appeared in 1150 B.C., is graphically described, as well as eclipses; and spots in the sun are noticed. The night was divided into watches of three hours each; and progress of time in the day was recorded by the sun-dial and clepsydra, or water-clock. There were four seasons and twelve lunar months in the Chaldean year, and one intercalary month. There were

five "sabbaths," or "days of rest" in the month, and every day was put under the protection of some deity. The constellations were named, and astrology was carefully cultivated, of which Mr. Sayce gave several illustrations; and "weather almanacks" were made. Specimens of the Babylonian law-books, the oldest in the world, were quoted, showing the honourable position of women and the protection of slaves. One statute enacts "that whatever a married woman encloses shall be her own property." Tablets exist giving details respecting Babylonian and Assyrian taxation, commerce, and banking, and, besides deeds of sale, other documents mention the lending out at interest objects in silver, iron, and other metals. In the British Museum is the private will of Sennacherib, and also (the last fruits of the labours of the late George Smith) cheques and deeds of a banking firm, from the reign of Nabopolassar, father of Nebuchadnezzar, to that of Darius Hystaspis, found in jars used as "safes." Traces of a work on agriculture, resembling the "Works and Days" of Hesiod, have been found, of which specimens were given, as well as of the songs of the ox-drivers, such as "Heifer that thou art, be yoked to the cow; the plough's handle is strong; the share cuts deep; lift it up, lift it up!" In concluding, Mr. Sayce remarked that the Chaldeans were pre-eminently a literary people, and great promoters of education, in which they were followed by their conquerors, the Assyrians. The great library of Assur-bani-pal was open to all his subjects, and amongst them the Accadian language was cultivated by the upper classes, as we do Latin. These ancient nations thoroughly grasped the fact that without literature there can be no history.

FIERY METEORS AND METEORIC STONES.

Dr. J. Hall Gladstone began his fourth lecture on Tuesday, the 8th inst., by describing and illustrating the phenomena termed shooting stars, which sometimes appear singly and sometimes periodically in showers, diverging from one point in the heavens, especially about Aug. 10 and Nov. 13-14. They are now believed to enter our atmosphere from the planetary spaces, and to be connected with the orbit of comets. They probably are very small pieces of solid matter, ignited by heat generated through rapid compression of the air, and are thus dissipated into powder. Besides these there are larger meteors (fire-balls or bolides), which dash through the air and burst into pieces, frequently with a loud report, leaving a luminous track. Their strongly-marked colours often change, but give little indication of their composition. Records of these meteors have been kept by the Chinese since B.C. 687. These greater meteors are sometimes accompanied by falling stones, either singly or in fragments, scattered over several miles of country. In ancient times they were much venerated; and it has been thought that the Palladium of Troy and "the image which fell down from Jupiter" (Acts xix. 35) were meteorites. In the British Museum there are masses, varying in size from rough powder to one which fell in Australia weighing three tons and a half, believed to represent 320 falls of meteorites. They are usually fragmentary masses of irregular shape, with an outer crust, due to the melting or oxidising effect of rapid passage through the air. These meteorites may be divided roughly into two classes: some are metallic, mainly consisting of iron and nickel; others are crystalline rock, chiefly silicates of magnesium; the majority include both kinds. The rarer constituents are cobalt, copper, tin, titanium, vanadium, carbon, and chlorine. In some of these stones hydrocarbons have been detected; and the peculiarly constituted iron when heated frequently gives off the gases, carbonic acid, carbonic oxide, or hydrogen. The mineralogical characters of these stones and their probable origin are being specially studied by Professor Story Maskelyne, Dr. W. Flight, Mr. Sorby, and other scientific men. Among the experiments, the supposed way in which meteorites containing iron burn was shown by igniting a piece of meteoric iron. The cause of the shattering and explosion was thus suggested:—A piece of thick glass held in a large gas-flame soon became very hot on the outside, though, like the meteors, cool inside, and in a short time exploded into myriads of pieces, with a sharp report. Above a hundred fine specimens of meteorites and meteoric irons were exhibited, kindly contributed by Professor Maskelyne, Mr. Ludlam, Dr. Flight, Professor Tennant, Mr. Gregory, and others; some of which fell in the nineteenth century, and others within the last few years. A view of the great Disco meteor was thrown upon the screen, and photographs of the more important meteorites shown.

MECHANICAL EQUIVALENT OF HEAT.

Professor Tyndall's fifth lecture, given on Thursday, the 10th inst., was principally devoted to explanations and illustrations of the grand theory of "the mechanical equivalent of heat." In the first place, a leaden weight was raised by a pulley to the ceiling and suddenly let fall, striking the ground. It was again raised, but let fall slowly with friction of the string through finger and thumb. In the first case heat was generated in the weight; in the second, heat was generated in the finger, thumb, and string. The quantities were equal, and both abstracted from the energy due to the consumption of the muscle. The same result was produced by raising the weight by a compressed air-engine. The air was cooled by the process, and the heat restored by the impact of the lead. It was then described how Dr. Joule caused descending weights to warm water and mercury by stirring them; and how, after a multitude of experiments, he was able to establish a relation between the space through which the weight descended and the heat generated by the descent, and thereby to calculate the "mechanical equivalent of heat." The term "foot-pound" means the weight of one pound raised one foot from the ground. Dr. Joule proved that the quantity of heat sufficient to raise one pound of water one degree centigrade in temperature is equivalent to 1390 foot-pounds. It would consequently raise 1390 lbs. one foot from the ground, or raise one pound 1390 ft. After explaining and illustrating what is meant by specific heat at constant volume and specific heat at constant pressure, and that the excess of the latter over the former is due to the consumption of heat in work, Professor Tyndall explained how Dr. Mayer, by experimenting with gases, had arrived at the same results as Dr. Joule, the figures being something more than 1389. Placing before his audience a pound of coal, Professor Tyndall said that its combustion, if it were all converted into mechanical power, would lift 110,000 lb. a hundred feet from the ground, and its fall would generate the same amount of heat as that produced by its combustion. He also stated that fired rifle-bullets are partially fused by impact, and exhibited an example. He then explained the old theory respecting the supposed different capacities for heat possessed by different substances, and contrasted it with the dynamical theory. In the concluding part of the lecture the Professor illustrated the generation of heat by the compression of gases and by the solidification of salts in solution, and the production of cold by the expansion of gases and the solution of salts, the phenomena in all cases substantiating the dynamical theory.

SECRET SOCIETIES IN RUSSIA.

Mr. D. Mackenzie Wallace, author of the remarkable work entitled "Russia," gave the discourse at the evening meeting

on Friday, the 11th inst. He gave a brief sketch of Russian history down to the reign of Peter the Great, when the political system was entirely changed, and the rulers began to aim at the civilisation and moral reformation of their subjects, by a bureaucratic centralised system. The arbitrary Paul, assassinated in 1801, was succeeded by Alexander I., educated by a Swiss philosopher, and deeply imbued with French revolutionary doctrines, which he proposed to put into practice by establishing a pure Federal Republic, with virtuous, happy citizens, and retiring into private life. He soon discovered his mistake; he saw insubordination and corruption everywhere; he lost his faith in Liberalism, fell a victim to religious melancholy, and became a devoted adherent of Metternich. The effect upon the young noblesse was different. It led to a passionate desire for reform, and the construction of secret societies to obtain it. The first was the "Union of Salvation," in 1816, chiefly composed of officers of the Guards. It was reorganised in 1818, as the "Union for Public Welfare," and professed to help the Government in suppressing official malpractices. But as the Emperor became more reactionary, a new society was formed, with the object of annihilating the Imperial family and constituting a Federal Republic. At the death of Alexander, in 1825, the attempted military insurrection failed. Five officers were hanged, and above a hundred transported to Siberia. During the reign of Nicholas we hear of no secret societies, but they began to reappear through the depression caused by the Crimean War, and the present reign in some respects resembles that of Alexander I. It began with a great enthusiasm for reform, and the emancipation of the serfs took place in 1863. But the Polish insurrection produced strong reactionary measures, and secret societies sprung up, but of a very different type, proposing the abolition of religion, marriage, and private property, and the substitution of Communism for the present government. The fundamental principle of the latest of these societies is absolute equality and mutual responsibility, with much self-negation. Its officers succeed in rotation, part to be educated and part uneducated. There is an active propaganda, by means of conversation, reading, excitement of discontent, publication and circulation of books and tracts, and the establishment of libraries and funds. Agitation is promoted to terrify the Government and the privileged classes, and to raise the spirit of the people. Mr. Wallace's opinion is that the extreme devotion of the mass of the nation to the Czar will prevent these societies having any more success than Fenianism had in Great Britain.

PIERRE JEAN DE BERANGER.

Mr. Walter Herries Pollock, M.A., devoted the first of a course of three lectures on modern French poetry, given on Saturday, the 12th inst., to the life and works of Béranger, whose influence over his countrymen was almost unprecedented. He himself never claimed a higher title than that of a song-writer. "A man," he said, "was wanted to speak to the people a language it knows and loves, and to raise up followers who should preach on the same text after him. That man I have been." He attributed his success to giving the popular songs a higher tone, since the people after 1789 gradually took their share in public affairs; and he asserted that henceforth for them literature ought to be cultivated. He was born in a poor street in Paris, Aug. 19, 1780, at the house of his grandfather, a tailor, his father, a notary's clerk, having deserted his wife. From his grandparents he derived his first literary tastes, and his experience under the "Reign of Terror" and the disorders of the Republic no doubt tended to reconcile his love for the people and their liberty with the adoration of the Emperor Napoleon, regarded as their protecting deity. Béranger partook of his father's brief prosperity in 1798 through a successful speculation; but, becoming destitute in 1804, he received kind patronage from Lucien Bonaparte and others, but declined the offers of employment as a classical poet, journalist, and critic, knowing his unfitness for the work. A small place, however, was found for him in the Imperial University, and in 1814 he witnessed the entrance of the Allies into Paris. His sympathies were not with the Bourbonists, and his first published volume, in 1815, narrowly escaped prosecution. His two volumes issued in 1821 led to a trial, which resulted in a fine and three months' imprisonment, which he passed very gaily. A heavier fine and longer imprisonment followed the publication of other volumes in 1825 and 1828. At the revolution in 1830 he felt that his work was done. He refused both office and pension; published another volume in 1833; wrote his biography in 1840; was elected deputy for the department of the Seine in 1848, against his will, resigning after a few days; and till his death (in 1857) lived in retirement. His will expressed a wish for a private funeral, but the crowds of people cried enthusiastically, "Honneur, honneur à Béranger!" In private life he was one of the most lovable of men, ever helping others out of his poverty. The general character of his songs is a mixture of gaiety and tenderness, well exhibited in "La Bonne Vieille," in "Le Grenier" (of which Thackeray has written a charming version termed "The Garret"), and in "Les Etoiles qui filent" ("The Shooting Stars"). The lecture was concluded with the reading and commenting upon a specimen of Béranger's songs relating to Napoleon, "Les Souvenirs du Peuple," in which an old woman tells her memories of the Emperor to another generation.

Professor James Dewar, the new Fullerton Professor of Chemistry, will on Tuesday next begin a course of three lectures on the Chemical Philosophy of Sir Humphry Davy. On Friday next a discourse will be given by Lieutenant-General Strachey on the Physical Causes of Indian Famines.

The State apartments of Windsor Castle will be open to the public on and after Monday next, the 21st inst.

A military ball, the first of the summer season, was held yesterday week at Woolwich Barracks.

Mr. James Glaisher, F.R.S., in his "Remarks on the Weather during the Quarter ending March 31, 1877," says that the weather during the quarter has been for the most part exceptional; the readings of the barometer have been usually below their averages, with frequent stormy weather; the temperature of the air was high both in January and February; rain fell almost continuously and was excessive in January, and there has been very little sunshine throughout the quarter.

A discovery of ancient coins has been made on the Montrane estate, a few miles from Cupar Fife, the property of Mr. Allan Gilmour. In draining a portion of land the labourers struck on what appeared to be a boulder, but which was subsequently discovered to be a pot. A stone was firmly wedged into its mouth, and on being removed it was found that the vessel was filled with coins, the total number of pieces being nine thousand. Most of them have the appearance of well-worn sixpences, a few are of the size of a florin, though not quite so thick, and a small number are about the size of a shilling. They are all silver, and, so far as has been ascertained, of the twelfth, thirteenth, and fourteenth centuries. The pot, which is twenty inches by thirteen in diameter, is in excellent preservation, and is of bronze.

THE GRAND DUKE NICHOLAS OF RUSSIA ARRIVING AT THE VILLA ANTACHI, HIS QUARTERS IN GALATZ.
FROM A SKETCH BY ONE OF OUR SPECIAL ARTISTS.

THE WAR: A SKETCH IN BUCHAREST, BY ONE OF OUR SPECIAL ARTISTS.

MAP OF THE DANUBE AND THE BALKANS.

We present this week a Special Map of the Seat of War in Europe, drawn by Mr. E. G. Ravenstein expressly for the occasion; and we trust it will be found equally useful with our last week's Map of the Seat of War in Asia, and that which accompanied it, of the Country around Kara, to assist our readers in following the movements of the Russian and Turkish armies in both the impending campaigns. The present Map comprises the whole extent of the plains of the Lower Danube, west to east, from the frontiers of Hungary and Serbia to the Black Sea; north to south, from the Carpathians, and the Russian province of Bessarabia, to the vicinity of Adrianople, in Rumania, south of the Balkans. It thus includes the whole of Wallachia, or the southern portion of what is now styled Roumania, on the left bank of the Danube, and the whole country of Bulgaria, a term usually confined by politicians to the strip of land between the right bank of the Danube and Balkans, but which ought to be extended south of those mountains, as Bulgarians are the chief inhabitants of the districts north and west of Adrianople. These districts, indeed, situated along the valley of the Maritza, were the actual scene of the horrible massacres of the Bulgarian population a twelvemonth ago, which did not take place anywhere in the region officially named Bulgaria, north of the Balkan range. We have spoken elsewhere of the Turkish fortresses on the Lower Danube, more especially those of Rustchuk and Silistria, with the positions yet lower down that stream, at Braila and Reni, near the town of Galatz, where the Russians threatened to cross into the Dobrukscha. The places named Machin, Isakcha or Isakia, and Tuldscha, on that part of the river's lower course, will be found in our Map, and these are of great strategic value. Higher up the Danube, and above one hundred and fifty miles south-west of Galatz, is the fortress of Rustchuk, now menaced by a large Russian force assembled at Giurgevo or at Banasia, on the Roumanian side. The history of former wars between Turkey and Russia also leads us to direct the reader's attention to Silistria, and to the positions of Oltenitza and Turtukal, standing over against each other, which are likely again to be contested. Far away to the westward, approaching the Servian boundary at the Timok, is the fortified town of Widdin, which has recently been bombarded from the Roumanian heights of Kalafat. The city of Bucharest, the capital of Roumania and residence of Prince Charles of Hohenzollern, the ruler of that semi-independent State, appears conspicuously near the centre of our Map. Thirty miles to the north of Bucharest is Ploesti, at this moment the head-quarters of the Grand Duke Nicholas, commander-in-chief of the Russian forces.

The following observations, by Lieutenant-Colonel Howard Vincent, in January last, on the military topography of the Danube and the Balkans, may profitably be studied with the aid of our Map engraved for this publication:—

"The outside world has wasted much time in discussing both the place and the means of crossing that river. Nearly every place has been passed in review, from Kalafat on the west to Tuldscha on the east. Some have thought that the same places will be selected as in 1828, and they have been among those who have insufficiently considered the new order of things established by the possession of the railway. We must bear in mind the character of the country on the right bank of the river—Bulgaria. Its bad roads and the consequent difficulty of preserving lateral communication—its impoverished state, and the impossibility of deriving local supplies. We must consider the capacity of the Turkish troops for disconnected warfare, their inherent incapability of moving, organising, and controlling large bodies. The result will be to show that the Russians must move by land on one, or at most, two or three lines, and endeavour to reap all the benefit they can from superior numbers, organisation, and training.

"The points most favourable for crossing are Giurgevo, Oltenitza, and Kalarash (Calarasu). On these three points will probably be directed the whole force, with the exception of two divisions which must prevent or check any Turkish movement on the flank, based on Tchernavoda, and facilitated by the railway connecting that place with Kustendji.

"Giurgevo is of these three places naturally the most important; and there must the gross of the army pass. It is the terminus of the railway and lies opposite Rustchuk, where the Turks are mainly concentrated. The left bank of the Danube is flat and marshy, whereas the Turkish bank forms almost throughout its course a natural parapet. If there be any exception to this rule it is at Giurgevo. A mile below Rustchuk lies the town. A mile from the bank, completely screened from the Turkish view by the houses and a gentle eminence, is the station. The line runs north-east, and it is but very seldom that even a thin wave of smoke can be seen from any eminence likely to be manned by fez-wearing gunners. The Russian troops can therefore be taken to Giurgevo, and the artillery formed up without any great fear of molestation.

"Nor need there be any apprehension of the line being seized by the Turks before the Imperial troops arrive. They possess no pontoon train nor any means of passage whatever. A division of Roumanian soldiers is already at Giurgevo, and they may be supplemented by a train of heavy guns.

"The bombardment of Rustchuk, distant, let us say, 2000 paces, must be a preliminary to any attempt at passage. The town, built mainly of wood, lies in front of the fortress, of bastion type, in dilapidated state, unprovided with guns of any calibre, unsupplied with ammunition, and aided only by a recently constructed earthwork close behind it. My conviction is that Rustchuk would be evacuated in two or three days at most. The river is about three quarters of a mile broad, and flows about two miles and a half an hour, and its passage might, the fortress silenced, be effected by boats—of which at Giurgevo there are a large number—flying bridges, and probably by pontoons.

"It may be well here to consider how far this passage, or that at either Oltenitza or Silistria, might be impeded by the Turkish flotilla on the Danube. It consists of seven small gun-boats, carrying one heavy gun, and bearing thin armour. These seven vessels would have to guard a line one hundred miles in length. At no place on the right bank can they obtain the shelter of a creek from the Russian guns. They cannot, therefore, remain concealed until the moment of crossing and then come out to thwart it. They may consequently be destroyed or disabled before a single Russian pontoon is pushed into the stream.

"I will now pass to Oltenitza, about forty miles from Rustchuk and twenty-five from Silistria, and situated at the mouth of the Dembowitza, which connects it with Bucharest. Here the river is 800 yards wide, and both banks offer great facilities for the passage of an army. Opposite is Turtukal, which I have reason to believe to be in so ruined a state as to offer but a merely nominal obstacle. The Dembowitza will enable the Russians to mass at Oltenitza all necessary bridging materials, as readily as will the railway at Giurgevo.

"Kalarash, opposite Silistria, is the last point of passage. It is, I am informed, in the same state in which the events of 1854 left it. The river adapts itself here no less than at Oltenitza to the operation. From Slobodzie a good road leads

to the Danube, and from Silistria runs the main artery of Bulgaria on to Shumla, which north of the Balkan must be the point of concentration.

"To resume. If the passage of the Danube, at these three points of Giurgevo, Oltenitza, and Kalarash, be well preceded by artillery fire, and be simultaneously made, it can hardly fail to prove successful. The Turks have no means of establishing or maintaining communication between Rustchuk, Turtukal, and Silistria, no cavalry, no horses, not even a field telegraph. Nor can they cut in between, for means of passage they have none.

"I have shown that the passage of the Danube presents no serious obstacles. We may, therefore, consider it accomplished. One thing alone must be always present to the Russian officers—the maintenance of friendly relations with the Roumanian peasantry. We must not forget how much the Russians lost in 1828, when their Generals exacted, at minimum prices, fixed by themselves, the provision from the miserable peasantry, of 250,000 measures of corn, 400,000 loads of hay, 50,000 barrels of brandy, and 23,000 oxen. These they paid for by bills, the acceptance of which history does not record. Sixteen thousand peasants were further requisitioned to make hay in the Danubian valley. It is not impossible that the memory of this error may yet do them harm with their Bulgarian co-religionists.

"But we must push on. As I have already said, Shumla is the first point to be gained. It stands on the eastern slope of a chain of mountains forming, as it were, an advanced post to the Balkan range, and separated therefrom by the valley of the Kamtschik, at the junction of several roads some 700 ft. above the Bulgarians' plains. The position is superb, and, skilfully treated, might be made almost impregnable. This it certainly is not, for reasons which I will consider. The town of Shumla has about 40,000 inhabitants, and is placed at the base of the heights, instead of having an elevated side within the strongest portion of its defences. It is environed to the north-west and south by a vast crescent of bold hills, and towards the east by a formidable marshy ravine. The town is approached from the north by the Silistria road, from the north-west by a road from Rustchuk, from the west by another road from Rustchuk by Osman Bazar, and from the east by the road from Pravadi to Karnabat. Besides these approaches, by one or more of which it may be turned, there is the Rustchuk and Varna Railway. The metals will, of course, be destroyed, but the roadway must remain, and is not, I believe, defensible in any part. It runs to within fourteen or fifteen miles of the town and forts of Shumla. A station bears its name, but the road therefrom is the Silistrian highway. No work of any description guards this junction, nor is the ground, so far as I remember, well disposed to protect it. Let us suppose that of the 120,000 infantry, 6000 cavalry, and 150 guns which have crossed at Giurgevo, Rustchuk, three fourths shall march in parallel columns along the ordinary road, and the railway track upon Shumla, keeping up their communications of course, and deriving their supplies from Roumania, while the remainder take the circuitous road of Osman Bazar. The line ought to be repaired as they proceed, and if no regular carriages are obtainable, a sufficient number of trolleys may be brought over from Wallachia. A pair of horses are, I believe, well able to draw a dozen loaded trolleys, each holding nearly as much as a military waggon.

"At Turtukal, say 20,000 infantry, 2000 cavalry, and 40 guns, will cross. They must make their way by cross-country roads to Shumla; and this will be the most difficult operation, requiring great care and circumspection. At Silistria 60,000 infantry, 4000 cavalry, and 50 guns should cross, and by the highway effect the junction with the Rustchuk columns. The force of cavalry ought to be of strength to preserve sufficient lateral communication for all practical purposes.

"Shumla is not, strictly speaking, the key to the Balkan passes, for it is twenty miles from them; but, at the same time, its investment is absolutely necessary before the passage of them can be attempted. Varna, on the seacoast, as Colonel Evelyn Wood said, has great but unused capabilities of defence. The taking thereof, if the Russians be successful, opens, first of all, the through railway communication to Rustchuk; then it enables another attack to be directed via Pravadi on Shumla; and, thirdly, renders available the coast road to Burgas and the south, through the easternmost slopes of the Balkan range.

"We will now imagine Shumla to have fallen into the invader's hands, or to be completely invested; the passage of the Balkans, the great barrier of Turkey, has to be effected. This formidable mountain range, separating Bulgaria from Roumelia, runs from west to east, gradually diminishing in height from 5000 to 3000 feet, until they abruptly terminate at Cape Emineh, on the seacoast. Von Moltke says that the difficulty attending the passage of the Balkans lies far more in the paucity and bad state of the roads than upon their height or inaccessibility. The passes, with the single exception of the Schibka (which the Sultan traversed in 1836 in a four-horse carriage) are impracticable, or nearly so, for wheels, and are little more than bridle paths. There are seven passes over the Balkan.

"1. Shumla to Karnabat, by Tjalikavak and Dobroll, called the Bogaz Pass, very difficult and narrow, easily defended, and combining fluvial with mountain impediments.

"2. Pravadi, by Koprikoj and Jenikoj to Aidos, called the Chenga Pass; difficult but successfully used in 1829 by General Rudiger, with the 7th Russian corps in nine days.

"3. The coast road from Varna to Burgas, taken in 1829 by General Roth with the 6th corps.

"4. Timova to Kasanlik—commonly called the Schibka Pass—perhaps now the most practicable of all, a road having been made in 1836, and in any case not very difficult or steep, and easy to be forced.

"5. Timova to Slivno or Islamji—called the Iron Gate (Demir Kapu) Pass—very steep, difficult, and almost unexplored.

"6. Timova, or Osman Bazar, to Kasan, and thence to Karnabat; very difficult.

"7. The Lovatz Pass to Tatar Bazardjik, which is almost impassable.

"We see, therefore, that three of these passes may be utilised by an invading force. What has been done before may well be done again. It is impossible to suppose that the passes will be neglected by their defenders in the same way as in 1829, but the attempt will be even more serious and formidable."

A lecture on the difficulties of Arctic exploration, and the means of surmounting them by the employment of balloons, will be given next Thursday afternoon, in the Vestry Hall, St. James's, Piccadilly. There will be no charge for admission.

The prizes and certificates awarded by the Gilchrist trustees to the students (consisting of elementary school teachers) who have attended the Charterhouse science course were presented on Tuesday night, in the large room of the Society of Arts, John-street, Adelphi. The Rev. John Rodger, M.A., presided, and gave away the prizes. Addresses were given by the chairman, Dr. Carpenter, and Sir John Wrenn.

THE MAGAZINES.

The *Cornhill* has two contributions of unusual merit. "Transcaucasia" records the impressions of a highly intelligent traveller who visited this interesting region last autumn. He has no doubt that Russian authority is firmly established there, and there seems no reason why it should not be extended much further. The people are well governed and fairly contented; and the dominant Power, so cruel a persecutor of Christians in other parts of her empire, is here so tolerant to Mohammedans that the religious difficulty has no existence. On the other hand, Russia has done little to civilise the inhabitants, nor has she in any way impressed the stamp of her nationality upon them. The heterogeneous races constituting the population are most unconformably disposed, manifest no tendency towards amalgamation, and have none of the stuff that goes to the making of a nation. Such considerations, nevertheless, though important in the long run, have little bearing on the military or political transactions in the immediate future. "E.W.G." contributes a highly interesting study on "Lucifer," the great sacred drama of the eminent Dutch poet Vondel, a contemporary of Milton. There can be no doubt that Milton knew and used this work, though his obligations are not extensive. In his description of the overthrow of the rebel angels he might have followed Vondel more closely with advantage. So far as can be judged from some admirably translated specimens, the drama would appear to be characteristically Dutch, combining magnificence of diction and true poetic spirit with heaviness, formality, and frequent want of taste. With all its shortcomings, it is a work far above mediocrity. The remainder of the contents comprises an ingenious disquisition on "Ridicule and Truth," some airy verses by Mr. Locker, the sequels of "Carità," where Mrs. Oliphant seems to be recovering herself, and of Mr. Blackmore's vigorous "Erema;" and the commencement of a promising story, on a smaller scale, entitled "Lizzie's Bargain."

Macmillan is rather poor this month, the only articles, at least, calculated to awaken any general interest being Dean Stanley's genial, but somewhat vague, review of the theological situation before the students of St. Andrews; and a straightforward, sensible, but rather commonplace notice of Miss Martineau's autobiography. Lord E. Fitzmaurice's dissertation on the inextricable tangle of conflicting nationalities in Eastern Europe evinces at any rate a wholesome sense of the almost insoluble difficulties of the question. A history of the Transvaal Republic makes out a strong case for its annexation on the grounds of policy and humanity.

The contents of the *Fortnightly Review* are in general sober and instructive. Mr. H. Sidgwick, by way of filling up a lacuna in Mr. Leslie Stephen's history of English thought in the eighteenth century, contributes a lucid account of the work and influence of Jeremy Bentham. Mr. Morley describes the reforms effected by Turgot as Intendant of Limoges, where the philanthropic statesman made his first essay in the art of government. Mr. Courtney points out how the great European Powers might have effected a peaceful settlement of the Eastern Question, if—a reserve he omits to make—each had not with good reason been utterly distrustful of the rest. Mr. H. Tuttle sketches the confused and unsatisfactory constitution of political parties in Germany, where Parliamentary Government seems in danger of paralysis through the admission, owing to shortsighted annexations and indiscreet legislation, of irreconcilable hostile elements into the national council. Mr. Innes, in a parallel between the present position of the English Ritualists and that of the Scotch Secessionists at the period of the disruption, intimates pretty clearly that no movement so purely sacerdotal as Ritualism will enlist sufficient laical support to make secession respectable. The only article of literary interest is an able review of Barry Cornwall's memoirs, by Mr. G. A. Simcox.

Neither Mr. Tennyson's Montenegro sonnet nor Mr. Gladstone's sketch of Montenegro history reflects any special lustre on the *Nineteenth Century*, or will add to the reputation of the writers. Every good sonnet embodies a thought; Mr. Tennyson's only embodies a fact. Mr. Gladstone's paper is too manifestly written *ad captandum*. A much more valuable performance is Mr. Ralston's account of Russian revolutionary literature. Contrary to the experience of other countries, revolutionary agitation in Russia is confined to the upper, or at least to the educated, classes. The bulk of the people, for whose regeneration it is supposed to be carried on, remain almost utterly apathetic. The propaganda is, nevertheless, exceedingly active, and may one day produce important effects if aided by widespread distress among the people, or of encroachments on their peculiar communal system. It would be difficult to exaggerate the wildness of the conspirators on the one hand, or their disinterested devotion on the other. Mr. Carter, who wishes the Church of England to be governed by Convocation, and Mr. J. G. Rogers, who would have it disestablished altogether, both prove considerably too much. Mr. Carter lets out that he would like to reverse the Gorham judgment and restore the First Prayer-Book of Edward VI. Mr. Rogers's picture of the woes of Nonconformists in this bishop-ridden land transgresses the domain of the pathetic and trenches deeply upon that of the ludicrous. Mr. Arthur Arnold is more successful in indicating the true line of advance for the Liberal party in his essay on the abuses of the land laws. The summary of "Recent Science" records some highly interesting experiments in the dissemination of minute germs, and of the photographic action of light on the retina, which seems at last sufficiently established. The conclusion of the "Modern Symposium" is chiefly remarkable for the contribution of Professor Huxley, whose power of exposing fallacies finds ample scope in a discussion of this nature.

The *Contemporary Review* struggles gallantly to maintain the high standard it had reached before the secession of its leading contributors. Although, however, no article in the present number is wholly devoid of merit or interest, the *tout ensemble* is rather heavy. Neither Mr. Hughes nor Mr. Haweis has much of novelty to communicate respecting the Church of England or Wagner's operas, on which their views have so frequently been expressed. Two of the most interesting papers, Professor Zeller's essay on the conflict of Paganism and Christianity and M. Janet's disquisition on Spinoza's not very considerable influence on French philosophic thought, are translations from foreign languages. Mr. Buchanan's "Balder" concludes with a strong reminiscence of "The Ancient Mariner." The other contributions include a half sympathetic, half ironical analysis of Miss Martineau's character; and an acute and thoughtful exposition of "A Reconciling Philosophical Conception," by Mr. A. Main.

The miscellaneous contents of *Fraser* comprise an essay on "The Causes of Pre-Eminence in War;" a full and able review of Crowe and Cavalcaselle's life of Titian; a highly-interesting account of two of the best of contemporary French poets, Coppée and Sully Prudhomme; and studies on two of the founders of Russian poetical literature, Lomonosoff and Kantemier. More interesting than any of these is an analysis of the play composed by Oehlenschläger on the story of Hamlet as recounted by Saxo Grammaticus, an example of the direct objective treatment of a picturesque theme, totally

BENHAM and SONS,
WIGMORE-STREET,
LONDON, W.

BENHAM and SONS'
VENTILATING GLOBE LIGHTS.
The following are some of the advantages of this mode of lighting:—
1. It carries off all the heat and foul air from the burner.
2. It also ventilates the apartment by removing the heated and vitiated air.
3. It introduces a constant supply of external fresh air.
4. The flame is powerful, steady, and cannot be affected by draughts.
5. No smoke escaping, the ceiling is not blackened.

TILE HEARTHES.

BENHAM and SONS'
GERMAN PORCELAIN STOVE may be seen in operation. Keeps alight for twelve hours. Consumes only 1 lb. coal in twenty-four hours.—40, 52, 54, Wigmore-street, W.

BENHAM and SONS'
PATENT COAL-ECONOMISING GRATES. This grate in its construction is exactly the reverse of an ordinary Register Grate; instead of being recessed in the mantel, all the heating surface stands out prominently in the room.—40, 52, 54, Wigmore-street, W.

BENHAM and SONS'
PATENT SLOW COMBUSTION GRATES keep alight for several hours and save more than half the fuel.—40, 52, 54, Wigmore-street.

BENHAM and SONS'
COOKING APPARATUS.—For cooking purposes, Benham and Sons have various patented arrangements adapted to the various requirements of hotels, club-houses, hospitals, asylums, prisons, workhouses, schools, colleges.—40, 52, 54, Wigmore-street.

BENHAM and SONS'
KITCHEN RANGES.

BENHAM and SONS'
COOKING APPARATUS.

BENHAM and SONS'
LAUNDRY APPARATUS.

HEATING APPARATUS.

BENHAM and SONS'
HOT-WATER APPARATUS.

BENHAM and SONS'
STEAM-ENGINES.

BENHAM and SONS'
LAUNDRY DRYING-CLOSETS.

BENHAM and SONS are also prepared to undertake **ENGINEERS' WORK** of every description for Asylums, Workhouses, and other large establishments, comprising the following—viz., Steam Engines and Boilers; Heating Apparatus, by means of hot water, hot air, or steam; Hot and Cold Water Tanks and Services; Pipes, &c.; Baths, Lavatories, Urinals and Water-Closets; Laundries, Wash-houses, and Drying Closets; Gas-works and Gas-fittings; Hoists (or Lifts), for Dinners, Coals, &c.—Wigmore-street, London, W.; Factory, 54, Wigmore-street.

BENHAM and SONS'
LIFTS (or HOISTS), to work by Hand or Steam, or Hydraulic Power.—Wigmore-st., W.

BENHAM and SONS'
GAS-WORKS, GAS-FITTINGS, and GAS COOKING APPARATUS.—40, 52, and 54, Wigmore-street.

BENHAM and SONS'
PATENT VENTILATING KITCHENES. It requires no brickwork to fix it. It roasts, bakes, boils, and steams with one fire, and supplies a bath if required. It carries off the heat and smell of the kitchen. It can be fixed in its place in a few hours after the fire-place is cleared out and prepared for it, and by local workmen in a day. —40, Wigmore-st.

BENHAM and SONS'
PATENT COAL UELLARETTE, or "Londonderry," is specially adapted for use in clubs, banking-houses, hotels, railway stations, Government offices, hospitals, steam-packets, noblemen's mansions, entrance-halls, &c. One Londonderry place in a corridor or landing will supply fuel for a whole suite of rooms.—40, 52, 54, Wigmore-street.

THE ILLUSTRATED LONDON NEWS, MAY 23, 1877.

HIS MAJESTY ALEXANDER II., EMPEROR OF RUSSIA.

RUSSIA AND TURKEY.

It is a favourite story with a certain class of political doctrinaires that for all wars we are indebted to "kings and princes," and that a fraternal peace would reign if "the peoples" had their way. There was, no doubt, an age when the personal interest of a king, the ill-temper or caprice of a despotic prince, was all-sufficient to plunge a kingdom into bloodshed; but for more than a century past popular passion, national jealousies and race antipathies, have been the master forces precipitating war; and the mighty conflict of which we see the beginning to-day is the latest illustration of this historical truth. Despotism as is the government of the Czar, and (unless we take Midhat's Constitution to be a reality) equally so that of the Sultan, it is unquestionable that the struggle just opened has been the result of feelings which neither ruler was able altogether to control, certainly not to defy. During the past twelve months we have been hearing alternately that the war feeling in Russia was a help or a hindrance to the Czar; one day that it was promoted to order, the next that it was forcing the Emperor's hand. It may be safely assumed that the fatal turn which events have taken has been the result of no mere Court or Cabinet policy, nor yet of popular enthusiasm wholly antagonistic to the ruler's will, but of a combination of both. That the lines of Russian policy, independent of the Slav agitation, have tended in this direction is too notorious; but there is abundant evidence to the eye of the careful student of recent events that the current of popular feeling in Russia had recently left the Czar little choice but to accelerate his action in obedience to its force. South of the Danube a state of things very similar is seen. With or without the Midhat Parliament the Sultan would have been equally powerless to avert this war, on which Turkey rushes as if yielding to a resistless destiny. The revolution which swept Abdul Aziz from the throne; the ominous ease with which his next successor was put aside after a few weeks nominal rule; and, lastly, the startling *coup* by which the chief author of these great changes was himself struck down, all spoke the peril of the situation at Stamboul. In truth, at no time for some months past was it practicable for Sultan or Czar to avert a catastrophe. Long before the assembling of the Conference at Constantinople the opportunity for diplomacy had passed away.

It is proverbially easy to be wise after the event; but, even apart from the light which present occurrences cast upon the scene, one cannot compliment European statesmanship on its proceedings since May of last year. It is hard to understand how a surprise so great could have befallen, where indications so steadily pointed in the one direction. In the middle of last July a highly influential deputation waited on Lord Derby in reference to the Eastern Question, and to that deputation the Foreign Minister made a speech which, singularly enough, seems to have been almost forgotten by commentators on our Government policy, although its importance must be apparent to those who recall the circumstances. His Lordship reviewed the whole situation, and pointed out the absurdity of gloomy apprehensions. He took up, one by one, the several European States which might be regarded as interested in Eastern affairs, and demonstrated with almost mathematical precision that neither one of them could think of war. Russian finances, not to speak of other causes, bound the Czar to the Peace. Austria was already too much embarrassed by the endeavour to maintain the necessary equilibrium of races in her dual system. France was engaged in the great work of recovery and reconstruction, for which peace and tranquillity were absolutely essential. Italy had enough to do, financially and politically, at home. Germany and Great Britain were alike devoid of ambition, and alike averse to violent action. Nowhere did his Lordship see any ground for uneasiness or alarm.

Since no one will imagine the Foreign Secretary to have dealt otherwise than frankly with the July deputationists, it is nothing less than distressing just now to recall those assurances. If there is one man in the Cabinet on whose "long-headed" sagacity, prudence, and foresight the country has implicitly relied, it is Lord Derby. Yet, if this be a fair sample of the political intelligence and clear-sightedness prevailing at our Foreign Office, the conclusion is not tranquillising. To most men who looked beneath the surface of things, the slow but steady and continuous march of events to their present position has been obvious enough ever since the rejection of the Berlin Memorandum by our Government. Were the Eastern Question a momentary quarrel, or a sudden complication between Cabinets, there might, indeed, be hazard and difficulty in forecast, so much would depend from day to day upon the decision of individual minds. But who does not recognise in it the culmination of that ever-growing, ever-formidable problem which has been Europe's constant trouble and greatest danger for half a century? Nothing that has occurred within the past fortnight should have been a surprise to genuine statesmanship. This war is not the work of rulers or courtiers; it is one of those tremendous collisions between nations in which race and religious antagonisms create a fierce momentum to which the haughtiest potentates have to yield.

A TOUR IN RUSSIA.

BY AN OLD RESIDENT.

If I were asked to describe Russia by a single epithet, I should say that it was flat. Flatness is by far the most prominent feature of the country which stretches from the Polar Ocean to the Black Sea and the Caspian. You may travel many thousand miles by road and rail in that region without ever going up a steep hill or passing through a tunnel. If you are fortunate enough to discover a hill or hillock and take the trouble of ascending it, you are pretty sure to find that the horizon on all sides is a straight line. Some of the rivers, it is true, have on the one side a high bank, and, as you look up at it from the deck of a steamer or small boat, you may be disposed to call it a low range of hills; but if you go to the top you will probably discover that you have been the victim of an optical delusion. What seemed a range of hills turns out to be simply the edge of a tableland stretching away far as the eye can reach, and the secluded little valley which you expected to see behind the summit has no existence in reality.

After flatness, the most prominent characteristic of Russian scenery is monotony. Russians often boast of the unexampled variety of scenery, climate, vegetation, and races which their country contains, and all they say on this point may be literally true. A land which stretches from the Arctic circle to the latitude of Rome cannot be monotonous to the eye of the geographer, botanist, zoologist, and ethnologist, when they sit in their study and survey the whole on a map. But it is not with such wide-seeing people that we have at present to do. The ordinary traveller who uses his own eyes and employs merely the ordinary means of locomotion cannot see more than a few square miles at a time, and cannot jump at a bound from Archangel to Tiflis. Even if he travels by express trains, at the rate of five-and-twenty miles an hour, he will probably after an hour or two begin to long for a newspaper or a novel; and, if he sums up his impressions at the end of the day's journey, he will find very little variety in them. The truth is that in order to get the impression of variety we must bring the various things together. It is of no use to be told that within the limits of the Empire there are ice-fields and luxuriant gardens, forests and prairies, reindeer and antelopes, cranberries and vines, fur-covered Samoyeds and swarthy Georgians, the stern grandeur of the Arctic regions and the soft beauty of the sunny south. We do not feel in travelling the variety which these words suggest. A hundred thousand people, when scattered over a large area, do not constitute a crowd.

On the whole, then, it may be said that Russia is not a country for tourists. Even when, in the course of time, it comes to be supplied with good roads, comfortable hotels, and all the other conveniences of civilised nomadic life, it will never be part of "the playground of Europe." Still, it ought not to be excluded entirely from the tourist world. If a route be chosen so as to include the most interesting parts and to omit as far as possible the regions in which flatness and monotony reign supreme, a summer vacation may be spent both pleasantly and profitably in the dominions of the Tsar. I propose now to make such a tour in the European part of the Empire; and, if the reader will kindly accompany me, I shall endeavour to fulfil the duties of guide and interpreter.

As very much depends upon first impressions, it will be well to avoid the dreary route by Brussels, Berlin, and Königsberg. A continuous journey of four days and three nights in railway carriages, with no bit of variety except the very unwelcome one of crossing the Channel, does not tend to make a man charitable in his judgments, and puts even abnormal good nature to a severe test. Besides this, the country to be traversed between the frontier and St. Petersburg, our first resting-place, seems dreary and desolate even to Russians. As we of course travel in summer, we had better brave the horrors of sea-sickness and go at least part of the way by sea. The sea route entails six days' imprisonment in a not very commodious screw-steamer; but that time can be agreeably diminished by crossing the southern part of Sweden by rail or canal-boat, and sailing from Stockholm to the coast of Russian Finland. As soon as we approach the land we can spend our time pleasantly in observing the strange forms of the bold, rocky coast; and, on arriving at Wiborg, we may leave the steamer and make an excursion to the Falls of Immatra, which, though not very lofty, are very picturesque and have a certain grandeur of their own.

We are now unquestionably in the Empire of the Tsar, but we have some difficulty in believing that we are in Russia, for we hear no Russian spoken around us. In the towns the common language is Swedish, and in the country the people commonly speak Finnish, a very euphonious language of the so-called Turanian family. We do not require to go much beyond the guide-book to discover that the institutions are as little Russian as the language. Having regularly read the newspapers since the outbreak of the Eastern Question, we know that Russia is behind the Ottoman Empire in having no Parliamentary institutions; but Finland has evidently already had its Midhat Pasha, for it possesses both a Parliament and a Constitution. And a very curious Parliament it is, consisting of no less than four Chambers, each of which is composed of deputies from one of the four officially recognised social classes—the Nobles, the Clergy, the Burghers, and the Peasantry. For ordinary affairs the consent of three of the Chambers is sufficient; but in all matters relating to the fundamental laws, the rights of the various classes, and the raising of new taxes, all the four Chambers must agree. All this is very non-Russian, and shows plainly that Finland, though officially a Russian province, is not a part of Russia in the ordinary sense of the term. What is it, then? Here comes our old Russian friend Ivan Petrovich, who has been long settled in Wiborg. Perhaps he will explain to us the anomaly.

Ivan Petrovich, though long resident in Finland, has not been at all contaminated by local influence. If the surrounding Finno-Swedish atmosphere has had any influence on him, it has been to develop his inborn Russian patriotism. All that

is peculiar in Finland he feels to be a grievance, and he is ever ready to ventilate his grievances when he can find an attentive listener. Meeting foreigners in search of information, he at once launches into his subject. He reminds us that Finland was long a Swedish province, and that the towns are still thoroughly saturated with the Swedish spirit. In 1809 it was conquered by Russia, and soon afterwards formally annexed to the Empire; but the Emperor of that time, Alexander I., did not act in the way that Ivan Petrovich would have recommended. Instead of sweeping away the existing institutions and putting genuine Russian institutions in their stead, his Majesty endeavoured to preserve as far as possible what actually existed, and adopted the title of Grand Prince of Finland. Hence arose all the anomalies of which Ivan Petrovich complains. Finland, he says, enjoys many privileges which it ought not to possess and escapes many burdens which it ought to bear, and, consequently, its inhabitants form a kind of privileged class in the Empire. Though they enjoy all the protection afforded to Russian subjects, both at home and abroad, they do not contribute to the expenses of diplomatic and consular agents, and, until quite recently, gave only one battalion to the army instead of 30,000 men, as they ought to have done. They have their own coinage, their own post office, their own national bank, and their own custom-houses, which do not admit many kinds of Russian goods. Above all, they treat Russians who live amongst them not as masters, or even fellow-countrymen, but as foreigners. On this last point Ivan Petrovich waxes pathetic, and condemns in the strongest terms the sentimental generosity of Alexander I. and his successors. In his words there is, amidst a good deal of patriotic fanaticism, a certain amount of truth. During the first quarter of the present century the Government did show a certain partiality to its non-Russian subjects. It not only preserved the institutions of Finland and the Baltic Provinces, but gave a kind of constitution to the Poles, and accorded many valuable privileges to foreign colonists from Germany and other foreign countries. These measures were based on apparently sound considerations of State policy, but they were none the less galling to the self-respect of genuine Russians. The Russian found himself less privileged than foreigners in his own country! And in many respects the system did not produce the desired result. The Swedes in Finland and the Germans in the Baltic provinces became more and more exclusive, and resolutely resisted all Russifying influence; expressing, often in a very inconsiderate way, their want of respect and admiration for the Russian character and institutions. The foreign colonists exercised little or no civilising influence on the surrounding peasantry, and remained foreigners even in the third and fourth generation; whilst the Poles did all in their power to transform their local autonomy into political independence, and to bring about the dismemberment of the empire. In consequence of these unpleasant facts the Government has in recent years reversed its policy, and now strives to assimilate all heterogeneous elements. Of course, this attempt at assimilation, or "Russification," as it is termed, produces obstinate resistance. Finlanders, Poles, and Germans feel that they are more civilised than Russians, and consider Russification to be what an ingenious Irishman once termed "retrograde progression." And, unfortunately, in this work of assimilation the religious element comes into play. In Russia, religion and nationality are so intimately interwoven, both in the minds of the people and in many of the forms of daily life, that they are practically almost identical. However we may explain this curious circumstance, the fact is undeniable. A man may be born in Russia and be educated in Russian schools, he may be a loyal subject of the Tsar and occupy a high position in the public service, but he will never be a genuine Russian in the full sense of the term if he remains a Protestant or a Roman Catholic. Pure Russian nationality is only to be found in conjunction with Greek Orthodoxy; and, accordingly, the Government would very much like to see all its heretical and schismatic subjects enter the pale of the official Church. How far it endeavours to drive them in is a question which is at present attracting considerable attention, and the reader may naturally desire to know how far the current accusations are well founded. It is, however, by no means easy to arrive at the truth. When a Consular agent like Colonel Mansfield relates what he has seen with his own eyes, we may regard the fact as duly proved; but when he relates from hearsay what is said to have taken place at a considerable distance, his testimony must be accepted with extreme caution. In Poland especially this caution requires to be exercised. Anyone who has come much in contact with Poles must be aware that whenever their patriotic feelings and their hatred of the Muscovite come into play their statements are not remarkable for accurate truthfulness. Whatever may be the truth in this particular case, certain it is that the persecuting tendencies of the Russian Government are in general greatly exaggerated. So long as Russians, or foreigners resident in Russia, adhere nominally to the faith in which they were born, and allow others to do likewise, they enjoy the most complete religious liberty. The Greek Orthodox, the Roman Catholic, the Protestant, and the Mussulman enjoy equally the protection of the State, and are free to worship God after the manner of their forefathers. But they are not all equally free to make converts. A distinction is made between converts and perverts. A Roman Catholic or Protestant may pass over to the Greek Orthodox Church, but a member of the national Church may not become a Roman Catholic or Protestant. Though the Government is, under ordinary circumstances, strongly tinged with religious indifference, and makes no strenuous efforts to convert unbelievers, it does not allow the official fold to be diminished. Of course this is a very serious infringement on complete liberty of conscience; but, as comparatively few people desire openly to change their religion, it has not so much practical significance as might be supposed. Still, it is a blot, and a very serious blot, on Russian legislation; and it is to be hoped that the present Emperor, who has accomplished so many beneficent reforms, will see fit to remove this remnant

of old religious intolerance. To protect orthodoxy by the criminal code indicates surely a strange want of faith in the inherent excellency and power of Mother Church.

But we have inadvertently wandered a long way from Wiborg. Let us return at once and get on board the steamer again. Perhaps at some future time we may hear the end of our friend Ivan Petrovich's oration. He is anxious to justify to benighted foreigners the policy of Russification, and can make a very plausible argument by showing that the so-called Finlanders, the dominant class, are not Finns at all, but Swedish intruders, and that the Russians, in opposing them, are defending the rights and liberties of the aborigines. Unfortunately, we have no time to listen to his ingenious defence; for the third bell has been rung, and we must bid him a hurried good-by.

The first object of interest which we see from the steamer is Cronstadt—a name very familiar to English ears. From the distance it seems an insignificant island, but it is in reality one of the strongest fortresses in the world. So, at least, Russians say, and I am not in a position to contradict them. Certainly, it kept at bay during the Crimean War a great British fleet, and since that time it has been immensely strengthened; so that now, if report speaks true, it could defend St. Petersburg against all the ironclads in the world. Shortly after passing it, we discover on the southern shore of the gulf two Imperial palaces, imbedded in trees—Peterhof and Strelna; and soon afterwards we notice, right ahead near the horizon, a peculiar quivering light which looks like a great yellow meteor. An ingenious passenger, who is always on the lookout for the marvellous, assumes that it is a gigantic lighthouse constructed on a new principle; but his better-informed companion assures him that it is merely the sun's rays reflected on the burnished dome of St. Isaac's Cathedral, the biggest church in St. Petersburg.

It may be stated as a general rule that Russian, like Oriental, cities look very grand and beautiful from a distance, but lose very much of their grandeur and beauty by closer inspection. St. Petersburg exemplifies only the first half of this rule. Seen from a distance, it is grand and beautiful; but, unlike the great majority of Russian towns, it does not lose its grandeur and beauty when you enter it—at least if you enter it by steamer. The deep, rapid river, on which skim perpetually swift steam-launches and small rowing-boats—the far-stretching quays of massive masonry, half concealed behind barges and steamers—the big, solid houses lining the quays on either side—the long, elegant stone bridge with iron parapet, behind which is seen the Academy of Arts, the Fortress, and the Winter Palace—the gilded domes of the churches rising above the whole and glittering red in the rays of the setting sun,—all this forms a picture of which the Petersburgians are justly proud. And the impression produced by this scene is not by any means dispelled by entering into the heart of the city. Here and there we may experience a sensation of bareness, and occasionally we may be reminded of "the city of magnificent distances;" but this is probably because we are unaccustomed to cities laid out by an autocratic architect on land of no value. On the whole, the city is grandiose in style and proportion. The streets are for the most part wide and straight, and run at right angles to each other, but they are by no means so mathematically and painfully regular as those of Mannheim or Karlsruhe. They always start with the intention of going in a perfectly straight line, and this intention never encounters any opposition from elevations or depressions; but occasionally, when they meet with one of the numerous meandering canals, they forget for a moment their rigid principles and become flexible. The size of the houses, many of which contain a score of independent apartments, is in keeping with the length and breadth of the streets, and the squares, palaces, theatres, and churches are on the same colossal scale. The Nefski Prospect—which is a kind of Regent-street, Piccadilly, and Oxford-street rolled into one—is certainly one of the finest streets in the world.

In our character of tourists we naturally "do the sights." They are, fortunately, not very numerous. First we may visit the Hermitage, which contains a second-rate collection of Italian and Spanish paintings and a first-rate collection of the old Dutch masters. Then we may look into one or two collections of modern Russian pictures, showing very tolerable work, but nothing of striking originality. If we care to see big halls and rich modern upholstery, we may walk through the Winter Palace; and, if our tastes be literary, we may spend an hour or two in the Imperial Public Library, which contains, among other curiosities, the library of Voltaire. The interior of the great cathedral and the other churches must be seen, but we shall find there nothing to detain us long. Indeed, the whole work of sight-seeing may be got through in a single day, and in the cool of the evening we can spend an hour or two in driving about the islands or gazing at the sunset from "the Point" a favourite rendezvous for those who are compelled to spend the summer on the banks of the Neva. We commonly associate St. Petersburg with ideas of snow and ice, costly furs and warm sheepskins; but in reality its inhabitants suffer quite as much from heat as from cold. During the long winter the ground is always covered with snow, the thermometer sinks occasionally to 30 deg. below zero, and, when a cutting east wind blows, the noses and ears of foreigners and natives alike are in danger of being frostbitten. Then every house must have double windows and double doors, and every room must be heated with hot air or by an enormous stove. When you open a pane in the double windows, the cold air rushes into the room in the form of steam, and makes you modify your English ideas about the necessity of frequently airing an apartment. When you go out to walk or drive you must put on a long, high-collared fur coat, and cumbersome galoches to protect the feet. You perhaps feel inclined to have a run to get up the circulation; but, if the weather is very cold and bright, you had better check that impulse and content yourself with simply drawing your fur cloak closer around you, for any violent exertion in the very cold, bright

days leads almost instantaneously to loss of breath, precisely as on the top of a high mountain. The lungs, it would seem, can bear only a certain amount of very cold atmosphere, and, unlike over-zealous, unconscientious tradespeople, they refuse to undertake more work than they can perform. You imagine, perhaps, that you will indemnify yourself for all these discomforts by an unlimited amount of skating; but in this you will probably be disappointed. The Russians are not a skating people. Snow falls almost as soon as the rivers and lakes are covered with ice, so that any long journey on skates is impossible. Once I succeeded, at considerable risk, in having a run of fifty miles on the Volkhof—the river which connects Lake Ilmen with Lake Ladoga—and the excursion was regarded by the natives as a wonderful feat! The more sceptical among them declared the story to be a myth, for such a thing had never been heard of. In St. Petersburg, indeed, you may have much more skating than one ever dreams of in England. There the English colony started many years ago a skating club, and now the Russians have learned to make skating rinks; but the amusement has never become very popular among the natives, and St. Petersburg is, so far as I am aware, the only town in the Empire where good rinks are to be found. And even here in the very cold weather skating cannot be had, for when the thermometer falls, to a certain extent (about—15 deg. Réaumur), the ice becomes hard as glass, and the skates, however sharp, will not bite. During the festivities which took place at the time of the Duke of Edinburgh's marriage fears were entertained that the skating fête prepared by the English colony might be prevented in this way; nature, however, showed herself more propitious than was expected, and the fête proved one of the most brilliant ever given on the Neva. Many people prefer the excitement of the ice-hills, or *Montagnes russes*, as they are called, to the tamer pleasures of the skating rink. If made sufficiently high and steep, these "hills" enable one to enjoy all the pleasure which can be derived from being pitched out of a high window, without the absolute certainty of breaking one's neck. Men of sporting tendencies can have a still more exciting kind of amusement in the form of a bear-hunt. It must, however, be admitted that bear-hunting is not quite such an heroic amusement as the name seems to indicate. There are, indeed, in some of the outlying provinces—so, at least, I have been assured, but I cannot speak from observation—a few peasants who may fairly be called "mighty hunters," men who can go out alone into the forest and face old Bruin with nothing more deadly in their hands than a heavy wooden club and a long knife. Report says that somewhere in the Ural there is even a woman who regularly seeks such dangerous encounters, and always succeeds in bagging the game. But that is not the kind of bear-hunting which is practised by the amateur sportsmen of St. Petersburg. Since none of these gentlemen are present, I may tell you, gentle reader, in strict confidence, that the bear is always *bought* before it is shot. When peasants discover one of the shaggy fraternity enjoying his winter siesta, their first care is to find a purchaser, and for this purpose they send a deputy to some member of the sporting world in the city. A bargain is made (the sum depending on the distance of the lair from a railway station), and on the appointed day a party of sportsmen, armed with rifles, proceed to the spot. The boaters then go into the forest and endeavour, by howling and yelling, to rouse the bear and drive him to the point where the sportsmen are waiting to receive him. If the affair has been well arranged he has little chance of escape. Being of a naturally pacific disposition, he tries to get away from his howling persecutors, and runs unsuspectingly "into the jaws of death." Thus, you see, gentle reader, amateur bear-shooting is not a very dangerous amusement. Still, if you have had no experience of the kind, you will do well to be cautious. Though your contract with the peasant may have been made in due form, remember that the bear has not signed it, and consequently does not consider himself bound to act as he is desired. He will make off if he possibly can; but, if he cannot, he may show in a very disagreeable way his instinct of self-preservation and his means of self-defence. I have known several men who were mauled, and one good sportsman who was scalped, by bears' claws. The rule you have to follow is—either make a good hit or a good miss. In the one case you disable your enemy, and in the other you enable him to escape. If you adopt a middle course and wound him, look out for your scalp! Before you have time to think of a second shot you may find yourself in the savage brute's embrace. Perhaps you may be released by a well-aimed, well-timed shot from one of your companions; otherwise your plight will be miserable indeed. Your quality of British subject, and all the real and imaginary protection of the Foreign Office on which you are wont to rely, will be of little service to you in that dread moment; for Bruin does his work swiftly, effectually, and without diplomatic formalities, and is no respecter of persons. The Autocrat of All the Russias himself, in his own dominions, had a few years ago a very narrow escape of the kind. But for the timely aid of the two spear-men who always accompany his Majesty on such occasions, the bear would have caused some alterations to be made in the *Almanach de Gotha*, and have exercised a considerable and lasting influence on European History!

There is something at once solemnising and ridiculous in the thought that a humble quadruped, belonging to a family whose name has never been mentioned in connection with the suffrage, should be able—or almost able—in a moment of blind rage to modify the destinies of a great empire! Yet so it is. In England bears might swallow half a dozen Sovereigns, and even two or three Prime Ministers, without materially modifying the policy of the country; but in Russia the case is quite different. There the Sovereign can do as he or she pleases, and the Imperial decision may be determined by a very insignificant item in the chapter of accidents. There is a capital illustration of this in the anecdotes told of the Empress Elizabeth. She was about to sign a very important treaty, which would have compelled her to declare war, when an

indiscreet fly, regardless of the divinity that doth hedge an Empress, alighted near her pen and made a blot. The incident seemed to her Majesty an evil omen, and made such an impression upon her that she laid the paper aside and never finished her signature. Thus a common little fly, with no more intellectual ability than is required to make a blot, had more political influence than the sixteen millions of inhabitants which at that time formed the population of the Empire! *Se non e vero, e ben trovato.*

We have recently heard a good deal about the popular pressure to which the Tsar is supposed to yield; and some Russians even go as far as to assert that his Majesty never does anything contrary to the popular will. "Our Government," say these, "though autocratic in form, is in reality representative. Though we have no Parliament, we have other means of expressing our wishes, and the Emperor cannot disregard them." Certain Russians love to speak in this tone to foreigners; but they would never think of doing so to their own countrymen. If they really believe what they say, then it is a case of the wish being father to the thought. The Emperor is himself a Russian, and consequently to some extent under the same influences as his people; but he is quite capable of having an independent opinion or of adopting the opinions of a small minority, as he has done in the question of classical versus scientific education, and no amount of popular clamour can in such a case shake his determination. But is he not, ask certain other people, forced to yield to pressure of another kind? The whole country, say these, is undermined by revolutionary propaganda. The Tsar sits, as it were, on a volcano, and is obliged to let out from time to time a little of the explosive material, lest he and his whole family should be blown into the air. At the present moment, for instance, he has to adopt the Napoleonic ruse of making war, so that the attention of his more patriotic than loyal subjects should be withdrawn from home affairs. All this is utterly false. There does exist a certain revolutionary propaganda, which causes the Government a great deal of unnecessary trouble, but it has not the slightest chance of overthrowing the existing order of things any more than Fenianism has a chance of breaking up the British Empire. The great mass of the nation are devotedly and unreservedly attached to the reigning dynasty, and would strongly disapprove of anything which tended to limit the autocratic power. Not only the revolutionary tendencies, but even the legitimate constitutional aspirations are confined to a very small minority of the people, and whatever the Tsar commands is certain to meet with no serious resistance.

But to return. I was saying that the Petersburgians have to suffer as much from heat as from cold. Though the winter is long and dreary, it does not last all the year round. Some time in April or the beginning of May the warm weather comes. The snow melts, leaving oceans of slush in the streets, the sledges are replaced by wheeled vehicles, the ice on the river begins to move, the steamers and sailing craft which have been imprisoned for six months prepare for work, and the sun sends down a flood of heat, as if anxious to make up for lost time. Soon the grass, the shrubs, and the trees show signs of reviving, and in the space of a few days the bare branches and twigs cover themselves with the fresh, bright foliage of spring. This is the most delightful time of year in Northern Russia. Unfortunately, it is as short as delightful. Ere a few weeks have passed, the sunshine that was so pleasant after the long black winter, becomes oppressive. The bright verdure of the foliage becomes sickly grey, the air becomes heavy, the odours that glide about the streets remind one that the drainage of the city is far from perfect, the pleasant houses that one frequented during the winter months are one after another shut up, the accustomed faces are no longer met with in the streets, and those who are obliged to remain in the city feel like the poor orphan school-boy who does not go home for the holidays. Among the upper classes there are few such unfortunates. Those who cannot go to estates in the country or make a foreign tour find for the most part summer quarters in the islands, or at Tsarskoe Selo, Pavlovsk, Strelna, Peterhof, or some other place in the immediate neighbourhood. Then come the long, long midsummer days, when the night brings neither darkness nor coolness. How different from the ordinary conception of St. Petersburg—the city of ice and snow! All extremes of temperature are objectionable, but in St. Petersburg, where everything is arranged for winter, extreme heat is much more disagreeable than extreme cold. Let us, then, tarry no longer. We have "done the sights" as conscientiously as can be expected from a British tourist, so we may join the south-eastward exodus and pay a flying visit to Moscow.

The railway by which we travel is one of the oldest in the country, and was constructed under the personal supervision of the Emperor Nicholas. That explains the massive style of construction. Nicholas was a man who loved to do everything in the grand style, and was not in the habit of accurately counting the cost. The Moscow Railway reflects his character truly in this respect. It runs almost in a straight line, because the Tsar so ordered it, and the principal stations are built in a massive—one might almost say a grandiose—style. At each of these the train stops long enough to enable the passengers to dine or sup copiously—an arrangement that necessarily causes considerable delay, but has some corresponding advantages. The whole distance is about 400 miles—very nearly the same as that between London and Edinburgh—and the journey is made by express-train in about fifteen hours. This will seem slow travelling to those who are accustomed to the Flying Scotchman and the Wild Irishman, but it must in fairness be added that accidents on this line are very much less frequent than on the principal English Railways. If Russian locomotives do not go so fast as English ones, they may at least plead in their defence that they are less addicted to running off the rails and dashing into goods-trains.

The tourist's first impressions of Moscow do not prepossess him favourably. The railway station is in the outskirts of the town, and the streets which lead to the central quarter are

THE RUSSIAN CIRCULAR IRONCLAD SHIP, ADMIRAL POPOFF, FOR THE BLACK SEA COAST DEFENCES.

THE TURKISH IRONCLAD FRIGATE HAMIDIEH (FORMERLY NAMED THE MEMDOUHIYEH).

narrow, winding, dirty, and execrably paved. The jerks and jolting would certainly prove too much for the springs of any English carriage, and try severely the traveller's muscles, sinews, and good-nature. But when he reaches the central part, if he have aught of the picturesque and antiquarian instincts in him, he will immediately forget any little personal inconveniences. There before him rises the Kremlin in all its quaint originality. He gazes with wonder, not unmixed with admiration, at the high stone walls, the curious old towers, the venerable Cathedral with its gilded cupolas, and the grotesque Church of St. Basil, one of the most fantastic architectural conceptions that ever issued from human brain. And when he examines the details he finds most interesting objects that recall every period of Russian history. There are still remains of the time when Moscow was but one among many independent Principalities, and not always even *primus inter pares*—when all "the Russian land," and Moscow as part of it, paid tribute to the Tartar Khan. Much more numerous are the remains of the period when the ancient city had risen high above her rivals, had thrown off the Tartar yoke, and had combined all the independent Principalities into the Tsardom of Muscovy. That was the period when Ivan III. ordered an Italian architect to construct the fantastic Church of St. Basil—when Ivan IV., surnamed the Terrible, broke the power of the proud old Muscovite aristocracy and quenched the republican spirit of Novgorod in the blood of 80,000 of its inhabitants—when the Poles and Cossacks overran the country, and ruthlessly pillaged, murdered, and desecrated in a way that Bashibazouks might have been proud of—when the mild, pious Alexis invited to his dominions all manner of cunning foreign artificers and soldiers skilled in the art of war, thereby paving the way for his energetic son, who was afterwards to be known as Peter the Great. Peter loved not the conservative Muscovites, and the conservative Muscovites loved him not. In order to carry out his vast reforms he was obliged to build a new capital and to transport thither the seat of Government; but Moscow retained, and still retains, the first place in the hearts of the Russian people; and once, at least, in modern times she has shown herself worthy of that affection. When, in 1812, Napoleon invaded the country, and fondly imagined that from the Kremlin he could dictate his own terms of peace, she forgot all selfish interests and nobly sacrificed herself on the altar of the Fatherland.

Moscow and St. Petersburg represent in a very graphic way the two great periods of Russian history. The old capital has a look of antiquity and irregularity which show that, like the famous Topsy, it "grewed;" whilst the new capital is regularly built, and bears everywhere traces of having been constructed according to a clearly-conceived plan. Russian history before Peter the Great closely resembles Moscow. Down to the time of the Great Reformer the country had a natural spontaneous life, struggling with difficulties as they arose and solving them more or less successfully by its own traditional wisdom. If the old Muscovite Tsars had any grand definite policy, it was to extend their dominions as rapidly as possible, and to retain all political power in their own hands. They had no idea of civilising their subjects or of constructing a symmetrical Administration according to the principles of political science. They were not averse to having in their service a few foreigners who knew something of architecture, artillery, and other useful arts; but they did not go much further in that direction, and even that little was very distasteful to their subjects. The ordinary Russian of that day regarded everything foreign as heretical and dangerous to salvation. He did not object to hard drinking, because that was a good old national institution, sanctified by immemorial custom; but he was very much scandalised by the sight of a tobacco pipe, because smoking was a foreign invention patronised by Papists and Protestants. And in this, as in all similar matters, he could give a reason for the faith that was in him. The distinction between intoxicating *vodka* and the fragrant weed was founded on no less authority than Holy Writ, for is it not written that a man is defiled, not by that which entereth into him—i.e., *vodka*—but by that which cometh out of his mouth—i.e., tobacco smoke. Whether they had equally good authority for the other parts of their conservative creed I know not, but I do know that they stuck with great tenacity to their time-honoured customs and beliefs, and sometimes showed themselves ready to die rather than depart from what had been observed by their forefathers. Among such people it required a very strong and a very bold man to introduce even moderate reforms, and any ordinary mortal, though strong and bold as his fellows, would have considered it simple madness to attempt any sweeping changes in the social or political life. But Tsar Peter was not an ordinary mortal. He had that impetuous rashness and that reckless contempt for opposition which drive their possessor either to destruction or to a high place among historical personages. Having travelled in foreign countries, he had been charmed by the results of Western civilisation, and determined to introduce it into his own country, however unpalatable it might be to his people and their priests. The scheme was a daring—we might almost say mad—one, and certainly could be justified by nothing but success; but it had that best of justifications. Not that all Peter's schemes turned out successful. Far from it. Very many of his plans utterly broke down, and even those which had a better fate did not produce nearly all the beneficent results which he anticipated. But he did succeed in breaking with the past and putting his country on a new road. Russia was no longer allowed to "grow" after its own fashion. Its institutions were remodelled according to the political wisdom of Germany, Holland, Denmark, and France, and the upper classes were compelled to adopt the dress, and in a lesser degree the ideas, of Western Europe. The conservative tendencies of the nobles were extracted partly by the new schools and partly the old *knout*, whilst the priests, monks, and ecclesiastical dignitaries were kept in order by the civil power. In short, the Tsardom of Muscovy, with its ancient venerable capital on the Moskva, was transformed into the Empire of Russia with a brand-new capital on the Neva. Up till

that time Muscovy had been considered an Asiatic Principality, and the Tsars had been regarded by the Christian Potentates of Europe pretty much as the petty princes of Central Asia are regarded by us at the present day; from that time onwards Russia was to be one of the European Powers, and her Imperial rulers were to have a hand in all the great congresses, conferences, and other ingenious expedients by which short-sighted, feeble-handed Diplomacy endeavours to preserve the public peace.

The rapidity with which Russia has grown during these two hundred years is certainly amazing. In 1682 her geographical area was about 5,600,000 English square miles; in 1867 it was about 7,535,000. The increase in her population is even more astounding. Between 1722 and 1857—that is to say, in less than a century and a half—it has risen from 14,000,000 to 74,000,000! We may perhaps console ourselves with the thought that our own territory and population have grown with at least equal rapidity. If we include our colonies and dependencies, we may say that Russia is still small as compared with the British Empire. British India alone has more than double the population of all Russia! But in this comparison there is one important point which must not be overlooked. Our empire is sporadically scattered over the globe, and many parts of it are linked together by a band that may snap at any moment. Our colonies are really independent States which contribute little to the political power of the mother country, and some of them are even adopting protective tariffs for the purpose of excluding our manufactures and creating industries of their own. We cannot impose upon them any policy that does not suit their convenience; and even the nominal supremacy which we exercise over them will probably—at least in the case of several of them—not be of very long duration. Russia, on the other hand, is a compact territory with a highly-centralised administration. What the Czar commands becomes law, not only in the vicinity of St. Petersburg and Moscow, but in every part of the Empire, from the German to the Chinese frontier, and from the Polar Ocean to the northern slopes of the Himalayas. Within that vast area he can do as he pleases, and no one dares to oppose his will. Political prophets, who found their predictions on materials invisible to ordinary eyes and unintelligible to the ordinary understanding, sometimes declare confidently that the great Colossus must soon fall to pieces. For my own part, I cannot lay claim to the gift of prophecy, political or other; but I must say I cannot discover any symptoms of this expected disruption. I have travelled in many of the outlying provinces and conversed with many of the inhabitants who are Russian subjects without being Russians in the ethnographical sense, and I have never discovered anything that seemed likely to grow into local political independence. Nowhere have I found what a German might call a healthy, vigorous "separatismus." The Russian who lives long in an outlying province may adopt some of the manners and customs of the natives, but his political instincts and sympathies remain unchanged. The idea of dismembering the empire probably never entered his mind, and if it is suggested to him it will sound in his ears almost as blasphemy. I have been told by an Englishman who travelled in Siberia, and who has, I believe, since published his observations, that he had found there the germs of a separate nationality. In Siberia, he said, a considerable part of the educated population is composed of Polish exiles and their descendants, who are neither Poles nor Russians, but Siberians. As the gentleman in question is an acute and conscientious observer, I do not venture to call his statements in question, but I cannot accept the conclusion that these Siberians are likely to found a separate nationality and acquire political independence. These men of Polish extraction form but a very small section of the people, and their numbers are not increasing nearly as rapidly as the purely Russian population. All Siberians have, it is true, certain slight peculiarities of character and manners which distinguish them from the ordinary Russian, but they are, so far as I have been able to observe, thoroughly Russian in feeling and sympathies. Indeed, it is often said by people competent to judge that, if you wish to find a genuine Russian, you must go to Siberia. There, it is said, you will still find the genuine Muscovite of the old type, uncontaminated by modern life and foreign influence. Say to such a man anything inconsistent with an unbounded, unquestioning devotion to "Papa Tsar," and you will see what effect it will produce on him—or rather, you had better not make the experiment, for in all probability he would consider it his duty to hand you over to the authorities. If Siberia has thus remained thoroughly Russian when communications were difficult, it will surely not become less so when the railway which is at present in course of construction has been completed. Everywhere in European Russia the railways are rapidly destroying the little local life that formerly existed, and the telegraphs have diminished the little independence which the local administration formerly enjoyed.

If we visit the Ethnographical Museum, which is one of the most interesting sights of Moscow, we may feel inclined for a moment to look favourably on the predictions of Russian dismemberment. We find there an immense collection of lay-figures, representing all the nationalities which profess allegiance to the Tsar. "And, truth to tell, it is a motley company!" There is the Samoyed, covered with reindeer skin from head to foot, and a hideous group of Fire-Worshippers from Bakou, wearing only a minimum of clothing—the squat, stunted Buriat, and the tall, stalwart Cossack—the uncouth, timid Tchuvash, and the agile, fierce Circassian—Tcheremiss and Votiaks, Bashkirs and Kirghis, Tartars and Kalmucks, Poles and Germans, Georgians and Jews, Persians and Lesghians. Turning to the religious statistics, we find an almost equally great variety—Greek-Orthodox, sectarians of every denomination, Gregorians, Roman Catholics, Protestants, Jews, Mohammedans, Idolaters! Surely, in a nation which comprises so many races and so many religions, there must be many dangerous elements of discord and disruption. No doubt there are; but the danger is not nearly so great as at first sight

appears. Though there are many races, the Russians compose four fifths of the population. The Finns show the respectable number of more than four millions and a half, but they have no nationality, in the political sense. The word includes a dozen tribes, which have no common language, no recollection of political unity, no special bond of sympathy with each other, and which are being rapidly Russianised. The Jews amount to nearly two millions and a half; but in Russia, as elsewhere, the children of Israel have no separatist political aspirations. The only nationality likely to cause the Russians any serious trouble is the Poles, and they have very little chance of ever regaining their political independence, which would be a thorn in the side not only of Russia but also of Germany and Austria. The Baltic Provinces are sometimes supposed to have a better chance. The inhabitants, it is said, are Germans; and though they have little power of their own, they may, perhaps, induce Bismarck, or one of his successors, to espouse their cause and unite them with the German Fatherland, from which they have been so long separated. To those who speak in this way it must be admitted that everything is possible; but it must be added that there are probable things and improbable things, and that the annexation of the Baltic Provinces by Germany belongs decidedly to the improbable. The majority of the population are not German but Finnish. The nobles and the commercial classes are alone German, and they cannot reasonably desire annexation to Germany, for they would thereby lose the important advantages afforded them by their present anomalous position. The nobles supply a very large proportion of the Russian "generals," civil and military, and play a far more important part than they could possibly play in the German Empire. In like manner the commercial classes would greatly suffer by annexation, for the commercial importance of the provinces would be immensely diminished if they ceased to be Russian.

In a country with so many nationalities you naturally expect to find an endless variety of curious primitive industries, and you think with pleasure of the neat, original objects that you will take home as presents to your friends and relations. Perhaps you even dream of making a little Russian museum in your library, and are impatient to go to the bazaars. Let us go thither by all means. The bazaar is in the "Chinese Town," close to the Kremlin, so that on our way we can have another look at those picturesque old walls and fantastic towers. But don't expect to find many curiosities for your museum, or you will inevitably be disappointed. Neither the Russians nor the various tribes which they have annexed are very remarkable for mechanical ingenuity or refined natural taste. In many parts of the country there are peculiar local industries; but of the articles produced very many—such as big boxes, tubs, stoneware jars, and wooden sledges—cannot be conveniently stowed away in a portmanteau; and others—such as nails, tar, and tallow—are scarcely suitable for presents. Still there are a few objects that will suit your purpose. Some heretical foreigners buy unconsecrated Icons as mantelpiece ornaments, and purchase largely cloth of gold and silver, from which ecclesiastical vestments are made, for the purpose of making window-curtains and covering drawing-room furniture; but it is to be hoped that you have sufficient veneration for things sacred not to encourage such a practice. You may, however, buy as a curiosity some specimens of the cloth of gold, much of which is extremely beautiful in design and workmanship. From the numerous patterns, many of which are commonplace and gaudy, you will have no difficulty in selecting specimens of genuine old Byzantine ornamentation. Then there are the enamels. If you can find a good old specimen of what the French call *email cloisonné* you may safely give a good price for it, and you will not regret your bargain. If nothing of that kind is to be had, you may invest in a few of the ordinary modern enamelled cups. Many of them are exquisite both in design and colour. The *niello* work, too, can be recommended. But the most thoroughly original of all is the lace and the embroidery on towels, both of which are made by the peasantry according to traditional models. Of late years several manufacturers have been induced by the Director of the Industrial Museum to reproduce some of these native designs on various kinds of textile fabrics; but the experiment has not proved, so far as I can learn, a commercial success. The natural, unsophisticated taste of the peasantry has been corrupted, it seems, by foreign importations, and they now prefer vulgar, gaudy patterns to the old simple designs which they inherited from their forefathers.

Perhaps you think of investing in some furs; but I would advise you to refrain, especially if you do not happen to be a connoisseur. The idea that furs may be bought cheap in Russia is a popular fallacy. If you wish a sheepskin there is no objection to your buying it here, but it will be merely an incumbrance during a summer tour, and useless to you at home. The higher class of furs are very expensive in Russia as elsewhere. I remember, a few years ago, a friend of mine, who shared the fallacy above alluded to, requested me to purchase for him the finest fur I could find in Moscow. Being a rich man, he carelessly added in a postscript—"Money is no object. I wish my wife to have a really beautiful cloak." In penning these words he contemplated, as he afterwards admitted, spending something like a hundred pounds; but, had I taken him at his word, I should have been obliged to send him in a bill for about two thousand pounds sterling! Beware, then, of giving carte blanche to a friend for the purchase of a Russian fur. Russians can detect the peculiar excellences of furs far better than we can; and therefore a really exquisite specimen—one that combines great warmth, extreme lightness, equality of colour without being dyed, and all the minor requisites which only the experienced eye can detect, will probably bring a higher price in St. Petersburg or Moscow than in Paris or London.

Now that we have completed our purchases, let us go and have some refreshment in a "traktir"—a genuine national institution where we are likely to find some "local colour." There is a large one close by, and we are sure

to find there some good specimens of the Russian merchant-class.

The room, as you perceive, is not very large, and a considerable part of it is occupied by the enormous automatic barrel-organ, which reaches to the ceiling, and is intended to represent an entire orchestra. The instrument might perhaps be pleasant enough in a gigantic hall or Crystal Palace, but here, in this small, low-roofed apartment, it is simply deafening, so that we cannot but think, with all due deference to Muscovite taste, that the £2000 sterling expended on its construction might have been more profitably employed. Such, however, is not the opinion of the native inmates, and they ought to know best. They thoroughly enjoy the harmonious din, and delight especially in the deep bass notes that make the building shake. In the music there is nothing Russian or peculiar. It is simply a collection of the Italian operatic airs which London organ-grinders patronise, and the instrument is merely a magnified, intensified barrel-organ, such as a bilious man might see and hear in a horrible nightmare. Next to the organ the most conspicuous object in the room is the big *samovar*, or tea-urn, which likewise reaches almost to the ceiling, and has from its magnitude also a nightmare look about it. How many gallons of boiling water it may contain I know not, but I have no doubt that if the quantity could be calculated the result would cause no little astonishment. It forms the centre of activity in the place, and round it collect the waiters—active, intelligent youths, dressed in white trousers and light silk shirts worn in the form of a blouse, who dart about like swallows. The third object in the order of magnitude is that portly Muscovite who sits by the window—as round and almost as capacious as the samovar. He has just finished his sixth tumblerful of scalding tea, and shows no signs of flagging. Had weak tea been the beverage in which the old Teutonic toppers indulged, that worthy Slav might have held his own among them, and worthily upheld at the great drinking-bouts the honour of his race. As it is, he has no consciousness of being anything heroic, any more than the old giants were when they went about their daily avocations. He is merely drinking his tea in a quiet, steady, business-like way as a respectable, weighty Moscow merchant should do; and, as to the quantity, it is nothing more than he and his fellow-merchants are accustomed to. His neighbour, it is true—that lean, white-haired man—cannot keep pace with him, but that is not wonderful, for he is not a genuine Russian merchant—at least, he was not so born and bred. Though the two men are now on a certain footing of equality, both being wealthy men on 'Change, their past history is very different. The capacious gentleman is the son of a peasant, and was in his youth a serf like his father. By his own efforts he scaled the ladder of fortune—no one but himself knows precisely how, for he never troubles his friends with autobiographical details; and now he is one of the richest men in the city. A stranger, judging by his appearance, might reasonably hesitate before lending him a shilling, but anyone at all acquainted with the commercial world of Moscow would know that his word is good for several hundred thousand roubles. His friend beside him is of a very different origin. He was born a noble, received a good education, and was for some time a professor in the University. He loved letters, but he loved financing still more; and when limited liability companies came into fashion he launched boldly into numerous speculations, and rapidly amassed a large fortune. The third person at that table by the window represents another category of merchants—a category that is as yet not very numerous. Like the portly personage, he is of humble origin; but, unlike him, he is a man of some education. His father, though not very wealthy, had been able to send him to school, so that now he is not only well grounded in the three R's, but can even speak French. His accent, it is true, is far from perfect, and his grammar is by no means faultless; but he can talk well enough for all practical commercial purposes, and that amply satisfies his linguistic ambition. The other guests almost all belong, like these, to the commercial world. Some of them indulge in caviar, sterlet, sturgeon, fish-soup, pickled cucumbers, buckwheat, and other favourite Russian viands, but the majority confine themselves to weak tea, flavoured with lemon, of which they drink appalling quantities.

We must now, however, leave the ancient capital and take a glance at the provinces. To effect this we cannot do better than make a voyage down the Volga. We can get on board at Yaroslaff, and sail down with the current for five or six days. As the weather promises to be fine, we shall no doubt find it very pleasant. But how are we to get to Yaroslaff? As to that, there is no difficulty, for the distance is only about 135 miles, and there is a railway all the way. You calculate accordingly that the journey will take five or six hours, and that you will make it in the day time, so as to get an idea of the country through which the railway passes. If you really mean to do it in this way you must order a special train. Of the ordinary trains, including expresses, there is only one in the twenty-four hours, and it does not fulfil the required conditions. Instead of five or six hours, it takes eleven or twelve, and it starts about nine o'clock in the evening. We may, however, make a compromise. There is a morning train to Troitsa, about two hours' distance from Moscow, on the Yaroslaff line. We can then spend a day agreeably in visiting the famous monastery, the name of which is as familiar to Russians as that of Canterbury is to Englishmen. Perhaps I ought to say "much more familiar," for there are, I fear, many thousands of rural Englishmen who have never heard of Canterbury, whilst there would be great difficulty in finding a genuine Russian peasant, either on this side or the other side of the Ural, who has never heard of Troitsa. Often in some distant village, where you might think that the inhabitants had never been, metaphorically speaking, "half a mile from home," you may light on old men and women who have not only heard of the famous monastery, but have also seen it, and can describe it graphically in all its details. The explanation of this is that Russian peasants are much given

to making pilgrimages, and regard it as an occupation very useful not only with a view to eternal salvation, but also for the cure of bodily evils. Many are the wonderful cures that have been effected in this way, when all the ordinary resources of medicine and magic have proved unavailing. The blind have been made to see, the deaf to hear, the lame to walk, and I know not what more besides. The scientific reader here wishes, no doubt, to put a question or two: Are these so-called miracles well authenticated? Might not the cures, even when proved as facts, be simply fortuitous coincidences? Or, if this cannot be admitted, may we not assume that unusually strong faith may have some as yet uninvestigated physiological influence, which has nothing whatever to do with supernatural power? To all of which queries I must reply as the Scotchman did to his obstinate friend, who persisted in asking him whether a bee was a beast or a bird: "Don't trouble me with theological questions."

Whether these alleged cures are natural, supernatural, or mythical, the peasants believed in them as firmly as they do in Holy Writ—rather more firmly, probably, for they know very little of what Holy Writ contains, and they do know all the minute details of many such miracles. Pilgrimage-making is, accordingly, a favourite occupation for aged peasants, and orthodox believers look on Troitsa and Kief with much the same feelings as the good Mussulman looks on Bokhara and Mecca. The reader must not, however, imagine that the Russian pilgrimages are at all like those French pilgrimages that were so graphically described in this paper not very long ago. In Russia the ecclesiastical world has not yet been invaded by the spirit of modern enterprise. There are as yet no "Cook's Tourists" even in the secular world. The noble, it is true, who determines to visit one of the sacred places will probably "take the liberty to boil his peas," or, in plain language, avail himself of the railways and other means of conveyance; but the peasant still performs this part of his religious duties in the old ascetic style—trudging all the way, with staff and wallet, as his forefathers did before him, without knowing much about the road, and with very little money in his pocket. The word "pocket," be it remarked parenthetically, is here used in a metaphorical sense, for the Russian peasant commonly carries his money, not in his pocket, but in his boot!

Seen from a little distance, this Monastery of Troitsa—or, more correctly, of St. Sergius—has somewhat the look of an old fortress; and well it may, for it was during several centuries a very strongly fortified place, and the valiant monks were always ready to defend it obstinately when occasion demanded. When the Poles and Cossacks overran the country, at the beginning of the seventeenth century, they did not succeed in getting possession of this stronghold; and the Superior played a conspicuous part in the patriotic movement by which those invaders were expelled. During the French invasion of 1812 it had similar good fortune, or, to speak more reverentially, it was again miraculously saved from the sacrilegious hands of heretics and unbelievers. At that time the French troops desecrated the churches in the Kremlin of Moscow, appropriated all the valuables they found in them, and showed their enlightened hostility to superstition by disinterring and treating contemptuously the bodies of saints and martyrs. Hearing that there was a famous and wealthy monastery about forty miles to the north, they sent some troops thither, it is said, for the purpose of desecrating and pillaging; but the troops somehow lost their way, or were afraid of venturing too far from the main army, and never reached their destination. So, at least, I have been told; but I have no guide-book at hand to verify the statement. Whether true or not, the story is at least edifying, and teaches the moral that the Monastery of St. Sergius is still, even in modern times, under the special protection of Heaven. Had the French succeeded in taking the place they would have been well rewarded for their trouble, for the Treasury contains ecclesiastical vessels, vestments, and other objects of enormous value. One may behold there, in the course of a few minutes, more pearls than one is likely to see elsewhere in a lifetime. What their quality is I know not; but if it is at all in proportion to their quantity, then, I think, it is a pity that an institution, which is by no means fabulously rich, should keep such an enormous capital in an unproductive form. Might not the precious stones be sold and the interest of the capital devoted to education or some benevolent purpose? Such is the idea that naturally occurs to the secular mind; but secular minds, I have been told, ought not to meddle with ecclesiastical, and especially with monastic affairs. To a suggestion of the kind any of the monks might reply:—"Our present riches are not a tithe of what we formerly possessed. In old times we had vast landed possessions and thousands of serfs, and people of all classes gave us of their abundance. Now all is changed. Our lands and serfs were confiscated without compensation a century ago, and the voluntary contributions do not flow in so liberally as of old. Notwithstanding all that, we feed the hungry and do much for education. If you look into that large hall over the way you will see a goodly number of pilgrims eating the dinner provided for them free of charge, and if you visit those other buildings you will find that we have a theological academy which we have no need to be ashamed of. Many Bishops and Archbishops of the Russian Church have received their education there. Besides this, we have prosperous schools. The vessels and vestments you saw are for us sacred things, which should not be sold. Man does not live by bread alone."

Though the monks may be expected to bear constantly in mind this last dictum, the creature comforts are not entirely neglected in Troitsa. There is a tolerable hotel belonging to the monastery, and here we can have not only the delicate *karassi*, which are caught in the ponds close by, but also beef, mutton, and other viands from which monks are debarred by the rules of the Church. All monks in Russia follow the rules of St. Basil—or, at least, profess to follow them, which we may charitably suppose for our present purpose to be the same thing—and these rules prohibit the use of animal food. They are binding, however, only on those who take the vows, so that

we may enjoy a good dinner of the ordinary kind without qualms of conscience. The afternoon we spend in strolling about and conversing with the pilgrims, many of whom come from great distances, and in the evening we return to the station and continue our journey. Soon the night closes in, but we do not thereby lose much in the way of scenery. The country which we traverse is, like nearly the whole of the northern half of Russia, a land of forest and morass, with here and there a village and an adjoining patch of cultivation. By the time we reach Rostoff, the only place of interest on the route, the sun has already risen. Rostoff is a very old town, and was in ancient times the capital of an independent principality, the Princes of which were rivals of the Princes of Moscow. The family is—if genealogical records are to be trusted—still extant, and one member of it is at this moment what we should call Under-Secretary of State for the Home Department. But the glory of the family has long since departed, and the city has become an ordinary provincial town, celebrated chiefly for its annual fair. There are several monasteries in the town and suburbs, and one of them is curious as having been founded by a Tartar! This will seem to modern ears a somewhat startling announcement, but in reality it contains nothing very wonderful or improbable. Remember that the Tartars were not always Mohammedans. When they conquered Russia, in the thirteenth century, they were Pagans, with a rude polytheism of some kind, but with none of that religious intolerance which Monotheism engenders. All foreign religions they treated with impartiality, and even with a certain respect. With the Russian clergy they lived on very good terms, and one of the Khans used to attend occasionally a Christian place of worship. Tartar princesses who married Russian princes, and Tartar nobles who entered a Russian Prince's service, naturally adopted Christianity, just as Protestant Princesses of the present day join the Greek Orthodox Church when about to marry the heir apparent to the Russian throne. Even missionaries, it seems, were allowed to visit the Tartar camp, and by these various means a certain number of Tartars became Christians. Thus it was that the son of a certain Khan founded a monastery at Rostoff, and after his death he became a saint of the Russian Church! Unfortunately, the mass of his people did not follow his worthy example. On the contrary, they adopted Mohammedanism, and from that time there were no more conversions to Christianity. We have here an instance of those apparently fortuitous events which exercise an incalculable influence on human history. If the Tartars and their cousins the Turks had adopted Christianity instead of Islamism how different the history of Eastern Europe would have been!

After leaving Rostoff, which, by-the-way, must not be confounded with the town of the same name on the Don, we arrive in about two hours at Yaroslaff, which was also at one time the capital of an independent principality. It is a very fair specimen of Russian provincial towns. What strikes the traveller most is the large number of churches—a peculiarity which gives the place a picturesque appearance. Like Russian churches in general, they have bright green roofs, out of which rise one or five painted cupolas—green, blue, or gilt—and some of them have curious, picturesque belfries. The interior of the town is less pleasing than the view from a distance. The streets are infamously paved; very many of the houses are in a by no means satisfactory state of repair; and there is in general a look of carelessness and squalor. After the churches and monasteries, which seem to be out of all proportion to the number of inhabitants, the largest buildings are the Government offices, which look into a vast open space—something between a square and a big fallow field or wilderness. Running parallel with this open space, behind a row of irregular houses, is the Promenade—a long, shady walk, overlooking the river and the flat country beyond. If tradition is to be trusted, this Promenade had a rather curious origin. The story deserves to be recorded, as illustrating "the good old times" which have only recently passed away. It was, as nearly as I can recall, to the following effect:—Sometime during the first quarter of the present century a fabulously rich merchant of the town was convicted of forgery and sentenced to transportation for life. Under ordinary circumstances this commercial Croesus might easily have escaped, for he was willing to pay a very large sum for his release, and the Russian officials of that time were fearfully corrupt; but the Governor of Yaroslaff happened to be, by some accident, an honest man, and stubbornly refused to be bribed. In spite of refusals, the efforts were continued, and at last it occurred to the Governor that the sums offered him might be usefully employed for some public object. A proposition was therefore made to the culprit that if he would give 150,000 roubles (I think that was the sum, but perhaps my memory deceives me) for the construction of a promenade on the high bank of the river, he would be allowed to escape the penalty of the law. The proposal was accepted, and the money paid; and then began the process of effecting the arrangement with all the appearance of legality. This is the most curious part of the affair. Though the Governor was a powerful man and could do all manner of unlawful things, he had to respect all forms and formalities most scrupulously, like an ordinary mortal. A little official comedy, therefore, had to be played. One document certified that the prisoner had died, and another, duly signed, gave the results of the post-mortem examination. Then the coffin, which was supposed to contain the remains of the deceased, received the rites of Christian burial, and some more official documents were drawn up and signed. Everything was done in such perfect order that had the affair been afterwards investigated it would have been found that no irregularity had been committed. And no one had any reason to complain. The culprit got off with a heavy fine, which taught him, let us hope, to avoid forgery for the future; the Governor had the satisfaction of feeling that he had conferred a great benefit on the town, and the inhabitants received a very agreeable promenade without being obliged to pay for its construction. That the story is absolutely true I cannot

venture to assert, but I may say that it was told to me by one of the worthy Governor's successors in office.

At the end of the Promenade, overlooking the river and the wilderness aforesaid, stands a long, high edifice, built originally in the barracks style of architecture, but now adorned, somewhat incoherently, with Corinthian columns. This is the Lyceum, founded for the benefit of the nobles of the province by a member of the wealthy Demidof family, and now transformed into a school of law for the benefit of the whole Empire. There are juridical faculties in all the Universities—in St. Petersburg, Moscow, Kharkof, Kief, Odessa, and Dorpat—but this is the only public school devoted exclusively to the study of law. Let us enter and get some idea of what a Russian school of law is. We cannot but be charmed by

the general appearance of the interior. The rooms are large, well ventilated, scrupulously clean, and in every respect admirably arranged. Here is a framed document showing the course of study. The completeness of it is very surprising, and certainly not to be expected in this out-of-the-way corner of the world. There are lectures on all kinds of law—Roman, Russian, commercial, criminal, international—and also on cognate subjects, such as juridical philosophy, political economy, and finance. "If we had only such a school of law in England!" we involuntarily exclaim as we read the programme. A sceptic might, perhaps, remind us of the French proverb, "*Qui trop embrasse mal étreint*," and it must be admitted that nowhere has the maxim more frequent application than in Russia. Youths who try to master all these subjects in three or four years are apt to get a mere smattering of many things without thoroughly mastering any. But a few minutes' conversation with the enlightened director suffice to allay our fears on this score. Whilst maintaining that a course of study should be wide and "liberal" in the best sense of the term, he recognises that the students should confine their best energies to a few fundamental subjects, and regard the others as merely subsidiary and complementary. From the class-rooms we pass to the library, where we find over 9000 independent works—perhaps twice as many volumes—in various European languages. We are pleased to observe that English historical and philosophic literature is largely represented. But the most interesting part at the present moment is a very remarkable collection of books relating to the Slavonic provinces of Turkey, and in general to the Eastern Question. On that subject we can get here the most complete information. All important contributions from Germany, France, and the Slavs themselves are at hand; and if we wish to know what has been said on that most intricate of questions in the British Parliament we have only to turn to "Hansard," a complete copy of which is to be found in the room devoted to periodical literature. Altogether, the arrangements are so well adapted to the wants of the studious that we feel inclined to sit down and begin at once a long course of reading and study. But we must not yield to the temptation, for our time is short, and a great part of our proposed tour lies before us. We must hurry on, therefore, more quickly than we have hitherto done.

The Volga need not detain us very long. If we made the voyage in the flesh we should have to devote to it at least five or six days; but making it as we are doing, we may accomplish it in a very few minutes. The banks on both sides for some time after leaving Yaroslaff are flat and uninteresting, and, with the exception of the large and much-venerated monastery

to the right, we notice nothing worthy of special attention till we reach Kostroma, a considerable town, picturesquely situated on a bit of rising ground to the left. Had we time to disembark here we should be sure of a hearty welcome from the worthy Vice-Governor, a hospitable gentleman who loves everything English—our faults and vices, of course, excepted—knows English literature better than many educated Englishmen, and speaks our language as fluently and correctly as his mother tongue. Let us employ the few minutes at our disposal to pay our respects to him, and then go on by the steamer. The night is spent in groping our way cautiously among shoals and sandbanks, and some time on the morrow we arrive at Nizhni-Novgorod. As the Great Fair is at present going on, we must remain here for at least a

can at all times be forded by those who prudently provide themselves with high boots. For those who wish to study the peculiar conditions of Russian trade, two or three weeks may be profitably employed here, but the mere tourist who is in search of nothing more serious than "first impressions" will find a few hours quite sufficient for his purpose. By that time he will have seen specimens enough of the big burly Russian merchant, the patient, listless peasant, the unmistakable, irrepressible Jew, the picturesque Georgian, the polite, keen-eyed Persian, and the numerous kinds of merchandise which these various personages offer for sale.

At Nizhni we leave the small, uncomfortable, flat-bottomed steamer in which we have hitherto travelled, and get on board a large commodious steamer built on the American

model and resembling closely those that ply on the Hudson and the Mississippi. From the spacious upper deck we can enjoy at our ease what little scenery there is to see. The left bank is flat and uninteresting, but the right bank sometimes rises to a considerable height in a gently sloping fashion, and occasionally a town or village is seen on the slope. On both sides there are pretty bits of wooding, and on the whole the scenery, though tame, is pleasing enough; but we miss sadly everything like historical associations. More and more we feel that we are in a strange land—a land with which we have few bonds of sympathy. The names of the places we pass are to us but empty sounds, which convey no idea and awaken no old memories. A learned Russian friend who overhears this remark comes up and assures us we are quite wrong. The country through which we are passing, he says, its historical associations, like other countries. To the north lies the land of the Tcheremissas, and to the south the land of the Tchuvash, and in both of them many a stubborn battle was fought between Russians and Finns. In this valley of the Volga many a time the Tartar hordes swept along like a whirlwind, spreading death and devastation in their track. There, beside that old monastery, sacred to Macarius, is a spot which for every Russian must be classic ground, for it is there that was held, in ancient times, the Great Fair that is now held at Nizhni. When we reach Kazan, and our friend points to the town and relates to us how it was once the capital of an independent Khanate, how it was captured by Ivan the Terrible, and how many a brave Russian found a grave before its walls. At the junction of the

A CIRCASSIAN CHIEF OF DAGHESTAN.

few hours. All who take the least interest in Russia have heard of this great annual gathering, which is sometimes spoken of as if it were one of the seven wonders of the world. We must not, however, expect to find anything very wonderful. In former times, perhaps, when Russian commerce was in a more primitive condition, the Great Fair was really a most interesting institution. Old men relate how numerous merchants from China and from all the petty states of Central Asia used to bring their goods hither for sale; and how landed proprietors from all parts of the country used to come hither for the purpose of laying in their yearly supply of household goods. But all this has been to a great extent modified by the construction of railways and similar causes. Traders and purchasers still come from all parts of the country, but they are by no means so numerous; and the number of Asiatics which one meets is very small. Much has been done, however, for the convenience of those who do come. Instead of the miserable wooden sheds in which the merchandise was formerly stored, there are now long rows of brick buildings; and the spaces between them, though muddy enough in wet weather,

Volga with the Kama, which comes down from the Ural Mountains, he can point to a monument still more ancient and venerable. Not far from the river, and almost visible from the deck of the steamer, stand the ruins of the old town of Bolgari, an ancient capital of the people who are now settled to the south of the Danube and are known by the name of Bulgarians. Next comes, high up on the left bank, the town of Simbirsk, about which there is not much to be said, except that it was almost entirely destroyed by fire some fifteen years ago, and has since been rebuilt. But when the Zhiguli hills heave in sight our amiable, self-constituted cicerone waxes eloquent. "There," he exclaims, "are hills rich in traditions as the Rhineland, and once frequented by freebooters daring as those of the Scottish Highlands, whom Walter Scott has immortalised! This is the country rendered for ever memorable by the exploits of Stenka-Razin and Pugatcheff! Here"—. But the other glorious memories of this classic region must remain undescribed, for at this point our guide's raptures are interrupted by a friend of his, who has been listening impatiently to the tirade for some time,

THE DANUBE, APPROACHING THE FRONTIERS OF SERBIA AND ROUMANIA: THE IRON GATES.

and now, coming up and tapping him on the shoulder, remarks—"Look here, Nicholas, son of Nicholas, how is wheat selling in Piter (St. Petersburg)? Let us go down stairs and drink a little glass of bitters; it's near dinner-time!"

After dinner and all next day our amiable friend continues his efforts to make us feel that we are passing through classic ground. He compares Samara to Chicago—for some inscrutable reason best known to himself—and Saratof to several Italian cities, and has stories to tell about many of the places which we pass. But all his efforts are in vain, and his eloquence finds no response in our hearts. If he lives long enough he may find more sympathetic listeners in our grandchildren, who will doubtless have Russian history and everything else at their fingers' ends, and may perhaps experience some kind of thrill from the mention of such names as Monomach, or Mistislaf the Brave. For us even such comparatively modern names as Stenka-Razin and Pugatcheff are simply names and nothing more, and when we reach Tsaritsin we think we have had quite enough of Volga scenery. Instead of going on to Astrakhan, as our friend advises, we leave the steamer and cross over to the Don, which is only about thirty or forty miles distant. Whilst driving through the town, preparatory to starting, we notice one thing that is very characteristic. On the market-place and close to the railway station we observe two strange-looking tents, and on going nearer, we see that it is a little colony of Kalmucks. Such are the curious contrasts to be found in Russia—pastoral nomads and railway porters within a stone-throw of each other.

After a fearful amount of jolting on the execrably constructed railway, which here connects the Volga with the Don, we reach Kalatch and get on board the steamer. The scenery of the Don is still less interesting than that of the Volga, and the navigation, in spite of the flat bottoms and small draught of the steamers, is still more intricate and difficult. We have, however, the feeling that we are at least in a semi-historical country. We have all heard of the famous Cossacks of the Don—though we may know little about the details of their history and their long struggle with the Tartars—and, accordingly, we look with interest at the specimens which we meet on board. Fine, big, muscular fellows they are, and much more amiable and communicative than their exterior would lead us to suppose. Report says that their old marauding tendencies are not yet completely eradicated; but we have no means of testing the truth of this assertion, and we know that reports—even when official—are not always to be trusted. They are not a peculiar race, as is often supposed, but genuine Russians—the descendants of men who in old times fled from the central provinces to the Steppe, where they could lead the life of "bold borderers." From their habit of capturing Tartar women they became to some extent a mixed race; but this admixture of Tartar blood was never very great, and did not much affect their character. Many of them, especially on the lower Don, are of dark complexion, and do not much resemble the fair-haired peasant of the north; but their features are thoroughly European, and they are thoroughly Russian both in language and sentiment. If you happen to hold any peculiar theory about the Cossacks being Tartars you had better not mention it in their presence, for they would consider the idea an insult, and they are not yet sufficiently imbued with the scientific spirit to discuss such questions with coolness and impartiality. They now compose a kind of irregular cavalry, and are of great use in such expeditions as the Russians have to make occasionally in Central Asia. How far they may be used effectively in a more regular kind of warfare we shall probably have an opportunity of judging in the course of the next few months. Two good qualities, at least, they undoubtedly possess; they are individually brave, and they have the talent of being able to live and thrive where regular troops would starve. No doubt, in the present war they will thoroughly enjoy a brush with their old enemies the Circassians, and there will probably be a good deal of "paying off old scores."

On arriving at Rostoff—not, of course, the Rostoff already alluded to—near the mouth of the river, we find a railway that will convey us to the foot of the Caucasus. So recently as three years ago this journey had to be made with post-horses, and those who have made it in that primitive fashion will certainly congratulate themselves that it can now be done in a more rapid way. To see a country and to know something about it, posting is a much better means of travelling than railways, and under ordinary circumstances the intelligent traveller will willingly bear the additional discomforts and annoyances for the sake of the additional advantages. But in a region like that which stretches from the mouth of the Don to the Caucasus these advantages form a poor compensation for the tedium and discomforts of the journey. The country is solemnisingly flat and very thinly populated, and between the post stations there is nothing to be seen but bare steppe. The only point of interest on the route is Piatigorsk, where five high isolated hills rise abruptly from the plain, and some rich mineral springs have created a town of considerable size and importance. From Piatigorsk onwards the route is more interesting, for in clear weather the main range of the Caucasus is clearly visible. Slowly but surely it approaches, increasing every hour in grandeur, till we find ourselves in Vladikavkaz on the Terek—a small town commanding the entrance to the famous Darial pass.

The British tourist who carefully maps out his route before starting, and endeavours to cram as much as possible into his programme, generally finds when he has got over three fourths of the ground that he is considerably behind time. Not having made sufficient allowance for delays and digressions, and being obliged to finish his journey within a given time, he is compelled to scamper over the remainder of the route at American speed, to the wonderment and pity of foreign tourists of more sluggish temperament. Here, at the foot of the Caucasus, we find ourselves in this predicament. Before us lie the great Caucasian range and Transcaucasia—a little world in themselves—in which we might spend usefully and agreeably a

whole summer; but already our time is nearly exhausted. We must drive hurriedly through the Darial Pass, admiring, of course, the grand scenery as we go, but refraining from all excursions in those tempting side valleys. First along the banks of the Terek; then through the narrow gorge and up to the bleak stations of Kazbek and Kobi; next over the high ridge, and then rapidly down by a tributary of the Kur to the smiling plains of Georgia. As we approach Tiflis we see before us one of the most picturesque towns in the world—half European, half Asiatic. More than ever we feel tempted to linger here. If we had but a few weeks at our disposal we might collect an enormous mass of information regarding the curious region of which Tiflis is the capital. In the centre of the European part of the town there is a public library, which contains a very good collection of books relating to the Caucasus and adjoining regions; and soon we discover that there are many valuable living sources of information—men who are ready to put their stores of information at the service of all serious investigators. For ethnography and statistics we have Bergé and Seidlitz; for zoology, topography, and geography we have Abich, Stebnitzki, and Kovalenski; for history and antiquities we can find a most able guide in M. Bayern. Mr. G. Arzruni can tell us much about Young Armenia, and M. Khatissaf can describe and show the great works of irrigation which are being carried on. If we wish to make scientific excursions, we have merely to apply to Prince Mirski, and he will afford us all the protection we require. But we must leave all that till some future time, and, after taking leave of these kind friends, start for Poti by train.

The railway from Tiflis to Poti is a new line, finished at great expense a few years ago. After passing over the Suram ridge the train descends by gradients, which make the unaccustomed traveller feel uncomfortably nervous, into the fertile valley of the Rion, and in the evening arrives at Poti, a small town at the mouth of the river. A certain interest attaches to this town at the present moment. A few days ago a telegraphic despatch announced that it had been bombarded and burned down by a Turkish fleet; but the news has not been confirmed. It is a small place, built on a marsh, and so unwholesome that no inhabitant, it is said, escapes fever. The entrance to the port—if port it can be called—is so shallow that only flat-bottomed steamers can pass over the bar—a fact that explains why the Russians covet Batoum, a fine Turkish port a little further down the coast. In the course of a few hours we begin to feel the depressing effect of the heavy, feverish atmosphere, and are glad to get on board the steamer and take our departure.

A coasting voyage of two or three days brings us to classic ground with which we are all familiar—Kertch, Theodosia, Balaklava, Sebastopol. Did time permit we should land at Kertch, and proceed by road, so as to enjoy fully the wonderful scenery along the coast; but our time is short, and we prefer devoting the little that remains at our disposal to visiting Sebastopol and its neighbourhood. The town is still to a great extent in ruins. It is only since the abolition of the clause of the Treaty of Paris relating to the Black Sea that it has begun to show signs of revival. The subsequent completion of the railway uniting it with the rest of the Empire has laid for it the foundations of a new prosperity, but a death-like stillness continues to hang over the place. On the heights surrounding the city everything remains pretty much as it was when the Allies left it. With a melancholy interest we visit the places whose names are still so familiar to us, and here and there in some lonely spot we unexpectedly come upon a graveyard with English names on the tombstones. As we read the touching inscriptions, and recall the great siege, we involuntarily ask ourselves what we have gained by that lavish expenditure of blood and treasure, and whether we are on the eve of a similar struggle. Are we once more to drift into a hazardous enterprise in which even victory costs so dear? Are we again to act over again the heart-stirring scenes of Alma, Balaklava, and Inkerman, and to witness once more the heart-rending scenes in the hospitals of Scutari? On these points we have, like other people, our fears and hopes, but we must keep them to ourselves. To discuss the chances of war and peace belongs to the editorial department. We are simple tourists, who do not venture into the region of high diplomatic mysteries. If we have conveyed to the reader some general idea of the Russian grand tour we have done our work and may bid him farewell.

THE ARMIES OF THE CONTENDING POWERS.

The Proprietors of the *Illustrated London News* have requested me to write an article to serve as an introduction to the study of the present war. They tell me that there is a great desire among the public for information as to the nature and organisation of the armies now in face of each other, and as to the military features of the countries which have become, or are likely to become, the scene of military operations. It is not without difficulty that such a task as this can be fulfilled, for everyone must have observed with what singular reticence the Russians and Turks have withheld from the press all information as to the details of their troops in the field. The strict censorship of the Russian press, and the care with which newspaper correspondents of other nations have been excluded from the head-quarters of the army at Kischeneff, and in the advance through Roumania, have made it practically impossible to obtain very close detailed materials for a description of the Russian army of the Pruth; while still less has leaked out in regard to the army of the Caucasus. The Turks, who were willing enough towards the close of last year to give information to the English, have, ever since the Conference and the subsequent negotiations, withheld most studiously all intelligence as to the condition or numbers of their forces in the field, feeling, probably that, from the date of their refusing the terms of the Conference, war with

Russia had become an absolute certainty, and that therefore it was necessary to keep secret the numbers, nature, and distribution of their armies. From one source or other, however, I have been able to collect a fairly accurate general idea of the numbers and composition of the various forces, while their organisation and their normal formation in time of peace can be gathered from publications which, from their nature, are not likely ever to have met the eyes of the general public. My own experience, as a student of contemporary military history, convinces me that the greatest difficulty in following with any care military operations during war arises from want of such previous preparation as can only be arrived at by a study of the organisation, nature, and equipment of the contending armies, and a thorough knowledge of the military geography of the theatre of war. In hopes that the information which I have been able to gather from a number of different sources may be of advantage to the public, I here place it most willingly at their disposal. Few people can be expected to take the trouble to search out from dry technical publications the chief matters of interest relating to the troops engaged in the campaign now taking place; and therefore, although the present article cannot pretend to give much information which might not have been collected by anyone from published sources, it may be of use in drawing together in one place a quantity of scattered materials.

Military students in this country are much indebted for a knowledge of the Russian and Turkish armies to those officers who have, in the Intelligence Department of the War Office, carefully studied the military establishments of those countries. A work called "The Armed Strength of Russia," translated from the German and published by the Intelligence Department in 1873, gave, in minute detail, the organisation of the Russian forces at the time when the original work was published by the Austrian War Department; but that date carries us back some six years, and since then great alterations have been made. Fortunately, Captain Clarke, of the Royal Artillery, an officer of the Intelligence Department, has published, in a recent number of the Journal of the Royal United Service Institution, a most valuable paper on recent reforms in the Russian army, which enables us to correct to a great extent those points in which the "Armed Strength of Russia" is behind the age; while, in the same journal, a paper on the Russian army, by Lieutenant Vincent, of the 23rd Fusiliers, lets us into some of the inner life of the Russian soldier. Much of what will be here said upon the Russian army is derived from the information contained in these papers; while a work by Captain Cooke, of the 22nd Regiment, on "The Ottoman Empire," also published by the Intelligence Department, is my chief source of information as to the Turkish armies.

The Russian Army consists of the regular army, the irregular troops, and the militia. I will speak first of the regular army. On Jan. 1, 1874, a great change in the Russian military system was inaugurated. A new law was introduced, making military service obligatory upon the whole nation. The Emperor had become satisfied that the old system of filling up the ranks was unfitted to produce for him a soldiery capable of contending with the trained armies of Europe. Up to this date the ranks of the army had been the receptacle for all the dregs of the male population. Was a man a criminal, a notorious bad character, a ne'er-do-weel, with whom nothing else could be done, the ranks of the army became his inevitable portion; while men possessing intelligence sufficient to make of them anything more than the mere automatons who could carry a musket and stand to be shot, the more stubbornly and resolutely the more they were primed with vodka, were to be counted in each battalion almost upon the fingers of one's hand. This was a relic of the old system of barbaric serfdom under which Russia for so many years groaned. Moltke, in his work on the Russian campaigns in Turkey, describes to us the recruiting system of the nation at the time of the great war of 1828 and 1829. The army, he tells us, was entirely composed of serfs. The Government having decided from time to time upon the number of troops required, an Imperial ukase was issued, demanding so many men per cent, a large margin being left for desertions. According to their population, the various districts, towns, and villages were called upon to furnish their quota of men, the landed proprietors being assessed for recruits in proportion to the number of serfs whom they owned. The noble who owned serfs chose at his will from among them the recruits for the army. Serfs on the Crown estates were selected for service by the magistrates. As a matter of course, those were elected as recruits of whom their masters, for one purpose or another, wished to be rid, and sometimes the reasons for sending men to serve in the army were no better than those which made David give Uriah a place in the foremost rank. It was almost impossible to escape by flight, and resistance was in vain. The men were, without warning, suddenly seized and led off in chains to the nearest seat of Government. It was unlikely that the man thus forced into the ranks would ever see his family again, for the term of service was for no less than twenty years in the Polish provinces, twenty-two years in the Line in Russia, and twenty-four years in the Guards. Moltke truly says that, though as a soldier the serf gained his liberty, he lost all else; for, should he ever return after his term of service expired, he found his place filled by another, and all memory of himself gone. He was sent to a garrison hundreds of miles away from his home, where, probably, the language was unknown to him, so vast and so varied are the countries under Russia's sway.

Mr. Wallace, in his marvellous work on Russia, has told us how the young peasant is made to marry at a very early age, in order that he may bring a worker into the family; and as the recruit might be taken to the army at any age between twenty-one and thirty, it is evident that a vast number of those draughted into the ranks were separated from their wives and children never to see them again. The Emperor Nicholas shortened the term of service; but this was most objectionable to the owners of serfs, for it made the conscription fall oftener;

and, as every soldier ceased to be a serf, and every serf had an actual pecuniary value, the more that were taken from any estate the heavier was the pecuniary fine to the proprietor. Hence long periods of stagnation when no recruits were called up to the army, and sudden calls for large bodies on the appearance or threat of war; so that at the very time when it was most important to the army to be well filled with tried soldiers it was suddenly filled up with a mass of untrained and practically useless recruits.

The Crimean War demonstrated to the military authorities of Russia many of the faults of their system; but the one great obstacle to anything like genuine reform existed for many years after the Peace of Paris. It was not until the emancipation of the serfs by the Emperor Alexander in 1861—that greatest work of reform ever accomplished by any living man—that the ground was really prepared for those great organic changes which have since taken place. The Russian War Ministers were not asleep to the enormous advantages which were derived by Germany from the system adopted by her of large contingents retained only for a short period of service, and passing from the ranks to form trained reserves; but to adopt any such system as this would have been to interfere to an extent practically impossible with the rights and privileges of the proprietors of the serfs, and there therefore remained no possible alternative to the old system of retaining men for long numbers of years with the colours. Thus, where service was to all intents and purposes banishment for life from home, where the army was filled with the outcasts of serfdom, it may well be understood that the soldier's career was looked upon with dislike, and that the adoption of it was almost a degradation. Hence, even for serfs, certain exceptions were allowed, and at any time a substitute might be purchased, the price accepted by the Government being 200 roubles, or about £35.

Certain changes were introduced tending always in the direction of shortening service. Indefinite furlough was allowed after thirteen years of service, or to those enlisted after September, 1859—after ten years. Men of specially good character might be sent on furlough after eight years' service, but all these furlough men were at any time liable to be called to the ranks. Hence, what with the period up to which he might be drawn as a conscript, lasting till his thirtieth year of age, and the many years during which, after a period of service in the ranks, he still remained liable to be recalled, the Russian peasant was so interfered with and his tenure of any civilian occupation so uncertain, that industry was hampered to an extent seriously injuring the vital power of the nation. In 1861 the serfs were emancipated; but it was not until 1870 that the liability to military service of every Russian male was recognised. The great war fought between Russia's two nearest neighbours on the battle-fields of Bohemia, and the outpouring of Prussia's vast hosts over crushed and desolated France, taught to the Czar and his advisers the stern lesson that any nation which hopes to hold her own as a great military Power must have great armies composed of thoroughly trained men and a rapid system of mobilisation. In November, 1870, while the Germans were besieging Paris, an Imperial ukase was issued proclaiming every Russian male liable for military service. What power this gave may be estimated by the fact that the male population of Russia at the time was not less than thirty-six millions; but the application of such a law to a country extending over about eight millions of square miles, with little railway communication and road communication poor and undeveloped, was matter of the greatest difficulty. It was at once recognised that to call the whole male population to arms would be to take a step that would ruin Russia financially, and would give her an army of even greater strength than she required. A population of thirty-six millions would give not less than six millions within the usual limits of age considered desirable for soldiers, and, accordingly, an annual contingent of only about 25 per cent of those attaining twenty-one years of age was yearly to be drawn, the remainder, who might escape conscription for the regular army, being organised into local militia, in which they were to remain until their thirty-sixth year.

The new law of January, 1874, is that under which the Russian army is now formed; though, of course, the greater bulk of the troops actually at present serving were enlisted under the earlier condition of things. Under the new law the forces of Russia are divided into an active army, a reserve, and a militia or general levy. Finland alone of all the Russian provinces is excepted from the operation of this law. The present peace establishment of regular troops in Russia is no less than 760,000 men, and, as the duration of service in the active army is for European Russia six years and for Asia seven years, an annual contingent of about 150,000 should be sufficient, allowing for casualties, to keep up this strength. The contingent, however, for the present year is about 190,000. Every year some 700,000 attain the age of liability, and consequently from one fourth to one fifth of the number is required by the conscription; the remainder pass into the militia, where for the first four years they are embodied into district regiments, and are liable to augment the ranks of the standing army, and for the next sixteen years are to form part of the district militia force. Military service in Russia presses less heavily than in many of the other great military nations of Europe. In France there is one man under arms for every 82 of the population; in Germany, 1 in 98; in Italy, 1 in 124; Russia has 1 in 127; Austria, 1 in 150; and England about the same, 1 in 148. Advantage is taken of the comparatively small proportion of those attaining the age for conscription which is required for the ranks to grant exceptions from service to very large numbers of young men. In all countries an only son, who is the support of aged parents, is exempt from service; but in Russia, when once the parents have attained the age of fifty-five their only son is exempt, even though they have independent means of existence. Postponement of the time of entry to the army is also granted to those who are engaged in the study of professions or in any occupation which is useful to the State. Clergy, medical students, chemists, veterinary

surgeons, artists, schoolmasters, officers of the mercantile marine, and others, obtain either exemptions or postponement; while, in order to encourage education, the term of service in the ranks is abridged by two years for the recruit possessing even the most elementary instruction, such as is given in the primary schools. The ordinary recruit serves in the active army for six years; he then passes into the reserve, where he serves for nine years or thereabouts, on permanent furlough, allowed to pursue any calling or occupation, but liable to be called out twice during the entire period for six weeks' drill each time. The army, however, as it now exists, contains only three contingents of the men called up under this new law—none of them have as yet passed into the reserve. It is therefore composed, to a very great extent, of such men as were enlisted under the old rules; and the only reserves at the disposal of Russia are men on furlough, who under the old system served from eight to thirteen years in the army with the colours.

For administrative purposes Russia is divided into governments, and these into circles. Each government has a military commander, each circle a circle commander. The latter officer is a member of the circle recruiting commission to which is confided the levy, by lot, of the conscripts. The circle commander is responsible for their selection for the various arms. Men with special intelligence or education are assigned to the engineers or artillery; those well built for riding or with a knowledge of horses to the cavalry. The Guard has a choice among all the recruits. The numerous exemptions above named would alone be sufficient to protect all those of a superior class or education from military service in the ranks; but there are additional methods by which regimental service as a soldier is avoided. If able to pass an educational test, any Russian may enlist as a volunteer, and according to the degree of his education his service is limited to twenty-four, six, or three months. From these men are selected, after very short periods of service, non-commissioned officers; and those who do not remain in the army pass into the reserve for nine years. There is also a system in existence very similar to that under which the German three-years volunteer enlists. Volunteers generally have the privilege of choosing their own regiment, and are allowed to live apart from the men, maintaining themselves at their own cost. This, of course, enables men of superior refinement to learn the training of a soldier without being subjected to the coarse and disagreeable companionship which must necessarily be involved in life in a barrack-room or billets. The reader of Mr. Wallace's "Russia" will be able to judge how little of intellectual companionship—how little, indeed, of anything that is not merely animal—there can be among a soldiery coming almost entirely from the peasant class, which but a few years ago was a body of serfs, hopelessly ignorant, utterly uneducated, the mere beasts of burden of an agricultural lord, the goods and chattels of an illiterate country squire. Yet, according to Mr. Vincent, he is not a bad fellow, this Russian soldier:—"Miserably paid, and almost worse fed on that which is not calculated to make men thrive, on black bread, on a sprinkling of meat mixed up with rice and a herb which makes it sour, with quass, a terribly sour, perfectly non-intoxicating beverage to drink, the Russian soldier flourishes, and so flourishes that he can endure almost anything. His spirits and good humour, too, never flag; and in every company, squadron, or battery there is a musical troupe who sing and dance admirably. When marching at ease the troupe always goes in front, and enlivens the route by comic singing and curious antics, although they never lag or get in the way."

A hard life it is that the Russian soldier leads. For the first six months he is attached to a training battalion, squadron, or battery, where he is clothed and drilled almost to death. At the end of this time he is appointed to a regiment. If he happens to be selected for the Guard, he gets housed in wooden-hut barracks, where, closely packed though he may be with the seventy or eighty comrades in his hut, he at least has warmth and shelter; but if he fall to any other portion of the army he is billeted on the town or village where his regiment happens to be quartered, and the quarters given to the troops are not always the best. The warm shelf over the stove which forms the peasant's bed in a Russian hut is not given to the soldier, and the winter cold must often be terribly trying. During the summer months the troops are all camped out, and go through a considerable amount of training. The daily pay of a full private in the Russian army is just one farthing; a lance-corporal gets a third of a penny, a senior non-commissioned officer a halfpenny, and a sergeant-major twopence-halfpenny. In time of war, on the march, and during manœuvres the men receive increased pay, equal to 50 per cent more than the ordinary pay; and, instead of the rations of fresh meat and brandy which formerly were issued to the men in peace as well as in war, a mess allowance is now given to non-commissioned officers and men in time of peace, varying, according to the market prices in the towns where they are quartered, from one penny to three-halfpence per man. Yet this gives a larger allowance than might be expected, for by the rules of the Greek Church 169 days of the year are fast days, on which the men may eat no meat; so that the whole of the 365 days' mess allowance is available to be spent on the 196 days of the year on which the consumption of meat is permitted. In addition, the men receive certain rations in kind: the daily ration per man is about 2 lb. of flour, a little peeled barley, and salt, which is supposed to make a ration of nearly 2½ lb. of bread. It is said, however, that the men save a large quantity of the flour in each mess and sell it to dealers, buying other and more savoury articles with the proceeds. They also earn money by hiring themselves out as labourers, painters, &c.; part of the money so earned going to the mess fund. But for this addition they would scarcely have sufficient to keep body and soul together. The drink called *kvas*, or quass, is prepared from flour and leaven. Yet on this poor food the Russian soldier stands great hard-

ships and makes wonderful marches. He supports great heat and great cold better, perhaps, than the soldier of any other nation. Some of the marches made on the expedition to Khiva four years ago show that the men must have had marvellous powers of endurance. In coarse and ill-made clothing, with a heavy knapsack and heavy rifle to carry, with ninety rounds of ammunition, and a short sword girt round his waist, in addition to the bayonet always fixed, the Russian soldier, with his feet swathed in linen cloths instead of socks, and with his trousers tucked into his long boots, steps out at such a pace that it is difficult for a good walker to keep up with him. His amusements consist to a great extent of gymnastic exercises, every barrack-room being furnished with a wooden horse and parallel bars, and every camp in summer having a complete apparatus for a gymnasium. His early peasant's training in his village, far from artisans and shops, has taught him to use the hatchet and other tools, to cook, and to sew. His clothing is made up and fitted in his own company, and a soldier of four years' service has no less than four suits of clothing. The first is only used for grand inspections and gala days, the second for regimental and town parades, the third for rough work, and the fourth, or oldest, for barrack wear. His little extravagance is vodka, but it is evident that the profits of the regimental canteen cannot be very great when we remember that the whole pay which the soldier clears is only one farthing a day. Mr. Vincent says that Russian soldiers do not smoke, and only drink periodically, which we suppose is due to their want of money.

As regards the discipline of the troops, the scale of punishment in the Russian Army would indicate that there is need for great severity. The disciplinary punishments that can be inflicted on the non-commissioned officers and men are as follows:—Reprimands; confinement to barracks; extra turns of fatigue and other duty; confinement to the guard-room, where no spirits or tobacco are allowed, and singing, and even conversation with comrades, is forbidden; solitary confinement on bread and water for a period limited to fourteen days, when for two days out of every three only bread, salt, and water are allowed, the ordinary ration being issued on the third day, and no candles being allowed after dark; and, lastly, solitary confinement in a dark cell, limited to eight days. Corporal punishment can only be inflicted on men already on the punishment-list, and may not exceed fifty lashes. Each rank, beginning with the corporal, has power to award a certain amount of punishment; thus—a corporal may give twenty-four hours' confinement to barracks, a sergeant-major forty-eight hours, a subaltern eight days, a captain two months, a battalion commander three months. No one under the rank of a captain of a company can award corporal punishment; no non-commissioned officer can award solitary confinement. Mr. Vincent says that if discipline is measured by the amount of crime, Russia yields the palm to no country; if discipline is to be established by the respect shown to officers Russia is nothing behind; but he goes on to admit that real discipline is of a very inferior nature, in consequence of the very inferior quality of the officers.

There is no doubt that a very inferior state of education throughout the country generally has in past times made it most difficult to obtain a body of properly qualified officers for the Russian army. The sons of the smaller class of nobility were brought up on their fathers' estates very often without more than the rudest elements of primary education; but in proportion as roads have been improved and railways introduced, the facilities for repairing to educational establishments have increased, and education generally spreading, has widened the field from which a superior class of men can be drawn. Moreover, the Government has taken the greatest possible pains to educate specially for the military service a very large body of youths. At the date of our last information on this subject there were ten elementary military schools established by the Government, containing nearly 3000 pupils, sons of officers, and of officials holding officers' rank. In these schools pupils are prepared for cadet schools, of which I shall presently speak. There were also twelve military schools, containing nearly 4000 pupils, also sons of the privileged classes, which train their scholars for admission to the war schools. The course of education comprises modern languages, mathematics up to a low standard, history and geography, the elementary principles of natural sciences, landscape and geometrical drawing, gymnastics, and drill. The pupils of the elementary military schools enter between the ages of twelve and fifteen; and must pass a qualifying examination in religion, reading, writing, and arithmetic. Those for the military schools must either have passed through the elementary schools or undergo a rather higher entrance examination. The great object of these schools appears to be not so much to give a high education as to impress upon the young men a strong feeling of duty, a high military spirit, and a healthy patriotism. Great attention has been paid to training a body of men competent to act as instructors.

The above may be considered as preparatory schools. Next come the schools for the training of officers for the army. There are four war schools—the Paul's war school and the Constantine war school at St. Petersburg, the Alexander war school at Moscow, and the Nicholas war school of St. Petersburg. The first three are for the training of infantry, the fourth for the training of cavalry. Each of the infantry war schools contains 300 pupils, who are admitted between the ages of sixteen and twenty on producing a certificate from the preparatory military schools or a civil upper-class school, or on passing an entrance examination. The object of these war schools is to train up a body of regimental officers. The pupils have the rank of cadet, and the course of education comprises the usual subjects taught in a military cadet college. The course is for two years, at the conclusion of which the students are appointed sub-lieutenants, ensigns or cornets, or cadets, according to the degree of proficiency which they have attained. Finland has a special cadet school of its own at Helsingfors. The pupils must be natives of Finland, and must pass a preliminary entrance examination. After a similar

course of instruction to that given in the military and war schools, they enter the army on the same conditions as the students from the war schools. There are about 120 cadets. The most aristocratic school in Russia is the Imperial Corps of Pages, established at St. Petersburg for the education of 150 Court pages, who must all be sons either of the old nobility or of Court Chamberlains. The course of instruction comprises the subjects taught in the military and war schools, and the pupils are appointed ensigns or sub-lieutenants in the Guard or ensigns in the army according to their qualifications. Each military district has also its own cadet school, resembling very much the cadet schools of Austria. Candidates for admission to these must have passed through an elementary military school, or must submit to an entrance examination. Non-commissioned officers of the army are allowed to enter these schools to qualify for commissions. The course of instruction lasts for two years, three months of each year being passed by the students with regiments of the army, in order to add a thoroughly practical acquaintance of the profession to the theoretical knowledge acquired at school. There are 3500 pupils in these schools. The Michael Artillery War School and the Nicholas Engineer War School at St. Petersburg train candidates for the Artillery and Engineers respectively. The course of instruction is for three years.

In addition to the above, which are exclusively devoted to

training young men to become qualified for commissions in the army, there are schools for the higher professional education of officers. The Nicholas General Staff Academy is open to all officers of and below the rank of major in the army who have served for at least four years with their regiment and passed a competitive examination. The usual course of instruction in a staff college is given here, and those officers who obtain special certificates receive, if below the rank of major, a step of promotion; if of the rank of major, one year's pay instead. The Michael Artillery Academy and Nicholas Engineer Academy train officers of Artillery and Engineers who have passed special examinations in the higher branches of their respective professions; and the Military Law Academy at St. Petersburg educates officers for the higher posts in the judicial departments. In addition to these, there are training schools for special branches, a military school-masters' seminary, technical and pyrotechnical schools, intended to train a body of efficient foremen and foremen instructors for the technical artillery; a military drawing-school, for the education of the minor officials of the topographical corps; a topographical school, for training the officers of that corps; an elementary military school at Tiflis, which specially trains men for the various departments of the army in the Caucasus; a military law school, to train officials for the department of military law; schools for dressers, to train up surgeons, assistants, and apothecaries; a riding-

master's school, and a medical and surgical academy, which confers degrees and educates surgeons for the army—surgeons educated at the public expense being compelled to serve for thirteen years, those educated at their own expense for eight years, in the army. The greater portion of the expense in the whole of these various training establishments is borne by the Government. In them all a large portion of the pupils are on the foundation, and the payment made by others is comparatively small. The object of the Government is to educate, at no matter what cost, a superior body of officers and officials for all the various departments of the army.

When we learn that there are nearly 14,000 pupils in these military schools, and observe how great their number is as compared with those of any other nation, it would seem at the first glance that Russia should have the most highly educated body of officers of any country of the world; but in reality it is not so. The fact is that in Russia there is so great a lack of elementary schools, and the educated middle class forms such a small fraction of the population, that it is necessary for the Government to take into its own hands and give a military direction to that general education which in other countries, possessing a higher degree of civilisation, is attained at the ordinary schools and in the various training colleges for the civil professions. Moreover, with all these schools the demand for officers for the huge Russian army is so great, and the competition of the civil professions with the army is growing so

TURKISH CAVALRY.

rapidly, that it is most difficult to keep the regiments supplied with the necessary number of regimental officers. Mr. Vincent says:—"The non-existence of what the Germans call the *Kleinadel*, and we the squirearchy—of a *haute bourgeoisie*, a class blessed with small pecuniary means, yet endowed with the proudest patrician feelings—renders the question of officering the Russian army one of the most serious difficulty. Although Russia is essentially a military nation, where uniform is the only passport, the attractions of the Bar, of Commerce, of Literature, and of Art are every year luring more and more officers to change their ill-paid and hard-worked profession. Ere long the Government will have to take very stringent measures; for now at least 5000 officers are wanting, and principally in the scientific corps, whose members have been called away to construct and superintend the new railways, roads, and bridges all over the country." In spite of all these military schools, it is the exception to find a Russian officer outside the Guard with a knowledge of any language besides his own. The Staff Academy at St. Petersburg languishes for want of candidates; and a large proportion of the staff officers of the army is appointed direct from regiments without any special staff training. In actual practical regimental work the Russian officer appears to be fairly instructed, but as a body the staff is infinitely inferior to that of either Germany or Austria.

The pay of the Russian officers is wretched. The pay of a captain of the line is under £65 a year, that of a lieutenant-

colonel only £93 a year, a full general has £300 a year, a major-general £178 a year. It is no wonder that we hear stories of Government stores misapplied by the generals in command, of cartridges filled with sand instead of gunpowder, of returns of clothing and material signed certifying the presence of articles which on the examination for mobilisation are found to have no existence except on paper. The pay is manifestly insufficient to support the position of an officer. In war it is increased by about 50 per cent, and officers stationed in some of the more remote and expensive districts, or holding appointments, receive the same increase as in war. Certain allowances also are given for lodgings, and officers holding commands receive an allowance for table money. Officers of the Guard have higher pay and the enormous advantage which, until recently, was given to our regiments of Guards, of an advance of brevet rank in each grade. An officer desiring to enter the Guard from the rest of the army is provisionally attached for six months, during which he is socially on probation. Promotion throughout the whole army is by seniority up to the rank of lieutenant-colonel, and then by selection. About six weeks' leave of absence is given every year. Before a Russian officer is allowed to marry he must deposit in the hands of the Government 5000 roubles as a guarantee that he possesses sufficient means. Russian officers are never allowed to appear out of uniform.

As regards the relations between the officers and men, the

outward and external relations are those of friendly courtesy. Every officer, from the subaltern drilling a squadron to the general inspecting a division on parade, or the Emperor himself at a review of an army, commences with a salutation to his troops, "Your good health, my children," to which the men reply, "We wish it also." It is said that on Imperial parades the shout, "We wish good health to your Imperial Majesty!" sounds very grand from the sonorous words of which, in the Russian language, it is composed; but we know that such salutations are more official than real, and that in Russia it is, probably, as in France, that the soldiers who one day shout "Vive l'Empereur!" are just as ready on the next to shout "Vive le Président!" and it may well be that the standing reply of the Russian troops when they receive an order, "We gladly obey," is sometimes mixed with words that have a very different meaning. There is little or no doubt that there was considerable disaffection among the Russian troops on the Roumanian frontier in the early part of last winter.

An excellent system which prevails in the Russian army is the instruction of the men by their officers, though perhaps it is carried with them to an extent which is not good for either officers or men. The Emperor, fully alive to the evil of want of education amongst the masses in Russia, desires to make of the army a great school of popular instruction; and so during the long winter months, when frosts and snows compel the

troops to remain for the greater part of the day under shelter, the officers are employed as schoolmasters teaching their men. The ordinary instruction of the soldier comprises reading, writing, and arithmetic, and simple instruction in tactics. In every regiment of cavalry, battalion of infantry, battery of horse artillery, or brigade of field artillery there exists a school for the training of non-commissioned officers under officers selected as instructors. Any soldier of two years' service who is likely from his physical qualities and character to make a good non-commissioned officer, who can read and write and knows the simple rules of arithmetic, may enter the school, where he is taught some little history, geography, composition, and arithmetic, and in the cavalry and artillery the elements of veterinary knowledge; and subsequently, if he has proved himself an apt pupil, the elements of the military art, field fortification, tactics, and mathematics. The following description of one of these Russian regimental schools is by an English officer:—"You would have been no less astonished than I was to see a pupil selected, apparently indiscriminately, by the General accompanying me, and ordered to bisect a given straight line, according to Euclid, on the black board. You would have been astonished, too, on entering a regimental school-room, to find the men listening to a lecture on tactics, and to see a relief model of the environs; on inquiring its purpose, for the General to order two pupils to stand out, to hear him give them an

extended operation to work, the one to advance with such an object against the other defending; to see painted tin models of companies and battalions at once worked, and, when the General stopped the really sham fight, to hear each of the men in turn give a succinct account of his movements, dispositions, and intentions, corrected now and again by his officers, but never assisted; to see another man stand out and make his dispositions for throwing an advanced guard across the Vistula, describing them the while. Nor would your astonishment lessen when a fourth pupil described the general geographical features of England, enumerated our chief towns, traced the course of our rivers; when a fifth, starting from London, followed the track of a ship to St. Petersburg, naming the countries, their several capitals and Sovereigns, by which he passed; when a sixth, starting from some far distant spot in Russia, traced the course by canals to St. Petersburg, enumerating the principal places on the route and their capabilities for billeting troops."

In summer field-works are constructed by the men; in winter models of works are made by them in sand. The pupils of these schools live apart from the rest of the men, rejoining their companies for the grand annual manoeuvres. The system of tactics taught is now almost exactly that of the German army. The Russian infantry is formed, however, in two ranks, and moves in rather heavier columns than the German. The greater portion of the army is now armed with the

Berdan breech-loading rifle; a portion only still retains the Krinka converted rifle.

Without entering elaborately into details, it may be desirable to give here a short sketch of the organisation of the Russian army. To begin with the infantry:—Each battalion of infantry consists of four companies of Line and one company of rifles. On the ordinary peace establishment each company has a strength of 120 officers and men, raised in time of war to over 200, so that the war establishment of a battalion is over 1000. Three battalions form a regiment, except in the regiments of the Caucasus, where there are four battalions to a regiment. Two regiments form a brigade, and two brigades form an infantry division. There are forty-one such divisions of Line in the Russian army, of which six in the Caucasus are composed of four-battalion regiments, the remainder of regiments of three battalions. Thus, each of the six Caucasus divisions has sixteen battalions, the remaining divisions of the army twelve battalions each. In addition to these there are three Infantry divisions of the Guard and four divisions of Grenadiers, one of which is in the Caucasus. A Rifle brigade of the Guard, five brigades of Rifles of the Line, a brigade of Rifles of the Caucasus, and a brigade of Rifles of Turkestan. In round numbers, the Infantry of the Russian army, if all the battalions were raised to a war footing, would amount to 650,000 men. The Caucasus battalions have only four companies each, instead of five, but the

RUSSIAN CAVALRY.

strength of the four companies is equal to that of the five in the other battalions.

The Cavalry of the Line is formed into fourteen divisions, each of which consists of two brigades, each brigade of two regiments. In each division there is a regiment of Dragoons, another of Lancers, another of Hussars, and a fourth of Cossacks. A regiment has four field squadrons, each squadron about 128 men, and is kept up in time of peace to the full war establishment. Besides the fourteen divisions of Cavalry of the Line there is a Caucasian division of Dragoons, two divisions of Cavalry of the Guard, and a division of Don Cossacks. In time of war the Cavalry of the Guard is formed into three divisions instead of two, and the Caucasian division is divided into two divisions, a regiment of Cossacks being added to each, so that the total number of cavalry divisions becomes twenty. A cavalry regiment consists of five squadrons, of which one is a reserve or dépôt squadron, and each squadron is divided into four sections, each under the command of a subaltern. The greater part of the horses of the cavalry are purchased from dealers by the Commander of the reserve squadrons, whose duty it is to purchase and break in the remount horses as well as to train the recruits. The price given for horses is from £20 to £27. No horse is taken on the strength of a regiment until he is rising six years old, and it is said that at twelve years horses are always cast. To us who retain our horses for service till they are twenty years old or more, this may seem extraordinary; but the fact is that the

hard life to which the Russian troop horses are exposed makes it absolutely necessary that they should be only in the perfection of working age during their service in the army. In the bitter depths of the Russian winter their wooden sheds alone protect them from the winds that sweep over the snowy waste. They are well fed, peace rations being one and one third pecks of oats and about 9 lb. of hay. They are generally of a short, thickset breed, with great power of work, which is necessary, considering that the average weight of a hussar, with all his equipments, forage, and the three days' provision which he carries on the march, is scarcely under 25 st. It is said that sore backs are practically unknown amongst the Russian cavalry, which is attributed to the peculiar saddle in use. From the description given of it, this must be something like the saddle in use in the Belgian army, a mere wooden frame without panels, the side bars of which are carefully fitted to the back of the individual horse for which the saddle is to be used. Underneath the saddle are placed four separate folds of felt, the blanket is placed over the saddle, and a single girth passed over all. When one felt becomes saturated with perspiration another is placed next the horse's skin. Mr. Vincent says that he saw a squadron of lancers with every man in full marching order, and every horse saddled and bridled, in six minutes and a half from the time when the commanding officer, entering the stable quite unexpectedly, found the men lounging about and gave the alarm. Great efforts are made to render the riding of both officers and men as

perfect as possible. The dragoons of the Russian army are real dragoons—that is to say, they are not cavalry soldiers, but mounted infantry. They wear neither spurs nor swords, but carry rifles, and when the order is given to dismount one man in three remains to hold the horses, which are kept together under a subaltern, whose duty it is to keep them as much as possible under cover, yet as near as possible to the dismounted men.

Every infantry division of the army has attached to it a brigade of field artillery. Each brigade consists of six batteries. Forty-four of the forty-eight brigades consist each of three 9-pounder and three 4-pounder batteries. The other four brigades have 3-pounder mountain batteries in place of mitrailleuses. The 9-pounder and the 4-pounder batteries are armed, some with steel, some with bronze breechloaders. The so-called 4-pounder throws a common shell of 12 lb. weight, the 9-pounder a shell of 24 lb.; but the charges are extremely small in proportion to the weight of the shot, and the initial velocity of the projectile is consequently very low, and the trajectory curved to a most undesirable extent. The Russians had until lately no factory for the manufacture of steel guns, and many of those in their army have been obtained from Krupp's factory at Essen. But they now have a factory at Obuchoff, and since its establishment they have become more independent of foreign industry. A large gun from these works was exhibited at the Vienna Exhibition. The bronze guns are

for the most part cast at Olonetz, near St. Petersburg. Each battery has eight guns, so that the forty-eight brigades, consisting of 288 batteries, have no less than 2304 guns. In addition to these, there are twenty-six batteries of regular and twenty-two batteries of irregular horse artillery, with 288 guns, making a grand total of 2592 guns. On the peace establishment only four guns per battery and two ammunition carts are horsed in most of the brigades. In war a 4-pounder battery has a strength of 255 non-commissioned officers and men and 151 horses, sixteen ammunition carts, two baggage waggons, four other waggons, including a field forge, and the ambulance. A 9-pounder battery has 325 men and 206 horses. The ammunition is carried in two-wheeled carts, not in waggons. These are drawn by three horses abreast, the driver riding the near horse. It need scarcely be said that it is most difficult to control three horses driven in this manner under fire, and, of course, if one wheel of a two-wheeled cart is broken the cart is upset. The arrangement of the ammunition boxes is very inferior. Intrenching tools are carried in each ammunition cart for the purpose of forming gun-pits or improving the passage over broken ground. The projectiles are common shell and shrapnel, with percussion fuzes: 120 rounds per gun are carried for the 9-pounders, 130 rounds for the 4-pounders, 98 rounds in boxes on pack-saddles for the mounted batteries. For each mitrailleuse 6290 cartridges are carried in 262 cases in one ammunition cart. The mitrailleuse cartridge is interchangeable with that of the new Berdan rifle, with which the infantry are equipped. The harness is clumsy, and the rope traces too long, but by a wise provision each battery starts on service with a complete set of new harness, so that there is less danger of its falling to pieces in a campaign. The mitrailleuses were introduced into the army during the war of 1870, before the German successes, at a time when a great mystery was made of these weapons in the French army, and before their effects for field service were known. They are ten-barrelled Gatlings, modified by General Gorloff, of the Russian army. The breech can be moved laterally during the firing, so as to give a great lateral spread to the bullets.

Without entering into details of the constitution of transport, artillery parks, engineer field parks, and other services, which, however important, are only accessories to the three arms, we will now briefly consider the organisation of the troops above described for war. When orders are given to mobilise, the calling in of the reservists and men on furlough is intrusted to the circle commanders, who possess and keep up registers of all men in their respective circles. Orders detailing the points at which these men are to join have all been prepared beforehand, so that no time may be lost. These are at once dispatched to the men, and they are called up to the different points of rendezvous, where arms, clothing, and accoutrements are, or should be, ready for immediate use. For the presence of these stores the circle commander is responsible. All horses in the country are registered, and when a mobilisation is ordered they are requisitioned by the Government. It is evident that in a country where the population is so widely scattered, railways so few, and roads so inferior as in Russia, mobilisation must be a comparatively slow process, and it would not perhaps be an exaggeration to say that at least double the time is required for mobilisation in Russia than is needed in Germany. In each circle are always the head-quarters of a certain number of divisions, and those divisions are first mobilised which are likely to be first required. So far as we can judge from the scanty accounts that have reached us in the newspapers, the troops in the circles of Odessa, Kieff, and Karkoff were the first to be mobilised in Europe, the troops of the Caucasus being mobilised about the same time for the present war. With the exception of the Guard corps, the largest unit of troops in time of peace is the division; but for war the divisions are collected in army corps. A division consists of two brigades, each brigade of two regiments, each regiment (with the exceptions already given) of three battalions of infantry; so that the strength of the infantry of the Line of a division is about 12,000. Each division has also its artillery brigade of six batteries, forty-eight guns, with about 1500 gunners, one rifle battalion about 800 strong, one Cossack regiment of cavalry also about 800, and a field artillery park. Two such divisions of infantry, together with a division of cavalry, form an army corps. The cavalry division consists of two brigades, each brigade of two regiments, and has two batteries of horse artillery. There is also an artillery park belonging to the corps. We thus get the strength of an army corps about 25,000 infantry, 3000 cavalry, and 112 guns. It is tolerably well known that in the first instance, for what was called the Southern Army—or, as the Russians openly called it, the Army of the Danube—four such corps were mobilised. Of these, two had their head-quarters at Kischeneff, one at Tiraspol, and one at Orgeieff. These four corps had probably a strength of about 130,000 infantry and cavalry, and 450 guns, with over 30,000 horses. In addition to these four corps, numbered 8th, 9th, 11th, and 12th, which were placed under the orders of the Grand Duke Nicholas, two other corps were mobilised—one, the 7th, at Odessa, and one, the 10th, at Sebastopol, which were placed together under one commander, with head-quarters at Odessa, and were called the Coast Army. Since the opening of the campaign there is reason to believe that large reserves from districts in rear have been brought up to join the army of the Danube. It is tolerably well known that four divisions of infantry, a brigade of rifles, and a division of cavalry, in all some 60,000 combatants, were mobilised for this purpose; and from what I can gather, I judge that these have been formed into two corps, which are now on their march. In addition some ten regiments of Cossacks, with some Cossack horse artillery batteries, were also prepared in reserve. There is reason to believe that much of the cavalry reserves has recently been moved up to the front, raising the cavalry of the army to 25,000 men, and that the army is accompanied by a siege-train of about 300 guns.

Very little information has leaked out about the army of

the Caucasus, but I have good grounds for estimating that a force of 95,000 infantry, 12,000 cavalry, and 300 guns of the regular army were ready for the field on the frontier of Asiatic Turkey on the day when hostilities broke out. Certainly there were not fewer troops, and it is probable that to these might be added some 10,000 militia, and a force at Erivan whose numbers I have not been able to ascertain, but which probably consisted of two of the seven divisions of the army of the Caucasus. Roughly, these troops were thus distributed:—At Alexandropol, 30,000 infantry, 4000 cavalry, and 130 guns; at Akhaltsich, 6000 infantry; at Erivan, 10,000 infantry, 4000 cavalry, and 50 guns; at Ozurgeti, 20,000 infantry, 1000 cavalry, and 40 guns; at Tiflis, 10,000 infantry, and 30 guns; at Sukhum Kali, 10,000 infantry, and 40 guns; while the remainder of the infantry and cavalry were distributed at various points along the frontier. The command in chief of the army of the Danube is in the hands of the Grand Duke Nicholas, an untried man so far as war is concerned, and not generally credited with any special amount of ability. His health also is known to be weak. The real command of the troops will here probably, as in the case of most armies commanded by Royal Princes, rest in the hands of his chief of the staff. This officer, General Nepokoitschitzky, has the reputation of being a skilled strategist and tactician. He, too, is comparatively untried in the field, but is believed to have thoroughly mastered the theory of modern war. The command of the army of the Caucasus has been given to General Loris Melikoff, an officer who served in this same theatre of war in the campaign of 1854 with considerable distinction. He is an Armenian, and it is said that he has been chosen to command for this reason; not only because of his knowledge of the country, but because he will better be able to influence the Armenian population. His chief of the staff, General Duhovskoi, is untried in war, but came out of the staff academy with a reputation for brilliant military talents. Several of the officers commanding corps in both the European and Asiatic armies bear German names; and, indeed, a very large proportion of the ablest officers in the Russian army are Germans.

Little or nothing is known in this country of the organisation of the army of the Caucasus; but English officers who have visited the army of the Danube report that at the beginning of spring it was in first-rate condition for war, with all its details of transport, ammunition, columns, parks, field-hospitals, and pontoon-trains complete, and that officers and men were alike thirsting for the commencement of operations.

Before leaving the subject of the Russian army, a few words about the Cossacks may be of interest. These form the chief irregular troops of Russia. The greater number of them are the Cossacks of the Don; but there are also Cossacks from many other parts of the Russian dominions—from Kuban, the Terek, Astrachan, Orenburg, the Ural, Siberia, the Amur, &c. The Cossacks of the Don are those now to be employed in the European campaign, and their organisation may serve as a type for that of the whole body. Until Jan. 1, 1875, they had no permanent organisation. They were brought together in a military district on the outbreak of war, formed into regiments, and commanded by officers and non-commissioned officers appointed from the whole body. At the termination of the campaign they were disbanded. Mobilisation was slow, regiments had no cohesion, *esprit de corps* was impossible. For the last two years they have been organised. The active troops are divided into three classes. The first or preparatory class consists of young Cossacks from eighteen to twenty-one years of age. In this class they are trained for a portion of the time at their stanitsas, or villages, and then pass into the field class, where they serve for three or four years embodied in regiments during peace, being then granted furlough till twelve years in this class have been completed. Afterwards they pass into a reserve class for five years. Men on furlough and in the reserve class are liable to be called up for war. The Don Cossack contingent alone furnishes in time of war sixty-two regiments of cavalry and twenty-two batteries of horse artillery. They provide themselves with their own equipment and riding horses. They are, in fact, military colonists. The regiments are called "polks," and each regiment is divided into six "sotnias," or squadrons, of about one hundred each. They are thus described by Mr. Vincent:—"Tall, powerful men, on small, lean, hardy ponies, which they guide with the thinnest of snaffle bits, and single reins, armed with long lance without a pennon, short sword, pistol stuck in the girdle, and rifle in leathern case slung behind, who, creeping silently, yet swiftly, on to an enemy, are ubiquitous in the field—their ponies' heads almost sniffing the ground. They have become the terror of many a foe of Holy Russia. Their dress is most picturesque. They use no spurs (except in the escort of the Emperor), but have a small lash whip slung on to their wrists. They ride admirably, yet with stirrups so short that in winter, when riding in overcoats, and nothing but the calf of the leg is seen, one wonders where they have managed to stow the thigh. Members of a manly race, all of whom are soldiers, trained to arms, associated with and accustomed to horses from their earliest infancy, always left to shift for themselves, never nurtured in luxury or comfort, these Cossacks of the Don are invaluable troops for escort, police, outpost, foraging, and scouting duty; yet their deficiency in education would probably prevent their performing European cavalry service with the same intelligence as the Prussians did in the late campaign."

We will now pass to the consideration of the armies of Turkey. When first the Ottomans overran the fruitful provinces of Southern Europe they gave to the vanquished their choice between death, conversion to the creed of the conquerors, or submission, with payment of tribute. The soil which was conquered belonged by the doctrine of the Koran to the Sultan, the Vice-Regent of God. The Moslems themselves were not to till the land, but were to fight for the spread of their religion. Thus, nothing suited them better than that a large portion of the inhabitants of a conquered country should refuse to accept the faith of Mahomet, and should remain as agriculturists and payers of tribute to support the

soldiers of the faith. Those thus submitting were called "rayahs," and, while their duty was to pay a capitation and a land tax, the duty of the Moslems was to receive the taxes and to fight for Islam. We have here, then, a true feudal system. Just as in Europe the feudal system of raising levies at the outbreak of war gave place to a system of small standing armies, so under the rule of the Sultans a special standing army grew up. The corps of Janissaries was recruited chiefly from the children of Christian rayahs taken from their families when very young and brought up in the Mussulman faith. They it was who carried the victorious standard of the Prophet to Belgrade, to Constantinople, and to the walls of Vienna. In course of time the corps of Janissaries attained very large proportions, and took the form of a corporation rather than a mere fighting body. They became unruly, and wished to be the masters rather than the servants of the Sultan. In order to check their excesses successive Sultans raised and gradually increased a standing army apart from the Janissaries, and in 1826, when the Janissaries revolted, Sultan Mahmoud attacked them, destroyed them as an organised body, and dispersed those who were not slain. The Janissaries thus destroyed, there only remained to the Sultan that nucleus of a standing army which had been used for the suppression of the Janissaries, and this at a time when the outbreak of war with Russia was imminent. Then it was that Sultan Mahmoud endeavoured to form a regular army upon the European system, himself directing the drill of his troops. Moltke thus describes the result of his efforts:—"The novelty of these measures, the opposition they encountered, the necessity for immediate action, and the want of time, caused everything to be hurried. Among his own followers Sultan Mahmoud found no one enlightened man to aid him with his counsel—all had to be done by means of foreigners and by the Sultan's own iron will. The recruits were seized in their villages, often carried in chains to Constantinople, and there kept as prisoners. There was an utter lack of intelligent native officers, and religious prejudice stood in the way of employment of foreigners. The Rayahs were excluded from the military service. The youngest men were selected from among the Moslems, in the hope that they would sooner get accustomed to the tiresome constraint of discipline and remain longest in the service. But the dislike of the Turks to the service, their close quarters in the overcrowded barracks, their vices, and the wretched hospital arrangements, made sad havoc in their ranks, so that new levies were constantly required. The army, therefore, was composed of men disciplined after the European fashion, wearing Russian jackets and Turkish trousers, with Tartar saddles and French stirrups, and English sabres. It consisted of Timariots, or troops giving feudal service; of troops of the Line, whose service was for life; and of militia, who served only a term of years, of whom the leaders were recruits, and the recruits mere children. The system of organisation was French, and the instructors were men from all parts of Europe. The splendid appearance, the beautiful arms, the reckless bravery of the former Moslem hordes, had disappeared; but yet this new army had one quality which placed it above the numerous host which in former times the Porte could summon to the field—it obeyed."

The army thus formed was broken to pieces by the war of 1828 and 1829 with Russia, and after the Peace of Adrianople the work of reconstruction began; but still the army of the Ottoman Empire retained its great characteristic, that it was composed of men of the Mussulman faith alone, Christians being rigidly excluded from serving in the ranks. While the Mussulmans gave to the State their personal services as warriors, the Christians paid a "haradsch," or poll tax. After the war of the Crimea, when the great Powers put pressure on the Porte to improve the condition of its Christian subjects, a Hatti-Humayan was issued providing for the extension of military service to all subjects of the Porte, irrespective of their religious belief; but from the date of its issue it was evaded. Although a fixed number of Christians was by this order to be drawn yearly, the men never were enrolled, and an annual tax was imposed upon the Christians in place of military service. This tax, called the "bedel," constituted in reality a compulsory exemption by purchase; and the Porte justified its action by saying that the Christian population was not disposed to accept military service. Thus, in reality, the pretended admission of the Christians to military service became merely the excuse for the imposition of a new tax. Admission to the military schools for the training of officers was refused to the Christians, and the only step taken to carry out the provision of the Hatti was the raising of one cavalry brigade of Christian volunteers, chiefly Poles and Bulgarians. The Poles have now nearly all disappeared from the Turkish army, and the brigadier of the Christian brigade is a Turk. The fact is that religion lies at the very root of Turkish military service. The basis of the whole Turkish conscription is the doctrine of the Koran. The thought of a Jehad, or Holy War, is the lifeblood that flows in the veins of the Turkish army; and it is practically impossible that Christian races of the empire can be admitted to service on terms of equality with Mussulmans so long as the great principle which makes the Turkish soldier brave in battle is that if he falls with his face to the enemy he dies a martyr to his creed and at once enjoys the delights of Paradise. Far from this being an injury to the Christians, however, it is an advantage to them and a grievous injury to the Mussulmans. The Christian knows what tax he has to pay, and it is but small. He is left free to cultivate the soil, to breed and bring up his children; but the perpetual drain for military service impoverishes the governing race, and by taking away all the flower of the Turkish manhood from peaceful occupations prevents the development of the race and its multiplication by marriage. The military service, too, is unequally distributed. The inhabitants of Constantinople, of Crete, of Scutari in Albania, of large districts of Asia Minor and Arabia, Syria and Kurdistan, are exempt from furnishing recruits. Four millions out of the 16,000,000 of Mohammedans are thus released from military service, the whole burden of which falls upon the remaining 12,000,000.

In 1869 a Special Commission was appointed, under the presidency of Omar Pasha, to consider the question of admissions to the army; and it recommended that military service should be introduced among them, except among the Bosnians, Herzegovinians, and Greeks. The Armenian chiefs, however, refused compliance; and the Government, unwilling to provoke an insurrection, gave way. Military service, moreover, is unequally distributed in the sense that it falls more heavily upon the peasant class. An exemption by purchase and the provision of substitutes is allowed, and the richer men avail themselves in large numbers of the privilege.

The following description will give a general idea of the organisation and method of recruiting the Turkish army. The army is divided into the Nizam or standing army, the Ihtiat or first reserve, the Redif or second reserve (in two classes), and the Mustahfiz or territorial militia. The period of service is for twenty years—viz., in the Nizam, four years for infantry, five for cavalry and artillery. The men then pass to the Ihtiat, where they complete their six years of service; from that to the Redif, where they serve for three years in each class, and finally for eight years to the Mustahfiz.

According to the reorganisation project of 1869 the annual contingent of recruits should be 37,600 men, which was calculated to produce, in 1878, an army of 700,000 men. The Nizam should contain 150,000 troops, the Ihtiat 60,000, and the Redif 96,000 in each class, and the Mustahfiz about 300,000; but, in reality, nothing approaching to these numbers has ever been attained.

Financial embarrassments have compelled the Porte greatly to reduce the annual contingent, the numbers passing to the Ihtiat and Redif being, of course, correspondingly diminished. The Nizam cannot be kept up to its full strength without absorbing almost the whole of the Ihtiat. Until very recently, at all events, arms and equipments were only provided for one half or one third of the Redif; while absolutely nothing was done to form cadres for or to train the Mustahfiz. Thus, at the outbreak of the present war, the military forces of Turkey were vastly inferior to those of her great antagonist.

For purposes of recruiting the country is divided into seven military districts or "ordu," corresponding with the seven corps of the army. The three corps quartered in European Turkey are compelled, however, in consequence of the depleted condition of the Mussulman population in Europe, to draw a large portion of their force from the recruiting grounds of Asia. All men from the age of twenty-one to twenty-four are liable to conscription, and draw lots each year during that time. If they escape each conscription, they are at once draughted into the Redif and escape service in the Nizam. The conscription takes place under the superintendence of a mixed civil and military commission. The Mollahs or priests, the Judges, and the members of the Ulema or Law Guild are exempted by law; so are those physically unfit for service, and those who are the only support of aged parents. All others are liable to conscription, exemption by purchase being allowed in time of peace. The price before the outbreak of the present war was fixed at 5000 piastres, about £45. If the full 700,000 Turkish troops were enrolled, the proportion of men serving would be about one in twenty-three of the Mussulman population, supposing the recruiting to be extended over the whole of the provinces of Turkey.

The Turkish "Nefer," or private soldier, is by nature and tradition warlike. He believes in the destiny of the Ottoman race to conquer the world. He is easily stirred by an appeal to his religious fanaticism to undergo the greatest hardships in the sacred cause. He longs for war as an opportunity for living at the expense of a conquered country on better fare and in greater comfort than in time of peace. Though strict laws against plunder have been introduced, a certain amount of pillage of the Giaour will ever be allowed to the Turkish soldier, as his recompense for the hardships of the military campaign. He is able to live upon food so scanty that almost any other than the Turk would starve upon it. He is by nature obedient, the obedience of apathy and constitutional Oriental laziness. He goes into battle believing in Kismet, or Fate, and encounters the enemy's bullets with a stolid indifference, believing that it matters not whether he encounters one shot or a million, for he will stand or fall according as it has been predestined by Allah. He has no inducements to study his profession or to rise out of the dull mechanical performance of his work of routine; for that corruption which pervades the entire nation has taken away from him that one great stimulus to exertion which in olden time was the very birthright of each man of his race, the right to rise to command by dint of superior military qualities. An old law provides that one third of the commissions in the army should be given to men from the ranks, but it is systematically evaded by the promotion of men who are Court favourites, and who only join the ranks, it may be but for a few hours, in order that they may be promoted to be officers.

It is said that the Turkish soldier suffers terribly from that curious form of disease known by medical men as nostalgia, and which we call home sickness. Little care is taken to provide the men far away from their places of birth with news or with letters from home. Months often pass without a post arriving; and it is said to be not infrequent to see strong, vigorous men refuse to eat and drink, and cry like children for furlough. Athletic sports, tale-telling, singing, dancing, form their amusements. In the evening, round their camp fires, the officers assemble and the men dance in their presence. Much of their unhappiness is, doubtless, due to the entire absence of womankind from among them. These Turkish soldiers, if well led and a little better educated, would be as fine troops as any that are to be found; but they have no education, and they are totally deficient of all knowledge of trades or handicraft. The Turk is by heritage a warrior, and he leaves to the subject races all the cares of the craftsman and the artisan. Whereas in other armies there are to be found in the ranks carpenters, smiths, tailors, and shoemakers, trades absolutely essential to the well being of an army: in the Turkish none such are to be found, and the want of men

knowing anything of these pursuits must seriously cripple an army engaged in active operations away from the resorts of tradesmen. Moreover, the benighted condition of Turkey generally as regards education acts prejudicially upon the army, in which there are few men fitted to become non-commissioned officers by even such simple knowledge as how to read and to write. But the Turkish private soldier is relatively vastly superior to his officers. The officers of the army form two almost distinct classes, the one composed of men risen from the ranks, the other of pupils of the war school. Amongst the officers from the ranks are to be found many thorough soldiers, with good knowledge of regular work, and of such tactics as are known in the Turkish army; but all the heart is crushed out of these men. No matter how good they may be as officers; no matter what service they may have seen, they can never hope to rise to a higher rank than that of captain; unless, either by bribery or family connection, they can ensure the good word of someone in high places. Promotion is said to be given regimentally up to the rank of captain; but this is often interfered with, and the promotion really rests in the hands of the commander of the corps, a Pasha, probably selected by the clique which governs at Constantinople, at the instance of some Court favourite. The officers from the ranks look down on the war school officers as unpractical and inexperienced; the officers from the war school, in return, consider them ignorant and unfitted to share their society. The junior officers fall back for companionship upon their non-commissioned officers and men, while their General or Colonel treats them as though they were menials. Young men of very few years' service, who have perhaps never seen a shot fired, and whose study of their profession has ceased on the day when they left the war school, are promoted to be field officers, and to the command of regiments and divisions.

From all this it naturally results that the Turkish army, excellent as is the material of its lower ranks, is a very inferior weapon for purposes of war. Drill is studied mechanically; battalions can manoeuvre fairly well upon a system of drill well enough suited for the days of the smooth-bore muskets, but tactics, in the true sense of the word, are not even understood. There is no practice in the duties of outposts and reconnoitring; and only last year, when a regiment of the Turkish Guard Corps was reviewed for my benefit in Crete, I was told by the officer commanding that they knew nothing of skirmishing, leaving that entirely to their rifle battalions. Yet skirmishing or fighting in open order is the whole life and soul of modern infantry tactics. Each of the corps has a preparatory school for the instruction of youths to become officers; but the education is of the most elementary description, and includes no military subject. There is a war school for the purpose of training officers for the army and the staff, in which four or five years are spent by the pupils; but the instruction is most inferior. There is also an artillery school, which, however, only turns out twenty pupils a year for the artillery and about three for the Engineers. The dress of the Turkish army is neat and serviceable, but of late the scarcity of money has prevented it being renewed in the bulk of the army. Infantry, cavalry, and artillery soldiers alike wear a fez, a blue jacket and waistcoat trimmed with red, scarlet sash round the waist, trousers wide to the middle of the calf and then tight as a gaiter, over which, in the cavalry, is drawn a boot of soft, untanned leather. The infantry wear gaiters and shoes, and in the field sandals of sheepskin laced over the feet. The infantry is armed with breechloading rifles—a considerable number with Sniders, some with Remingtons. A large supply of Henry-Martini rifles has lately been procured, but all the army is not yet supplied with them. Such a variety of weapons, of course, involves a great complication of ammunition, and is likely to lead to serious difficulties in war.

Captain W. S. Cooke's work on the Ottoman Empire and its Tributary States, published recently by the Intelligence Department, and from which most of this information has been obtained, places the normal strength of the infantry of the Turkish army at thirty-six regiments, each of three battalions and thirty-six battalions of rifles. Each battalion has eight companies, and a strength of about 800 men. There are fifteen Ihtiat battalions and about thirty other regular battalions furnished by various special levies, giving the infantry of the standing army a grand total of about 150,000.

The cavalry is normally composed of twenty-four Line regiments, each of six squadrons, and two Cossack regiments. It is all light cavalry. Two squadrons in each regiment are armed with the carbine and the remainder with lance and revolver. Each man carries a light curved sabre. The men are good horsemen, and there are plenty of good small horses in the cavalry; but, owing to want of money, or, worse still, to speculation and robbery, generally a large portion of each regiment is dismounted and another large portion mounted on wretched old screws. Of one regiment, says Mr. Vincent, it is narrated that, reduced to a few score mounted men, the Colonel, who was a Christian, after long solicitation obtained the money to buy horses. It was winter, and he thought that the money placed out at interest till the spring would enable him to buy more horses at a cheaper rate. But the Koran forbade the lending of money at interest, so it was locked up in the regimental chest. Meanwhile the complaints of the men, who had for a very long time been left without any pay, reached the ears of superior authority, and an order came that they should be paid from the grant for remounts. They were so paid, and the regiment of horse in due time became a regiment of foot. The famous dromedary corps, in which two mounted riflemen used to ride one dromedary, has been recently disbanded.

The artillery of the Turkish army is said to be the best arm of the service. There ought to be fifteen batteries, each of six guns, for each army corps; but a large portion of these does not exist, and of those which do exist their strength in peace is variable, depending apparently to a great extent upon the number of men and horses which the commander of the battery can suppress in order to put the money in his pocket.

So late as October of last year it is stated, on the authority of Captain Cooke, that muzzle-loaders and breechloaders, bronze and steel, rifled and smooth bore, French, Prussian, and English systems, were mixed up in the same regiment. I believe, however, that now nearly the whole of the artillery is composed of 4-pounder and 6-pounder Krupp guns. The great want seems to be a sufficiency of ammunition waggons, and an organised system of ammunition columns, both for artillery and infantry. The training of the field artillery is modelled upon the Prussian system, and the German instructors have displayed indefatigable energy in improving the service of this arm, fighting perpetually against jealousies, suspicion, corruption, and fanaticism. There is a great scarcity of horses suited for artillery draught purposes. The bulk of the artillery horses is purchased in Hungary. Breeding establishments for cavalry and artillery horses have from time to time been established; but here, as in everything else in Turkey, there is rottenness at the core, and the efforts to improve the breed of horses have met with no success.

The want of draught horses tells also with terrible effect upon the transport train, the greater part of which in Bulgaria and in Asia is composed of requisitioned country carts drawn by oxen. The organisation of this important branch is most defective; and when we remember that the Turkish army carries tents, and that the roads both in European and in Asiatic Turkey are of the worst description, it is not difficult to imagine the scene of confusion that must attend the advance of the Turkish army. What, then, must it be in a retreat? Great attention has been paid to the medical department of the army; but in time of war it is said that all foreign medical officers in the service of the Porte are to be removed; and I hear that the sanitary arrangements in the field are wretched.

The titles of the various ranks in the Turkish army are as follows:—The Commander-in-Chief is called the Serdar Ekrem, a Field-Marshal is a Mushir, a Lieutenant-General commanding a division a Ferik, a Major-General or Brigadier a Liva: all of these are Pashas. A Colonel is a Miri Alaj, a Lieutenant-Colonel a Kaimakam: these are Beys. A Major is an Alaj-Emini, a battalion commander is a Bimbashi, a company commander a Juzbashi, a Lieutenant a Mulazimi, a sergeant-major is a Bash-Tshaush, a sergeant a Sira-Tshaush, a corporal an Onbashi, a quartermaster-sergeant a Buljuk-Emini. I mention these names because I observe that the newspaper correspondents are very fond of giving to the uninitiated public these foreign titles without the necessary explanatory instructions.

It would be too great a farce to give the rates of pay of the Turkish army, because they are purely nominal, no man under the rank of a Colonel having for many years received any pay except by titul instalments, the amount of which bears apparently no relation to that which by regulation he would be entitled to receive.

The rations of the Turkish soldiery are estimated on a very liberal scale even in time of peace, and in war they should be doubled; but the pervading system of speculation and corrupt contracts makes the food even in peace generally of wretched quality, while in war transport and commissariat arrangements are so defective that the Turkish soldier is almost forced to plunder. On the march each man carries some meal in a bag, and a small iron pan, in which he bakes cakes on arriving in camp. Want of transport prevents proper cooking utensils being carried.

I have failed to obtain any accurate information as to the details of organisation of the Turkish armies now in the field, but I have tolerably accurate information of the numbers as they stood towards the close of last month. In European Turkey the Turks had north of the Balkans about 128,000 men, distributed, roughly, as follow:—About 55,000 at Widdin, 10,000 at Rustchuk, 15,000 at Silistria, 17,000 in the Dobruzscha, 18,000 at Schumla, and 13,000 at Varna. In rear of the Balkans they had upwards of 30,000 more, the greater part of whom were at Sofia—a total, say, of 160,000 field troops at the outside. In Asiatic Turkey their numbers were, roughly, about 22,000 at Batoum, the same number at Kars, 12,000 at Ardahan, and nearly 20,000 at Erzeroum, with a detachment at Bayazid; in all about 76,000.

From what has been already said it is evident that a great number of these troops must be derived from the Redif and Mustahfiz, the chief part of whom had had no soldier's training until called up to arms in the presence of the enemy. Diminished contingents had even two years ago reduced the army far below its proper strength. The number of trained men passing into the reserves was very small, and the bulk of these reserves was consequently formed of untrained men. The strain upon the army caused by the insurrection in Bosnia and the Herzegovina still further reduced its strength; then came the campaign in Serbia, when wounds and sickness and want of sanitary arrangements told their tale, and the winter camps in snow and frost, where the Asiatic blood was frozen, and death reaped a plentiful harvest. Even now the armies of the Danube and of the Caucasus do not represent by any means all that Turkey has to provide against her foes. She has still to keep large forces in Bosnia and Herzegovina, in Thessaly and Epirus; in Crete alone she has 8000 men, and far more than that are required to deal with her dogged Montenegrin foes. It is easy to predict that if she is left without money and without friends, to face alone the hosts in arms against her, a worse fate will befall her armies than even that of being defeated in the field. They will die of starvation and exposure.

I have not yet spoken of the irregular troops. These may be subdivided, in general terms, into enlisted Bashi-Bazouks and volunteer Sipahis, Bedouins, &c. Bashi-Bazouks are raised at the outbreak of troubles from within or without. Orders are sent from Constantinople to the governors of vilayets or provinces to supply a certain number of men, and money is sent to them for the purpose. The usual thing then generally takes place: the governors apply to the chiefs of tribes, and between the governors and the chiefs the money is absorbed,

HIS IMPERIAL MAJESTY SULTAN ABDUL HAMID II.

in fact, a junction of roads leading from a large number of passages of the Danube, and, as two roads lead from it through the Balkans, it is not improbable that this route will be selected by the main Russian army for the passage of the Balkans. The distance from Rustchuk to Tirnova is about sixty miles. Further west again, there is a difficult steep pass over rugged heights, leading from Lovatz to Tatar-Bazardjik, in the valley of the Maritza; and, further west again, the great road leading by Sofia, the main Belgrade and Constantinople road, turns the Balkans on the west. It is guarded by forts in advance of Ta'ar-Bazardjik at the celebrated Trajan's Gate. It is scarcely

to be expected, however, that the Russians will make so long a detour as to traverse the whole length of Wallachia and cross the Danube near the Servian frontier for the sake of using this road. It is far more likely that they will endeavour, if any attempt is made to cross the Balkans, to force them at a more central point.

As a question of strategy, it is considered that the best method of defending a mountain range with a certain number of well-defined passes is to hold all the passes with small detachments of observation, to delay the enemy's passage through whichever of them he may select as long as possible,

and to keep the bulk of the defending army concentrated in a central position in rear, ready to fall upon the head of the enemy's column as it debouches from the pass on to the plains in rear. It must be an operation of many days to pass a large army through any pass upon a single road; and therefore time is given, if the dispositions have been skilfully made, for the defending army to advance to the attack before the whole of the invader's forces can be brought to oppose it. Now, the passes available to the Russians, from that by Pravady on the east to Tirnova on the west, all debouch upon a line of about eighty miles in length, from Aidos on the east

to Eski Saghra on the west. These two points, Aidos and Eski Saghra, are connected by a good road; and Jamboly, a central position about equidistant from the two flanks, directly commands the outlets of the central passes, and is in communication by railway with Adrianopol and Sofia. From the point of view of a strategist, therefore, it would appear that this is the point where the bulk of the Turkish army should be concentrated for the defence of the Balkans. If once the Turks are defeated here in the open field, it is scarcely worth considering what other positions there are between the Russians and Constantinople. From Rustchuk to Adrianople by the Schumla or Tirnova passes is a distance of about 200 miles; from Adrianople to Constantinople is about 150 miles.

Allowing for all opposition, the distance from the Danube to Constantinople could be traversed by a well-found army in less than two months.

The theatre of war in Asia next demands examination. The great barrier of the Caucasus, which naturally divides Europe from Asia, has for many years ceased to form the frontier of Russia, and the mountain chain itself, with some hundreds of miles of its southern slopes, is now in Russian hands. Georgia and part of Armenia have come beneath the sovereignty of the Czar, and are pierced with roads available for military operations. The conquest of these provinces was no light task; but that dogged obstinacy with which Russia carries on her unchanging policy of annexation has triumphed over all obstacles, and, little by little, Russia has extended her territory southwards towards the Mediterranean. The great barrier of the Caucasus once overstepped, natural frontiers have ceased to exist, and the further progress of Russian conquest is but a question of time. All the Caspian Sea except its southern shore is now in Russia's hands. Her flotilla there is steadily increasing; naval stations are being constructed; a little further development of railways and the Caspian will become a Russian lake, for Persia is already, like a ripe plum, ready to drop into the mouth of the Czar. The Trans-Caucasian provinces of Russia can be approached in three different directions: by the seaports in the Black Sea, the chief of which are Sukhum-Kali and Poti; by the seaport of Baku, on the shore of the Caspian; and by that one road which alone crosses the mountains of the Caucasus. This road traverses the Kasbek Pass, and throughout the whole of the winter months is impassable from deep snow. The seat of government is at Tiflis a town of about 100,000 inhabitants, mostly Georgians and Armenians, where are the arsenal and chief military stores of the province. Tiflis is not fortified. It lies immediately south of the Kasbek Pass, by which it can be approached from the railway station of Vladikavkas, by a road of about 140 miles in length, crossing over the mountains at a height of 8000 ft. above the sea. This road is known as the Georgian military road, and is always kept in good order, being repaired as soon as the winter's snows have cleared off. From it a railway runs to Rostov and Taganrog, in the Sea of Azov; and this, though a badly-laid line, will be the chief Russian line of communication with the interior during the present summer. From Tiflis to the seaport of Poti, a distance of nearly 200 miles, there runs a single line of railway, and beside it a road, which has fallen somewhat out of repair since the railway was built, crossing numerous streams. Poti is a very inferior port. There is a bar at the mouth of the river Rion, and ships have to lie in the open roadstead, and their cargoes must be unloaded into barges for discharge. A belt of swampy forest runs inland for some distance, and the place is the haunt of fever and ague. Thielmann says that no European has passed a night there and been spared by the fever. About sixty or seventy miles north of Poti is the seaport of Sukhum-Kali, where there is a better anchorage, though entirely unsheltered from the south wind. It is a more healthy situation than Poti, and would probably long ago have been united by railway to Tiflis were it not that Russia has not considered it worth while to spend money for this purpose, as she has always intended to annex the nearer and still better Turkish port of Batoum, lying just south of her frontier. From Tiflis to Baku, the Caspian seaport of Trans-Caucasia, there is a good post-road, about 350 miles in length. Baku is not a large town having a population of only about 12,000, situated in the midst of a barren and desolate country, where vast naphtha-beds yield their contents by means of springs, the preparation of naphtha forming the chief industry of the place. Baku has a sheltered harbour, and is distant a little more than 500 miles from Astrachan and the mouth of the Volga.

Russian Trans-Caucasia contains very varied natures of country. The plain of the river Rion, which runs into the Black Sea at Poti, is chiefly clothed with dense timber forests, and is feverish and unhealthy. The basin of the river Kura, which runs into the Caspian, contains in its upper part fertile valleys, but its lower part, as well as the lower basin of the Araxes, flows through barren steppes, which can only be cultivated by means of a careful irrigation. The soil, except that of the steppes, is of a rich character. The country rises towards the southern slopes of the mountains in a succession of terraces, all cultivated. Corn of various kinds is grown, there are rich pasture lands, cotton and flax have been successfully cultivated, and the manufacture of tobacco is on the increase. Rich mineral deposits have also been found, chiefly of copper, but also of iron and of silver. The following description of the Russian frontier line is taken from a letter which appeared last February in the *Daily Telegraph*, and conveys a correct idea of the country through which the frontier passes:—"Let us look at the new frontier made by man that has taken the place of one marked out by God. Standing upon Mount Ararat, we are on the spot where the kingdoms meet of Sultan, Shah, and Czar. All around us is a tangled mass of mountains, upheaved by some later convulsions than that which built the great Caucasian range. At our feet, as we look northwards, flows in a south-easterly direction the River Araxes, forming, till near its junction with the Kura, on the great Mogan plain, the Russo-Persian frontier,

But the delta of the Kura is all in Russian hands, and her territory thrusts down a long wedge into Persia along the Caspian shore. Along the northern bank of the Araxes, for nearly one hundred miles from Djulfa, runs the main road from Tabriz, in Persia, to Erivan, a Russian fortified town due north of us as we stand on Ararat, and thence again north to Tiflis, the seat of Government of the province. Due west, for some fifty miles, the Russo-Turkish frontier follows the crest of the Ararat range, turns northwards, crosses the Upper Araxes Valley, follows the valley of the Arpa Tchai, and then, ascending another mountain range, runs north-west along its crest to the Black Sea. This coterminous boundary of Russia and of Turkey is some 350 miles in length. On both sides of this Russian frontier lies a strangely tangled web of mountains and of streams, in which at first it seems hard to introduce any idea of order, such as nature generally shows in all her schemes. Instead of rivers rushing down at right angles from the mountains, we find them running parallel. The Rion, which flows into the Black Sea at Poti, and the Kura, which falls into the Caspian, run at the foot of the great Caucasian range. In Turkish Armenia the mountains seem to form a network, in which the streams are led into strange courses. Here we have the upper waters of the Euphrates flowing at first due west, as though they were going to empty themselves into the Mediterranean, while in between the eastern and western sources of the Euphrates the head waters of the Araxes and of the Chorokh flow eastward; yet the one finds its outlet in the Caspian, the other in the Euxine. Clearly this must be a most difficult country for military operations, affording obstacles of a serious nature at almost every step." I have already pointed out that there are three means of communication between the interior of Russia and these Trans-Caucasian provinces—by the Black Sea and Poti, by the Vladikavkas railway and the Kasbek Pass to Tiflis, and by the Volga and the Caspian to Baku. As soon as the present war was declared, Russia lost the command of the Black Sea route; and she is therefore now restricted to the pass over the mountains, which will be closed against her on the approach of winter, and the Caspian route, which is also likely to be blocked by ice. Thus, if the war endures longer than the present summer, and Russia is still blockaded on the Black Sea, she will have throughout the winter no means of renewing supplies and stores for those provinces. From Poti through Tiflis to Baku runs a great main road, nearly parallel with the chain of the Caucasus. It is the spine of Trans-Caucasia; from it on one side extend vertebræ in the shape of roads running at right angles from this main road to the Turkish frontier. Commencing from the Black Sea coast, one such road follows the coast-line from Poti to Fort St. Nicholas, a small work which has been bombarded by the Turkish ships since the opening of the campaign. From Orpiri, a village about forty miles inland from Poti, a good post-road descends to Ozurgeti, and is connected with Fort St. Nicholas. It is from this post that a Russian reconnaissance advanced in the direction of Batoum at the opening of the campaign, and was driven back by the Turkish troops posted on the Tchourouk. The next road of any importance to the frontier is one which, starting from a point about half-way between Tiflis and Poti, follows the valley of the Upper Kura to Akhaltsich. This is a town of some 14,000 inhabitants, close to the Turkish frontier. Sir Arthur Cunynghame, who visited it in 1873, says that the fortifications, though impregnable against insurrectionists, would be untenable against modern artillery, and that it is commanded from heights close at hand. From Tiflis a road runs to Achalkalaki, a distance of more than one hundred miles, passing on the road the village of Biely Klutch, to which a part of the Tiflis arsenal has recently been removed. Achalkalaki, which was once a fine city, is now but a poor village. It has, however, a fort of very secondary importance, also commanded from hills at short range. From Tiflis there are several routes leading to the great Russian frontier fortress of Gumri or Alexandropol, and through this passes the main high road into Asiatic Turkey. The fortress here is separated from the town by a ravine, and has lately been considerably strengthened by the Russians. Sir Arthur Cunynghame says that a number of Krupp guns of very large calibre have been mounted there; but he adds that it is apparently capable of escalade from the towns and ravines on the eastern side. Alexandropol has been converted by the Russians into a great frontier dépôt. Here was collected the force which, under General Melikoff, has advanced on the main road against Kars, and it will doubtless be the advanced base of operations in the Russian campaign against Turkey. By far the best though the longest way from Tiflis to Alexandropol is to follow the main road towards Baku until Novo-Akstafa is reached, thence to turn off on the post-road to Delijan, where the road branches, one good route leading to Alexandropol, another to Erivan. The distance from Tiflis to Alexandropol by this route is about 170 miles. There is a shorter road, but not so good, only about 120 miles in length. Erivan is situated some forty miles back from the Turkish frontier, and from it runs the great post road to Tabriz, in Persia, and thence to Teheran. Erivan is a town of some 12,000 inhabitants, mostly Armenians, and has one of those old-fashioned fortifications which depend chiefly for their strength upon the thickness of their walls. From Erivan some inferior roads lead over the Ararat range to Bayazed, a fortified place situated in the extreme angle of the Turkish frontier, under the slopes of Mount Ararat; and by these roads Russian troops have advanced, and Bayazed has surrendered without a blow, its garrison falling back in the direction of Erzeroum. A road running parallel to the frontier, in many places very bad, but still available for troops, connects Fort St. Nicholas, Akhaltsich, Achalkalaki, and Alexandropol with villages at the foot of the Ararat range. The whole of the country lying between the great Poti-Baku road and the Turkish frontier is intersected by ravines and streams.

Let us now pass to the Turkish territory. Standing back about 180 miles from the Russian frontier at Alexandropol, with a mountainous, broken country between, is Erzeroum, the

capital of Turkish Armenia, with a population of about 40,000 souls. It is far better built than most Turkish towns, its houses being mostly constructed of stone, and some of them of handsome appearance. It stands on a small hill at the foot of a mountain in an extensive plain, and contains no less than seventy mosques and three Christian churches. It is well supplied with fountains, whose water is conducted to them by conduits from the hills. It is surrounded on north, south, and east by high mountains, on the slopes of which the Turks have constructed earthworks; but it is not strongly fortified. From Erzeroum as a centre, roads branch out to all parts of the frontier from Bayazed to Batoum; the two chief roads being that leading through Kars, which is about forty miles from Alexandropol and 140 from Erzeroum, and that leading by Kara Kalissa to Bayazed, distant about 180 miles. The first of these roads—namely, that by Kars—divides at Meshed, about sixteen miles west of Kars, whence two separate routes lead to Erzeroum—one by Bardes and Olti, and one by Khorasan; another and more northern road leads direct from Kars to Olti, without going near Bardes; a road also leads from Kars to Kara Kalissa, on the Bayazed-Erzeroum road. From Olti, which is about seventy miles from Erzeroum, a road leads to Ardahan, some twenty miles from the frontier, opposite Achalkalaki; and another road to the frontier opposite Akhaltsich; another, again, to Batoum. Thus, if the Turks take up a position between Olti and Khorasan, they will cover all the roads leading from the Russian frontier upon Erzeroum. From Khorasan to Olti would be about four marches. In front of this line there is a chain of mountains called the Soghanli-Dagh, covered with forests of Scotch firs and intersected by streams running in deep gullies, but penetrated by numerous tracks, some of them even passable for wheels, by which an advancing army is enabled to evade the main roads. It was in this manner that Paskievitch turned the Turkish position when they attempted to defend these mountains in 1829.

And now a word as to the Turkish defences on the frontier. And first Batoum. Batoum, though exposed to the north, is a good harbour, sheltered from the south winds by high hills, with deep water close to the shore. It is about thirty miles by land from the Russian frontier, and is strongly defended both by land and by sea. The value to any nation whose territories border the Black Sea is great; for it is the only good port on the east coast south of the Sea of Azov. Doubtless, if it were in the hands of the Russians, it would, long ere this, have been in railway communication with Tiflis; and we can well understand their anxiety to obtain it. Thielmann relates that the wretched port of Poti owes its prosperity, if not indeed its very existence, to a slip of the pen; "for, when Turkey ceded to Russia by the Treaty of Adrianople the territory between Kars and the sea, the boundary line was by general consent drawn to run down the river Tschorokh, which arrangement would have brought over to the Russian side the advantageous harbour of Batoum. It was, however, discovered, but not until after the ratification of the treaty of peace, that the river Tscholock, which runs about eighteen miles on this side of Batoum, had been inserted in the treaty as the boundary line. Batoum was lost, and Poti was accepted in its stead." The next fortified place is Ardahan; here there are only field-works; it is a mere mud village, with an old castle, the houses being for the most part built underground for protection from the severity of the climate. Ardahan can be approached both from Akhaltsich and Achalkalaki; but it affords excellent positions for defence against an advance from either side. Kars is, as I write, besieged by the Russians. It is a partly walled town, with a citadel situated on both banks of the Kars-Tchai, crossed here by stone bridges. It has a population of 13,000 or 14,000, and is situated in a corn-producing plain. It is surrounded by heights, and would be difficult to fortify thoroughly; but the Turks have constructed redoubts for its defence. A Russian despatch described the garrison leaving the fortress on April 30, and taking up a position under the shelter of these redoubts. It has, however, been turned by the cavalry of General Melikoff, and, if not already in his hands, will probably be soon reduced by bombardment. Should this fail, it can be invested and turned. I am not aware whether the Turks have thrown up any fortifications on the road between Erzeroum and Bayazed. There is, I believe, a good position at Kara-Kalissa; but it looks as though the Turks were falling back to concentrate and defend a position near Erzeroum. If so, they are right, in point of strategy; but if their concentrated army is once beaten, the advance upon Erzeroum will be rapid and easy. Erzeroum is situated on the upper waters of the western Euphrates; to reach it from Bayazed the upper waters of the eastern Euphrates are crossed. From Erzeroum to Trebizond there is a good road of about 200 miles in length; and it is about the same distance to Diarbekir, on the great Bagdad caravan road. From Diarbekir to the Gulf of Scanderoun it is about 300 miles.

In considering the progress of war in Asiatic Turkey, Persia cannot be entirely left out of the question. I gather from the newspapers that she has concentrated a force of 20,000 or 30,000 men at the north-west angle of her frontier, where it joins Russia on the north and Turkey on the west. A force issuing from this corner of Persia, which is thrust out like a bastion between Russian and Turkish territory, might exercise a most powerful effect upon the fortunes of the campaign. Persia, I believe, dreads Russia, who has conquered her troops in repeated campaigns, and once dictated terms of peace to her in her capital of Teheran. Both on the western and on the eastern shores of the Caspian Russia has gradually encroached upon Persian territory. On the west shore she has thrust the Persian frontier back on the river Araxes, has annexed Baku and Lenkoran; on the eastern side she has pushed Persia southwards beyond the Atrek, and has formed a naval station at Ashourada. Persia retains the southern shore of the Caspian, but Russia permits no flag but her own to float upon that sea; and the Shah and his advisers cannot fail to see that the Caspian is destined to

become a Russian lake, and that sooner or later Russia hopes to plant one foot upon the Mediterranean and the other upon the Persian Gulf. France, who at one time had great influence in Persia, has long since abandoned it; and there is one nation only to which the Shah can possibly look for help. That nation is England; but our policy of late years has not been in the direction of supporting the Shah. He has nothing to fear from England, and would gladly place himself under our protection, were it real and earnest; but, as it is, his interests lie in the direction of keeping in favour with Russia. To act alone against her without the support of England would be to court destruction at her hands, and, therefore, we may safely assume that the force assembled about Khoi will not act in a sense hostile to Russia. The Turkish and Persian Mohammedans are of different sects, and the Persians do not recognise the Sultan as the Kaliph. It is therefore quite possible that when the fortune of war turns against Turkey the Persian forces may be let loose to plunder in the direction of Lake Van and Kurdistan; nor would it be possible for England, even were she so disposed, to march any force into this part of Persia in the course of the present year.

Whatever operations are conducted in Armenia or Turkestan must be carried on before winter sets in; for in the winter the country is covered with deep snow and is intensely cold. On the other hand, in summer the heat is excessive—in fact, the characteristic of the Armenian climate is the great extremes of heat and cold. The climate varies greatly in different parts of the country. The plateaux are healthy, though the sanitary conditions of the towns and villages are very bad; but the valleys and marshes which border the rivers running down from the plateaux of Erzeroum are unhealthy in the extreme. It is probable that considerable quantities of the chief articles of supply for an army would be found in the country, meat and flour being abundant; water, too, is plentiful in Armenia; fuel, however, is very scarce, except on the seacoast and the Soghanli-Dagh. Camels, horses, and oxen are to be found for transport; and, as the Russian army operating here is said to be deficient in transport, it is probable that it will make heavy requisitions upon the people of Armenia. An Armenian lately staying in London, whose opinion is entitled to great weight, expressed his belief that if the Russians were signally successful in Armenia an insurrection of the Armenian Christians would take place against the Turks; but, from all the accounts which have reached me from recent travellers in that country, it appears that the Armenian Christians have little to complain of. They are exempt from military conscription; and no recent instances of oppression have come to light. On the other hand, were a strong force of any other Power to enter the Russian Caucasian provinces—a force of sufficient strength to give confidence to the Circassians—it is probable that the hill tribes of the Caucasus and other tribes submitting unwillingly to Russian rule might easily be induced to revolt. A rising even north of the Caucasus would seriously interfere with one of Russia's only two lines of supply; a rising amongst the men of Daghestan might interfere with her line of operations from Baku. Under the present condition of the Russian advance in Asiatic Turkey, it could only be by an attack upon her communications from Persia or the Black Sea that she could be compelled to retreat by any force not actually superior in point of numbers.

Before concluding this sketch, a few words as to the movements of the contending armies up to the time of my sending these proofs to press (May 15) may be of interest. On April 24 without previous declaration of war, the Russian army crossed the Roumanian frontier. While the right wing crossed the Pruth opposite Jassy, the centre reached it at Leovo, and the left wing marched directly upon the Danube, occupying Kilia, Ismail, Reni, and Galatz, pushing on a column which seized the Barbosch railway bridge across the Sereth and protected it by batteries, while a still further advance was made in this direction to Ibralla. While the left wing holds and fortifies these places, the centre and right are marching by the valleys of the Pruth, Berlat, and Sereth towards the Danube. Troops have been sent by railway to Bucharest and Giurgevo, and other points higher up the river have been occupied. Meanwhile the Roumanian army has occupied Turn-Severin and Kalafat, opposite Widdin. A few Cossacks are said to have been sent across the river at Reni; but the movements of the Russians have been mainly confined to forming a cordon of troops along the Danube, and bringing on their columns through Roumania. They have taken the post and the telegraphs, as well as the railways, into their hands, and kept their secrets so well that but little information has leaked out. But we know that all their transport must march by road; that the roads are still in a very bad condition, and that the distance from Jassy to Rustchuk is about 275 miles. As it is probable that the bulk of their matériel will be brought up to the front before the passage of the river is attempted, and as fifty miles a week is a good average for marches over such roads, all stoppages included, good authorities estimate that they will not be ready to cross till end of the present month.

I have no knowledge of the Turkish plan of defence; nor has the press given any indications of what it is likely to be. Beyond some useless cannonading from their gun-boats on the Danube, the Turks have done nothing to hinder the Russian dispositions. They appear to have fallen back from the Dobrudscha; but troops drawn in from Widdin towards the centre are said to have been sent back on the occupation of Kalafat by the enemy. The Turks have bombarded Kalafat from Widdin; but have nowhere attempted to effect a lodgment on the left bank of the Danube. It would have been a very useful stroke to destroy the Barbosch bridge; but probably the Russian advance without previous declaration of war took them by surprise; and they were unwilling to commit any hostile act against Roumania so long as there was a chance of that State remaining neutral.

In Asia on the same day the Russians crossed the frontier. A reconnaissance was made towards Batoum, and repulsed.

Meanwhile simultaneous advances were made towards Ardahan, Kars, and Bayazed. The latter place was abandoned by its garrison, who retreated towards Erzeroum. What has occurred on the Ardahan route we do not know. Kars was turned by the Russian cavalry, which is said to have harassed a force under Mukhtar Pasha, retiring from Kars towards Erzeroum. Subsequently Kars has been invested, partially if not wholly; and it appears probable that the main Russian advance will take place by the Ardahan and Bayazed routes. The latter road turns the strongest position on the Soghanli Dagh, and an advance in force by it would compel the Turks to fall back nearer to Erzeroum. Meanwhile the position of Batoum on the flank is a constant source of danger to Russia; because at any time a large force might be landed there and advance into Russian territory, so that Batoum must necessarily be masked by a force much larger than its existing garrison would demand. This accounts for the rash assault made on the 11th, which met with the fate it deserved. The Russians will meet with great difficulties of transport and supply in Turkish Armenia. They encountered such difficulties in their campaigns in 1828-29; and now the size of the invading army is much greater, the weight of ammunition to be carried far heavier, and the roads are no better—are, indeed, probably worse than they were at that time.

I express no opinion whether England will or will not be drawn into this war in defence of British interests; but it is evident that if the course of events should lead this country to send a force to Constantinople or to the Black Sea, the neck of land in front of Gallipoli must first be occupied, in order to secure from interruption the passage of the Dardanelles. Gallipoli and the position of Boulair are nearer than Constantinople to the Balkans, and I find a general concurrence of opinion amongst our highest military authorities, that the Russians could reach Constantinople within less than sixty days from their crossing the Danube. I am not in the secrets of the War Office, and therefore cannot tell how long it would take to prepare and send out a British force sufficient to hold the Constantinople position; but, in my own humble opinion, based upon what has been done on previous occasions, it would not be less than from forty-five to fifty days. If that be at all correct, the nation has not much time for making up its mind.

THE RUSSIAN AND TURKISH NAVIES.

BY E. J. REED, ESQ., C.B., F.R.S., M.P.,
LATE CHIEF CONSTRUCTOR OF HER MAJESTY'S NAVY.

Although the great and ruling events of the war will doubtless turn upon military operations, it is likely that the navies of the two countries will furnish many exciting and some instructive incidents, and both the order and the rapidity of hostilities will be much influenced by the respective naval conditions of the belligerents. And however viewed—whether broadly as fleets or in more detail as ships—the Russian and Turkish navies are alike interesting. The interest is in each case almost exclusively confined to ironclad ships, as in neither navy, if we except certain Imperial yachts of very high speed, do any remarkable vessels of unarmoured types exist, nor is the number of efficient vessels of this kind great in either navy.

Viewing, therefore, the ironclad navies of the two countries, we observe, first, that the navy of Russia is of a much more composite and diversified nature than that of Turkey. While the latter consists entirely of broadside ships (excepting the river boats), the Russians have adopted both broadsides and turrets, and both broadsides and turrets have been embodied in vessels of very different types. Until within the last few years, and more particularly before the advent of Admiral Popoff to that somewhat undefined but very powerful office of extra-constructor which he has of late years held, the Russian navy had but a remote relation to the British Navy. In the days of wooden ships, the Russian Navy was, no doubt, modelled in pretty close conformity with Western war-ships; and, even since the introduction of armour-clads, the examples of England and France certainly have had great influence with Russian designers; but there were other powerful influences also at work, and the American monitor type of vessel, and the English turret system of the late Captain Cowper Coles, obtained admirers and imitators in the Russian Admiralty. Admiral Popoff has subsequently established closer relations with British constructors, and his admiration of our ships and systems of design has often been publicly expressed by him; but the gallant Admiral seems to be himself so original a designer as to give the freest scope to his own inventive faculties, and the Russian Navy accordingly now includes more than one type of vessel bearing his peculiar impress, and among them the famous circular ironclads which have been described and illustrated in these columns. In the Turkish Navy, on the contrary, British influence has been paramount in all essential respects, and the result is that the Turkish ironclads are of much less variable type, and entirely free from the influence exerted in America by Mr. Ericsson and in England by Captain Coles.

Counting ironclads of all kinds and sizes, including gun-boats, and ships in progress as well as finished ships, the Russian navy is the larger of the two, comprising twenty-nine vessels against the twenty-one of the Turkish navy, and an aggregate tonnage (displacement) of 92,178 against 79,722. Of ships of 5000 tons and upwards, the Russians have four, while the Turks have six, of which only five are available, as will presently be seen; of ships between 5000 and 2000 tons each, the Russians have twelve and the Turks ten (eight only available); of vessels between 2000 and 1000 tons, there are thirteen Russian and no Turkish, the remaining five Turkish vessels being small river gun-boats of only 328 tons each, carrying only 3½-in. armour, and so constructed as to be capable of being readily taken to pieces (*démontable*). We shall presently have occasion to show that two—and probably three—of the most important vessels that appear in the list of

Turkish ships are still in England, more or less incomplete, and must be deducted from the twenty-one ships with which we have credited the Turkish navy. This will at the same time reduce the tonnage from 79,722 tons to 61,294 tons, or two-thirds the tonnage of the Russian ships.

Before looking more closely into the character of these two ironclad navies, it will be well to observe that in the present war Turkey will probably derive a special advantage from the fact that her ships are to operate at home, or near at home; while the Russian fleet must operate chiefly at an enormous distance from its base and from Russian ports. This assumes, of course, that the war will be carried on in the south only, and not in the Baltic, as it is highly improbable that the Turks will attempt anything against the Russian ports of the Baltic or of the Gulf of Finland. For whether the Russian Baltic fleet, on the opening up of the navigation, remains in the north or proceeds to the Mediterranean (as has been, in the latter case, confidently asserted), it is exceedingly improbable that Turkey will be able to spare any great and powerful squadron of her ironclads for operations in the north, because in the former case she would scarcely care to encounter the Russian fleet at so great a distance from her own ports, especially as even a decisive victory there would be comparatively barren of results now that every port of importance can be readily protected by electric torpedoes; and if the Russian Baltic fleet comes south, the Turks must either watch or fight it. Of course, there is the possible case of the Russian Baltic squadron coming to the Mediterranean, and being there engaged and defeated, or even destroyed, by a superior force of Turkish ironclads; but in that case, there can be but little doubt, the Turkish fleet would be so much knocked about as to be effectually prevented—even if other causes did not exist to deter it—from going so far afield as the Baltic for further advantage and glory. The presence of a Turkish squadron in the Baltic is, in fact, under any circumstances of the present war, so improbable a contingency that it need hardly be considered, and would not deserve even to be mentioned but for the daring and enterprising qualities of Hobart Pasha, its present Commander-in-Chief, to whom the bold and unanticipated nature of the expedition might be a strong inducement to undertake it. Its improbability is, however, so great as to lend great credit to the rumour that a squadron of at least ten Russian ironclads may shortly make its appearance in the Mediterranean. In the Black Sea Russia has but two ironclads, and these are the two circular vessels, the Novgorod and the Admiral Popoff, which have been specially designed for the defence of the mouths of the Dnieper and of the Straits of Kertch. Powerful as those two vessels may be for their intended purposes, they are small in comparison with the large Turkish frigates (which are, indeed, three times their size), and are not, we have reason to believe, in the best condition. It was stated in public that the boilers and machinery of the first vessel, the Novgorod, were not in good order even at the date of our visit to her in November, 1875; while the Admiral Popoff has only temporary gun-carriages of an inferior kind, the splendid hydraulic gun-carriages which Messrs. Easton and Anderson, of Erith, have lately constructed for her are either still in their establishment or must have left there within the last few days. It is likely, therefore, that these two vessels will act chiefly on the defensive, and consequently the entire extent and circuit of the Black Sea lie open to the operations of the Turkish fleet. It is not at all probable that, even under these circumstances, the Russians will attempt to force the Dardanelles and Bosphorus with their ships from the Baltic; but it will scarcely be consistent with their naval prowess or with their historical naval reputation if they make no diversion, by way of relief to their Black Sea ports, coasts, and naval establishments. In time of war, and especially in these days, events occur so swiftly that what we are now writing, and are about to write, may possibly be set aside even before it comes under the eyes of our readers; but at the time of writing there would appear to be grounds for giving credence to the statement that a considerable squadron of Russian ironclads will shortly come south, will make their appearance in the Mediterranean, and will compel the Turks either to send their most powerful ships south or to submit to have Salonica, Alexandria, and other ports ravaged by the enemy. At this point, however, it becomes necessary to revert to the composition of the two hostile ironclad navies.

We will first describe the Turkish ships. The largest of these are two very large frigates, of 9000 tons each (more exactly, 8994 tons by measurement displacement), which have quite recently been built in England, and one of which has not yet left our shores. Although it has been stated (at the time of writing) that this ship, the Hamidieh, is on the point of sailing for Turkey, and although she is receiving coals, oil, tallow, provisions, and other stores for the voyage, we venture to believe that she will not attempt to leave, and for the simple reason that she is entirely without armament. She has not a gun on board, and although it might not be impossible for the Turkish Government to obtain guns of some approximately suitable kind for her without much delay, modern guns require such special and elaborate carriages and other fittings as cannot be produced and applied in a few days. If she had been got away a few weeks ago there would probably have been no Russian vessel to intercept and molest her; but the time for an unmolested voyage of an unarmed Turkish frigate of great value has probably already passed away, and Russian vessels are, no doubt, on the look-out for her. The ship, it is true, is of very high speed, and is a powerful ram, and a dashing captain might possibly elude or disregard even a watchful and a powerful enemy; but machinery may break down, and the ship has no trained crew to make the sail power available, so that she might well fall an easy prey to an enemy if the trip were attempted; and, besides this, questions may now arise respecting the officering and manning of this ship in England during the actual hostilities between Turkey and Russia. On the whole, we shall be surprised if this ship, notwithstanding her very advanced state,

is not doomed to inactivity during the present war. If so, it will be a great misfortune to the Turkish Government, as she is one of the two most costly and powerful ships which they possess. We need not further dwell upon her, as she is in every respect similar to the Mesoudiye. This fine ship (like the other) has been built by the Thames Ironworks Company, under the superintendence of officers of the British Admiralty. In general characteristics the Mesoudiye is like the Hercules, but with the central battery very much lengthened, in order to carry twelve guns of eighteen tons each, instead of the eight of the Hercules. This enormous battery of Armstrong guns at once stamps her as a ship of the very first class as regards offensive powers, superior, in fact, in this respect to all the ships of the British Navy, excepting only the Alexandra. In order to accomplish this object, the ship has been made somewhat longer than any modern ironclads of our own Navy, and of a breadth equal to that of the broadest of our broadside ships. Practically speaking, however, she compares for size very nearly with our own Sultan, as the following figures will show:—

	Length.	Breadth.	Displacement
	Feet.	Feet.	Tonnage.
Sultan	325	59	8899
Mesoudiye	333	59	8994

It should be stated that the Sultan has a small upper-deck battery, which the other ship has not, and that there are other differences between the two ships, which account for the differences of armament, that need not here be dwelt upon. The armour of the Mesoudiye is in places 12 in. thick, with the usual taperings towards the ends, and in the strakes below and above the water-line; and one of the means by which the weight of armour is kept down to a reasonable amount, notwithstanding the great length of the battery, is that of narrowing the belt of armour before and abaft the battery, and more particularly keeping the upper edge of the armour-belt down much nearer to the water-line than has been usual in the large ironclads of our own Navy. The total weight of the armour of this ship, and of the teak timber backing which supports it, is 2000 tons. The height of her ports is ten feet above the water, and, in order to keep the

guns up to this height, and at the same time to keep the deck before and abaft the battery down near to the water's surface, a great "break," or change of level at the main deck occurs at the ends of the battery. As the upper deck is continuous, it results that the height between the decks outside of the battery is very much greater than that within the battery, the latter being only just sufficient, of course, to allow of the guns being freely and comfortably fought. This great loftiness between decks—which is also observable, and from the same cause although in different degrees, in several of our British ironclads—strikes the eyes of visitors in a remarkable manner. It gives great spaciousness to the ward-room and many of the officers' cabins, and makes it difficult for any one seated in these apartments to realise the fact that they are on board an ironclad man-of-war. In point of fact, however, all these spacious apartments are outside of the armour protection, and all their splendid fittings and decorations would be exposed to speedy destruction in action. This great ship, the Mesoudiye, is rigged, and carries a fair proportion of canvas, and, having engines (by Maudalay) of over 7000 indicated

HIS IMPERIAL HIGHNESS THE GRAND DUKE NICHOLAS OF RUSSIA, COMMANDING THE ARMY ON THE DANUBE.

horse power, is capable of steaming, when hard pressed, at the rate of 13½ knots per hour. She is built with a formidable ram stem for running down an enemy, and with steam steering-gear, to give her great handiness when under steam. It will sufficiently complete her description to say that the guns at either end of her battery are so placed as to fire within a few degrees of the line of keel; that she has three additional guns of 6½ tons each on the upper deck, to complete the bow and stern fire; and that, besides these, she has six 20-pounders, also on the upper deck, for saluting and other subordinate purposes.

The Turkish navy next comprises four ships all of 56 ft. beam, 293 ft. in length, and of 6500 tons displacement tonnage. They are protected with 5½-in. armour on 10-in. wood backing, the hulls being of iron. They all have engines of 4500 indicated horse power, and steamed, when in good condition and doing their best, at twelve knots. They are each armed with fifteen guns of 6½ tons each and one of 12½ tons. They were all built in this country, several years ago, and are rigged vessels. These ships are named Azizieh, Orkanieh, Mahmoudieh, and Osmanieh respectively. Mr. Martin, in his "Statesman's Year Book," states that the last-named ship is

somewhat larger than the others, and he speaks of her as follows:—"Among the other ironclads the largest is the Osmanieh, built by Napier and Sons, Glasgow, and launched Sept. 2, 1864. The Osmanieh is a ram, armour-plated from stem to stern, 309 ft. long, 56 ft. broad, and of a burden of 4200 tons (old measurement, we may presume). The stem of the vessel projects about four feet beyond the upper deck at the water-line." Our own information points, as we have stated, to this ship being of substantially the same size and description as the other three vessels, all of which were built at about the same time, and we do not think there is any great or substantial difference between them.

The next ship in point of importance in the Turkish fleet is the Athar Terfik (originally built in France for the Khedive of Egypt under the name of the Ibrahieh), which is 275 ft. long, 50 ft. broad, and has a displacement tonnage of 5000 tons. She is defended with 8-in. armour, and carries eight guns of 12½ tons. Her engines are of 3500 indicated horse power, and her speed about twelve knots. We may in this connection mention two ships of about the same tonnage as this one, which, as already stated, appear in the list of Turkish ships, but must be deducted therefrom in order to free the list

from unavailable vessels. We refer to two powerful vessels now under construction by Messrs. Samuda Brothers, of Poplar, and named respectively the Payki Sherref and the Barji Zafer. The most advanced of these vessels has two months' work to be done upon her, and the other is not yet launched. Neither can, therefore, be allowed to leave this country for Turkey during the war, because of international law. It will be understood that these ships are in a somewhat different position from that of the Hamidieh already adverted to, for whereas she was Turkish property, and under the Turkish flag, before war was declared; the other two ships are the property of the English builders, and cannot now be parted with to a belligerent, or if parted with cannot, without a violation of international law, be taken by a belligerent owner from our ports. In point of fact, we understand that no attempt to bring the Turks into possession of either of these two ships will be made, and it is rumoured that they have ceased altogether to be the property of the Turkish Government, and have passed, subject to the claims of the builders, into the hands of private persons. They may therefore be dropped altogether out of consideration in dealing with the relative naval strengths of the belligerent

Powers. It has been either great neglect, or a marked want of funds, that has deprived the Turkish navy of these ships in their present contest with Russia. They carry armour as thick as that of the largest of their ships—viz., 12-inch, and are to be armed with more powerful guns than any other Turkish ship bears, having an armament each of four 25-ton guns. They are also short, broad, and handy ships, with an intended speed of twelve knots, and would have been powerful and invaluable additions to any navy in the present day.

The Turks next possess two vessels of still smaller size, but of a modern type, and well adapted by their armour, guns, and handiness for modern naval warfare. These are the Fethi Bulend and the Mukadamme Kies, sister ships. The

former of these was built in this country by the Thames Ironworks Company, Blackwall; and the latter is as nearly as possible an exact reproduction of her, built in the Imperial Dockyard at Constantinople, and mainly by Turkish workmen. These small vessels, which are of only 2760 tons displacement, on a length of 235 ft. by a breadth of 42 ft., have engines of 3000 indicated horse power, and have a speed of nearly fourteen knots, which is enormous for vessels so small. They each carry 9-in. armour, with a battery of four 12½-ton guns, each gun being placed at the angle of the battery, so as to obtain with the four guns fire in all directions, or very nearly so. It is difficult to put a full value upon small fast armour-clad vessels of this type under the conditions of modern warfare; and we

may observe, in passing, that it is a matter both of surprise and of regret that the British Navy includes no such ships.

We come next to a couple of somewhat smaller vessels, not altogether unlike the Fethi Bulend in their general type, but inferior to her in the essential elements of armour, engine power, and speed. We refer to the Avni Allah, built in 1869 by the Thames Company, and the Muni Zafer, built at the same time by Samuda Brothers. These vessels are 230 ft. long, 36 ft. broad, and have a displacement of 2320 tons. They each carry four 12½-ton guns, with devices (differing from those of the Fethi Bulend) for securing great horizontal scope of fire; but their thickest armour is 7-inch, their engine power 2000 indicated, and their speed twelve knots.

ADMIRAL HOBART PASHA, COMMANDER OF THE TURKISH FLEET.

All the foregoing ships, with one exception, have been built for the Turkish Government. We now come to some vessels of earlier and inferior types, several of which were originally constructed for the Egyptian Government and afterwards handed over by the Khedive to the Sultan. There are three corvettes, almost alike, named Athar Shefket, Neghin Shefket, and Idjla Liah, all of about 210 ft. long, 40 ft. broad, and of 2300 tons displacement. They each carry four 150-pounders (of about 6½ tons) and one 12½-ton gun, and are protected with 4½-inch armour. They have engines of 2000 indicated horse power, and steam from eleven to twelve knots. Besides these three vessels, there are two others—the Latif Gelit and the Hasi Rahman, carrying 4½-inch armour and four guns (two of 6½ tons and two smaller); but these are of light draught (9 ft.), and have low-powered engines (being intended for the Danube

months), and are consequently of low speed, and weak both offensively and defensively. Of the five *démontable* river gun-boats it is needless to say more than has been already mentioned, except that they each carry two 9-inch guns in turrets, are defended with 3-inch armour, draw 6 ft. of water, and steam two of them at nine knots, and three of them at seven knots. It is most probably the Latif Gelit which has been blown up on the Danube.

The only Turkish ironclad which we have left unmentioned is a ship called the Noosretieh, which has been constructed at Constantinople, and may be considered as of a similar type to the Mesoudiye and Hamidieh, but much smaller, being of 6900 tons displacement. This ship is included in some lists as completed, and as taking a part in the present war. M. Dialere states that she carries ten guns of 12½ tons in a central battery,

with angular fire at the corners within 15 degrees of the line of keel, and that the bow and stern chasers consist of one 6½ ton unprotected gun on the upper deck. Her thickest armour is 9 in. Besides her ironclads, Turkey possesses unarmoured ships as follows—viz., three or four ships of the line, five frigates, and several corvettes, with numerous despatch and gun boats of various descriptions, amounting probably to fifty. There are likewise three Imperial yachts of high speed, which may be made available for despatch and transport purposes. Of the condition of the various vessels composing the fleet we must speak presently.

On turning to look at the Russian navy, we find we have to deal with an ironclad fleet of a very different character indeed to that of Turkey. We have seen that at the head of the latter stands the large English-built and English-armed frigate

Mesoudiye, with its long outspread battery of broadside 18-ton guns. There is no ship at all analogous to this in the Russian navy. At the head of that navy stands the Peter the Great, which in its general characteristics resembles our own Devastation and Draught types of ship, being a large two-turreted twin-screw mastless ship, with very thick armour, very heavy guns, and a high speed. This powerful ship is 330 ft. long, 64 ft. broad at the battery, and has a displacement of nearly 10,000 tons. She has also been supplied with engines and boilers intended to produce no less than 10,000 indicated horse power, and to give to the vast ship a speed of fifteen knots. Her armour is 15 in. thick, and each of her four guns weighs 40 tons. The worst rumours have reached this country about this vessel, some of them going the length of averring that she is leaky, that her engines when at work shake her all to pieces, that she cannot stand, the fire of her own guns, that her engines are failures, and that instead of being one of the fastest ironclads in the world, she is, in point of fact, one of the slowest. The writer of these lines having seen the ship, and gone carefully through her more than once, advises the reader to receive these statements with distrust. No doubt there are very great difficulties to be encountered and overcome in turning out in Russian factories and dockyards such a ship as this, and it is not impossible—especially as the ship has been sheathed with wood, in the working and fastening of which to an iron hull under water extreme accuracy and care are indispensable—that some leakages may have occurred, although these need only be believed when some evidence is given. The Peter the Great can hardly, however, be structurally weak, or leaky in any very serious manner; and although our own recent experience must warn us not to place excessive confidence in marine engines, it may be assumed that the firm of Baird and Co., of St. Petersburg, who manufactured the engines and boilers, have made no very great or permanent failure in her machinery. Making all allowances for possible or probable shortcomings, it will be safe to assume that this ship, although exclusively Russian built, will be found to correspond pretty closely to what her elements of design and construction would lead us to expect. If it be true that the Russian Government intend to send a squadron south the Peter the Great will no doubt form its leading ship, and we shall probably have an opportunity of seeing her in English ports. However dreadful in many respects, an engagement between this ship and the Mesoudiye would illustrate a great many questions upon which much doubt at present exists, and it is to be hoped that if the course of events should unhappily bring about such an engagement, neither skill nor courage will be wanting on the part of their officers and crews, so that the merits of these great rival ships and rival systems of naval design may be fairly exhibited. Although the Peter the Great is well known to us, and we have, in fact, all her plans before us as we write, we think it will interest our readers to cite the following observations from M. Dislere's book on *La Guerre d'Escadre*, published last year. He says:—"At the epoch when the British Admiralty was led to construct ironclad ships with central batteries, and without masts or sails, carrying in turrets guns of the greatest calibre, the Russian marine authorities arrived at the same conclusion, and, almost on the same day, the Devastation was commenced at Portsmouth and the Peter the Great at St. Petersburg. Larger than the English ship, with a displacement a little greater, thanks also to a reduction in the coal supply, and consequently in her steaming distance, the Peter the Great was able to receive armour plating of excessive thickness ('500 millimetres') at the water-line, with a proportional increase in the other parts of her armour-plating. The draught of water, in view of the exigencies of navigation in the Baltic, was reduced to 23 ft., from which followed the necessity of increasing considerably the length of the ship, and of augmenting the power of its machinery. . . . To resume, the Peter the Great represents, for the time at which she was commenced, the maximum useful effect to be derived from a displacement of about 10,000 tons." However this may be, we clearly see in this ship an embodiment, at a very early period of the development of these large European monitors, of a well-studied effort to keep pace in Russia with the very latest progress made in England; and, in point of fact, a careful study of her design proves that, if the Peter the Great has any very considerable defects, they must be defects of workmanship rather than of principle or of plan. We see no less clearly that, in a conflict between this great seagoing mastless monitor and such a frigate as the Mesoudiye we should witness a contest between the latest and highest development of the frigate type and a very powerful example of a type of vessel that is essentially a product of modern invention.

In going over the remaining vessels of the Russian navy we shall find it impossible to follow both the order of size and the order of efficiency, for some of the large ironclads of early date are doubtless much inferior to some of the smaller but more recent vessels. It will perhaps be best, on the whole, to consider them approximately in the order of size; and we may therefore mention next the Sevastopol and the Petropauloski, two wood-built frigates, of seagoing type, of 6200 tons displacement, and 300 ft. in length. These ships, like our own early vessels, are plated with only 4½-in. armour, and carry armaments of 9½-ton guns, these being eighteen in number in the Sevastopol and twenty in the other ship. Both ships are built as rams, the first named having a speed of fourteen knots and the latter of twelve knots, the indicated horse power being about 3000 horses in each case, but the slower ship being 56 ft. in breadth and the faster only 50 ft. 10 in. This ship is in commission, and was in the Mediterranean last year. The Prince Pojarsky is an iron ship, with a central battery, and she also is a ram. She is a smaller ship than the two preceding, being only 280 ft. long, 49 ft. broad, and of a displacement tonnage of 4500. Like them, she has but 4½-in. armour, with 18-in. teak backing, and carries an armament of ten guns of equal size with theirs. Her speed is eleven knots.

Next in order comes the Minin, a ship designed originally

as a turret-ship of the Monarch type, but smaller, being 289 ft. in length, 49 ft. in breadth, and of 5800 tons displacement. She was found to have been designed unsatisfactorily in some respects, and has now been converted, at the works of the Baltic Ironworks Company, St. Petersburg, into a broadside cruising-ship, with 7-in. armour belt and an upper-deck battery of six 12½-ton guns. Very similar in type, but built from original designs chiefly by Admiral Popoff (who has conducted the conversion of the Minin), are the General Admiral and Duke of Edinburgh, two iron-built ships, 285 ft. long, 48 ft. broad, and 4500 tons displacement. Their armour is 6 in. thick, and they each carry four 12½-ton and two 7-ton guns *en barbette*. All three ships have engines of 6300 indicated horse power, and will steam at a speed of about thirteen knots. They are all intended to keep the sea, and to proceed to foreign stations, and they therefore carry not only a large coal supply, but also a large spread of canvas. Neither the General Admiral, the Duke of Edinburgh, nor the Minin is yet complete; but, judging from the state in which we last saw them, they cannot be very far from completion, and may form part of the contemplated Mediterranean squadron. Owing to the backward state of their machinery, however, this cannot take place till late in the summer.

We next come to four iron-built turret-ships, which are all nearly alike in size, and which, when designed, were intended as a powerful squadron of cruising ships. They are known as the four Admirals, being named after four distinguished officers of that rank, and were modelled on the general type of low freeboard rigged turret-vessels, so much recommended a few years ago by the friends of the late Captain Cowper Coles. They were, in fact, ships of the Captain class, but of less size; and when that ill-fated vessel capsized and went to the bottom confidence was lost in these four vessels, in so far as their cruising capabilities were concerned. The result has been that the intention to rig them as cruising ships has been abandoned, but there is probably no good reason why, with an additional coal supply, they should not form part of a fighting squadron, and in that capacity we may expect to see them accompany the Peter the Great as a bevy of satellites, if we may use such a phrase, to the Mediterranean. They are all 260 ft. long, 43½ ft. broad, and of about 3700 tons displacement. But they differ somewhat in armour and armament, as follows:—

	Thickness of Armour.	Armament.	No. of Turrets.
Admiral Lazareff ...	5½–6 in.	6 of 15½ tons	3
Admiral Grieg ...	5½–6 in.	3 of 27 tons	3
Admiral Chichagoff ...	6 in.	2 of 27 tons	2
Admiral Spiridoff ...	6 in.	2 of 27 tons	2

They are all furnished with engines of 400 nominal and 2000 indicated horse power, and each has twin screw-propellers. They cannot be considered fast vessels, none of them exceeding eleven knots in speed, and their coal supply is small (only 300 tons), even when we view them as full-rigged ships. With their masts and rigging dispensed with, and the crew and provisions greatly reduced in consequence, no great difficulty would be found, however, in doubling the quantity of coal, or even in increasing it still further.

Passing by for the moment the two circular ships, which we will consider hereafter, we may next mention the three floating batteries—Pervenetz, Kreml, and Netro-Menya. These are mastless vessels of about 3300 tons displacement each (220 ft. long by 53 ft. beam), and are protected with 4½-in. armour, excepting the Kreml, which has some plates of 6-in. iron upon her sides. Their armaments consist chiefly in each case of 9½-ton guns, of which the Pervenetz carries fourteen, the Netro-Menya sixteen, and the Kreml twelve, the last-named ship having besides five guns of 5 tons each. The Kreml's greatest speed is nine knots, the Pervenetz being a little faster and the other ship a little slower.

The Russian navy in the Baltic also comprises no less than thirteen turret-ships of the American monitor type, of comparatively light draught—the draught of water of several of them being only 10½ ft., and none exceeding 12 ft. Of these vessels three are two-turreted and the remainder single-turreted monitors. The guns of all of them are 15½ tons each in weight. The Charodeyka and the Rusalka each carry four guns, two in each of two turrets; the Smertch also has two turrets, but carries only one gun in each; and all the remaining ten vessels carry each two guns in a single turret. The speeds of the three vessels first named are from eight and a half to nine knots; those of the other ten are from seven to eight knots. The armour in no case exceeds 5 in. except in the turrets, where it is in most of them made up to 11 in. in thickness. The displacement tonnage of the Charodeyka and Rusalka is nearly 2000 tons in each case; that of the others about 1500 tons each.

The only other ironclads of Russia are the circular ships Novgorod and Admiral Popoff. The very notoriety of these extraordinary vessels has tended in some degree to diminish their credit, chiefly because it has drawn them somewhat out of the limited sphere for which they were intended, and brought them into comparison with seagoing ships, which they were never intended to be. On hearing of their steaming from one end of the Black Sea to the other, and encountering bad weather at sea, people begin to think of them in connection with other seagoing ships, and to ask, "What is their speed?" "How do they pitch and roll?" "How do they defend themselves against boarders?" and so forth. These questions are no doubt very interesting and important; and the more we hear of the sea performances of these vessels the more justified people are in putting them. But the tendency of doing so is, as we have said, to bring them into a more or less false light, and to judge them by improper standards. There is no doubt whatever that these circular monitors were intended to perform in the South of Russia the simple and specific purpose of defending the mouths of the Dnieper and the coasts of the Sea of Azof, assisting, no doubt, in the latter case the fixed fortifications of Kerch. It would be well, therefore, to compare them with the Russian monitors which were built for similar services in

the Baltic, or, in the present state of war, with the light draught vessels of Turkey. This the reader can now readily do for himself, with the above information before him: we must proceed to give some further account of the circular vessels themselves. The Novgorod (the first built) is 101 ft. in diameter and 13 ft. 2 in. draught of water. She is protected with 11-inch armour, and armed with two guns of 27 tons each in a fixed circular turret at the centre of the ship. She is propelled by engines of 480 nominal and 2700 indicated horse power, by means of six screw-propellers, and steams seven knots. The second ship, named by the command of his Majesty the Emperor the Admiral Popoff, after her designer, is 121 ft. in diameter, draws 14 ft. of water, is protected with 18 in. of armour, and armed with two guns of 40 tons each in a fixed turret situated as in the other ship. She is propelled by engines of 640 nominal, and about 3500 indicated, horse power, by means of four screw-propellers, and steams at nine knots. With regard to the armour of these vessels, respecting which there has been some controversy, it should be observed that behind the armour plates is an iron backing of channel rail of great strength, which so much exceeds in weight the ordinary amount of iron edge-plates that it would be much more misleading to omit this from the weight of armour than to include it in it, and for this reason we have given the above thicknesses of plating which are equivalent to the actual plating, increased by an amount due to the inner edge or channel armour, so to speak. As it is very desirable for the public to form and hold sound opinions upon these naval questions in the present state of European affairs, we venture to put them on their guard against the misleading gossip of those who do not understand them. Admiral Popoff has been so prominent of late years, and has had so much influence with his Government, that those whom he more or less displaces not unnaturally do what they conveniently can to discredit him, directly and indirectly; and this is carried to such lengths, that the grave errors which have undoubtedly been made in Russian naval administration are visited, not upon those who have made them, but upon the man who has not made them, but who has, on the contrary, given his country really powerful ships—the only powerful ones she now has. A curious instance of this, which may be cited as an example of many, occurred in a letter which a writer signing himself "W. W." contributed to the *Pall Mall Gazette* of Saturday, April 28. He wrote, "As to the navy, and the Popoffkas, so much praised in the *Times* a little while ago by the Russian Correspondent of that journal, I need only quote *ipsisima verba* of the Emperor, uttered within the last three months to one of his ministers:—'My navy is very much like the army of Napoleon III. at the commencement of the German War—very large on paper, but very small when found.'" Now, the Emperor may have spoken those words, and he may have spoken them with considerable truth, as we have seen, looking to the failure in plan of several ships, the incompleteness of others, and the large extent to which American monitors, fit for Baltic use only, figure in his Navy List. But what the Emperor's words had to do with the "Popoffkas," which designation is strictly limited to the two circular ships, it is hard to conceive. These ships do not exist on paper only; they are not stowed out of sight where they cannot be found; they are ready for service, and are, no doubt, performing it; they are on guard against the Turkish enemy, with thicker armour and heavier guns by far than any other Russian ships possess (neglecting only the Peter the Great, which also is Admiral Popoff's ship); and it cannot be doubted, therefore, that the words of the Emperor, if spoken at all, were spoken notwithstanding the possession of these vessels; and had the Russian navy been as fortunate in respect of all its other ships as it has been in respect of these it is obvious such words could not have been spoken at all. In fact, the writer of these remarks has heard from the Czar's own lips His Majesty's approval of the Popoffkas for their intended purpose. If Russia had but built a dozen of these vessels she would have been well able to hold the Black Sea easily against the Turkish fleet, and have threatened Constantinople if she were foolish enough to do so. Having but two such vessels in the Black Sea, and not another ironclad of any kind there, these two will probably be devoted solely to the object for which they were built, and will act strictly on the defensive at the sea entrances.

The Russian Navy, like the Turkish, has a considerable number of unarmoured vessels. No wooden line-of-battle ships are now comprised in its list; but it has five steam-frigates, twenty-two wooden steam-corvettes and cruisers of various sizes, and more than one hundred gun-boats and smaller vessels, besides fourteen yachts, several of which are large and fast. Several of these unarmoured ships are, of course, on distant stations; and these, while the war is confined to the present belligerents, will find, of course, little or no opportunity for attacking Turkey. In the Black Sea and Mediterranean some of the unarmoured fleet will, no doubt, play an active part; but the chief interest of naval operations will be concentrated in and upon the ironclad fleet. We have now seen how that fleet is in each composed, in so far as the size, offensive and defensive powers, speed, &c., are concerned, but of the condition of the fleets we have yet to speak. The subject divides itself into two parts:—1. The condition of the ships, in hulls, armaments, and machinery; and, 2, the capabilities of their crews for working and fighting them. As regards the Turkish ships, if we leave out of consideration those which are still incomplete, both in England and Constantinople, it must be acknowledged that nothing but specific and minute information to the contrary would justify us in doubting that all the Turkish ironclads are fairly efficient. None of them has performed any great amount of service; none of them is old enough to be worn out with age, especially as a lot of them are iron built, and most of them English built; and great exertions have been made by Hobart Pasha for a long time past to bring them into a condition of efficiency in every respect. On the other hand, it must be borne in mind that constant care is requisite in order to keep iron ships in good condition, and more especially

to keep their engines and boilers so. It has frequently happened of late in our own Navy that injuries and accidents have occurred to boilers and machinery which have been very little used or not used at all, and it is hardly to be expected that greater care has been systematically taken over a course of years in the Turkish navy than in our own. Considerations of this nature should lead us to expect a serious falling off in the ships (both of Turkey and Russia) in one respect—that of speed. The speed we have assigned to all the ships previously described is that which is usually given—viz., the maximum which can be or has been attained under the most favourable conditions. Some readers may be disposed to regard this estimate of speed as essentially misleading; and so it doubtless is if it is not properly understood, and if deductions from it are not made. But the maximum attainable speed, with the best of coal, the best of stoking, clean bottom, smooth water, and little or no wind blowing, has the great merit of being a *standard* by which vessels of the same or of different naves can be compared with one another; and there is no other standard attainable. If bad coal is used, who is to define its degree of inferiority to the best? If inexperienced stokers or too few of them are employed, who is to judge of the falling off in the boiler performance from this cause? If the bottom is foul, who shall say what loss of speed is due to that fact? Or who shall judge with nicety, or even approximately, of the reduction of speed that would be due to an unmeasured force of wind, or to a disturbed sea, or to both combined? And, if no one can tell us the result of any one of these causes of loss of speed, who shall tell us the combined result of the whole? The fact is, when we once depart from maximum speed as our standard, our information at once becomes vague and uncertain. It is, nevertheless, necessary to bear in mind that the average working speed even of the best of steam-vessels falls far below the maximum, and that, too, when employed upon regular and known services. For example, the Channel steamers which run from Dover to Calais, and which are said to be able to steam seventeen knots, or nearly twenty miles an hour, usually occupy about an hour and forty minutes on the journey; and the large Holyhead mail-packets, which are said to be able to steam even faster still, make throughout the year an average speed of not much more than fourteen knots. In the case of war-ships, therefore, and still more in the case of most of the ships of the Russian and Turkish navies, which have but very occasional service to perform, we must make large deductions from their greatest attainable speed in order to arrive at the actual speed. There is no sufficient reason to doubt that in all other respects the Turkish vessels are fairly efficient; and, even where some defects may exist, as the war service has to be at present performed in home waters—at least until the Russian ships are released from the Baltic—they probably, unless serious and disabling, would not be allowed to interfere with the duties of the fleet.

The accounts which have lately reached this country respecting the crews and officers of the Turkish fleet speak of their discipline and efficiency as highly satisfactory to those who inspect them. And no doubt Hobart Pasha has taken good care to bring them into the best state possible. We must remember, however, that the Turkish fleet is—for what reason no man knows—a seagoing fleet, as we have seen, with masts, and sails, and sailing crews like most of our own ships; and discipline, and good order, and sailor-like appearance of the men in such a fleet are one thing, while the knowledge and experience necessary to take these steam fighting vessels, with modern armaments, into action, and there to manage all their parts efficiently, is another. Our own knowledge of what has taken place in the Turkish ships when they have been sent down for exercise into the Sea of Marmora makes us doubt whether a huge ship like the Mesoudieh, with her steam capstans, steam steering-gear, and diversified and more or less complex appliances for working and fighting, will be handled with all needful efficiency in the hurry and excitement of battle. To counteract any shortcomings, however, the Turks have the very great advantage of having a month or two of war-time in which to practice themselves, and have the Russian Black Sea seaboard towns to practise upon, because, as already remarked, it is unlikely that the two circular monitors will alone grapple with the Turkish fleet. On the whole, therefore, we may fairly assume that the Turkish naval strength is fairly represented by the ships which we have described, and that these ships and their crews will have been brought into a state of considerable fighting efficiency before the bulk of them is likely to encounter a Russian squadron.

Reverting now to the Russian navy, and considering, primarily, the condition of her ships, we note first that we have in her case to regard the question from a point of view very different from that from which we have considered the Turkish fleet, because, as it is highly improbable that a Turkish squadron will seek the Russians out in the Baltic, all the Russian naval work will have to be done in the south, at a vast distance from its only available dockyards and arsenals,—unless, indeed, the Russians should take one course which, although it would be an enterprise of daring and danger, is probably open to her—viz., that of forcing a passage through the Dardanelles and Bosphorus into the Black Sea. It is possible that international considerations are alone sufficient to prevent this; but even if that be not so, it is hardly to be expected that Russia would risk almost the only powerful ships she possesses in an enterprise so desperate as that of encountering all the land batteries, torpedoes, and naval forces with which Turkey could and would resist the Russian approach to the Euxine. We think we may dismiss this contingency from our thoughts, and that being so, have now to consider how far the Russian Baltic ironclads are in an available state for use in the Mediterranean. We may first, we think, dismiss the whole of the American monitors from this category, not because we hold it impossible, or extremely dangerous, to send them round in the spring or summer months, but because they were not intended for such a service, could only be sent upon it with a considerable degree

of risk, and will doubtless be kept in the Baltic for their natural purpose in the present state of European affairs. At least one of the three floating batteries will also be retained at Cronstadt. We are in grave doubt, as already stated, as to the practicability of getting the General Admiral, the Duke of Edinburgh, and the Minin ready for sea; but great exertions have been made of late, and it would not be safe to leave them all out of consideration. One, and possibly two of them are likely to be completed this summer. The Sevastopol and Prince Pojarski are available for service. The Petropauloski is in commission, the Peter the Great is ready for sea, and the "four Admirals" have also been made ready for service in the way previously suggested.

With regard to the condition of the officers and crews of the Russian fleet, it is sufficient to say three things:—First, the Russians always have a number of ships in commission and on actual service on foreign stations, so that their officers and men are well practised in ordinary navigation and seamanship; secondly, unlike the Turkish navy, the Russian navy is always under the command of Russian officers in every grade, and a systematic habit of sending her ironclads out to exercise has been kept up ever since the introduction of ironclads; and, thirdly, on one plea and another, there always are a certain number of Russian naval officers studying in this country, and no doubt in France also, every improvement and development of the art of naval warfare, as regards both ships and tactics. When we add that the discipline and courage of her men are known to be proverbial, we have said enough to lead to the belief that her ships will be well handled and well fought. On this head, therefore, it is unnecessary to make any deductions or allowances beyond those which must inevitably attend the employment of ironclad steam-ships, with their multiplied mechanical contrivances under the conditions of battle.

Without, therefore, wishing to guarantee the accuracy of our list in the case of every one of the Russian ships, we may now draw a comparison between the available navies of Turkey and of Russia for war service, observing that we leave altogether out of the following lists the thirteen monitors, and also the three cruising ironclads General Admiral, Duke of Edinburgh, and Minin, because of their present unreadiness:—

TURKISH IRONCLADS.			
	Displacement Tonnage.	Principal Armament.	Thickest Armour.
Mesoudieh ...	8994	12 guns of 18 tons	12 in.
Noomretieh ...	6900	10 guns of 12½ tons	9 in.
Azizieh ...	6500	15 guns of 6½ tons	5½ in.
Orkanieh ...	6500	"	5½ in.
Osmanieh ...	6500	"	5½ in.
Mahmoudieh ...	6500	"	5½ in.
Athar Terfik ...	5000	8 guns of 12½ tons	8 in.
Fethi Bulend ...	2760	4 guns of 12½ tons	9 in.
Mukadamm Kies ...	2760	"	9 in.
Avni Illah ...	2320	"	7 in.
Muni Zafer ...	2320	"	7 in.
Athar Sheket ...	2300	1 gun of 12½ tons	4½ in.
Neghim Sheket ...	2300	4 guns of 6½ tons	4½ in.
Idjla Lieh ...	2300	"	4½ in.
*Latif Gelit ...	2300	2 guns of 6½ tons	4½ in.
*Hazi Rahman ...	2300	"	4½ in.

*And five river vessels.

*Light draught gun-boats. One of them since destroyed.

RUSSIAN IRONCLADS.			
(Omitting thirteen monitors and three incomplete cruising ironclads.)			
	Displacement Tonnage.	Principal Armament.	Thickest Armour.
Peter the Great ...	9660	4 guns of 40 tons	15 in.
Sevastopol ...	6275	18 guns of 9½ tons	4½ in.
Petropauloski ...	6175	20 guns of 9½ tons	4½ in.
Prince Pojarski ...	4500	10 guns of 9½ tons	4½ in.
Admiral Lazereff ...	3750	6 guns of 15½ tons	6 in.
Admiral Grieg ...	3580	3 guns of 27 tons	6 in.
Admiral Chichagoff ...	3700	2 guns of 27 tons	6 in.
Admiral Spiridoff ...	3750	2 guns of 27 tons	6 in.
Pervenets ...	3300	14 guns of 9½ tons	4½ in.
Netro-Menya ...	"	16 guns of 9½ tons	4½ in.
Kreml ...	"	12 guns of 9½ tons	6 in.
Novgorod (Popoffka) ...	2500	5 guns of 5 tons	"
Admiral Popoff ...	3550	2 guns of 27 tons	11 in.
		2 guns of 40 tons	18 in.

It may be taken for granted, we think, that the above lists represent the full available force of either country for service in the South of Europe; and it appears to us that the comparison is not, all things considered, so adverse to Russia as many have supposed, if we regard the probability of a contest in the Mediterranean. For, in the first place, it is obvious that Turkey cannot afford, and is not likely, to abandon the Black Sea altogether, even for the purpose of giving battle to the Russian Squadron when it makes its appearance in the South and proceeds to menace Turkish ports. Turkey will desire to keep that command of the Black Sea which is at present hers, and to blockade all those Russian ports there from which Russia might send supplies to her invading army of the Danube. This she will have to do in presence, so to speak, of the two Russian Popoffkas, which, however low an opinion may be formed of their steaming powers, are capable of proceeding in a comparatively few hours to any part of the Euxine, either to break a blockade or to attack Turkish ports. The Turks must, therefore, continually keep in the Black Sea a sufficiently powerful force to fight these two ships, should they come out. And it is here that the great value of these Popoffkas to Russia comes in. One of these ships, the Admiral Popoff, carries the most powerful guns yet afloat in the world, and the Novgorod has 27-ton guns, and even these are 50 per cent more powerful than any guns carried in the Turkish fleet. Besides this, these vessels are defended, as we have seen, with armour 11 in. thick in the one case and 18 in. thick in the other; and there is but one ship in the Turkish fleet, and that the largest, which has guns at all able to penetrate such armour as this. It is true that as they are to fight from inner waters, these Popoffkas have their guns in open-topped turrets, and would, therefore, run risk of having their armaments made useless by inferior ships of the broadside type with heavy guns at tolerably close quarters; but it is quite possible that even in the open they would, with their powerful guns, and their invulnerable sides, successfully engage even several of the

Turkish vessels, especially as they are very much safer under the attacks both of rams and torpedoes than ordinary vessels. Of course superior skill, or even superior courage, in the handling of ships may set at nought all calculations on such a subject; but for purposes such as ours at present is we can only consider the relative capabilities of the vessels themselves. What appears to us probable is that the Mesoudieh, with her lofty battery of twelve 18-ton guns, would have a very fair chance of quickly silencing the two Popoffkas at close quarters, and therefore we think it doubtful if they will venture out in her presence; but, on the other hand, if this ship be withdrawn from the Black Sea, we do not see how the Popoffkas are to be met successfully, except by a combined attack of several of the other Turkish vessels. When, therefore, the Russian squadron appears in the Mediterranean, Turkey will have to decide whether she will keep the Mesoudieh in the Black Sea to control the Popoffka, in which case she will have to encounter the Peter the Great, with ships carrying no gun heavier than those of 12½ tons; or whether she will send the Mesoudieh southwards to meet the great Russian monitor, and attempt to control the Popoffka by a detachment of less powerful ships, in which case an action between the Popoffkas and the Turkish frigates or corvettes would, no doubt, ensue. One thing appears quite certain—viz., that in either case we shall be likely to witness an action south of the Dardanelles between a Russian and a Turkish squadron of not very unequal power. It may be interesting to forecast—although this can only be done in a very general way, of course—the probable composition of the two hostile fleets. We will assume that, after making due allowances for unreadiness and for other demands upon the Russian naval force, that the squadron menacing the Turkish southern ports, and bringing on the battle, will be composed of nine ships (observing that, although we select the names of certain ships of each class, we do that merely for convenience, and with the view that the mere interchange of ships of the same class, in either navy, would make no difference in the result). Presuming that the Mesoudieh is sent south, and that, besides the river gun-boats, the Nooretieh, the Athar Terfik, the two fast corvettes, Fethi Bulend and Mukadamm Kies, and one of the smaller vessels of the Athar Sheket class, and no more, are also retained for Black Sea purposes—and we really do not see how less than these five vessels could at all hope to maintain blockades and engage, with a chance of success, the Russian circular ships—we shall then have nine ships left to compose the Mediterranean squadron. Here, then, we have the two hostile squadrons composed as follows:—

TURKISH SQUADRON.		RUSSIAN SQUADRON.	
Mesoudieh ...	8994 tons.	Peter the Great ...	9660 tons.
Azazieh ...	6500	Sevastopol ...	6200 "
Orkanieh ...	6500	Petropauloski ...	6175 "
Osmanieh ...	6500	Prince Pojarski ...	4500 "
Mahmoudieh ...	6500	Admiral Lazereff ...	3750 "
Avni Illah ...	2320	Admiral Grieg ...	3580 "
Muni Zafer ...	2320	Admiral Chichagoff ...	3700 "
Neghim Sheket ...	2300	Admiral Spiridoff ...	3750 "
Idjla Lieh ...	2300	Kreml ...	3300 "
Total ...	44,234 tons.	Total ...	44,385 tons.

The reader will see, by referring to the lists given a little further back, that, apart from the two largest ships, there are no great differences of armour between the two squadrons taken as a whole, none of the remaining ships having less than 4½-inch or more than 7-inch in either squadron, and most of them having 5½-inch or 6-inch armour. As regards guns, the comparison is as follows—remembering, however, that in the four Russian turret-ships the guns are available for fighting on either side, which is also the case in one or two of the smaller Turkish ships, but to nothing like the same extent or with the same ease and readiness as in the turret ships. Taking the whole of the principal guns in the ships we have:—

GUNS IN TURKISH SQUADRON.		GUNS IN RUSSIAN SQUADRON.	
12 of 18 tons, equal to 216 tons.		4 of 40 tons, equal to 160 tons.	
14 of 12½ tons, equal to 175 "		7 of 27 tons, equal to 189 "	
68 of 6½ tons, equal to 442 "		6 of 15½ tons, equal to 93 "	
		60 of 9½ tons, equal to 570 "	
94 guns, weighing ...	883 tons.	77 guns, weighing ...	1012 tons.

It will be seen from the above that the two hostile squadrons, if composed as we conjecture, will be fairly matched, if we regard the aggregate tonnage, but the Russian squadron would have the heavier armament, measured by the aggregate gun-weight. In respect of number of guns the Turkish squadron has the greater; but in these days that points, of course, to weakness rather than strength—otherwise a ship with thirty of the old 95-cwt. guns which were in vogue before the days of ironclads would be equal in offensive power to the Devastation. The greatest interest of an engagement between two such squadrons as the above would, of course, be centred in the contest between the Peter the Great and the Mesoudieh; and the victory ought, if modern ideas are sound, to be with the turret-ship, which has armour that the other ship's guns cannot pierce, and guns which can pierce hers. If either of the two ships surrendered, leaving the other still in a fighting condition, the destruction which would fall upon the remainder of the fleet which had thus lost its champion would doubtless be speedy and complete. We need not push our speculations on the subject further, because in the interval that is elapsing between the declaration of war and the departure from the Baltic of the Russian squadron of the south the Turks have things all their own way in the Black Sea, and may find means of destroying the Popoffkas, and of thus setting their whole ironclad fleet free to meet the enemy.

Thus far we have not taken into account the probable influence which the new weapon of naval warfare, the torpedo, will have upon the operations of the belligerents. For obvious reasons, both Powers have kept the general public pretty much in the dark respecting the extent to which they have been able to possess themselves of these destructive instruments. We are not disposed to believe that either Power has provided itself with large supplies of them, because there is great reason to believe that the want of financial means, which has operated so

TURKISH INFANTRY.

RUSSIAN INFANTRY.

seriously in the case of the ships, has had its effect here likewise. Our readers will have observed that, although this war has been more or less probable for two years past, the Turks have one of the most powerful ships still lying complete but unarmed in our docks; and two more vessels of very recent type, and invaluable at such a time as this, the one unfinished in dock and the other unlaunched upon the stocks; or have, rather let us say, parted with these vessels, although there has been ample time to complete the whole. Want of financial means has doubtless been the sole cause of this state of things. Nor can it be doubted that, with a freer application of money to the object, all doubt about the readiness for sea of the Russian ships *Minin*, *General Admiral*, and *Duke of Edinburgh* would have been at an end. In the matter of torpedoes the same hard necessity has no doubt pressed on both Governments; and in the case of the *Whitehead* torpedo other difficulties likewise have existed. The invention is still more or less secret, and more or less under the control of Mr. Whitehead himself, who is enthroned at Fiume like a Prince of Destroyers, to whom the Powers of Europe, and of other parts of the world beside, are continually sending their envoys to learn his latest wishes and behests—envoys bearing golden gifts as the price of his disclosures. So strange a phenomenon has never before been seen, and it remains to be ascertained hereafter how far this naval demigod has set free or restrained the present belligerents. Events will, we think, show that up to the present time no great supplies of the fish torpedo have been secured by either party. On the other hand, some limited supplies have been obtained, we believe, by both, and torpedoes of other descriptions are also in the possession of both; and we may consequently look for very interesting operations shortly. Never before was there a time in which single ships embodied such vast results of labour and expense as the *Mesoudiye* and *Peter the Great* each represent, and never before was there a time when science had put it into the power of a boat's crew to blow up a big ship with so simple an instrument. England may well look with anxiety, and even longing, to learn the results of war between such navies as we have described; but neither anxiety nor longing ought for a single moment to be allowed to paralyse, or even to delay, her own exertions; for whether Russia or Turkey win the battles, small and great, that are likely to be soon fought, the loser will be the loser much less from mistakes than from inaction—from doing too little rather than from doing what was not the best.

At the same time, it is not a little instructive to observe what mistakes have been made by both Governments in building up their respective ironclad fleets. Russia has, in our opinion, made three grave errors. First, in the early days of ironclads she clearly expended far too much upon mere Baltic coast-defence monitors and floating batteries, considering that she had been debarred by the Treaty of Paris from building or maintaining a Black Sea fleet. At least thirteen of her existing vessels are unfit to come to her aid now in the south; whereas, had she expended the same money in seaworthy ironclads, she might have had, say, eight additional ships to those coming south, and thus have sent an overwhelming force into the Mediterranean. Secondly, she made a great and terrible mistake when she took up the demand for rigged turret-ships of low freeboard, in face of the steady opposition which the scheme met with in this country from naval constructors of the greatest experience and repute. Our own Government, indeed, gave way, in one slip, and paid the penalty in a frightful catastrophe; and, although this came in time for Russia to profit by it so far as to avert like losses, she is saddled with four very inefficient ships, in place of four powerful and successful vessels; and, thirdly, Russia has made and is still making the grave and inexcusable error of limiting her navy solely to the ships she can produce in her own country, where the disadvantages of shipbuilding are enormous, and where the cost of ships is equally great. No one could for a moment blame, or even fail to admire, the energetic efforts which foreign countries make to develop their own resources, and to cease to depend for manufactures upon other countries but such efforts require to be regulated, and to be brought under the control of other considerations, and we venture to assert that if this question had been properly understood in Russia she would now, with her past expenditure, have possessed a navy twice as strong as her present one, and at the same time have had ship-yards and engine factories of her own in a far healthier and more prosperous condition than hers can at present profess to be. In Turkey this last error of Russia has been entirely avoided, her efforts to promote shipbuilding at home having been judiciously made, and very successful. Whatever her fleet may be, it has certainly been constructed with far greater economy than the Russian fleet, and no great or glaring errors have been made in this respect. But there has been one serious error committed, and that is the very reverse of the first error which we have had occasion to impute to Russia. Turkey has made her ironclad navy too largely and too exclusively a navy of masted and rigged ships. Her necessities have for many years past pointed to the construction in the main of steam fighting ships—ships capable of going long distances, if necessary, but in which great offensive and defensive power took the first place. Far too much has been expended upon furnishing all her ships with masts and sails, and for no better reason, we fear, than to afford the late Sultan, Abdul Aziz, with the personal pleasure of looking from his palace windows upon a fleet in all points equal, ship for ship, with the rigged frigates of England and France. At any rate, the construction of this sort of ship has been pushed too far in Turkey, especially of late years, when, with the circular ironclads of Russia taking shape at Nicolaieff, it would have been wiser to concentrate the whole expenditure upon offensive, defensive, and steaming qualities. On the whole, however, and viewing the subject from the commencement of ironclad shipbuilding down to the present, we think Turkey has done better than Russia in this matter, and is at the present moment much better able than Russia to bring into action the results of her expenditure upon ironclads.

THE TURKISH ADMINISTRATION.

The Ottoman Empire, comprising all its provinces, in Europe and in Asia, under the immediate rule of the Sultan at Constantinople, has a total population estimated at twenty-eight millions and a half. Thirteen millions and a half are considered to be of the Ottoman Turkish nation, of whom less than two millions are found in European Turkey. The Mussulman population, in all, numbers about eighteen or nineteen millions, including, besides the Ottoman Turks, above four millions of Turcomans, Arabs, Albanians, Kurds, and Circassians, mixed up with others in different parts, and probably half a million of the Bulgarian and Slav races, more especially in Bosnia, who have adopted the religion of their conquerors. The ten millions of people reckoned as Christians are divided chiefly between the Orthodox or Greek-Russian Church, the Armenian, and the Bulgarian ecclesiastical communions, with above half a million Roman Catholics, and a few Nestorians or Jacobites, besides the Jews and Gipsies. In general, throughout the Turkish Empire there is perfect liberty of sequestered religious worship; but the non-Mussulman Churches and sects are not allowed to make converts by the open preaching of their doctrines in public. The Christians, of whatsoever race, indiscriminately called *Rayahs*, are excluded from civil offices and exempted from military service, instead of which they pay a certain tax in money; but they are allowed to manage their own affairs in small local communities, free from Government interference. In all private and social relations amongst themselves, where none of their Mohammedan neighbours happen to be concerned, the *Rayahs* enjoy a large share of practical liberty, which they have used, in most instances, to prosper fairly by their agricultural, industrial, and trading occupations. The Bulgarians in European Turkey, and the Armenians in Asia Minor, as well as at Constantinople, have long been accustomed to do nearly all the real steady work of farming, manufacturing, and ordinary labour; while the Greeks have followed the gainful pursuits of commerce and finance, and all manner of intrigue. The Mussulman lords of this extensive region, as a general rule, are content to indulge their natural indolence, and their pride as a superior class of privileged proprietors, without producing any contribution to the wealth of the country. The Turkish or Syrian peasant will, of course, labour as much as he is obliged to do for his mere livelihood; and there are Mohammedan tradesmen and craftsmen, along with others, in the cities and towns of Turkey. But the Turkish rural landowner or squire, who is entitled *Agha* or *Beg*, has too high a sense of his personal dignity ever to condescend to useful business. These classes of the Turkish population are nevertheless equal, in most domestic and social virtues, though not in the virtue of industry, to those of any other nation. Their honesty, sobriety, and veracity, and their kindness of disposition, when not inflamed by religious animosities, are fully attested by every foreign resident in Turkey. A very different character is ascribed to the class of metropolitan Turks at Stamboul, the place-hunters, officials and courtiers of the Sultan's Government, from whom the Pashas and Beys exercising power in his name are selected. There is probably not a more corrupt and worthless set of men, intrusted with rule over their fellow-subjects, in any country of the world; extortionate, unjust, and cruel beyond our conception, and frequently addicted to the most infamous vices. This frightful demoralisation of the Turkish governing class, which has not yet infected the whole Turkish nation, is the result of four centuries of absolute domination. It is not the moral teaching of the Koran, though much harm is done by polygamy, chiefly practised by men of wealth and rank; nor is it the inherent wickedness of an "anti-human specimen of humanity," that has developed such monstrous governmental iniquity among the Osmanli or Ottoman lords of the East. They have become so depraved from the possession of despotic power, like the ancient Romans of the Western and Eastern Empire; and we have no reason to say that Englishmen, placed in the same position, would have behaved much better, unless restrained by the purifying influence of the Christian faith.

These remarks will serve for an introduction to a brief statistical account of the administration of the Turkish Empire. Its vast and various territories, extending from the banks of the Danube and the shores of the Adriatic to those of the Red Sea and the Persian Gulf, are divided into twenty-two Provinces or Vilayets, eight of them in Europe and fourteen in Asia. Those in Europe are the metropolitan district of Constantinople, to which is annexed the neighbourhood of Scutari, on the Asiatic side of the Bosphorus; the province of Adrianople, including the better part of Roumelia or Thrace, limited northward by the Balkans; the Danubian province, called *Touna*, which extends from Varna, on the Black Sea coast, westward as far as Widdin, on the Danube, adjoining the Servian and Roumanian frontiers; the province of Bosnia and that of Herzegovina, which occupy the north-western corner of the Turkish Empire, adjacent to the Austrian dominions; the province of Salonica, including the ancient Macedonia, on the shores of the *Ægean* Sea; the south-western provinces of Monastir or Prizrend, and of Scodra and Yannina, or Albania and Epirus; besides which there is the island province of Crete or Candia, and one comprising the Greek isles of Rhodes, Chios, Mytilene, Cos, and Cyprus. There is a similar subdivision of Asia Minor, Syria, and Mesopotamia, into fourteen Vilayets or Provinces. The most considerable are those of Aidin (with Smyrna), Aleppo, Bagdad, Trebizond, Erzeroum, Adana, Tripoli, Syria, and Kordistan. The Governor of a Vilayet is styled the *Vali*, and is usually a man of the rank of Pasha, but absolutely dependent on Court favour. He gets his appointment from the Council of State at Constantinople by dint of gross and notorious bribery; and, his tenure of office being very short and uncertain, he strives to enrich himself, as quickly as possible, by every sort of trickery, and by squeezing the unfortunate people under his rule. Each Vilayet is further divided into five or

six *Livas* or *Sandjaks*, which are managed respectively by their *Mutecarrifs*, under the general instructions of the *Vali*; and each *Sandjak* comprises so many *Cazas*, under their respective *Caimacams*, or *Mushirs*, these sub-governors being likewise appointed in Constantinople. Below this grade of Turkish Government officials, and their spheres of iniquitous oppression, are the *Nahiehs*, or *Communes*, each presided over by a Mayor, called the *Mudir*, who is elected by the inhabitants, and who may be a Christian; there are also the *Codja-bashis*, or head men of villages, under the orders of the *Mudir*. A Council, which in the Turkish language is a "*Medjliss*," and in which one or two Christians may sit with a dozen Mohammedans, assists every grade of executive officials; the *Vali* has his *Medjliss*, including the provincial judges or *Muftis*; the *Mutecarrif* has his, consisting of the magistrates or *Cadis*, the leading clergymen, and four elected members; the *Mushir* or *Caimacam*, and the *Mudir* of a commune, have similar nominal assistants. But it too often proves that the *Medjliss* is only a screen for the illegal and oppressive acts of the administration. The whole of this complicated machinery, in fact, is applied by the ruling Pasha to the purpose of extorting money, in a variety of irregular ways, but mainly by intimidation, from the more helpless classes of the Sultan's subjects, and the *Rayahs* are most helpless, because their complaints will never be heard by the Sultan. With regard, however, to the judicial system and the dispensation of civil and criminal law, there is a distinct set of law courts, with peculiar jurisdiction, composed of Mussulman and Christian Judges sitting together, for the trial of cases in which any of the Christian subjects of the Sultan are plaintiffs or defendants. The ordinary Moslem courts of law, which deal with all cases in which only Mussulman plaintiffs and defendants, or accused persons and prosecutors, are concerned, have an entirely different character. They are composed of *Mollahs*, or Judges of the Law of the Koran, which is styled the *Cher'i*, and the supreme head of this learned body is the *Sheikh-ul-Islam*, who is at once Lord Chancellor and Primate of the Mohammedan Church. But the law deduced from the moral and religious precepts of Mohammedanism, by a succession of literary scholars and commentators since the Middle Ages, is now supplemented with rules derived from the old Roman or Civil Law of the Empire, and from the French Code Napoleon; so that it is tolerably fit for application to modern secular affairs. The district judges, *Naibs* or *Cadis*, of the Moslem law-courts, are said to be men of tolerable integrity; and it seems to be acknowledged, on the whole, that the Turkish judiciary is much sounder than the administrative or executive branches of government. The *Sheikh-ul-Islam*, indeed, is a venerable personage at Stamboul, the organ of ecclesiastical and legal authority, placed high above those temptations of servility and venality which beset the Sultan's courtiers, parasites, and Ministers of State. The *Mollahs*, and the various degrees of rabbis, teachers, scribes, and lawyers, constitute a fairly respectable corporation, with the *Sheikh-ul-Islam* at their head, willing to exert their influence for the protection of good Mussulman subjects against the abuses of governmental power. But the unfortunate Christians and Jews have no such effectual protection. The Patriarch of the Greek Church has usually been a mere instrument of Turkish tyranny. The Bulgarian national Church, till lately overborne and suppressed by the Greek, has regained its ecclesiastical independence, but the chief of its hierarchy does not possess any credit or influence with the Sultan's Government; nor can the Armenian Patriarch or the Jewish Chief Rabbi, interfere on behalf of their fellow-religionists with any hope of obtaining redress. The source, indeed, of all that is evil in the home administration of the Turkish Empire will be found in its being absolutely centralised in the will of an autocratic ruler, who is incapable, from hereditary indolence and necessary ignorance, of really governing by himself, and must therefore commit his power to the hands of a few men about his Court, who do not care how sorely the non-Mussulman subjects are oppressed. This negative condition alone, even without the shameless profligacy and ruthless rapacity of Ministers and Pashas, corrupting and perverting the entire administration of Turkey, would seem to make it hopeless that equal justice can ever be done to Christians and Mohammedans under the Sultan's reign. The Christians of every race and class in Turkey are still treated as a conquered people, to be fleeced, insulted, and kept in perpetual degradation, by their Moslem conquerors, though four or five centuries have elapsed since the date of their conquest.

We shall now quote, from the writings of experienced and impartial English visitors or residents in different provinces of Turkey, a few testimonies upon this grievous subject. It may be well to look rather at the Asiatic provinces, which are not the scene of recent conflicts or revolts, and in which there is no opportunity for Russian agents to stir up disaffection. The late Mr. John Barker, who was Consul-General at Aleppo, and some time at Alexandria, and who resided in Syria nearly fifty years, has left his private opinions recorded in the biographical Memoir of him, compiled by his son, Mr. Edward Barker, also of the Consular service. This witness, one of high authority, and who had no prejudice against the Mohammedans on the score of their religion, being quite an admirer of the Arab character, gives us the worst account of Turkish provincial government. The pecuniary dishonesty, the manifold peculations, embezzlements, and frauds of which Pashas in high office are frequently guilty, the permanent conspiracy between a *Vali* or a *Mushir* and the leading members of the provincial Council or the *Medjliss* of his district, to bully, to rob, and to ill-treat their weaker neighbours, their ferocious vengeance upon any who dare to offer resistance, and the price at which they buy the tacit connivance of the Sultan's Ministers with these iniquitous practices, are here forcibly exposed. Mr. Barker the elder, and his son, the editor of the two volumes we have perused, whose experience comes down twenty years later, seems to have formed the same judgment of this question. They tell us that the modern institution of the *Medjlisses*, or provincial and municipal Councils, has only made the state of things worse than before.

"The medjlises of each town," says Mr. Edward Barker, "combined with the Pashas or Governors to legalise their spoliations, by a lying document called a 'mazbata,' sent to the Porte, signed by all the members of this Council, which declared whatever they pleased, at the suggestion of the Pasha. Sometimes, however, this weapon could be used both ways, and the Porte was defrauded. For instance, the Vali or Pasha of a district put up at auction the tithes on the Government account, and sent this certificate, the 'mazbata,' to the effect that, after some weeks' competition, the farming of tithe was adjudged to a Christian or a Jew merchant, generally a moribund one, Youssuf or Moosa. As soon as the harvest was ready to be got in, or more generally when taken in coin, the money was collected and paid into the Pasha's treasury. The 'mazbata' was then again resorted to, to declare that the Christian or Jew had become bankrupt, and that after the seals had been taken of his house and property, little or nothing was found. When the Porte, unwilling to lose so large a sum as, perhaps, \$300,000 or \$400,000, sent an officer called the 'Mombashir' to investigate he was told that the Christian or Jew had fled, or was dead. The 'mazbata' again came into play, and was delivered to the officer, who would receive a bribe, besides his fees, and declare all square on his return to Constantinople. For was not the 'mazbata' there? A second officer would be sent, with the same result, and so on; but this is an extreme case, which, however, has been known to occur in the pashalik of Bagdad, and three 'mombashirs' were sent, to no purpose, one after another, two of whom we saw on their passage through Aleppo. In general, the Porte took care to be on the safe side, by rendering the Valis or Pashas responsible; but the iniquities committed by the system of 'mazbatas,' under the authority of the Porte, were frequent and ruinous. After twenty years' residence in habitual contact with this council or medjlise, on public and private business, wherever we have resided, we can with truth declare that we believe it to have been the most baneful and unfortunate concession, on apparently liberal principles, that could have been made to a country just emerging from anarchy, as the Turkish Empire then was."

The views above set forth by Mr. Barker in Syria, with regard to the futility and inutility, at least, of the Medjlise, as a check upon malversation of the civil authority, are confirmed by the experience of Dr. Sandwith in Asia Minor. We quote from his "Narrative of the Siege of Kars," published in 1856:—

"Now, in Turkey, where there is no free press and no expression of public opinion, the working of these municipal councils, so fine in theory, does but multiply the oppressors of the people. Instead of one tyrant in the form of a Deribey, there are fifty smaller ones, each bent on enriching himself at the expense of the community. The mudir or kaimakam appointed at Constantinople may possibly be an honest man, and may have come with a determination to resist oppression, but no sooner does he attempt to thwart the designs of the Medjlise than the members unite against him, and send to Constantinople a 'mazbata' or round-robin—an instrument of irresistible force in Turkey—praying for his removal, and accusing him of all sorts of crimes and misdemeanours. This petition is always attended to, since the mudirlik or kaimakamlik is a most valuable piece of patronage at Constantinople, for it brings in a certain money value to some great Pasha, who sits in his 'yali' on the Bosphorus and dispenses places at so many thousand piastres each.

"The theory," says Dr. Sandwith, "of the election of the members of the Medjlise is that the notables of the town are elected by the popular voice; but in reality they are always the creatures of the Pasha. In these municipal councils Christians are supposed by very credulous Ottomaniacs to have a voice; I believe that one or two are admitted to a seat in the Medjlise of the Pashalik, to carry out a theory; but I never heard of one being hardy enough to open his mouth. The Medjlise, or Council of the Mushir, regulates the taxes, sending the demand for the sum required to the Kaimakams; these apportion it to the mudirs, who divide and apportion so much to each mukhtar, or chief of a village, who must collect the money. The municipal councils also fix the price of bread, corn, and other commodities for their own district. Unfortunately for the sake of justice and fair play, the members of this council are always tradesmen, and generally contrive the prices to suit their own advantage. They also hear criminal cases, and farm the taxes. When any public works are undertaken the medjlise fixes the price of labour and the number of men to be employed. These latter are supposed to give their time and labour in lieu of taxes; and in no department is there such injustice and plunder. The bill of costs to the Government is signed by each member of the medjlise, each taking his share of the proceeds of speculation. All the wrongs, the unjust exaction of labour, double taxation, truck system, and other burdens grievous to be borne, fall on the unfortunate peasant, who is thereby ground down to the lowest stage of poverty, and can never hope to improve his position.

"The criminal cases are tried before the Medjlise, the money cases by the Kaimakam, or Cadi; and these latter are entitled to five per cent on the sum awarded to the successful client, when the debt is above a certain amount. Collusion, I am told, frequently occurs; a false charge is made by a man, the debt is awarded to him, and the corrupt judge receives his five per cent or more. If a Turk is condemned to pay a Christian, he refuses to submit to the decision of the Cadi, and carries his case to the 'Mehkemé.' This is a tribunal, of which the Cadi is the president, and of which the decisions are guided entirely by the Koran, the Mufti being referred to in cases of difficulty. Here, the Christian is not recognised as a fellow-citizen; he is a 'rayah,' or conquered being, whose existence is only tolerated by his paying a ransom yearly for his head, called a 'haratch.' It would be monstrous, indeed a great sin, to admit his evidence; therefore the Mussulman's 'yea or nay' is sufficient to overthrow all Christian asseverations or testimony. In February, 1854, a firman was published, to the effect that

Christians were henceforward to be considered as fellow-citizens, and their 'information' taken in all courts of justice throughout the Empire. Mark the word 'information,' which was used instead of 'oath,' that the religious prejudices of the people might not be shocked. This new law was published in the European papers, and sundry hopeful comments were made upon it; but we, knowing better, understood that it was what both English and Turks call 'bosh'; that it was but a sop thrown to the barking diplomatic Cerberus, and never intended to be acted upon. Since then I have been nearly two years in the provinces, both in European and Asiatic Turkey, and have seen Christians frequently wronged, but have never heard of their evidence being taken. Each Pasha, when questioned concerning this firman, declares he knows nothing of it; no firman of the kind has ever been officially communicated to him. He must act according to his instructions; he cannot take cognisance of firmans conveyed through European Consuls."

Dr. Sandwith relates a trial he once heard before the "Mehkemé" of a town governed by a Pasha of two tails; an Armenian tradesman had intrusted some paper money to a Turkish officer, who had agreed to get it exchanged for gold, but kept back part of it. The Turk, when sued for this amount, insisted on his right to be tried by the "Mehkemé," where he knew the Koran would serve him in his need. When the Mussulman and the Armenian were confronted before that religious tribunal, the former declared that it was the Armenian who wished to rob him; that he (the Turk) had placed the sum, in paper money, in the hands of a third person, to be changed for gold, and that the Armenian had taken it for that purpose, but had never paid him the gold. "Do you swear to this?" asked the President. "I swear it on the Koran," answered the Turk. "It is enough." The Armenian had brought witnesses, but as they were all Christians their evidence was impossible; so the hapless Armenian was obliged to refund all the gold he had previously obtained, and found himself a ruined man. This happened some months after the firman accepting Christian evidence was issued. But it is satisfactory to observe, in the sequel of the story, that by the interference of a distinguished British official, whose indignation was roused by what he saw of "Turkish oppression and Turkish insolence," the Pasha of the province was induced to take up this case and order the poor Armenian's money to be restored to him. "I suppose," Dr. Sandwith remarks, "that a mixture of fanaticism and venality influences the judges on such occasions. These were men whom a pound sterling would influence in their decision; and it is probable that the officer gave them a share of the spoil, while they soothed their consciences, if they had any, by the conviction that they were acting up to the precepts of the Koran." But the Koran certainly does not lend any sanction to fraud, robbery, and injustice in dealings between man and man.

"I cannot do better," adds this writer, "than give an example of the way in which the feelings of this class of the Sultan's subjects are rudely trampled on by Mussulman intolerance. Here is a faithful translation of a 'teskeré,' or permit of burial, given by the Cadi of Mardin in the spring of this year, 1855, to a Christian applying for it. He has given, and does give, scores of the like kind to all the Ghiaours in his jurisdiction, and here it is: 'We certify to the priest of the Church of Mary that the impure, putrid, stinking carcass of Saideh, damned this day, may be concealed underground. Sealed, El Said Mehemed Faizi. A.H. 1271, Rejib 11 (March 29, A.D. 1855).' Facts speak for themselves; and I would ask, how is it possible for the Christians to be well treated when such judges as these are put over them, who insult and plunder them as a sort of religious duty? The above facts are picked up by the merest accident; what thousands there are which never come to light!"

In Palestine, which is to most of us a country of the greatest interest among the Asiatic dominions of the Sultan, the effects of Turkish administration have always been exceedingly pernicious. Captain Warren, R.E., one of the directors of the recent archaeological and topographical researches at Jerusalem and in other parts of the Holy Land, thus sets forth his opinion concerning the obstacles to any improvement in the condition of that country:—

"The first and foremost difficulty is the present bad government; the people are oppressed, are wronged; there is no feeling of security for property or person; no justice, no honesty, among the officials. Bribery and corruption, according to our meaning of the terms, are mild words to set towards the infamous means by which money is extorted from the poor. And, unfortunately, the maladministration commences from the top. No Pasha could afford to be honest; no governor-general could venture to be just. The whole organism of the country lies on a rotten foundation, which is constantly being underpinned by the fortunes and lives of the Christians, and often, too, by those of the Moslems who have not been sufficiently wily to avoid getting into difficulties; but nothing will ever make that rotten foundation solid, based, as it is, on the Turks' view that the Christians and Jews cannot be admitted to an equal position in the country with the followers of the Prophet. The Moslem religion has entered into a phase which will admit of no prosperity in the land. Days were when trade by Christians and Jews was fostered, when the rulers of the country understood the art of governing; but now nothing is taught but the art of misrule, for Moslem fortunes are in the hands of the barbarous Turk.

"It is not the Christian alone of Syria that the Turk oppresses; the Arab Moslem is, if not equally, yet most hardly used. Many a time have the Arab Moslems said to me, 'When will you take this country and rid us of our oppressors? anything is better than their rule.' For the Turk has no affinity of race or language to connect him with, or give him a right to rule, the Arab. He has no power of sympathising with the Semitic races, and his religion is but in name. The Arab, if I may use such an expression, is a Moslem by nature; the Turk cannot become a Moslem by art. He is sent to Palestine to govern badly; he is given but a small salary,

and is obliged to squeeze the people in order to pay his own officials and to live, to recoup himself for what he has paid for his appointment in the past, and to carry away with him something for the future wherewith he may buy a higher appointment, or purchase immunity for the consequences of his evil deeds, should complaints be made against his rule. The Turk can never govern Palestine well; and until he departs the country must remain half desert, half prison; for it is his policy to leave it so. He wants it to continue impoverished, so that it may not tempt the cupidity of stronger nations."

We have seen the actual working of the Ottoman despotism rule in those provinces of Asiatic Turkey where the majority of its subjects are of the same religion with their conquerors, but of a different race. The Arabs, indeed, are a race incomparably superior to the Turks, and equal to any European nation in their capacity for a high civilisation, for law and government, science and literature, commerce and industry, and the arts of peace. It is only by the ferocious exercise of warlike violence, and of a ruthless tyranny, with rapacity and cruelty almost unsurpassed in the most savage state of mankind, that the Turks have succeeded in holding down the nobler and more intelligent Arabs of south-western Asia. Egypt, where the government is mainly carried on by Arabs, under its Khedive or Viceroy, has made only too rapid progress in the adoption of European improvements; and we are told by the late Mr. Barker, an eye-witness of the fact, that the eight years' rule of Syria by Mohammed Ali, Pasha of Egypt, till his expulsion in 1841 by British arms, was a period which contrasted most favourably with Turkish rule before or since. It is a mistake, therefore, to suppose that no Mohammedan Government can be a just, wise, or good one; the Arabs and the Moors, from Bagdad and Grand Cairo to Seville and Granada, have given the world splendid examples of social union, liberality, and culture. There may be in store, perhaps, for an age not very distant, a revival and regeneration of the Arab race, in Egypt, Tunis, Syria, and the Euphrates Valley, not less unequivocal than that of the Greek and Italian nationalities. But for this prospect to be entertained at the present day we must reckon upon the speedy disruption of the Turkish Empire.

The foregoing testimonies and comments have, we again observe, been purposely restricted to the Asiatic provinces of Turkey. With regard to the European Christian populations, Bulgarians, Greeks, and Slavs, whose unhappy situation, beneath the Ottoman rod of barbarous brute force, has at length excited a high degree of sympathy in English breasts, we do not think it needful to quote additional evidence of the character of Turkish rule in their oppressed native lands of Roumelia, Bulgaria, Macedonia, Bosnia, and Herzegovina, in Crete and other islands of the Levant. It would be superfluous to refer to such writers as the Rev. W. Denton, Miss Mackenzie and Miss Irby, Mr. Arthur Evans and Mr. H. C. Barkley, travellers or residents in European Turkey, whose statements have lately come under public notice. The monstrous, hideous, portentous fact of the recent massacres and nameless outrages inflicted upon thousands of the helpless Bulgarians, with the connivance and tacit approval, if not at the instigation, of the Sultan's Government, puts quite into the background all minor grievances of these sorely wronged Christian people, whose deliverance from the Turk is already vowed in every honest heart among us. But the ordinary, incorrigible, fatal vices of Turkish administration in those parts of Europe should be kept in mind with a view to political considerations; and it is deeply to be lamented that gross misconceptions upon this subject should have prevailed during the past twenty years. The result has been the waste of British money to the amount of nearly two hundred millions sterling, in those disastrous loans to the Government of Turkey which have, perhaps, rather precipitated than postponed the ruin of that doomed Empire. We will quote, more particularly upon that question, the remarks of Colonel James Baker, in his very recent work, "Turkey in Europe," which deals with the Turks in a friendly spirit.

"I give," says Colonel Baker, "some statistics of the average value of imports and exports of Turkey, and of the revenue returns. We see here a decrease in the revenue of upwards of three millions sterling, and it is significant that the only items of increase are spirits, judicial taxes or fines, and tapous, or tax on the transfer of lands, which certainly does not point to prosperity. I believe (and I know that I am borne out in my opinion by many competent authorities in Turkey) that this decrease in revenue is greatly attributable to the demoralising effects of the large foreign loans, which have induced Turkish capitalists to fly to the attractions of the Stock Exchange, instead of investing their capital in the country. Many landed proprietors have sold their estates simply for this purpose; others have invested every farthing they could scrape together in the same channel to the detriment of their estates, and consequently of their tenants, who have languished for want of support. The worst aspect of the case is that much of this money passes into the hands of foreign speculators and leaves the country, which thus becomes impoverished. Travel where you will in any part of Turkey, and in every small town you will find many of the wealthiest people who can think and talk of nothing else but Turkish bonds; and there is quite a feverish excitement on the subject. The whole gear of the commercial machinery of the country is put out of working order by this species of excitement; and when money cannot be obtained by fair means it is too often found by venality.

"With a sort of blind fatuity, the people insisted upon believing that the Porte would meet her liabilities, and thus, when the crisis, which might have been anticipated, was at length realised, all trade and enterprise was paralysed." Colonel Baker further remarks that "in finance, like all other branches of administration, Turkey has made great reforms within the last thirty years; but there is no doubt that, notwithstanding the reforms which have been promulgated, the officials and administrators generally are more corrupt now than

they were then." With this parting testimony from a friend of Turkey, we may take leave of that portion of the subject.

The late Mr. Nassau Senior, a most competent political and statistical inquirer, who visited Turkey on purpose to form a correct judgment of its real position, records his conversations with persons who had the best information and came to the following conclusions:—"Turkey, in fact, exists for two purposes; first, to act as dog in the manger, and to prevent any Christian Power from possessing a country which she herself, in her present state, is unable to govern or protect; and, secondly, for the benefit of some fifty or sixty bankers and usurers, and some thirty or forty Pashas, who make fortunes out of its spoils. I do not believe that the Turks are more idle, wasteful improvident, and brutal now than they were four hundred years ago. But it is only within the last fifty years that the effects of these qualities have shown themselves fully. When they first swarmed over Asia Minor, Roumelia, and Bulgaria, they seized on a country very populous and of enormous wealth. For three hundred and fifty years they kept on consuming that wealth, and wearing out that population. If a Turk wanted a house or a garden, he turned out a rayah; if he wanted money, he put a bullet into a handkerchief, tied it into a knot, and sent it to the nearest opulent Greek or Armenian. At last, having lived for three centuries and a half on their capital of things and of man, having reduced that rich and well-peopled country to the desert which you now see it, they find themselves poor. They cannot dig, to beg they are ashamed. They use the most mischievous means to prevent large families; they kill their female children, the conscription takes off the males, and they disappear. The amount of tyranny may be inferred from the depopulation. You see vast districts without an inhabitant, in which are the traces of a large and a civilised people, great works for irrigation now in ruins, and constant remains of deserted towns. There is a city near the frontier, with high walls and large stone houses, now absolutely uninhabited; it had once sixty thousand inhabitants. In government and religion Turkey is a de-

A DON COSSACK.

tritus. All that gave her strength, all that gave her consistency, is gone; what remains is crumbling into powder. The worst parts of her religion—hatred of improvement and hatred of the unbeliever; the worst parts of her detestable government—violence, extortion, treachery, and fraud—are all that she has retained. Never was there a country that more required to be conquered. Our support

the plains of Thrace, Macedonia, and Thessaly yield abundant and easy harvests to the husbandman; a thousand ports and a thousand gulfs are observed on the coasts, peninsulas, and islands. The billows of those seas still bathe the base of mountains covered with vines and olive-trees. But the populous and numerous towns mentioned by ancient writers have been changed into deserts beneath a despotic government.

merely delays her submission to that violent remedy. I can see no other solution: the Turk is utterly unimprovable. He hates change, and therefore he hates civilisation; he hates Europeans; he hates and fears all that they propose. There is not a word of it that does not disgust, or irritate, or alarm him. Nothing but force will oblige him to give it even the appearance of execution. And what is the value of apparent reforms in a people without an aristocracy, without a middle class, without a public opinion, without the means of communication, without newspaper, without even a post-office; accustomed for four hundred years to plunder and oppress rayahs and to be oppressed and plundered by Sultans, Pashas, Cadis, and Janissaries?"

We shall end this series of quoted opinions with one written forty years ago by an illustrious Englishman, the late Richard Cobden, who had not, indeed, at that time visited Turkey, but whose sentiments with regard to the moral and economic conditions of social welfare must always command our respect. Writing, in the year 1836, on the mutual relations of "Russia, Turkey, and England," he thus expressed his own view of the administration of the Ottoman Empire:—

"Down to our own time, the Turk governed a territory so vast and fertile that, in ancient ages, it comprised Egypt, Phœnicia, Syria, Greece, Carthage, Thrace, Pontus, Bithynia, Cappadocia, Epirus, and Armenia, besides other less renowned kingdoms. The present lamentable condition of this fine territory arises from no change in the seasons, or default of nature. It still stretches from 34 deg. to 48 deg. of north latitude, within the temperate zone, and in the same parallels as Spain, France, and the best portion of the United States. Mount Hamus is still covered with verdant forests;

CONSTANTINOPLE, WITH THE SEA OF MARMORA.

"All the authorities upon this country assure us that the soil of many parts of Turkey is more fruitful than the richest plains of Sicily. When grazed by the rudest plough, it yields a more abundant harvest than the finest fields between the Eure and the Loire, the granary of France. Mines of silver, copper, and iron are still existing, and salt abounds in the country. Cotton, tobacco, and silk might be made the staple exports of this region, and their culture admits of almost unlimited extension throughout the Turkish territory; whilst some of the native wines are equal to those of Burgundy. Almost every species of tree flourishes in European Turkey. The olive, orange, mastic fig, pomegranate, and the laurel and myrtle are natural to this soil. Nor are the animal productions less valuable than those of vegetable life. The finest horses have been drawn from this quarter to improve the breeds of Western Europe; and the rich pastures of European Turkey are, probably, the best adapted in the world for rearing the largest growths of cattle and sheep.

"That, in a region so highly favoured, the population should have thus retrograded whilst surrounded by

RUSSIAN MONKS.

abundance; that its wealth and industry should have been annihilated; and that commerce should be banished from those rivers and harbours that first called it into existence—must be accounted for by remembering that even the finest soil, the most genial climate, and all the brightest and richest gifts of nature, are as nothing, when subjected to the benumbing influences of the Turkish Government at Constantinople. The Turks found, at the conquest of the Eastern Empire, splendid and substantial public and private edifices, which have been barbarously destroyed, or allowed to crumble beneath the hand of Time. Bridges, aqueducts, and harbours, the precious and durable donations of remote, yet more enlightened, generations, have all suffered a like fate; and the roads, even in the vicinity of the capital, which in former days maintained an unrivalled celebrity, are now in a broken and neglected condition. The cause of all this decay is ascribed to the Turkish Government, a fierce, unmitigated military despotism, allied with the fanaticism of a religion which teaches its followers to rely only on the sword, and to disdain all improvement by labour."

MONASTERY OF TROITSA, NEAR MOSCOW.

OUR ILLUSTRATIONS.

The Portraits of the two powerful Sovereigns, whose military and naval forces are now contending against each other for dominion and supremacy both in Eastern Europe and in Western Asia, are presented in this Special War Number of the ILLUSTRATED LONDON NEWS.

His Imperial Majesty Alexander II., Emperor of Russia, was born April 17 of the Russian Calendar (April 29, New Style) in the year 1818. He is eldest son of the late Emperor Nicholas I. and of the Empress Charlotte, who was Princess Charlotte of Prussia. He was educated, under the supervision of his father, by General Mürder, a German, and the Russian scholar and poet, Joukowski. He entered the military service in 1831, and became Colonel of the Grenadier Regiment in 1835. He travelled in Germany in 1840, and soon afterwards married Princess Maria, daughter of the late Grand Duke of Hesse-Darmstadt. The Grand Duke Alexander of Russia, as he was then styled, was nominated Chancellor of the University of Helsingfors, in Finland, and Superintendent of the Military Schools of the Empire. He held, in 1850, a command in the Russian army in the Caucasus. In 1855, during the Crimean War, upon the death of the late Emperor Nicholas, which took place on Feb. 18 (March 2 of our reckoning) in that year, Alexander succeeded to the throne of his father and grandfather; and he was crowned at Moscow, with a magnificent pomp and ceremonial, in September, 1856. The present Emperor has effected great reforms in the municipal and judicial institutions, the laws, and the official administration of his Empire; and he has, notwithstanding the opposition of a large class of nobles and landed proprietors, achieved the total and immediate abolition of serfdom, giving a complete emancipation to nearly twenty millions of peasants, formerly bound in a depressing and humiliating servitude. He has been obliged, on the other hand, despite of his naturally humane and benevolent disposition, to permit the exercise of great severities in repressing the Polish insurrection of 1862; and the measures of his Government in the Caucasus and in Central Asia have been characterised by a policy of ruthless self-aggrandisement, and harshly repressive domination, which belies the reputed philanthropy of this mighty Emperor. His Majesty is father of six children now living; the eldest son, now Czarowitch and heir-apparent, is the Grand Duke Alexander, born in 1845, and married in 1866 to Princess Dagmar of Denmark, sister to our Princess of Wales. There are four other sons, Vladimir, Alexis, Sergius, and Paul. The only daughter, Grand Duchess Marie, was married, in January, 1874, to his Royal Highness Prince Alfred, Duke of Edinburgh. The Emperor's two brothers, Grand Duke Nicholas and Grand Duke Michael, command in this war.

His Imperial Majesty Abdul Hamid II., Sultan of Turkey, was born Sept. 5, 1842, the second son of Sultan Abdul Medjid. He succeeded to the throne, Aug. 31 last year, on the deposition of his elder brother, Sultan Murad V., who had been proclaimed Sultan three months before, when his uncle, Sultan Abdul Aziz, was deposed, after a most profligate and mischievous reign of sixteen years. By the laws of the Ottoman Turkish Empire, a brother is preferred, on account of seniority, to the son of a deceased sovereign, in the inheritance of the Crown, which belongs to the eldest male descendant of Othman, the founder of this dynasty nearly six hundred years ago. Even a cousin, who is older than the sons of a lately reigning Sultan, will be entitled to succeed him, instead of his own children. The present Sultan has several brothers. He is the thirty-fifth Sultan of the Ottoman Empire, and the twenty-eighth who has reigned at Constantinople since its conquest by Mohammed II. in 1453. He is entitled Commander of the Faithful, like the Arabian Caliphs of early Islam, and is official Protector of the orthodox Moslem religion—that is to say, of the Sunnite communion, held throughout Western Asia and North Africa; the Shiite sect of Mohammedans, in Persia, being excommunicated from the main body of the Prophet's disciples. The Sultan's own subjects usually call him the Padishah, or Supreme King; in diplomatic language, his Imperial Court or Government is styled "the Sublime Porte," which is a corruption of the Latin phrase, "Sub Limine Portæ," formerly applied to the august threshold of the old Palace at Constantinople.

Our illustrations of the cavalry and infantry soldiers of the Russian and Turkish armies require no further comment than is supplied by Captain H. Brackenbury's detailed account of their military organisation. In like manner, we need only refer to the special article, by Mr. E. J. Reed, on the naval forces and preparations of Russia and Turkey for all the

information that can be desired in view of the Engravings which represent one of the most formidable ships in each of the mutually opposing fleets. The Portraits of the Grand Duke Nicholas, Russian Commander-in-Chief on the Danube, and of Admiral Hobart Pasha, commander of the Turkish fleet, derive their present interest from the amount and employment of those great military and naval powers.

His Imperial Highness the Grand Duke, a younger son of the late Emperor Nicholas I., is nearly forty-six years of age, having been born in July or August, 1831. He married, in 1859, Princess Alexandra of Oldenburg, and has two sons, Nicholas and Peter, the former about twenty years of age, the latter a boy of thirteen. The Grand Duke Nicholas is in the full vigour of life, a strongly-made, muscular, soldierly-looking man, with a melancholy Romanoff face. He is General of Engineers and Aide-de-Camp General to the Emperor, Inspector-General of the Engineer Corps, of the Imperial Guard, and of the Cavalry, Commander-in-Chief of the Military District of St. Petersburg, President of the Supreme Committee on the Organisation and Instruction of the Army, Chief of a Grenadier regiment, of the regiments of Dragoons of Astrakhan, of the Alexander Hussars, and of the first battalion of Sappers of the Caucasus, Proprietor (Colonel-in-Chief) of the Austrian Hussars, No. 2, and Chief of the 5th Regiment of Prussian Cuirassiers.

Admiral Hobart Pasha is the Hon. Augustus Charles Hobart, a son of the Earl of Buckinghamshire. He was born in 1822, and entered the Royal Navy, in which he attained the rank of Captain. Having retired on half-pay, he found employment during the American Civil War, from 1861 to 1865, in commanding a swift blockade-runner, the Don, along the coast of North Carolina, and keeping up maritime communications with the Southern States in spite of the Federal blockading squadron. He published a narrative of these experiences, under the name of "Captain Roberts." In 1867, when the Cretan insurrection broke out, Captain Hobart entered the Turkish naval service, and was placed in command of the squadron which had to blockade the coasts of that island. The Greek Government then called the attention of her Majesty's Government to this fact, and the Admiralty, at the instance of the Foreign Office, struck his name off the British Navy List. In 1874 Admiral Hobart Pasha addressed a letter to Lord Derby admitting that he committed a breach of naval discipline by accepting service under the Turkish Government without leave, but adding:—"During seven years that have elapsed since that time I have endeavoured to maintain the character of an Englishman for zeal, activity, and sagacity, and I have been fortunate enough to obtain a certain European reputation of which I hope I may be justly proud. I prevented by my conduct during a very critical period at the end of the Cretan Revolution (while I was in command of a large Turkish fleet) much bloodshed, and, many people think, a European war. I have organised the Turkish navy in a way which has led to high encomiums as to its state from all the Commanders-in-Chief of the English fleets who have lately visited Constantinople. I have established naval schools, training and gunnery ships (and here I have been ably assisted by English naval officers). While doing all this towards strengthening the navy of our ally, I naturally have made many enemies. . . . All that they can find to say (and it is bitter enough) is, 'He has been dismissed the English service,' without, of course, explaining the cause. This is most painful to me, and is very detrimental to my already difficult position." He therefore asked that his offence might be overlooked and that he might be relieved from "the ban of disgrace." This application was supported by the Earl of Derby, "as a matter of Imperial policy," considering it to be of material advantage that Admiral Hobart Pasha should occupy the position he held in Turkey. The Lords of the Admiralty therefore consented to allow the Hon. Augustus Hobart to be reinstated in his former rank as a Captain in the Royal Navy, placing him on the retired list, with the opportunity of rising by seniority to the rank of a retired Admiral. He is reputed, we believe, to be an officer of considerable skill and ability in his profession, as well as of high courage and enterprise.

The remainder of our illustrations, mostly those which represent scenes and figures or costumes of the different provinces in the Russian Empire, and in the Turkish capital, will be regarded with the more interest from a perusal of the "Tour in Russia," and of the other articles contained in this special publication.

23rd Edition, 8vo, cloth, pp. 1102, 16s.
HOMOEOPATHIC DOMESTIC MEDICINE. By J. LAURIE, M.D. Completely re-arranged and revised by H. S. Gutteridge, M.D. The most comprehensive Guide published for the use of families, emigrants, and missionaries, being free of all technicalities. The present edition contains, in addition to the symptoms and treatment of all general diseases, including those of Females and Children, many important new chapters, comprising among others the specific characteristics of all the new American remedies, plain Directions for the Treatment of Accidents, and illustrations delineating the minor operations in surgery. Dropsical Affections, Affection of the Eyes (with a description of the Eye and their Appendages), and Illustrations showing the various parts of the eye. Full directions are also given for the treatment of Diseases prevalent in Tropical Climates. A new and concise Dictionary of Medical Terms and Treatment, with leading indications of Treatment prefixed to the various chapters and divisions. An Epitome of the above, 25th Edition, price 2s.
A Case of Medicines adapted to the former Work, in tinctures or pills, price 4s. 4d. In globules, 4s. 4d.
To the latter, tinctures or pills, price 2s. 2d.; globules, 1s. 10d. LEATH and ROSE, 5, St. Paul's Churchyard; and 9, Vere-street, W.

"They come as a boon and a blessing to men,
The Pickwick, the Owl, and the Waverley Pen."
"THE HINDOO PENS ARE A TREASURE."—Standard.
Specimen Box of all the kinds, assorted, by post for 15 stamps.
MACNIVEN and CAMERON, 25-26, Blair-street, Edinburgh.

ANNOUNCEMENT.

MESSRS. SAMPSON LOW, MARSTON, and CO.

beg to announce that they have arranged with

CAPTAIN FRED.

BURNABY,

AUTHOR OF

"A RIDE TO KHIVA,"

for the Publication of

HIS NEW WORK,

Describing his recent

FIVE MONTHS'

TRAVELS IN

THE EAST.

For the most complete and trustworthy account of RUSSIA'S POLICY IN CENTRAL ASIA, see Mr. EUGENE SCHUYLER'S TURKISTAN. Two vols., with three Maps and many illustrations, demy 8vo, cloth extra, £2 2s. Fifth Edition.
"Incomparably the most valuable record of Central Asia which has yet been published in this country."—The Times.
"This most accurate and interesting book will long remain the standard English work on Central Asia."—Athenæum.

BOOKS OF MARK.

A FOURTH EDITION OF THE CRUISE OF H.M.S. CHALLENGER, by W. J. J. SPRY, is in preparation. 1 vol. demy 8vo, cloth extra, with route Map and many illustrations, 18s. "One of the rarest books of travel of the season."—Scotsman.
"A capital idea of the cruise. . . . Capitally written."—Academy.
"We must give unqualified thanks to the writer for a charming book."—John Bull.
"Will be eagerly welcomed. Mr. Spry's solid and complete information."

A SECOND EDITION OF THE TWO AMERICAS. By Sir ROSE PRICE, Bart. 1 vol. demy 8vo, cloth extra, with illustrations, 18s.
"One of the rarest books of travel of the season."—Scotsman.
"The whole book is exceedingly pleasant reading."—Standard.

"The book of the season."—Morning Post.
Imperial 8vo, cloth extra, gilt edges, over 70 illustrations, price £2 12s. 6d. The Second Edition is now ready.
Copies of the very handsome Large Paper Edition, in Royal Quarto, handsomely bound in cloth extra, gilt edges, price £4 4s., of which only 250 copies may still be had.

THE PRINCE OF WALES' TOUR IN INDIA. Written by Dr. H. RUSSELL, and illustrated by Sydney Hall, M.A. THE TIMES.

"The Prince's visit to India was a great political event, and this imposing volume is not unworthy memorial of it. There is much in this instructive book that is exciting and thoroughly enjoyable."

THE ATHENÆUM.
"Dr. Russell has written a careful and praiseworthy book. Till this handsome volume appeared, the literature connected with the Prince of Wales's visit to India had been of a somewhat spasmodic kind."

MORNING POST.
"Aided by the illustration of one of our best living artists."

COURT CIRCULAR.
"This is, par excellence, the account of the Prince's tour."

Now ready, in demy 8vo, cloth extra, price 21s.
SEONEE; or, Camp Life on the Satpura Range. A Tale of Indian Adventure. By ROBERT ARMSTRONG STERNDAL, F.R.G.S. Illustrated by the Author.

A Third Edition is ready of A DAY OF MY LIFE AT ETON. By a present ETON BOY. Small post 8vo, limp cloth, price 2s. 6d.

TICKNOR'S MEMOIRS. 2 vols., crown 8vo, cloth extra, 21s. Second Edition.
"No matter what your peculiar taste in this style of composition, no matter what your range of acquirement; rest assured that you will rise from the perusal of his journals and correspondence with a lively sense of self-satisfaction, amused, instructed, and (we will venture to add) improved."—Quarterly Review.

TURKISH PASTILS.

BON-BON.
"Through all my trav'ls few things astonished me more than seeing the Beauties of the Harem smoking Narghiles at Stamboul. After smoking a sweet aromatic Lozenge or Pastil is used by them, which is said to impart an odour of flowers to the breath. I have never seen these Breath Lozenges but once in Europe, and that was at Pizazz and Lumin's shop in Bond-street."—Lady W. Montague.

Ladies who admire a "Breath of Flowers" should take one of these Pastils night and morning.

SUEZ CANAL.

PIESSE and LUBIN'S

NEW BOUQUET FOR THE SEASON.

"My being in Egypt, Czar, what was't to you?"—(Beaconsfield.)

This perfume is stolen from the Sacred Lotus Flower of Egypt.

"Thy shores are empires changed in all save thee."—My Joy

Was "thy breast to be Borne, like thy Lotus, onward."

Sold in flacons—2s. 6d., 3s. each—by every Druggist and Perfumer, Twixt Cornhill and Cuckett's; and at the Royal Laboratory of Flowers, 2, New Bond-street, London, W.

SACHET POWDER.—PIESSE and

LUBIN'S Powder for Sachets:—Heliotrope, Violet, and

Frangipanni, 1s. 6d. per ounce; Patchouly, sandal, and others, 1s. 6d. per ounce. In quantities of a pound, 20 per cent. reduction.

Potpourri for the scent-vase, 8s. a pound. Eau d'Espagne (Queen Elizabeth's favourite scent), for perfuming writing-paper, 2s. 6d. and 4s. each. Be sure to ask for Piesse and Lubin's

Manufactures, of 2, New Bond-street, London.

Sold by all Fashionable Druggists and Perfumers.

Catalogues sent post-free.

KEATING'S INSECT POWDER

KILLS BUGS,

FLEAS,

BEETLES,

MOTHS.

THIS POWDER is quite harmless to

animal life, but is unrivalled in destroying all insects.

Sold by all Chemists in Tins, 1s. and 2s. 6d. each.

Avoid worthless imitations. Ask for

"KEATING'S POWDER,"

and take no other, and you will not be disappointed.

KAYE'S

WORSDELL'S PILLS.

The arrival of Spring indicates the necessity of Medicine to

purify the blood and strengthen the system against the effects

of change of weather and the advent of summer.

KAYE'S WORSDELL'S PILLS,

being composed of vegetable matter, chiefly acting on the fluids,

will be found the best Spring Medicine that can be used. The

experience of more than fifty years bears out the truth of this

assertion.

Of all Chemists, at 1s. 1d., 2s. 6d., and 4s. 6d. per Box.

RUSSIAN SOCIETY.

Translated from the German. Crown 8vo, 7s. 6d.

Contents:—The Grand Duchess Helena—Count Peter Schu-

valoff—Countess Antoinette Bludoff—The Counts Adlerberg—

The Brothers Millutin—Prince Gortchakoff—Count Protassoff—

P. A. Wainoff—General Ignatieff—Our Ministers of Education—

at 3s. 3d. per yard. Patterns free.

PETER ROBINSON, OXFORD-STREET.

and the recruits get little or none. The Bashi-Bazouks furnish some small cavalry contingents, but are for the most part an irregular infantry, badly armed and badly disciplined, and only of use against insurgents, being quite unfit to take part in regular military operations in the open field. Without pay, and with only a bread ration, they maintain themselves by requisition and plunder; and it is not matter for surprise if they break loose from the control of their ignorant officers, who possess scarcely any authority over them, and pillage and burn on all sides. Under English officers, in the time of the Crimean War, contingents of Bashi-Bazouks became good soldiers; but then they were paid, and subjected to the restraints of discipline.

The volunteers, on the other hand, are in their way well-disciplined bodies. They are all cavalry, and for the most part are furnished by the Arabs. Their organisation is tribal, under their own chiefs, who maintain in the field that same rough discipline by which the tribes are governed at all times. Their services are only to be procured with the consent of their chiefs; and there is no doubt that, as irregular cavalry, for purposes of scouting, foraging, and harassing an enemy's convoys, they might render valuable service. It is yet to be seen what will be the result, as regards numbers of these volunteers, of that proclamation of a Holy War which will probably follow the defeat now, as I write, imminent, of the Turkish army in Asia. The greatest number of irregular troops that Turkey has ever raised was during the Crimean War, when some 10,000 of these volunteers took the field, and from 30,000 to 40,000 Bashi-Bazouks.

Another body of men which might render to the Ottoman Empire admirable service in case of war is the force of Zaptiehs, or police. These are well disciplined, and, to a great extent, recruited from the best troops of the regular army. The force of Zaptiehs, which has now been placed under the orders of Colonel Valentine Baker, is organised into companies, battalions, and regiments. Each battalion has one company mounted. The men of the regiment at Constantinople are specially selected to form a superior force for the capital, from the best non-commissioned officers of the army. It is supposed that the force of zaptiehs available in war throughout the empire will be nearly 30,000 strong. The pay of this force, like that of the troops, is heavily in arrear; their clothing is in many cases falling to pieces for want of renewal; but it is remarkable how few complaints are made by the Christian rayahs of Turkey of the conduct of these zaptiehs, who have almost every temptation to plunder.

A word about the generals and the staff of the Turkish army. The generals reach their position not by merit, but by interest. That special clique at Constantinople, small in numbers but large in power, which wields in its hands the fate of every Turk, makes or mars the career of every soldier. To be the relation of one of this powerful body, connected by blood or by marriage with a Grand Vizier or Minister, or even a superior official of one of the great departments of State, is sufficient to ensure rapid promotion in the army. Still better is it to be able to approach, either by means of money, or other method of less direct bribery, the ear of a favourite Sultana. Where governors of provinces, and even Cabinet Ministers, are appointed and dismissed through seraglio intrigue, it will easily be believed that the commands in the army are disposed of in a similar fashion. The constant removal of officials from their posts, in order to make room for some new favourite, is at the root of the maladministration of the Turkish provinces. The appointment of generals to commands, entirely apart from all consideration of their fitness for mili-

tary knowledge, must be fatal to the conduct of great operations of war. Even to the most honest man thus appointed to a post from which he knows he may be removed within a few weeks or months, simply because another has bribed and intrigued to obtain his place, there must be a great temptation to make the most he can out of the appointment during his tenure of office, more especially as he has probably, in one shape or another, paid heavily for his post. In these days war is no longer the mere clash of armed masses when bravery alone wins, but it is a science which demands to be as closely studied as any of the learned professions. The Turkish Pashas are an ignorant body of men; comparatively few of them know any language beyond their own. Works on the art of war are not translated into Turkish; and even if they were they would not be read. The constitutional laziness and apathy of the Turk would prevent his settling down to that deliberate study in his closet which is quite as necessary for the formation of a skilful general at the present day as the practical experience gained from commanding bodies of troops. The ideas of strategy of the Turkish generals are based upon the traditions handed down by their ancestors in days when railways and telegraphs did not exist, and when troops lived by the plunder of the countries upon which they made war. Their ideas of tactics have not advanced one step to meet the changes necessitated by modern arms. And, whereas in other nations where the generals may be but ill-skilled Princes, their deficiencies are supplied by the knowledge and ability of a highly-trained staff, in Turkey no such body exists. It is true that the War School receives from the army each year eight officers to be trained for the general staff; but such a number is utterly insufficient to supply the needs of the great Turkish army, and those officers who have been trained in the War School have, when their course of studies was completed, almost without exception, been sent to perform duties which are really those of engineers, while all the administrative work of the army has remained in the hands of the favourites of the Court party. In the War Office itself the most important business is in the hands of civilians, and the efforts made a short time back by Hussein Pasha to better this condition of things lasted but for a short time. Raised from the post of President of the General Staff to be Grand Vizier, he endeavoured to introduce reforms into the War Department and General Staff of the army; but the attempt to interfere with existing interests almost immediately brought about his fall; and so affairs go on, ever turning round and round in the same vicious circle. Nothing short of the utter break-up of the whole governing body at Constantinople could ever make of the Turkish army a body fit to cope with the other armies of Europe in modern scientific war.

From what has been above said, it may be judged that Turkey, if left alone to face her fate, has but small chance in the game of war. An army without generals capable of forming correct strategical plans, without officers capable of conducting the operations of war against a skilled enemy, with a system of tactics hopelessly unsuited to meet the terrible fire of breech-loading rifles and powerful rifled artillery, with transport and commissariat arrangements so defective that the first rude shock of battle must inevitably disorganise them completely, with regimental officers ignorant and altogether insufficient in numbers, and with but one single great power upon which to rest, the sobriety, hardihood, and courage, of its private soldiery, must, I venture to think, be shattered to pieces when it meets the armed hosts of Russia in the life-and-death struggle now about to take place. It is true that

A NOGAI TARTAR, OF ASIATIC RUSSIA.

A KARAKALPAK, OF ASIATIC RUSSIA.

the army of Russia is itself behind the age, that its soldiery, as a body, is far from possessing the keen intelligence of the French, the individual training and education of the German soldiery; it is true that its regimental officers are far from possessing that intimate knowledge of minor tactics, of outpost duty, of leading men over varied kinds of country, that Austria and Germany have so carefully inculcated in their lower commissioned ranks; it is true that only a small portion of the Russian staff has been educated as a staff should be in these days; it is true that financial embarrassments have more or less hampered the complete organisation of the Russian army, and that its arrangements of transport and supply are not so perfect as those of Russia's great Western neighbour; but in all that constitutes the strength of an armed nation Russia is immeasurably above the empire of the Ottoman Porte. By mere numbers alone she could crush her foe; but, even without bringing her full strength to bear, her superior military knowledge must be sufficient for the task. A united Holy Russia, viewing this campaign as a crusade against the infidel, advances to the attack of a foe whose country is torn by internal dissensions, whose arms are crippled by being forced to meet attacks from every side at a moment when her whole strength is required to face the vast legions gathering in her front. Yet Turkey will fight for God and the Faith; and woe be to her Christian subjects if the day comes when her last sparks of hope have expired, and the only flame left burning in her breast is that of wild, fierce fanaticism. It is on her own unprotected subjects that her deadliest blows are likely to fall rather than on the trained and united armies of the Czar.

Unless I fail to read the signs of the times, Turkey will have the Roumanian army to deal with as well as the Russian, in Europe, and it may therefore be interesting to give a short sketch of the constitution of the Roumanian forces. The Roumanian army is based upon a system of universal service, introduced by a law in 1863, and modified in 1872. The forces of "the United [Principalities of Moldavia and Wallachia," as Roumania is officially called in its relations with foreign Powers, consist of a standing army and reserve, a territorial army and reserve, a militia, and a national guard. The standing army is recruited by conscription, voluntary enlistments and re-engagements adding but small numbers to its ranks. The age of conscription is from twenty-one, the period of service eight years—four in the standing army, four in the reserve. The peace strength of the standing army in 1874 was about 18,000. In time of war it should be brought up to a strength of about 36,000 infantry, 1700 cavalry, and 96 guns. It is under the command of the reigning Prince, and is organised into four divisions, with the head-quarters respectively at Krajova, Bucharest, Galatz, and Jassy. As might naturally be expected in a country governed by a Hohenzollern, the system of training the army is purely Prussian, as are its tactics. It is curious to trace in Roumania the changes which the army has undergone according to the influence predominant in the Principalities. Before the Crimean War it was Russian in organisation and in dress. When Russia, defeated, was driven back, and the allied Powers gained the ascendancy, a French model was copied, and French officers and non-commissioned officers were introduced by Prince Couza; but since the accession of Prince Charles the French element has disappeared. Prussian officers have been brought to the Roumanian army as instructors, and Roumanians sent to Berlin to study Prussian military institutions. In dress alone the army has not followed the Prussian model, but the infantry wears the blue tunic and grey trousers of the Belgians, and a cap like the French kepi. The cavalry is dressed in scarlet, with busbies, and grey loose trousers thrust into the boots; the rifles and artillery in dark brown. The pay of the Roumanian army is comparatively high—almost approaching to the English scale of payment. As regards the material of the army, the rank and file is intelligent, and those drawn from the mountains are active and courageous; but good officers are sadly deficient, and the greatest difficulty is found in supplying the army. In all the public schools of the country the system of instruction is military; boys go through a military training without arms up to fifteen years of age, and subsequently under arms. Each school constitutes a military unit. There are regimental schools for the further education, both general and military, of the troops, and divisional schools for the higher training of non-commissioned officers aspiring to commissions. At Jassy there is a preparatory military school for the training of youths wishing to become officers, and their education is completed at a military high school at Bucharest. The staff of the army is trained at a war academy at the same place, and there is reason to believe that the staff of the army has reached a high standard of attainments. The regiments are completed from their peace to a war strength by calling in the reserves of the standing army.

The territorial army of Roumania is its most characteristic force. It dates back to the fifteenth century, and is the national force of the country. Before the year 1872 its infantry was called frontier troops, and performed the duties of police in the border districts; its cavalry was called Dorobanzi. When, in 1872, the army was reorganised this territorial force was reconstructed, and the name Dorobanzi, which was popular in the country, was given to the infantry; and the cavalry were christened Kallarashi. The budget of 1874 provided for a force of 40,000 Dorobanzi and 12,000 Kallarashi. Service in the territorial army is for the same period as in the standing army, but six years are active and only two in reserve. Men drawing the lowest numbers in the conscription are taken for the standing army, the higher numbers for the territorial army, the corps of which are localised. These local corps perform their services in a most curious manner, to which we know nothing similar in any other country. Each squadron or company is divided into four sections, and each section takes duty for a week at a time, so that the men are three weeks at home and one week on service. There are thirty-three territorial districts, each of which has a

battery of artillery, as well as a battalion of infantry, or a squadron of cavalry. The infantry perform frontier and garrison duty and act as police, the cavalry act as mounted police.

Since the year 1871 the territorial army has been combined with the standing army each autumn, and manœuvres have been held upon a considerable scale. The marching and military knowledge displayed at these manœuvres is said to be inferior, the officers especially knowing little of their work, but each year it has improved.

It appears, then, that Roumania can place in the field a standing army of about 36,000 infantry, 1700 cavalry, 96 guns, and a territorial army of 40,000 infantry, 12,000 cavalry, and apparently no guns; for our last information is to the effect that the batteries of artillery exist only on paper. Still a force of 76,000 infantry, 14,000 cavalry, and 96 guns is a most important factor in the solution of the Eastern Question. To this must be added the militia, composed of all men from twenty-one years of age who have not been drawn in the conscription, and of men from twenty-nine to thirty-seven who have served their turn in the standing or territorial armies. The militia is assembled by parishes once or twice in the year for periods of fifteen days; but it is evident that, containing so large a proportion of men who have never been subjected to discipline, it cannot be a very reliable force. The National Guard and rural levies comprise all men between thirty-seven and forty-six years of age; they do garrison duty in their towns and parishes when the standing and territorial armies are called into the field, either for manœuvres or for war. The infantry of the Roumanian standing army is armed with the Peabody breech-loading rifle, the territorial army with the Prussian needle-gun; the Roshiori, or Red Hussars, of the standing army are equipped like German Hussars; the Kallarashi, who are mounted on small native-bred ponies, are equipped like Cossacks. The artillery has 4-pounder and 6-pounder breech-loading steel guns of the Prussian pattern, and a large number of bronze guns of the same pattern; it is said that one hundred guns on the old French muzzle-loading model were also in store a few months ago.

It is evident that if the Roumanian army takes part with Russia against Turkey—and it seems now tolerably certain that it will do so—it might, by crossing the Danube near the Servian frontier, create a most powerful diversion in favour of the Russians, drawing off a large body of Turkish troops who would otherwise be available to oppose the passage of the Danube by the Russians. Still more would this be the case should the Servian army again take the field. However difficult it might be to get together again the Servian army, after its experience of last year's campaign, it can scarcely be doubted that Servia could put into the field a force of 30,000 or 40,000 men, fairly armed and equipped, and, if not imbued with the most warlike spirit, at least capable of taking a part in harassing the smaller detached bodies of Turkish troops which are engaged in keeping down the flames of insurrection in the western provinces.

The military force of Montenegro can scarcely be counted upon for other than defensive operations. At present it engages the attention of a considerable body of Turkish troops; but, should Turkey take the only step which from the point of view of a strategist can give her any hope in this war—viz., the calling in of all her detachments and the concentration of her whole armed strength in one body to do battle with the Russians, the Montenegrin army would, of course, be free to cross its own frontiers. Even in that case, however, it can do little more than spread into the immediately surrounding Turkish provinces, for it possesses none of those organised administrative establishments which are absolutely necessary to enable any body of men to take the field as an army for offensive operations. The Montenegrin army is, in fact, a local militia—the men wear the national dress and provide for themselves in the field. Its organisation is very remarkable, the civil and military authority being combined under the same chiefs. It is calculated that each house can provide two soldiers, and five houses or ten men are placed under a desetar, or decurion; ten of these decurions, with their fifty houses, are placed under a stotinjar or centurion, and all the centurions of any one tribe, with their soldiers, are combined together under a captain. The tribes are called Plemena, and are again combined into Nahias. There are eight of these Nahias, which are each under the command of a Vojvoda. The eight Nahias are placed together under the chief command of a head Vojvoda, who is at once President of the Senate, Chief Administrator of the Government, and Commander-in-Chief of the military force. Every citizen is liable for service from his seventeenth to his fiftieth year, and not less than 25,000 men are enrolled. They have rifled mountain batteries and breech-loading rifles of various types; but, as already said, it is an army which can only be counted upon for defensive operations. Whatever instruction its officers and non-commissioned officers have had, the arms in the hands of the troops, the establishments for the powder factories and armoury at Rieka, have been paid for with Russian money. Russian non-commissioned officers are the instructors of the Montenegrin school of tactics, Russian workmen in the powder factories and armoury. Splendid in physique and manly in character as the Montenegrins are, they are still little better than savages in many respects. The unquestionable proofs which have been furnished that they have mutilated not only the dead but the living of their enemies scarcely entitles them to that pan of praise which Mr. Tennyson has so recently sung over them.

Large numbers of Albanians have recently taken advantage of such military instruction as can be obtained in Montenegro; and an Albanian insurrection would, of course, add considerably to the difficulties of the Porte. The tactics of Albanians and Montenegrins alike consist chiefly of the various stratagems of guerilla warfare. From all that I have read of their tactics, they seem to correspond almost exactly with those employed by the Kaffirs of South Africa. They endeavour to entice their enemy into the mountains; they hide in caves

and ravines; they draw the enemy on by the retreat of their skirmishers before him, and, when he is led into the ambuscade prepared, from behind rocks and mountain peaks, from every coign of vantage, from every spot affording shelter, they pour down a fire delivered with all the accuracy due to their marvellous skill as marksmen. Captain Cooke gives the following description of the fighting qualities of the Albanians:—"They know thoroughly how to utilise ground, are acquainted with every stratagem of guerilla warfare, understand the art of deceiving the enemy by false marches, and falling upon him unawares, and will ably cover a wide front with a small body by occupying it with a network of small posts communicating with each other by single vedettes. When preparing an ambush, they will often leave their caps and cloaks at some prominent spot in an opposite direction to that in which the ambush is intended. Whether lying full length on the ground or aiming in a crouching position behind cover, they rarely miss their mark. The enemy's head is then cut off, salted, and planted on a pole in the village." The Mirdites, now or recently in insurrection against Turkey, are a clan of the Ghegs, one of the two principal Albanian tribes. They are most warlike people, all of the Roman Catholic religion.

The present aspect of the Eastern Question forbids us to leave the armaments of Greece out of our calculation, as it is certain that if the flames of war spread wider the Greeks must be among the first to take fire. The land force of Greece is but small, nor could it be otherwise in the bankrupt condition of the nation. Indeed, the country is but thinly populated, and can spare but few of its people from agriculture and industry. Every Greek is liable for service from his twentieth to his fortieth year; 13,000 young men every year attain the age of conscription, of whom about 2500 are taken for the Line and 2000 for the first reserve. A law, dated 1867, provides for an effective Line army of 31,000; 14,000 to be kept up in peace, the remainder to be in reserve. My latest information as to the actual numbers is for the year 1868, when only 8500 were under arms. Such troops as Greece keeps on foot are spread over a wide area, and there is no combination, except on paper, into brigades or divisions. The duties of the soldiers are essentially those of detachment. They act as police and suppress brigandage on the Continent, and garrison the Ionian Islands and the islands of the Archipelago. Hence they can know nothing of manœuvres on a large scale, and they have no experience of war. So far as I can judge, they might collect 25,000 regular troops, with fifty guns, for war service, and, in 1869, when war with Turkey seemed probable, orders were issued for the enrolment of volunteer corps to the number of 30,000; but it seems improbable that such an army brought together for the first time in the presence of an enemy, without any experience of the operations of war on a large scale, with all its transport arrangements and commissariat crippled by want of money, could within any reasonable time be fit to take the offensive against the Turks. Should the Turks call in their detachments from the Greek provinces of Turkey, or leave there no troops but weak garrisons of fortresses; should Greece be thoroughly satisfied that Turkey is going to be so crushed that there is no chance of her making an offensive return when peace has been made with Russia, then the Greek army might very possibly invade Thessaly and Epirus, aid the insurrection which would inevitably take place, and annex those provinces to Greece.

It has been announced that one other country is to take part in the war. I have read that the Khedive is to raise his present contingent of 10,000 troops to 12,000, and they will be at the service of the Sultan for whatever purpose he may prefer. Egypt is bound to take this course by her convention with the Porte. The Egyptian army has suffered dreadfully from the effects of the Abyssinian war, and a force of this size is probably as much as the Khedive can send without altogether denuding his own country of troops. The infantry of the Egyptian army, recruited entirely from the class of fellahs, is unsuited for war in any but a tropical or sub-tropical country. The Arab, accustomed to the sandy plains of Egypt, or the warm Delta of the Nile, suffers severely when exposed to the cold of a winter in high latitudes, or in the mountains at a considerable distance above the sea. To him a winter campaign on the Danube, in the Balkans, or in the high table-lands of Armenia means disease and death. The Egyptian troops sent to suppress the insurrection in Crete in 1866 lost nearly half their strength from fever and from exposure to cold; yet the climate of Crete is one of the best in Europe, where there are no great extremes of either heat or cold. For work in his own country the Egyptian foot soldier is well suited. Lithe and active, possessing great marching power, living upon Indian corn, beans, and rarely a little soup made from meat, he requires but small commissariat. As regards his clothing, if his linen garments wear out, if the soles disappear from his boots, he has simply reverted to the condition in which he spent his life before he was enlisted into the army, when, barefooted and nearly naked, he tilled the field and earned by the sweat of his brow enough to keep soul and body together, and perhaps enough to save his back from the taxgatherer's lash. I believe the life of the Egyptian fellah to be almost the hardest in the world. It would be the hardest were it not for the glorious climate, which makes existence a pleasure, and the smallest pleasure a delight. The Egyptian infantry are well armed with Remington breech-loading rifles, which they keep clean and in good order (more than can be said of the Turk and his arms); but their officers, taken from the same class as the men, and not possessing any claims to the respect of the private soldier from superior birth, nor, indeed, often from superior education, are quite incapable of leading their men to the best advantage. I am not aware of what troops the Egyptian contingent sent to Turkey consists, but I am convinced that Egyptian cavalry and artillery would be of little service. The cavalry is very inferior, and in the batteries of artillery which I have seen in camp the horses were in the most miserable condition, the harness a mass of patchwork, and the guns dirty and ill-kept.

The best officers in the Egyptian army are a few of their generals and colonels who are Americans. After the great civil war in America, when the armies of the south were disbanded, several officers of considerable ability offered their services to the Khedive. To General Stone, the Khedive's able chief of the staff, are due whatever reforms have been introduced into the Egyptian army. He has inaugurated excellent educational establishments to train up non-commissioned officers and officers, and he is combating with all his strength the inertness and apathy of the fellah class and the corruption which abounds throughout official life in Egypt. But the fellah is not by nature a warrior; he is by nature a tiller of the soil, and no Egyptian troops will ever stand their ground against an equal number of Russians.

I now propose to give some description of the probable theatres of war in Europe and in Asia. I will begin with that in Europe. By the Treaty of Paris in 1856 the southwestern boundary of Russia in Europe was contracted. Russia gave up that portion of Bessarabia formerly possessed by her, which touched upon the northern bank of the Danube; and her frontier line, instead of following the course of the river Pruth to the Danube, was made to quit the Pruth at a point some thirty miles south of Jassy, and recede further and further from that river till, at another point about thirty miles north of the Danube, it was made to turn at right angles towards the seacoast—a wedge-shaped piece of land being thus left between her frontier and the Pruth, and a long narrow strip between her frontier and the Danube. These pieces of territory were handed over to Moldavia. The protectorate hitherto enjoyed by Russia over the principalities of Wallachia and Moldavia was abolished, and the sovereignty of the Sultan over them was established. The right of investiture of the Hospodars of these two principalities remained with the Sultan, and they were to pay an annual tribute to him of four millions of piastres. It was not till the end of the year 1861 that the principalities were united under Prince Couza, who gave them the title of Roumania. In 1866 he was forced to abdicate, and in the same year Prince Charles of Hohenzollern-Sigmaringen was proclaimed reigning Prince. After considerable difficulties the Porte recognised him, and he received his investiture at Constantinople from the hands of the Sultan himself. Roumania is still bound to pay her tribute of £36,000 a year to the Porte. The country thus newly formed has for its southern boundary the Danube, which separates it from Turkey and Servia, for the northern boundary of Wallachia and the western boundary of Moldavia the Carpathian Mountains separating it from Austro-Hungary, and for its eastern boundary that Russian frontier already described. The southern portion of the principality consists of the low plain of the Danube; the northern portion of Wallachia and the western portion of Moldavia of broken country formed by the spurs of the Carpathian Mountains, which descend and become gradually lower till they are lost in the plains of the Danube and the Pruth. That portion of the plain nearest the Danube consists chiefly of extensive swamps or wide tracts of forests and brushwood. Wallachia possesses few good roads. Throughout its whole length, from Bucharest to the Servian frontier, it is traversed by one well-made route, while another, fairly passable, runs along the bank of the Danube. At right angles to these, roads lead down from the passes of the Carpathian Mountains and to the passages of the Danube. In Moldavia the whole of the western portion of territory is so traversed by the spurs of the mountains that no road can here run from north to south; but at the foot of the spurs there runs a main road down the valley of the Sereth, from a point due west of Jassy to Fockschan, whence it curves round to Bucharest, another branch leading to Galatz. A second road runs more or less parallel to this from Jassy to Tekutch, while roads run down by both banks of the Pruth to Galatz and Reni. The Russo-Roumanian frontier is crossed near Jassy by a railway from Kichenieff. This railway runs west for some distance, and then down the valley of the Sereth till it strikes the Danube at Galatz; thence it passes along the bank of the Danube to Ibraila, crossing the Sereth by the Barboesch bridge; it then runs to Bucharest, where it divides into two parts, one running due west to the Danube, on the Servian frontier at Turn-Severin, the other running south to Giurgevo, opposite the Turkish fortress at Rustchuk. This railway and the roads running parallel to it cross a great number of streams. The streams which feed the Sereth and the Pruth are crossed in Moldavia, while in Wallachia the roads and railway traverse an innumerable quantity of affluents of the Danube, which descend from the Carpathian Mountains. The movement of troops throughout the whole country is in consequence entirely confined to the roads, the streams which have to be traversed, the masses of forest, and the swampy banks of the rivers rendering all movement off the roads impossible. The river Pruth is bridged at three points in Roumania—at Skuljany, at Leovo, and near the Danube west of Reni. From Skuljany, where both road and railway cross it to the Danube, it is navigable for large vessels. From the southern portion of Russian Bessarabia to the Danube at Reni, Ismail, and Kilia, there are roads available for troops.

That southern portion of Bessarabia in which the Russian army of the Danube was cantoned before the declaration of war partakes very much of the nature of the adjacent steppe land, being barren, and possessing for the most part only villages of a very poor description. Here the Russian army during the past winter appears to have suffered from cold and exposure, and the climate of the southern portion of Roumania is not by any means so wild as one might expect from its latitude. On the one side, in winter, bitter winds sweep down from the snow-clad Carpathians; on the other side still more bitter winds sweep across from the Russian steppes. In winter the thermometer often falls below zero, and the Danube has its navigation obstructed by ice. In spring the weather is uncertain, cold and heat alternating for a short time, till there is a sudden burst into summer, when the heat of the days is intense, though the nights are very cold. The autumn is the most pleasant season, and the climate is not, on the whole,

unhealthy, with the single exception of the great liability to aguish fevers, entailed by the swamps which border all the streams and the bank of the Danube itself. It is probable that troops obliged to remain for any length of time on the banks of the Danube would have large numbers of men invalidated, and considerable mortality from this cause.

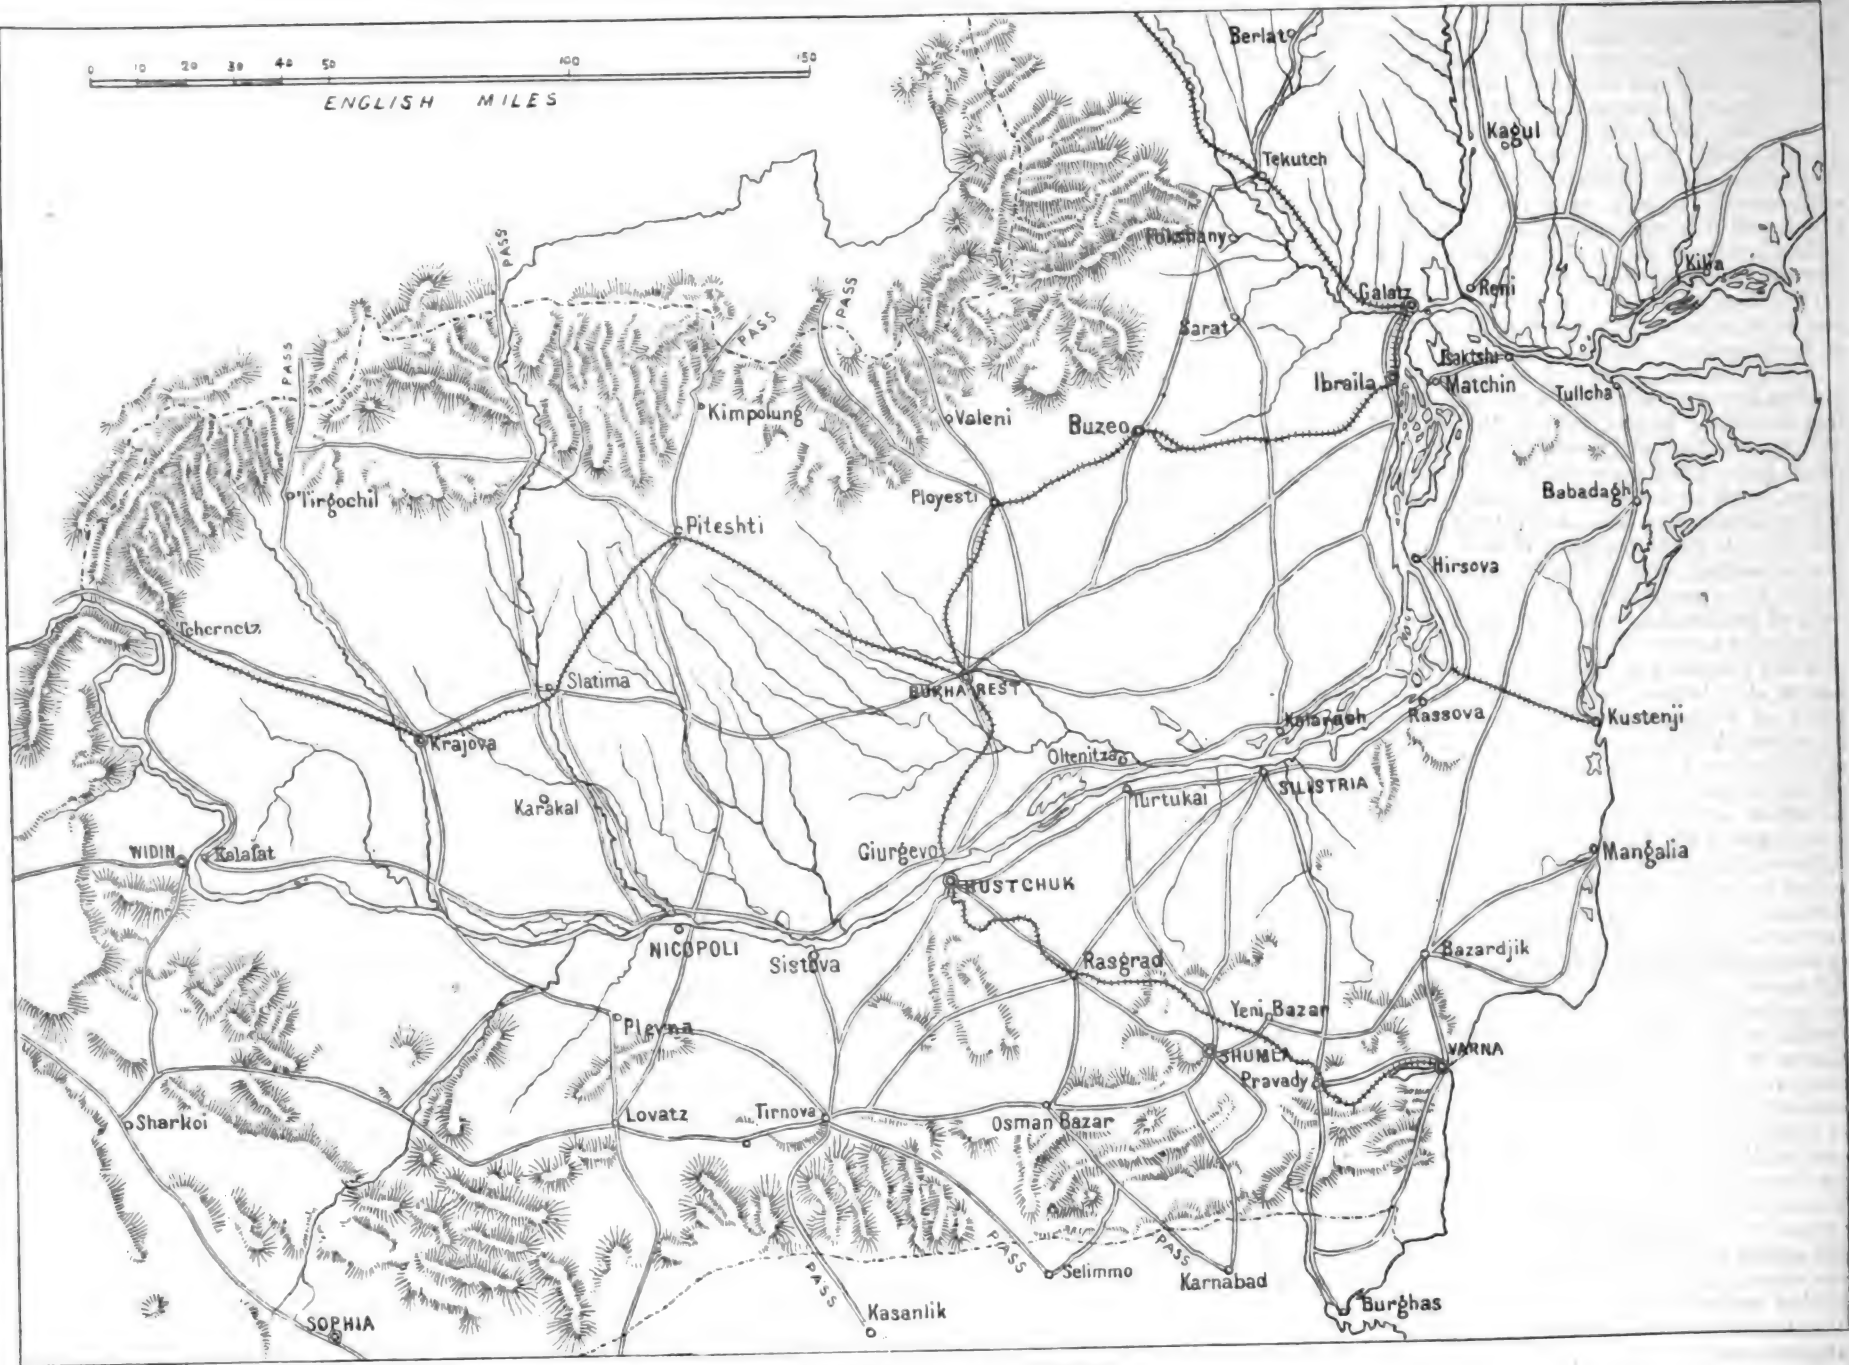

For the purposes of the present campaign it is not necessary to describe the Danube above the point where it issues from the famous Iron Gates between Austria and Servia. There the perpendicular cliffs narrow the rapid stream to little more than fifty yards in breadth, and from this point for the 650 miles of its course to the Black Sea it separates Roumania on its left from Bulgaria on its right bank. The characteristics of the two banks are that the Roumanian bank throughout the whole of this space is flat, nowhere more than about fifty feet above the level of the Black Sea, and in places very marshy, the marshes sometimes extending into lakes. The right bank, on the other hand, is often 300 feet in height, seldom falling below 100 feet, and the country on this side gradually rises to the lower ridges of the Balkans. The valley of the Danube is, in fact, bordered by the Carpathians on the left and the Balkans on the right; but while the Carpathians recede far back and leave a flat, wooded, marshy plain between them and the river, the Balkans approach nearer to the river, and thrust down their spurs to its very brink. Looking at the map, we see between the Danube where it begins to run northwards about Silistria and the Black Sea, a strip of country containing at its northern part the Delta of the Danube, and traversed through its centre by one main road, leading from Tulcha to the Balkans, near Varna. This is the Dobrudscha, a barren inhospitable country, the chosen home of fever. It is generally covered with a thick growth of brushwood and willow; swamps and bogs abound, but where cultivated it is fertile. The Roumanian plain on the north bank of the Danube possesses one of the richest soils of Europe. The earth is black and strongly impregnated with saltpetre, and the numerous rivers and streams afford ample facilities for irrigation. Yet vast areas of land remain uncultivated, and such agriculture as there is of a primitive description. The perpetual fear under which Roumania has laboured of being converted into a battle-field for hostile Turks and Russians is not calculated to improve agriculture or any other industry, or to encourage the outlay of capital upon buildings or improvements which at any time, for many years past, have been liable to be devastated by human locusts. Yet Roumania has produced a vast amount of corn, not only enough for its own consumption, but sufficient to export very large quantities for the European market; while numerous herds of cattle and sheep graze upon the rich pasture lands for which these provinces are famous. The Russian army then, entering Roumania, is sure to find considerable supplies of meat and corn. If, as we have every reason to believe will be the case, the progress of the Russian troops is so conducted as not to interfere with agriculture, and if supplies are paid for as it is promised they shall be, and if the whole of Roumanian mankind is not taken away from its occupations for military service, the whole of the corn crop of Roumania, which would otherwise be exported this autumn, should be available for the Russian troops. At the present season of the year, however, the corn supply would be less than at any other, for last year's harvest is long since exported, and the stores in the country are nearly exhausted by the end of the winter. Bulgaria, too, on the opposite bank of the Danube, produces a large amount of corn for export, though not in such quantities as Roumania. The roads in Bulgaria are plentiful, but bad. In the spring months the heavy rainfall on the northern slopes of the Balkans renders them all but impassable. This, however, is the time when the rich grasses afford ample supplies of forage for horses; but when the hot summer comes it scorches up all herbage, and by July the streams are dry and the country almost a desert. July is, however, the season of harvest, both for Roumania and Bulgaria; so that by the time that green fodder is gone there should be ample supplies of corn. The northern slopes of the Balkans are thickly wooded, and the low ranges of hills or terraces lying in front of them are intersected by numbers of streams flowing through deep ravines, and in places swamps and deep ground are to be met. The soil is heavy, and movement is much impeded by masses of thick brushwood, so that here, as in Roumania, the movement of troops is confined almost exclusively to the roads.

It remains now to speak of the passages of the Danube and of the Balkans. It is a curious fact that different writers assign very different degrees of width to the Danube—for instance, Moltke and Chesney—but I believe its average width from Widdin to Hirsova to be about 1500 paces. By reason of the numerous extensive morasses, lakes, and forests on its left bank, an army approaching it from the north is compelled, if it seeks to cross, to effect the passage at certain known parts. At most of these points of passage towns have sprung up on both banks of the river, and to these points only are there roads on either bank. As no army of any size can operate except where there are good roads, the points where passage is possible are marked by these roads. Descending the Danube, we find that a road runs along its left bank more or less near to the river throughout its whole course from Widdin to Kilia. The river about Widdin affords good ground for passage. Opposite to Widdin, which is strongly fortified, and upon which the Turks have of late been engaged, is Kalafat, said to be now occupied by the Roumanian troops. The next important point of passage is opposite to the Turkish town of Rahova, where, in one of the former wars between Russia and Turkey, a Russian force of 28,000 troops was thrown over the river: a road leads to this point from Craiova. The next points of passage are opposite Nicopolis, at Islaez and Turnu, to which roads lead down both banks of the Aluta. At Simniza, opposite the Turkish town of Sistova, there is a good point of passage, but no road to it, except one leading along the river bank. Next comes by far the most important passage of the river, that between Giurgevo on the

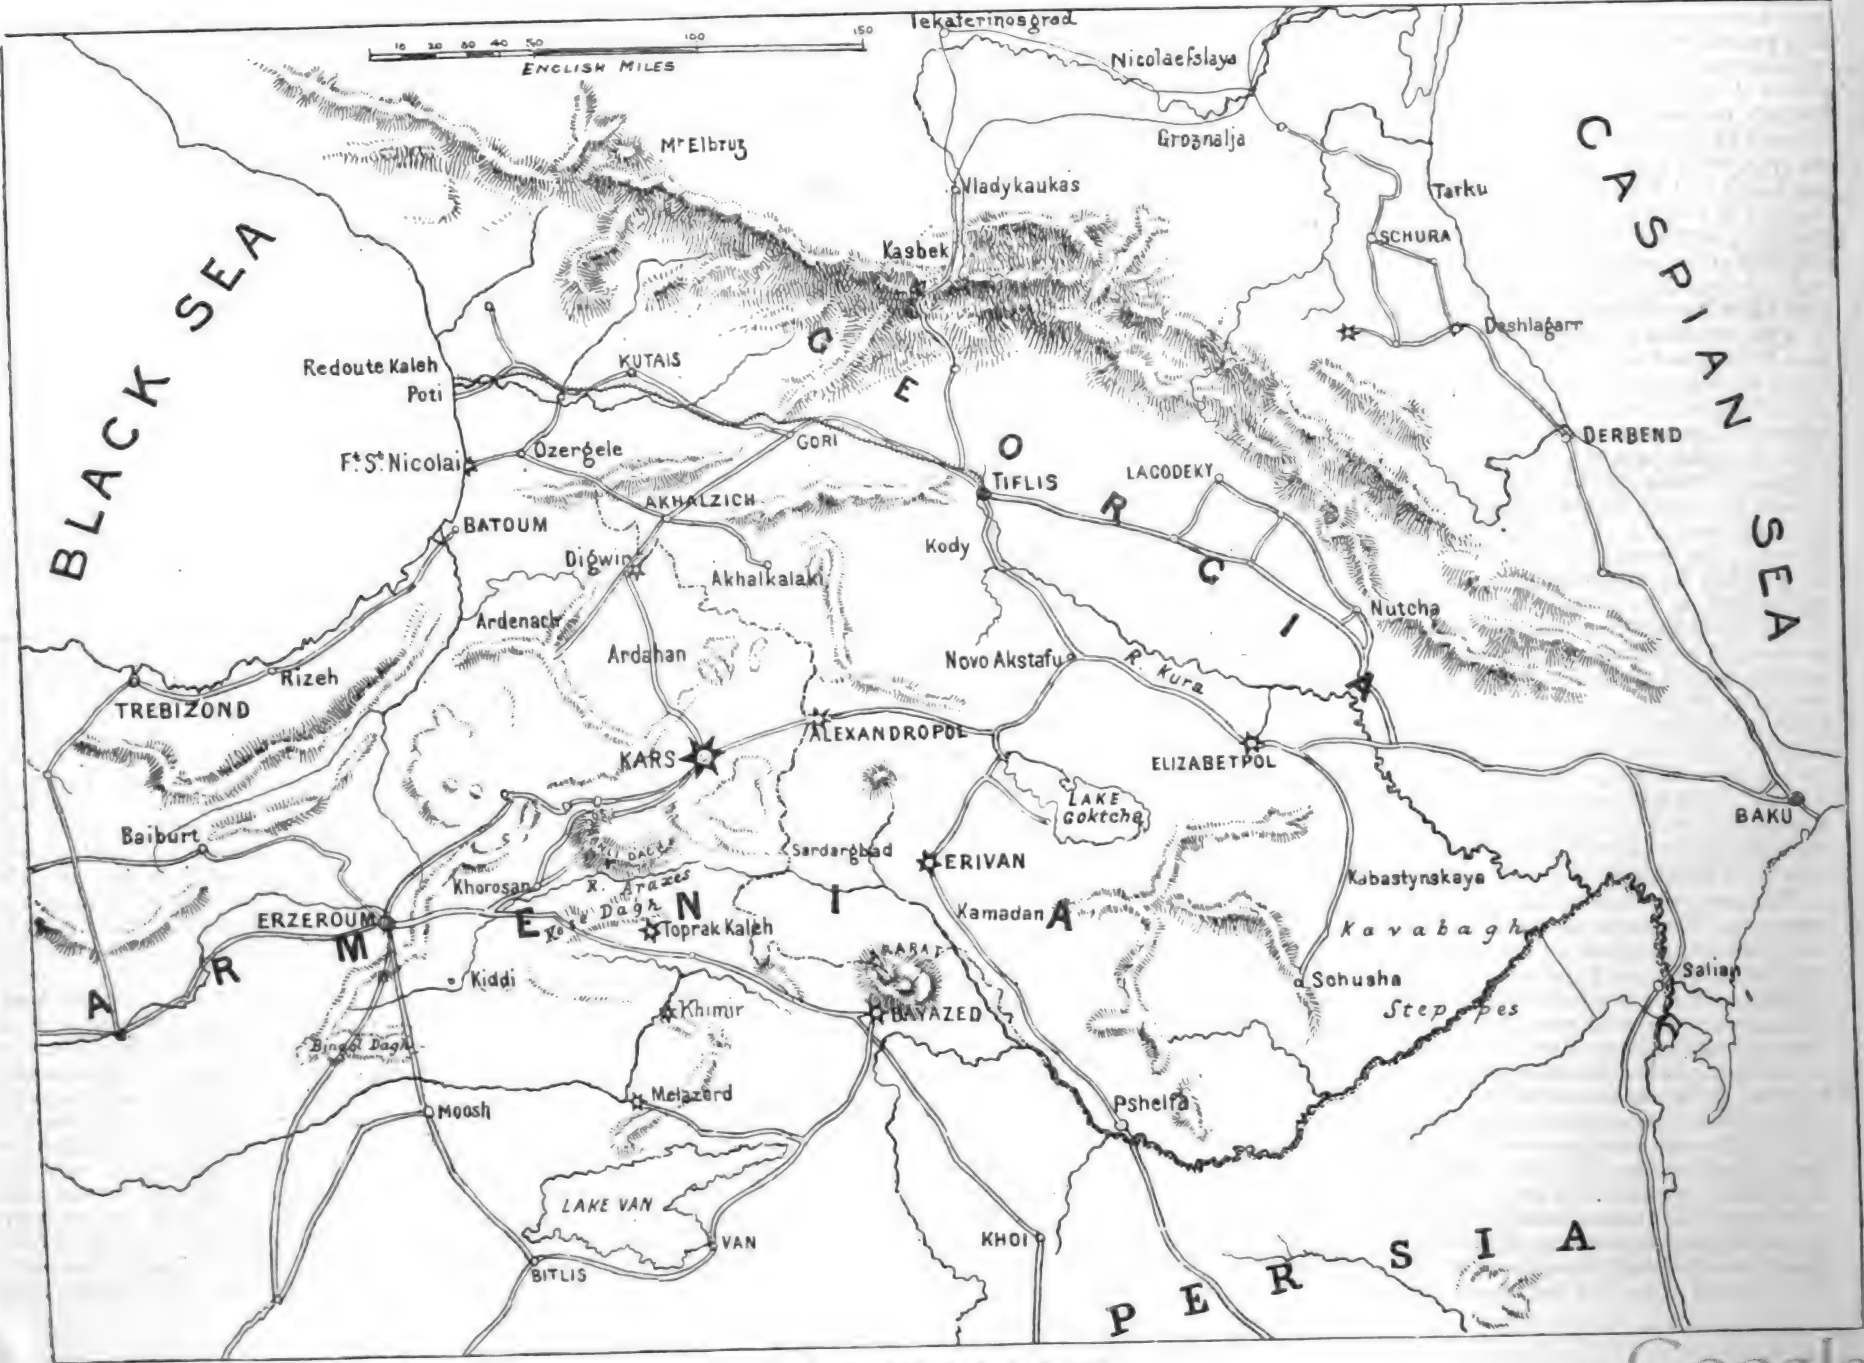

left and Rustchuk on the right bank. I say by far the most important passage, because Giurgevo is the terminus of the Roumanian line of railway, and Rustchuk is the terminus of the Turkish line which leads past Schumla to Varna. Here the left bank is comparatively free from marshes, and the stream is scarcely 1000 paces wide; but Rustchuk is strongly fortified. Its defences stand on a series of hills: they have been recently greatly strengthened, and a number of heavy Krupp guns have been mounted. The defences of Rustchuk, on high ground, entirely command Giurgevo and the left bank of the river. The next passage, and also one of great importance as being within easy reach of the railway at Bucharest and at Giurgevo, and having also water communication by a navigable stream from the railway between Bucharest and Giurgevo, is Oltenitza, opposite the Turkish town of Turtukai. The banks here afford firm ground. The Turks have no permanent works at Turtukai, and a good road leads from the latter place to Rustchuk. Next there is a passage at Kalaratsh, opposite Silistria. My readers will not have forgotten the famous story of the defence of Silistria in 1853, where Butler and Nasmyth earned their heroes' laurels. Since the days of the Crimean War it has been considerably strengthened. It stands on a projecting height, and entirely commands the opposite bank, the width of the river being only about 1000 paces. Immediately below Silistria the river is broken up by a number of islands, and from this point on to Hirsova the left bank of the river borders a wide tract of marshy ground quite impracticable for troops. At Hirsova the Turks have some slight works, but not formidable, relying more upon the nature of the opposite banks, as the river can only be approached here in the dry season. In 1809 a Russian force did cross at this point. A mass of wide marshy ground again borders the river on its left bank the whole way to Ibraila, a town which the Russians have already occupied. The river is here broad, but much intersected by islands; and nearly opposite to Ibraila, on the Turkish bank, stand on a hill some slight works at Matchin. Railway and road run side by side from Ibraila to Galatz, and here there is firm ground on the Roumanian side, and the marshes are on the Turkish side. These marshes are not practicable for troops until the middle of June at the earliest, by which time they are dry and are sufficiently baked by the sun to be passable by artillery. The conditions are almost exactly similar at Reni, at Ismail, and at Kilia, with the addition that at these two latter places more than one arm of the Delta of the Danube would have to be crossed.

Now, putting aside the increased difficulty of passage on account of the Turkish fortifications, there can be no doubt whatever that if their object were merely to cross the Danube and operate on Turkish soil as near to the Balkans as possible, with a view to the subsequent passage of the Balkans, the Russian troops would select Rustchuk as their point of passage, because it is the only place upon the river except Galatz to which both road and railway conduct. The enormous and incalculable advantage of a railway for bringing up those masses of stores which must accompany the march of a large army makes it almost a certainty that the Russians will leave no stone unturned to capture Rustchuk, and so have free railway communication to Giurgevo and a free passage of the river at that point. It is quite true that Galatz is 150 miles less distant from the Russian frontier than Giurgevo; but those 150 miles, if not traversed on the north bank of the Danube, will have to be traversed on the south bank, in an enemy's instead of in a friendly country, in the barren and unhealthy Dobrudscha, without the use of any railway; and to an army of such strength as the Russian force operating in Roumania a railway is an absolute necessity. I therefore believe that, whatever steps the left wing of their army may take about Galatz, the passage of the main Russian body will be effected somewhere in the neighbourhood of Rustchuk.

I come next to speak of the passage of the Balkans. The Balkans may be turned by the coast-line; but the road is hemmed in between the mountains and the sea, of which the Turks have the command, and is in many places impracticable for guns; so that this road, which passes, moreover, through Varna, a fortified town, may be for all purposes of Russian attack dismissed from consideration. The nearest passage to the sea by which the Russians can move is one that passes through Pravady. This is known as the pass of Nadir-Derbend, and the road through it leads upon Aidos. Between Pravady and the southern opening of the pass either of two roads may be taken. One passes through a ravine not more than a hundred paces wide, and inclosed by almost perpendicular walls several hundred feet high; the other is a little less difficult; but both are severe passes, though they have repeatedly been used for artillery. The next pass is that of Schumla, which is the most important fortified place in the Balkans. From what I can learn, it appears that the intrenched camp of Schumla is fortified by a number of earthworks thrown up on a circle of hills, in advance of the northern outlet of the pass. With true Turkish carelessness, the railway from Varna to Rustchuk has not been made to pass through the defensive works of Schumla, but leaves them about ten miles on the flank. Roads from Silistria, Turtukai, and Rustchuk converge upon Schumla; and from Schumla itself, which is far advanced on the northern slopes of the hills, two separate approaches lead to the pass at Tshalikavik, whence the road winds through deep, precipitous ravines, finally descending through a broad, well-cultivated valley. On account of the strength of the intrenched camp of Schumla, this pass would be the most difficult for the Russians to force; and it is more than probable that they would invest Schumla and cross the Balkans by another pass. The next pass is one of considerable natural difficulty, by Osman Bazar to Kasan, whence two roads branch off to Karnabad and Selimno; further to the westward again is the pass known as the Iron Gate, leading from Tirnova to Selimno; while another pass, called the Shipka Pass, leads from Tirnova to Kezanlik. Upon Tirnova road, converge from Silistria, Rustchuk, Sistova, and Nicopolis; it is

THE THEATRE OF WAR IN EUROPE.

No. 1976.—VOL. LXX.

SATURDAY, MAY 26, 1877.

WITH } SIXPENCE.
TWO SUPPLEMENTS } By Post, 6d.

THE WAR: RENI DURING THE BOMBARDMENT.
FROM A SKETCH BY ONE OF OUR SPECIAL ARTISTS.

BIRTHS.

On the 17th inst., at Summerlands Hall, Hull, the wife of Lieutenant-Colonel Longstaff, 1st East York Rifles, of a daughter.

On the 17th inst., at 86, Brook-street, London, the Countess of Dunmore, of a daughter.

On Feb. 14, at Valparaiso, the wife of Edwin Woodgate, Esq., of a son.

MARRIAGES.

On the 8th inst., at Christ Church, Waterloo, C. Goldney, Chaplain of the County Prison, Stafford, eldest son of the Rev. A. Goldney, Rural Dean, and Prebendary of Wells Cathedral, to Agnes Emmeline, only daughter of the late E. Williams, of Liverpool.

On the 25th ult., at the Cathedral, Calcutta, Reginald William Dalgety, Captain 66th Regiment, to Kate, widow of William Sloane Elderton, Esq.

DEATHS.

On the 17th inst., at Devon-square, Newton Abbot, Agnes, widow of Thomas Michelmore, late of Berry House, Berry Pomeroy, Devon, aged 75 years.

At sea, on a voyage from Cape Town to Calcutta for the benefit of his health, William Gladstone Dyce, son of the late William Dyce, R.A., in his 25th year.

On the 9th inst., at Swinhope House, Lincolnshire, Mary, the wife of Geo. Marduke Alington, and daughter of the late Matthew Bancroft Lister, of Burwell Park, in the same county.

On the 16th inst., at Glenmore, the Earl of Orkney, aged 73.

On the 22nd inst., at the Tile House, Denham, Lady Emily Drummond, widow of A. Mortimer Drummond, Esq., in her 91st year.

On the 12th inst., at his residence, Linda-Vista, Abergavenny, Henry Jenkins, formerly of Coquimbó, Chile, aged 46 years.

* The charge for the insertion of Births, Marriages, or Deaths is Five Shillings for each announcement.

CALENDAR FOR THE WEEK ENDING JUNE 2.

SUNDAY, MAY 27.

Trinity Sunday. Full moon, 4.5 a.m.

Doors open at 2.30 for Day Performances, and at 7.15 for the Evening ditto. Places may be secured, without extra charge, at Austin's Office, St. James's Hall, any day from Nine till Six.

ST. JAMES'S HALL.—Signal Success of the MOORE and BURGESS Easter Burlesque on THE MARVELLOUS GIRARDS, which will be repeated EVERY NIGHT at EIGHT; MONDAY, WEDNESDAY, and SATURDAY, at THREE and EIGHT.

Vide extract from the "Morning Post," April 3:—
"In a burlesque performance entitled 'The Marvellous Girards,' Messrs. T. Sully, Albert Moynihan, and Rene emulated the eccentric gymnastics of the well-known 'Girards' with absolute accuracy in the minutest particulars of action and expression, doing everything that the clever originals do, and as nearly as possible in the very same style and manner. A new 'Interlocutor' appeared for the first time in the person of a gentleman bearing the illustrious name of J. P. Kemble, who, being gifted with a fine voice and a keen sense of humour, is likely to prove an acquisition."

MOORE and BURGESS MINSTRELS.

In pursuance of the policy long since instituted by the Directors of this Company to elevate the character of the entertainment with which their names are now so intimately associated, they have just introduced

AN ENTIRELY NEW AND MOST DELIGHTFUL FEATURE IN THE SECOND PART OF THEIR PROGRAMME.

OPERATIC MELANGE,

the whole of the music of which is new and strictly original, having been composed expressly for Messrs. Moore and Burgess by that highly-gifted and rapidly-rising Composer,

MR. JOHN HOBSON.

MUSICAL UNION.—PAPINI, last time; SAINT SAENS, first time this season.—TUESDAY, MAY 29.—Quartet, D Minor, Mozart; Trio in F, Saint Saens; Quartet, No. 4, in D, Beethoven; Solo, Violin and Piano, ST. JAMES'S HALL, at 8.30. Quarter-past Three. Tickets, 7s. 6d. each, to be had of Lucas and Co. and Olivier, Bond-street; and Austin, at the Hall. Visitors can pay at the Regent-street entrance. Prof. ELLA, Director.

PHILHARMONIC SOCIETY.—Conductor, Mr. W. G. COCHRAN.—MONDAY EVENING, MAY 28, Half-past Eight. ST. JAMES'S HALL.—Scherzo, "Power of Sound" Symphony, Overture, "Egmont" (Beethoven); Overture, "Tannhäuser" (Wagner); Macfarren's Violin Concerto; Violin, Herr Ludwig Straus. Vocalist, Madame Campobello-Sinico. Stalls, 10s. 6d.; Tickets, 7s. 6d., and 2s. 6d.

HORSE SHOW, AGRICULTURAL HALL, Islington.

The Show opens Saturday, June 2, Hunters Judged and Ponies leaped. Admission, 2s. 6d.; other days, 1s.
Monday, June 4.—Harness Horses Judged and Parade of commended Horses.

S. SIDNEY, Secretary and Manager, Agricultural Hall Company, Limited.

HORSE SHOW, AGRICULTURAL HALL, Islington.

Reserved Seats in the Balcony to view Parades and Leaping, 10s. and 5s., may be engaged from a numbered Plan on and after Monday next, May 28. Unreserved Seats, 2s. 6d. and 1s.

THE ILLUSTRATED LONDON NEWS.

LONDON: SATURDAY, MAY 26, 1877.

There has been another political upset in France, unexpected as it is likely to be serious. Marshal MacMahon, on the most trivial pretexts, has dismissed his Ministry, has chosen another from the Right, of which the Duc de Broglie is Premier and M. de Fourtou Minister of the Interior. Parliament has been prorogued for a month. An extensive change of Prefects has been effected. A system of strict repression has been adopted in regard to the press, foreign as well as domestic. A dissolution of the Legislative Body is contemplated; and no one can doubt an eventual overthrow of Republican institutions, to be replaced by a Monarchy, should the electors of France be seduced or intimidated into a sanction of the change. The act of the President of the Republic virtually amounts to a coup d'état. He has descended from his high position as Chief Magistrate of France to play the rôle of a partisan. He is not carrying into effect the expressed will of the nation, as made known at the last general election, but the will of the minority, whom that election for the time being silenced.

Let us be fair to Marshal MacMahon. He is a soldier; he has never been trained in political methods of action; he believes in the Army; he has no confidence in free discussion; he is honest, but his honesty is not enlightened by a due appreciation of public opinion; he has not in this last step transgressed the legal limits of the Constitution; he has done nothing but that which the law gives him a right to do; but he does not seem to be aware of the vast difference that exists between what he has a right to do and how prudently to exercise that right. The spirit in which he has acted is adverse to the end for which his powers were intrusted to him. He says that Ministers are responsible to Parliament, but that he is responsible to France. In a certain sense this is true; but how is he to interpret the will of France except through its legitimate organ of expression? This is not a case in which any visible change has come over the people since the period of their election of representatives. His late Ministers had sustained no defeat. Their policy had provoked no serious apprehensions. There existed no reason to believe that any discrepancy existed between them and the national majority. There may have been reasons, and there were, which might induce Marshal MacMahon as a partisan to dislike the progress of political affairs in France, but there were none to justify him, as the head of the Executive, in breaking with his Government, or in interposing between the Representative Body and that of its constituents.

The affair is graver than at first blush it seems to be. France was in a state of profound peace, carefully and energetically engaged in its industrial pursuits. In an incredibly brief space of time it had recovered from the effects of the disastrous war with Germany. Its commercial position equalled, if it did not surpass, in progressive prosperity that of any other State in Europe. Its financial administration had been wonderfully successful. Its Foreign Policy commanded the respect of all other States. Everywhere quiet reigned supreme, and the opinion of foreigners with regard to the capability of Frenchmen for permanent self-government had undergone a considerable change. It was at this inopportune moment that Marshal MacMahon, influenced, no doubt, by irresponsible advisers, took upon himself to force the resignation of his Ministry and to replace it by one of an extreme reactionary character. What the consequence will be in France is yet uncertain; though it seems hardly probable that his new Minister, the Duc de Broglie—who certainly cannot be credited with a large amount of success in his schemes of Government—will achieve a triumph in this instance. To be sure, through the Marshal's compliance, he has now the whip in his hand. But he has to drive a high-spirited people; and the probability is that he will find, in the end, that the task he has undertaken will be far too gigantic for his abilities. It is to be noted that the change he has succeeded in accomplishing is but an official change—one that leaves the vast mass of Frenchmen untouched. As yet they are what they were. No wave of new opinion has flowed over them. No new sentiments or sympathies have taken possession of them. The challenge which has been thrown down to them was utterly unprovoked, and they are not likely to accept a

policy of rigid repression at the bidding of a minority. For there is no pressing danger to be averted, no call for a "saviour of society," no legitimate claim upon them for self-sacrifice or for a cession of their political liberties with a view to the protection of their social interests. The extreme section of the Left is very far from formidable. It has no great political influence anywhere, not even in Paris. Patience, moderation, compromise, where compromise does not touch great principles, were the order of the day, and the confidence of France had gradually become stronger and more settled in the fitness of Republican Institutions for her present needs.

The great hope of those who are opposed to this sudden change of official machinery lies in their moderation and forbearance. The contest cannot last long if only they will continue to practise that self-restraint which has governed their tactics for some time past. The only practicable road to Monarchical Government will be opened by Republican violence. Marshal MacMahon, in order to dissolve Parliament and make a new appeal to Universal Suffrage, will have to obtain the concurrence of the Senate—a result not by any means certain. If he do not obtain it, his Ministers must go out. If he do, the only further question remaining is whether the people of France will sustain him in the course which he has taken. Should they not do so, he will be bound to resign his post, or he will be driven to the ulterior necessity of assuming a dictatorship, an alternative which his character forbids us from suspecting that he will embrace. He has entered upon a path the difficulties and dangers of which will multiply as he advances, and he will possibly be compelled before long to rue the day when he listened to the insidious and mischievous advice of his present counsellors.

Public opinion throughout Europe all but unanimously condemns the step which the Marshal has taken. He has declared that the foreign policy of France will undergo no change, and has prevailed upon the Duc Decazes to retain the portfolio of Foreign Affairs. But the suspicion of Germany, of Italy, of Belgium, and of some other States, has been excited, and no little uneasiness is beginning to manifest itself. There is a contest of principles going on, partly political, partly ecclesiastical, on the Continent, which can hardly fail of being exasperated by the sudden change of conditions in France, which gives birth to new hopes, new apprehensions, increased bitterness of feeling, and, possibly, new lines of action. There are some who see in it a heavy weight thrown into the scale adverse to their own policy. There are others who are likely enough to be roused into fanaticism by what has occurred. Unfortunately, sudden movements of this kind cannot be localised at will, and, in politics as well as in a more material sense, the fire kindled by accident or by design in one house may, fanned by an unfavourable breeze, extend itself and run its course through a whole city.

The appointment of the Earl of Powis to be Lord Lieutenant of Montgomeryshire, in the room of the late Lord Sudely, is gazetted.

General Grant, during his stay in London, will be the guest of the Minister of the United States. The Minister and Mrs. Pierrepont will have a reception at their residence in Cavendish-square in honour of the General and Mrs. Grant on June 5.

The Duke of Devonshire, owner of Furness Abbey, has buttressed several of the walls of the ruins which were giving evidence of decay or which were likely to fall, and he has taken other precautions to preserve as much as possible these relics of bygone days.

The threatened lock-out in the Clyde shipbuilding yards was partially carried into effect last Saturday, when 10,000 men were thrown out of employment. It is expected that the number will be increased this week to 30,000, and that the loss of earnings in consequence will amount to £50,000 a week.

The principal merchants and commercial men of Bristol have privately subscribed a sum sufficient to secure to Mr. Conrad Finzel, who was until lately one of the largest sugar refiners in the country, an income of £500 a year for life. Mr. Finzel, it is stated, has spent a large fortune in trying to compete with the French bounty system, and was lately compelled to suspend payment.

At Liverpool on the 10th inst. William Robert Williams, a shipping clerk, aged thirty-two, permitted two local doctors to take from him six ounces of blood for transfusion to the body of another man who was in a critical condition. Mr. Williams became ill soon after the completion of the operation, and died on Thursday week; the person who received the blood also died. An inquest on the body of Mr. Williams has resulted in a verdict of "Died by misadventure."

The 81-ton gun underwent a further trial on Tuesday at the Ordnance Select Committee range in the Government marshes adjoining the Royal Arsenal, Woolwich. The charges of powder were the heaviest ever fired at Woolwich, being 425 lb. at each round. The results of the trial have shown that the heavy charge, when rammed up close, has produced velocities no greater than charges of 360 lb. or 370 lb. of powder, but when the density of the cartridge has been diminished by air spacing the more profitable consumption of the powder has been obtained, and a rate of speed attained which affords satisfactory evidence of the great gun's power.

In celebration of the erection of a new Liberal club at Brighouse, a meeting was held on Tuesday in that town, which was attended by, among others, Lord F. C. Cavendish, M.P. Another Liberal association was inaugurated the same day at Hereford, at which Sir H. James was the principal speaker. At the annual meeting of the Cricklade Liberal Association, on Wednesday, addresses were delivered by several speakers, among them being Lord Edmond Fitzmaurice, M.P., and Mr. N. S. Maskelyne, the Liberal candidate for the representation of the borough.—The progress of Conservatism in Cheshire has been marked by the opening of a new Conservative club, on Wednesday, at Congleton. At a luncheon given on the occasion several local gentlemen and members of Parliament addressed the guests.

THE COURT.

The Queen entertained at dinner at Windsor Castle before her departure for Scotland Prince Christian, the Marquis and Marchioness of Ormonde, the Earl and Countess of Elgin and Kincardine, and Sir Rainald and Lady Knightley, the Right Hon. the Chancellor of the Exchequer, Lady Mary Butler, Lieutenant-General Sir T. M. Biddulph, and Captain Haig. Herr R. Wagner was received by her Majesty.

The Queen, accompanied by Princess Beatrice, Prince Leopold, and Princes Albert Victor and George of Wales, left the castle at a quarter before eight p.m. yesterday week for Balmoral. The Duchess of Edinburgh accompanied her Majesty to the Great Western station at Windsor, and there took leave of her. The Queen travelled in the customary manner by the usual route. The Royal party breakfasted at Perth at half-past nine on Saturday morning. Lord Kinnaird, the Provost, and magistrates, were at the railway station; at Bridge of Dun Lord Carnegie was on the platform; at Aberdeen a Foreign Office despatch and telegrams were handed to her Majesty; at Ballater a guard of honour of a detachment of the 79th Queen's Own Cameronian Highlanders were drawn up. The Royal travellers drove from Ballater to Balmoral, where they arrived shortly after three o'clock. Snow was lying on the hills, and the weather very cold. After luncheon the Queen, with Princess Beatrice, drove out and visited the cottagers in the vicinity of the castle.

Her Majesty, Princess Beatrice, Prince Leopold, and Princes Albert Victor and George of Wales, attended Divine service, performed at the castle on Sunday by the Rev. A. Campbell, of Crathie.

The Queen, with the members of the Royal family, has taken daily out-of-door exercise.

The Countess of Errol has arrived at the castle as Lady in Waiting, and the Hon. Mary Pitt and Colonel the Hon. H. Byng have arrived as Maid of Honour and Equerry in Waiting to her Majesty.

THE PRINCE AND PRINCESS OF WALES.

The Prince of Wales, accompanied by Princes Albert Victor and George of Wales, visited the Royal Aquarium, Westminster, on Thursday week. Prince Christian visited the Prince at Marlborough House. The Prince dined with Lord and Lady Suffolk, at their residence in Upper Grosvenor-street, and afterwards accompanied them to Her Majesty's Theatre. Princes Albert Victor and George went to Windsor Castle the next day and accompanied the Queen to Scotland. The Prince dined with the Marquis and Marchioness of Hamilton at their residence in Belgrave-square. The Duchess of Edinburgh, Princess Louise of Lorne, and the Marquis of Lorne visited the Prince on Saturday last and remained to luncheon. The Duchess of Edinburgh dined with his Royal Highness, and afterwards accompanied him to the Royal Italian Opera. The Prince, with Princesses Louise, Victoria, and Maud of Wales, visited the Duchess of Edinburgh at Buckingham Palace on Sunday and remained to luncheon. The Duchess of Edinburgh and the Duke of Cambridge lunched with his Royal Highness at Marlborough House on Monday. The Prince, after lunching with the Duchess of Edinburgh on Tuesday at Buckingham Palace, went to Portsmouth on a visit to Sir Hastings Doyle; he was received at the railway station by his host, who accompanied him to Government House, where a distinguished party met his Royal Highness at dinner. On Wednesday the Prince, with Sir Hastings Doyle and other officers, visited the dockyard, whence his Royal Highness and the various officials embarked in the Admiral's and other state barges, under a Royal salute. The Prince went on board the double-turret ship Thunderer, Captain J. C. Wilson; and the armour-plated ship Minotaur, flagship of Admiral Seymour, and witnessed several important torpedo and other experiments, under the superintendence of Captain Arthur, of her Majesty's torpedo-ship Vernon. His Royal Highness lunched with Admiral Seymour and the officers on board the Minotaur; and afterwards visited the Dreadnought, Inflexible, and other ships, and dined with Captain Wilson and the officers of the Thunderer, returning to Government House at night. The Prince returned to town on Thursday.

His Royal Highness has signified his intention of presiding at the inauguration of the Marine Society's new training-ship Warspite and presenting the prizes to the boys on Thursday, June 21. He will be accompanied by Princes Albert Victor and George of Wales, who have recently passed for naval cadets.

The Princesses of Wales will leave Athens on Monday next on her return to England.

The Prince has appointed Andrew Peppys Cockerell, Esq., to be Groom of the Bedchamber to his Royal Highness, vice the Hon. Charles Lindley Wood, resigned.

The Duke of Edinburgh arrived at the Piræus on Wednesday on board her Majesty's ship Sultan. The Duchess of Edinburgh, accompanied by Prince Alfred and Princesses Marie and Victoria Melita of Edinburgh, left Buckingham Palace on Thursday for the Duke of Edinburgh's palace at Coburg.

The Duke of Connaught dined with the Lord Lieutenant of Ireland and the Duchess of Marlborough on Saturday last at the Viceregal Lodge, Dublin; and on Wednesday he accompanied his Excellency on a cruise from Kingstown in his Grace's steam-yacht Francesca.

The Duke of Teck presided on Wednesday at the twenty-sixth annual general court of the Royal Cambridge Asylum for Soldiers' Widows, held in the theatre of the United Service Institution. The Duchess of Teck was present. Last Saturday evening the prizes gained during the past year by the 1st Surrey Artillery Volunteers were distributed at the Crystal Palace by the Duke, the honorary colonel of the corps.

His Excellency the Chinese Minister attended a ball, given at Willis's Rooms on Wednesday, in aid of the Central London Throat and Ear Hospital, Gray's-inn-road.

His Excellency Sayad Yukub Khan Turah, the Ambassador, with the members of a special mission from Kaskgar, have arrived in town.

His Excellency Zuhdy Effendi, counsellor to the Minister of Finance of Turkey, has left the Alexandra Hotel.

The Duchess of Marlborough, accompanied by Lord and Lady Churchill and Lady Rosamond Spencer, visited the Claremont Institution for the Deaf and Dumb, Dublin, on Wednesday.

The Duke and Duchess of Roxburghe have arrived at Floors Castle.

The Duke of Norfolk and the Ladies Howard have arrived at Arundel Castle from Rome.

The Duke and Duchess of Leeds have arrived in Grosvenor-crecent.

The Duke and Duchess of Cleveland have returned to Cleveland House, St. James's-square, from Battle Abbey.

The Duchess of Sutherland and Lady Alexandra Leveson-Gower have left Stafford House, St. James's, for Trentham.

THE WHITSUNTIDE BANK HOLIDAY.

The comparatively deserted state of the leading thoroughfares of the City on Whit Monday, and the vast numbers of pleasure-seekers that crowded the favourite places of recreation in town and in the suburbs, bore testimony to the general observance of the latest Bank Holiday. As Sir John Lubbock would doubtless be the first to allow, figures speak most eloquently of the public appreciation of the day of rest now sanctioned by the Hon. Baronet's Bank Holiday Act. It might not have been easy to form an exact estimate of the thousands who sought free and easy relaxation on the breezy heights of Hampstead, where an army of young folk skipped, danced, and played kiss-in-the-ring with unconventional freedom and enjoyment, in spite of the chill east wind which swept across the heath in the afternoon; nor could even the acutest arithmetician on Sir John Lubbock's staff have calculated to a nicety how many people sped from town to Roeherville, Greenwich, and Blackheath by rail and boat, or drove to Epping Forest, Kew, and through Bushey Park to Hampton Court by van and every conceivable kind of vehicle, or hied for an invigorating mouthful of sea air to the east and south coast watering-places rendered accessible through the enterprise of the railway companies. But the Whit Monday statistics tell us that 59,934 persons visited the Crystal Palace. There the entertainments comprised the charming little children's pantomime which ran from Christmas to Easter at the Adelphi; the martial music of military bands; a concert in which Mesdames Lemmens-Sherrington and Patey, Messrs. E. Lloyd and Patey sang; and a balloon ascent from the palace grounds, which are now delightfully bright with the freshness of spring. About the same number appear to have visited the Alexandra Palace, where the indoor and outdoor amusements were of a varied nature, Mr. Howard Paul's sparkling entertainment being especially relished. No less than 42,484 visitors thronged the Zoological Gardens, and there the lions and tigers in the open-air cages formed the chief novelty. There were 8000 visitors to the state apartments at Windsor Castle. "In their thousands," likewise, the people assembled at the Westminster Aquarium, and the sensational performance of Zazel being shot from a cannon was witnessed in the afternoon and in the evening by a crowd some 15,000 strong. Through the interesting and instructive galleries of the British Museum about 12,000 visitors passed; the National Gallery was also very full all day; 10,000 persons strolled through the Horticultural Gardens; the turnstiles of the South Kensington Museum recorded the grand total of 23,892, and Bethnal-green Museum had its share of patronage; whilst the 7080 lovers of art who thronged the Royal Academy rendered the inspection of the pictures a matter of difficulty. Brighton having become almost a suburb of London, thanks to the London, Brighton, and South Coast Railway, it may also be recorded here that over 13,000 excursionists visited the admirable Aquarium of London-Super-Mare. Whilst hosts of Londoners hurried to the country, country visitors came to town in considerable numbers by special excursion-trains, and flocked to see the standard sights of the Tower, St. Paul's Cathedral, and Madame Tussaud's, where effigies of the Czar, the Sultan, and General Ignatieff are among the most attractive novelties. Life and colour were given to many London streets by the processions of Roman Catholic Temperance Societies to the Thames Embankment, whence, with brilliant banners borne aloft, bands playing lively airs, and their leaders gaily bedizened with green scarves, the various branches of the League of the Cross marched to the site of the new Roman Catholic Cathedral near Vauxhall-road, there to listen to an earnest address on temperance by Cardinal Manning. Another outing which deserves mention was the visit of 600 members of the London Working Men's Clubs to Pembroke Lodge, Richmond, at the invitation of Earl Russell, who gave them a hearty welcome, and handed to Mr. Hodgson Pratt an address to read to his visitors.

Many members of the metropolitan volunteer rifle and artillery corps spent their Whit-Monday holiday in a patriotic fashion. The hardy campaigners of the London Rifle Brigade, camped out at Mitcham, joined their comrades in a field-day at Banstead; and the Artists' Corps (that indulged in a sham-fight under the command of their popular chief, Lieutenant-Colonel Leighton, last Saturday) spent their last day but one under canvas at Whitmoor-common, near Guildford, on Monday. Panshanger Park, the picturesque Hertfordshire seat of Earl Cowper, was the scene of an instructive review and a series of brigade manoeuvres, in which the St. George's and the Post Office Volunteers took part with the 1st Herts Administrative Battalion. The Duke of Westminster hospitably entertained the Queen's Westminsters at Cliveden, and tested their efficiency. The 40th Middlesex marched to Wimbledon-common, and had a field-day. The 1st London and 2nd and 3rd Middlesex Artillery had big-gun practice at Sheerness, under the command of Colonel Sir William Palliser and Lord Truro; and the "ping" of the rifle bullet was heard at most of the suburban ranges, where volunteers seized the opportunity of going through their class-firing. Of the provincial volunteer gatherings, that of the Royal Naval Artillery Volunteers at Southport was one of the most noteworthy. Satisfaction has naturally been expressed at the steadily increasing popularity of this useful branch of the volunteer service; and the skill which civilians can acquire in the smart loading and firing of cannon was exemplified in a marked degree by the admirable gun-practice on board her Majesty's gun-boat Cromer, at Southport, on Whit Monday. Equally commendable was the rifle and cutlass drill gone through by the Liverpool men on Southport Pier in the presence of Mr. Whalley, M.P., and Mr. William Ingram, M.P., both of whom spoke in warm terms of the efficiency of the volunteer artillerymen. We shall have occasion to refer to this meeting in our next Number, which will contain illustrations of the Southport Naval Volunteers from sketches by one of our Artists.

Every town of mark throughout the country kept holiday on Whit Monday. In Manchester the customary procession of some 17,000 Sunday-school children through the streets gratified a great number of spectators, and the Pomona and Belle Vue pleasure-gardens afforded lively recreation to many. Whilst this remarkable procession was favoured with dry weather in Manchester, the procession of 60,000 children and 10,000 teachers which usually takes place in Sheffield had to be postponed owing to the wet. We regret to add that at Hull several children received severe injuries from the explosion of a balloon.

The electors of the county of Limerick, and also of the borough, have subscribed £1500 to be presented to Mr. Butt, M.P., in recognition of his services to the Home-Rule cause.

About 7000 of the farm labourers of Somerset and Dorset met at "The Frying-Pan," a natural amphitheatre on the summit of Ham-hill, between Martock and Yeovil, in Somersetshire, to discuss the extension of the county franchise and other matters. Mr. George Mitchell presided. Speeches were delivered by Mr. Halliday, Mr. Joseph Arch, and others.

THE WAR.

The campaign in Asia continues to be prosecuted with more activity than the campaign on the Danube. Amidst a variety of accounts from different quarters, the one fact of importance is the capture of Ardahan by the Russians. Ardahan cannot be considered as a fortress, for the fortifications were destroyed by the Russians in 1828. At that time, although really a strong place, it capitulated without firing a gun. This was in consequence of the effect upon the garrison of the fate of Akhaltsikh. That place had offered a desperate resistance to the Russians, and with very inferior means. The town was completely commanded from the surrounding hills, but the defenders repulsed attack after attack of the Russians, and, finally, after losing 4000 men and killing 6000 of the assailants, they were allowed to march out with the honours of war and to retire to Erzeroum. The fate of Akhaltsikh dismayed the garrison of Ardahan, and, although that fortress was far stronger than Akhaltsikh, they surrendered on the first summons. The fortifications were then dismantled, and have never been repaired. An old wall and few temporary

redoubts were the sole defences of the place. The Russians upon this occasion appear to have made breaches in the wall without difficulty, and to have attacked with gallantry. The Turks defended the breaches for awhile, and no doubt the losses were heavy on both sides. The Russian official despatch is very boastful. The sixty guns spoken of by General Melikoff were probably old wall pieces; for had they been modern artillery the Russians could certainly not have taken the place by storm with a loss of some 235 killed and wounded. The position of Ardahan is not strong, as the mountainous country commences thirty miles to the west. Its capture is important, inasmuch as the road is now open to General Melikoff to come down and take Kars in the rear, and thus, while effecting a junction with the force now besieging that place, to cut it off from its communication with Erzeroum. At present Kars appears to be quite capable of holding its own. The Turks claim that in a sortie in force they have inflicted considerable loss on the enemy. Further south, the Russians at Kaghisman are moving up the Zarabkhan valley. The Kurds, of the Djellari, Haiderham, and Zulon tribes are joining the invaders. The Djellari country is that around Kaghisman. Still further south, the

Paasha of Van has, as he says, driven back a Russian force to the frontier, probably a mere sotnia or two of irregular cavalry.

There has been an engagement near Soukhoum Kaleh. The Turkish accounts state that 5000 Russians, in advancing to retake the town, were met by the Turkish troops and the Circassians, and defeated with loss. The Turkish troops had no doubt come from Kutais.

The accounts from Constantinople lead us to doubt whether the experiment of raising the Caucasus is proceeding as satisfactorily as had been anticipated. The 10,000 men who were reported to have started with sealed orders turn out to have been intended for Soukhoum Kaleh, and consist of 8000 regular troops and 1500 Circassians. They take with them 50,000 rifles and several field batteries. The native population, however, are stated to hang back from joining them, being deterred by the exhibition of parties of their countrymen marched in chains by the Russians through their towns.

The activity displayed by the Turkish fleet in the Black Sea, the bombardment of the places on the east coast, and above all, the taking of Soukhoum Kaleh, seem to have pro-

THE WAR: THE GRAND DUKE MICHAEL, COMMANDER OF THE RUSSIAN ARMY IN ASIA MINOR.

duced a panic, not only in Odessa, but all along the Russian south coast. The fortifications along the shore and the closing of all approach to the port by means of torpedoes, had created a feeling of security, not only among the population, but, it seems, in the Government also. Thus alone can it be explained that of the two corps-d'armée, the 9th and 10th, which were originally destined for the defence of the south coast and concentrated there, the former was moved up in the direction of Roumania, with the view of making it share in the active operations on the Danube. The feeling of security, however, which was doubtless increased by the very indifferent opinion entertained of the spirit of enterprise among the Turks, has now been considerably disturbed. According to a letter of the 16th inst. from Odessa, since the fall of Soukhoum Kaleh, a panic reigns, not only in that place, but all along the Black Sea. All confidence in shore batteries and in torpedoes has been lost. The Governor of Odessa, Count Lewaschew, has endeavoured to calm the public mind by issuing proclamations. Adjutant-General Semeka, the military commander of the south coast, has, on his part, taken measures to defend Odessa against a coup de main by concentrating there a force of three brigades

of infantry, eight sotnias of Cossacks, six squadrons of light cavalry, and two companies of field gendarmes. Besides this, a portion of the 13th Corps d'Armée, which follows the Army of Operation as a first Reserve, is to be employed in the defence of the coast-line from Otchakoff to Ackerman. At present, however, Odessa seems less threatened than Otchakoff. Great care has been bestowed of late on this fortress, which, with the works at Kinburn, protects the entrance to the Bay and the mouths of the Dnieper, and, consequently, Nikolaieff, the chief or rather the only shipbuilding place since the destruction of the docks at Sebastopol. The whole enceinte of the place has been rebuilt, and detached outworks have been erected. The place is armed with 220 guns, among them being sixty 24-pounders and forty-two mortars. The garrison consists of 6800 men (Infantry) and numerous artillery. The approach to the waters of Otchakoff is also barred by torpedoes. For some days past Turkish vessels have been cruising there, seemingly also with troops on board. Great stores of provisions and ammunition are accumulated in Nikolaieff, and, in the event of the Turks rendering the Otchakoff torpedoes harmless, not only these stores and the shipbuilding yard there, but also Kherson and

the other great towns of the Dnieper basin, would be open to them. The panic in Odessa must be great indeed if the precautions which have been taken to protect Otchakoff, and, moreover, under the direction of General Todleben, are no longer very much relied upon, and even an advance on Nikolaieff and a descent on the Dnieper coast are not deemed impossible.

According to the same Odessa letter, the news from the south coast of the Crimea is not more reassuring. A Turkish squadron, consisting of two monitors, three ironclad frigates, several smaller vessels, and a whole flotilla of barques, supposed to have volunteers on board, are cruising about in the waters of Sebastopol and Eupatoria. It is reported that this fleet will not be satisfied with bombarding the places on the coast, but also means to excite an insurrectionary movement in the Crimea. The Tartars have been quiet hitherto, but the spirit beginning to show itself in that population is not one calculated to inspire much confidence. The Russian element has wholly left the districts inhabited by the Tartars, and the south coast is now almost entirely occupied by Mohammedans, upon whom events in the Caucasus might have a very bad effect.

THE WAR: BLOWING UP OF THE LUTFI DJELL, TURKISH GUN-BOAT, AS SEEN FROM THE RUSSIAN BATTERY AT BRAILA.
FROM A SKETCH BY ONE OF OUR SPECIAL ARTISTS.

A Russian official telegram indirectly admits the taking of Soukhoum Kaleh by the Turks, saying that the town has been burnt down by a new bombardment, and that it was consequently abandoned by the Russian troops. Another account states that the garrison of Soukhoum Kaleh, after the destruction of the place and fort, retired to the forts and block-houses of Maramba and Sebeldinskoe, on the heights to the north-east, and have been reinforced by three battalions of riflemen from the Kuban and regular field and mountain batteries. According to the same account, General Tchernaïeff was expected to take the command of the Daghestan Brigade in place of General Tchelokajeff, who was wounded in the shoulder by a lance-thrust in one of the reconnaissances before Kars.

Soukhoum Kaleh, with its bay, is a place of great beauty, inclosed by an amphitheatre of hills, with a gorge and snow-clad mountains behind. Being so near the frontier, as a military post it was important, and the barracks were large; a Government steamer was always in the bay. It is the station where the large Russian steamers stop, the service between Poti, which has a bad shallow harbour, and Batoum, being performed by a smaller craft drawing less water. There being no tide in the Euxine, boats can approach the shore easily and the place was invaded with facility. The town of Soukhoum is very straggling; its buildings mostly of wood with verandahs. There are a few villas of stone in the rear. Vegetation is most luxurious, and the botanic garden a sort of Eden, with its orange, lemon, and box trees flourishing in the open air. During the summer the district is not healthy, though it has of late years been much improved by clearing the woods. In the winter it is mild and salubrious.

Soukhoum Kaleh was founded in 1578 by the Turks, at a time when the Sultan, as Suzerain of Gouria, Mingrelia, Abkhasia, and Imeritia, arrogated the right to fortify and occupy two points on the coast—one in Abkhasia, which was named Soukhoum Kaleh; the other called Poti, at the frontier of Gouria and Mingrelia, and at the mouth of the river Rion. The insignificant population of the town of Soukhoum Kaleh is chiefly Armenian and Greek; the former are traders and shopkeepers; the latter, boatmen and fishermen; most of the officials are Russians; but the natives proper—the Abkhassians—are seen from time to time only, when they bring cattle, hides, and timber, which they barter for cotton stuffs, tobacco, and gunpowder. The Abkhassians, a branch of the Tcherkess (Circassians), number 60,000 or 70,000. They were at one time noted pirates in the Euxine; and are now, after the Swanny, certainly the wildest and most unmanageable mountaineers in the Caucasus, being lawless and greatly addicted to thieving and highway robbery. In 1771 they rebelled, and for a time threw off the Turkish yoke, but they most readily fraternised with the troops under Omar Pasha in 1855, and had the temerity, so lately as in 1866, to invest Soukhoum Kaleh during three days. The garrison, a very small one in time of peace, was made up chiefly of soldiers, who, becoming physically unfit for general service, required a mild climate. The foregoing particulars are supplied by Commander Buchan Telfer, R.N., and by Mr. John Leighton, recent visitors to the eastern shores of the Black Sea.

We give a view of Soukhoum Kaleh, from a sketch by Mr. W. Simpson. Our readers will remember that it was the landing-place, in 1855, of Omar Pasha's army designed for the relief of Kars, then held by the Turks, under the command of General Sir W. Fenwick Williams, with Colonel Lake and Major Teesdale, against the besieging Russian force of General Mouravieff. We also give a Map of the Black Sea coasts.

The only news of importance from the Danube is that the Russians have taken the place of the Roumanian troops at Oltenitza. This was done on the night of the 21st, without the Turks disturbing the operation. After the Russians had occupied all the positions the Roumanian division, under General Mann, marched out in the morning and went westward to join the other Roumanian troops, now concentrated in Little Wallachia.

The independence of Roumania was declared on Monday in the Chamber of Deputies at Bucharest. There were no votes against the resolution, but three members abstained from voting. The resolution recited the aggressions of Turkey, accepted the state of war, and ended by declaring Roumania free and independent. M. Cogalniceanu, Minister of Foreign Affairs, then solemnly announced the new situation of Roumania as being established, while he fully recognised the difficulties to be overcome before the independence of the country would be confirmed by the guaranteeing Powers. Tuesday was the eleventh anniversary of the accession of Prince Charles to the throne of Roumania. Services were held in the cathedral in the morning, and a parade in front of the palace afterwards, when a deputation congratulated the Prince upon the event, and also upon the independence of Roumania, asserted now by the Senate and Chamber of Deputies.

We give a Portrait of Colonel George Slaniceanu, at present Chief of the General Staff of the Roumanian Army. He became Minister of War at the fall of the Roumanian Conservative Ministry in April, 1876. The then Minister of War, General E. Floresco, had provided the army with a sufficient quantity of sandals and fur caps to last for twenty years, but had left them without ammunition: fifty rounds per man was the utmost amount in store. But Colonel Slaniceanu, after taking charge of the War Department, in six months reorganised the army, which had till then been considered rather as a police force to secure the tranquillity of the country and the safety of the Conservative Ministry. He created eight new regiments of infantry, organised the militia 35,000 strong, formed two new regiments of artillery, and provided ammunition sufficient for a campaign of six months' duration. All this was effected by him while reducing the Estimates of the Ministry of War from twenty million francs to 13,500,000f. The Roumanian army, divided into two army corps, is composed of 53,000 men altogether, with 180 guns. The reserve force numbers 35,000 militiamen and 10,000 irregular cavalry (Dorobautz), with thirty guns. The whole army is under the immediate command of Prince Charles of Hohenzollern, the ruler of the State, with Colonel George Slaniceanu as Chief of the General Staff. The First Army Corps is commanded by Major-General Lupu, the Second Army Corps by General Radovitz. The former will operate in Little Wallachia; the latter, between Giurgevo and Oltenitza, will cover Bucharest.

From all sides the news comes that the Emperor Alexander intends to go to Roumania to take up his residence there while his army is crossing the Danube. Plojesti, where the Russian head-quarters are at present, is mentioned as the place of his sojourn, and a neighbouring country house is said to have been rented for his use. But it is supposed that, as the head-quarters of the army advance, he will change, for, according to the latest accounts, the Grand Duke Nicholas was about to transfer his head-quarters from Plojesti to Kotroceni, the country seat of Prince Charles, close to Bucharest, where, on the advance being proceeded with, the Czar, in turn, would take up his residence. The transfer of the Russian head-quarters from Plojesti to Bucharest would indicate that the march of the first line of the Russian army to the Danube was nearly completed, for Plojesti is the point of junction where

the railway lines branch off towards Bucharest and Giurgevo in the south, and to Little Wallachia in the west. It was, therefore, the central position for directing the movements of the columns to the different points on the Danube.

Having established themselves at Braila, as well as on the island between Braila and Matchin, the Russians will soon be able to prevent the Turkish gun-boats in the upper course of the stream from approaching the shores of the Dobrukscha. This will not a little facilitate the crossing of the river in that locality. Further up the Danube, the torpedoes intended to impede the movements of the gun-boats as yet seem to have had no effect.

The Turks confine their preparations to the strengthening of Varna, Shumla, Silistria, Rustchuk, Widdin, Nicopolis, Hirsova, and Turtukai. All these are being made more or less formidable places; but, as what is added to their strength detracts from the numbers of the field force proper, the advantage of having so many fortresses is coupled with a corresponding disadvantage of a serious nature. With all the reinforcements recently brought up, the Turks are believed to have no more than 200,000 combatants north of the Balkan, a number hardly sufficient to garrison the fortresses and to resist the attack of the 250,000 Russians on the march.

Our Illustrations of the war on the Danube, from Sketches by our Special Artists with the Russian army, show the most remarkable incidents that have yet occurred in this incipient campaign. The bombardment of Reni by one of the Turkish gun-boats, on the 4th inst., with its startling effect on the Roumanian inhabitants and their domestic animals, is represented in our front page Engraving. We related last week the blowing-up of a Turkish "monitor" or turret gun-boat, called the Lutfi Djellil, which was struck by a shell from a Russian battery, and sank immediately, leaving only its masts above water. This took place on the 12th inst. The number of men on board is said to have been two hundred, including the officers, and all perished except one man, who was picked up by the Russian steam-launches, and is now in their military hospital, terribly scalded either by the steam or hot water of the engine boiler, or by the explosion of the powder magazine. The Turks, indeed, declare that their gun-boat was not blown up by a Russian shell in her magazine, but was accidentally destroyed by a steam-boiler explosion. On the other hand, the Russian Commander-in-Chief, the Grand Duke Nicholas, in a review held last Tuesday at Plojesti, decorated Sub-Lieutenant Romanovsky with the cross of St. George for aiming the lucky shot at the Lutfi Djellil. We give an illustration of the appearance of that vessel, which had two revolving turrets on her deck, with two large guns in each turret. Another sketch by our Special Artist represents the scene of the explosion, as viewed from the Russian battery. He contributes also the sketch of a detachment of Cossacks, near Braila, on the 9th inst., crossing the Danube, aided by the fire of Russian batteries, to destroy some Turkish outposts at Ghuzt, at the entrance to the Matschin canal; and a view of the Russian post at the mouth of the Pruth, with their small gun-boats or armed steam-launches, and the river barges or lighters employed in their military service. From another of our Special Artists we have an illustration of the Russian Generals holding a council of war at the Barboschi railway station, near Galatz; and that of a peasant family of the Christian population, belonging to the Turkish province, on the opposite shore, crossing the Danube on a raft, with their cattle and household furniture and stores, to seek refuge in the Roumanian territory. The last-mentioned scene forms the subject of our Extra Supplement Engraving. We also give the Portrait of the Grand Duke Michael, one of the two brothers of the Emperor of Russia commanding in chief respectively in Europe and Asia.

FOREIGN AND COLONIAL NEWS.

FRANCE.

Marshal MacMahon has succeeded in diverting to French politics some of the attention which Europe was giving to the war. We take up the thread of narrative from where it broke off last week, first stating that the new Cabinet has been composed as follows:—Duc de Broglie, President of the Council and Minister of Justice; M. de Fourtou, Minister of the Interior; M. Caillaux, Minister of Finance; M. Paris, Minister of Public Works; M. de Meaux, Minister of Agriculture; M. Brunet, Minister of Public Instruction. Vice-Admiral Gicquel des Touches, Minister of Marine. He is not a member of either Chamber, but he ranks as a Legitimist.

The resignation of the Duc Decazes and General Berthaut, Ministers of Foreign Affairs and War in the last Cabinet, has not been accepted. Marshal MacMahon has sent the following letter to the Duc Decazes:—"Circumstances do not allow me to intrust power to the late Cabinet, of which you formed part. I wish it to be well understood, however, that I intend to maintain with foreign Powers the relations of friendship and confidence which you were able to establish with them. Nothing should be done to impair those relations, and nothing must be changed in the foreign policy which you so ably and worthily represent. I appeal, then, to your patriotism, and beg you to remain in the post to which I called you three years ago, so long as you may not relinquish it without prejudice to the public good."

There was a full sitting of the Chamber of Deputies on Thursday week, at which M. Gambetta spoke at some length upon the crisis provoked by the Marshal's dismissal of M. Simon, and proposed the following order of the day, which was adopted by the Chamber by 355 against 154 votes:—"The Chamber, considering that it is incumbent upon it in the present crisis, in order to accomplish the mandate which it received from the country, to recall the fact that the preponderance of the Parliamentary power exercised through Ministerial responsibility is the first condition of the government of the country by the country—to establish which was the object of the constitutional laws—declares that the confidence of the majority will only be enjoyed by a Cabinet which is free in its action and resolved to govern in accordance with Republican principles, which can alone secure order and prosperity at home and abroad."

At the sitting of the Assembly yesterday week a Message from Marshal MacMahon was read in both Houses. Marshal MacMahon maintains that he has scrupulously conformed to the Constitution. He chose the Cabinets of M. Dufaure and M. Jules Simon for the purpose of placing himself in accord with the majority of the Chamber. Those Cabinets were, however, unable to command a majority in the Chamber capable of causing proper ideas to prevail. He could not proceed farther in this direction without appealing to the Republican fraction which desires a radical modification of all the institutions of the country. With these he cannot in any way associate himself, for the triumph of their ideas would be the ruin of the country. He is, however, convinced that the country thinks as he does, and that it would say so if appealed to. Meanwhile, in order to allow the excitement to calm down, he invites both Houses to suspend their sittings for a month. Should the press by imprudent language compromise the concord which

all desire, it will be suppressed by legal means. Such was the Message read in both Houses. In the Senate M. Jules Simon demanded leave to "explain," with reference to the passage in which he was said not to have acted up to his engagement before the Council. But the Message was followed by the immediate reading of the decree of prorogation, after which the Constitution permits of no further discussion without the assent of the Government; and this assent the Duc de Broglie refused, by a shake of the head, to give. In the Chamber M. Gambetta's mouth was stopped by the same summary process.

A manifesto to the nation was drawn up in the evening at a meeting of the deputies of the Left, calling upon the people to pronounce between a policy of reaction and adventure, which places again in doubt all that has been achieved during the last six years, and the wise and pacific policy sanctioned by themselves. They urge the country to be calm, and predict the ultimate triumph of the Republic. This protest has been signed by 361 deputies, being more than two thirds of the Chamber.

The Senators of the Left have also agreed to a short protest, in which they deprecate a dissolution.

At a meeting of the Right in the Chamber of Deputies, a resolution has been passed declaring that Marshal MacMahon has only executed his Constitutional rights.

The official journal of Sunday published a decree effecting sixty-two changes in the staff of prefects. Of these, twenty-one are moved to other places, ten are placed on the half-pay list, twenty-five are dismissed, three have resigned, two are called to other functions, and one has been placed on the retired list. The Minister of the Interior received the new prefects on Sunday, in order to give them instructions. It is stated that M. de Fourtou has addressed a circular to the prefects explaining the nature and significance of the resolutions of the President of the Republic, as well as the policy which the Cabinet intends to follow. A second, but much smaller, batch of prefectural changes has been gazetted.

Marshal MacMahon has sent the Pope a splendid piece of tapestry on the occasion of his Episcopal Jubilee. The *Franciscan*, the Duc de Broglie's organ, seemingly afraid of political significance being attached to this present, explains that the order was given weeks ago, and that it is customary to send birthday gifts to a Sovereign of advanced age.

Comte Hippolyte de Tocqueville, the eldest brother of Alexis de Tocqueville, the illustrious publicist and *littérateur* died, at an advanced age, on the 18th inst. His death raises the number of vacancies among the life senators to seven.

The grand prizes of the Paris Salon were awarded on Monday. M. Henri Peinte takes the Prix de Salon, for his statue of "Sarpedon;" M. Jean Paul Laurens the Prix de Peinture, for his picture representing the Austrian Staff passing before the dead body of General Marceau; and M. Chapu the Prix de Sculpture, for "La Pensée," intended for the tomb of Madame d'Agout, known by her pseudonym of Daniel Stern, and for a statue of Berryer, destined for the Palace of Justice.

Don Carlos left Paris on Wednesday morning for Germany. The *National* states that he was expelled, at the request of the Spanish Government.

The Prix de Diane (French Oaks), run for at Chantilly on Sunday, resulted in favour of M. Lupin's La Juchère, who beat Count Lagrange's Hallate by a length and a half, Vicomtesse being third. The Grand Paris Steeplechase was won on Monday by Congress, Revenge being second, and Wild Monarch third.

SPAIN.

The Duke de Montpensier and family have left Madrid for Paris.

In the Cortes on Sunday the bill for creating the new imposts, which are expected to realise £2,000,000, and are destined to do away with the amortisation of the debt, was read the first time. The debate on the Estimates has begun.

ITALY.

Prince Humbert and Princess Margaret received at dinner on Wednesday the members of the Geographical Society's Commission for the Exploration of Africa. The Prince made a long and able speech, pointing out the utility to Italy of such explorations.

In the Chamber on Wednesday the Government was questioned as to its relations with France since the change of Ministry in that country. In reply it was stated by the Minister for Foreign Affairs and the President of the Council that those relations remained as cordial and friendly as before, and that no fears need be entertained of Clerical intrigues. The President of the Council at the same time expressed the opinion that the subject was not one which should have been brought before the House.

On Sunday the Pope administered the sacrament, confirmation, and first communion to the daughter of the Duke and Duchess of Parma and the son of Princess Thurn and Taxis. His Holiness afterwards entertained the illustrious party at luncheon in the Library, and accompanied them on a visit to the Vatican Exposition. The Pope also gave audience to several smaller bands of pilgrims, among which was a deputation from the Committees of the Catholic Working Men's Clubs of France, headed by the Marquis de Willermont, who read an address, presented a considerable *obolo*, and brought several handsome oriflammes for the Papal benediction.

In the morning his Holiness received a deputation from the Roman nobility, who came to offer their congratulations on the fiftieth anniversary of his Episcopate.

The opening ceremonies of the Episcopal Jubilee on Sunday at St. Pietro in Vinculo, and on Monday at the Basilica of St. Peter, passed off in the most perfect order.

At the reception given on Tuesday by the Pope to a large number of pilgrims, mostly French, a German journalist presented to his Holiness four volumes containing letters and addresses of devotion to the Holy See signed by 200,000 German Catholics.

The Belgian pilgrims, about 1000 in number, including many distinguished persons, were received by the Pope on Wednesday morning, and were led by the Bishop of Liège, who read an address, to which his Holiness replied, taking "Quid est Papa?" for his theme, and stating that these pilgrimages demonstrated what the Pope was. Separate deputations from different parts of Belgium and her Catholic institutions included in the pilgrimage also presented addresses and gifts, with an *obolo*, amounting to a large sum of money.

On Thursday the United States pilgrims, bringing 250,000f., were received at the Vatican.

June 7 is fixed for the reception of the Irish pilgrims, led by Cardinal Cullen, and, it is expected, ten Bishops.

The total amount of money offered recently to the Pope by the Roman Catholics of England was £14,770.

GERMANY.

Prince Bismarck has paid a flying visit to Berlin, but it is stated that his presence in the capital had no political significance. On Monday he had an interview with the Emperor. He has left for Kissingen. It is reported that his health is better.

HOLLAND.

Intelligence received at the Hague from Atcheen states that the province of Langsar, and therewith the whole eastern

coast of Atcheen, has given in its submission, the Rajah accepting the conditions offered by the Government of the Netherlands. The blockade has consequently been raised.

BELGIUM.

The King was present on Sunday at the unveiling of a statue of Leopold I. at Mons.

DENMARK.

A proclamation of neutrality in the war between Turkey and Russia has been issued by the Government.

AMERICA.

On Tuesday evening the International British celebration of the birthday of her Majesty Queen Victoria began at Petersburg, Virginia. The festival lasted three days, and delegates from other States of the Union and from Canada attended.

Mr. Ewatts, the Secretary of State, acting under instructions from the President, is considering a plan for the representation of the United States at the Paris Exhibition of 1878.

The Delaware peach crop of the present season is estimated to yield not less than six million baskets.

A fatal accident at the launching of a steam-boat is reported. The *Saratoga*, while being launched in Delaware River, at Chester, near Philadelphia, on Tuesday, started prematurely, while forty men were under her blocking her up on ways, and many were dragged into the water. Most escaped with slight injuries, but eight were killed and two mortally injured.

CANADA.

The militia department at Ottawa has been inundated with offers for Imperial service. Up to May 3 these offers represented an aggregate of over 10,000 men, although the movement had not yet extended beyond a few of the best-trained militia corps in the different provinces.

Preparations are being made, by order of the Government, to erect a battery at McCauley's Point for the defence of the harbour of Victoria, British Columbia.

The statement to the effect that the Canadian Premier had expressed a desire that the Queen should assume the title of Empress of Canada appears to have for its only foundation that a private person wrote to an Ottawa newspaper making the suggestion.

AUSTRALIA.

A telegram from Melbourne of the 19th inst. states that the Ministerial crisis continues.

The Tasmanian Legislative Assembly has passed a vote of want of confidence in the Ministry, and has, in consequence, been dissolved by the Governor.

NEW ZEALAND.

We learn by a telegram from Wellington of the 22nd inst. that Sir Julius Vogel, the Agent-General in London, has been instructed by the New Zealand Government to send out, during the next five months, 5000 emigrants, consisting of domestic servants, ploughmen, farm labourers, shepherds, bricklayers, and carpenters.

INDIA.

The *Times'* correspondent at Calcutta, in a long telegram dated the 20th inst., states that Lord Salisbury's despatch on the Fuller case is causing much excitement and alarm throughout India. "I fancy," the correspondent says, "we shall hear a good deal more about this matter; for it is one of so great importance to the people of India—European and native—that it will not readily be allowed to drop." The telegraph line to Quetta has begun, and an office has been opened there. News from Kandahar, which formerly took three weeks or a month, now reaches India in six days. Captain Butler, 9th Regiment, who last year managed to survey 200 miles of the Atrek river in the disguise of a Chinese merchant, has been summoned to Simla to give an account of his adventure. The Viceroy will probably hold a durbar of hill chiefs at Simla in June. Difficulties are said to be impending between the Bengal Government and the Behar indigo planters. With regard to the famine, the *Times'* correspondent says that during the week ending the 10th inst. light showers fell in some of the Madras districts, but not sufficient to improve the general prospects. The number on the works is 670,851. There has been a cyclone and a heavy rain near Madras, and if the rain reaches far enough inland it may do good. Mysore official reports for the week ending the 10th inst. state that there has been a trifling shower, but no improvement in prospects. There is an increase of about 10,000 on the works. The last Bombay report, for the week ending the 11th inst., says the number on the works is 319,208. The condition of cattle is improved by rain in many districts. The general condition of the people is fairly good. The sowing of quick-growing crops has commenced in Dharwar and Belgaum, where the rainfalls are heavy.

The *Times of India* gives an account of a fatal encounter between an English officer and a tiger, near Manselghur, in Shahpura State, eighty miles from Nusseerabad, on March 18. Major Bolden, 68th Light Infantry, was tiger-hunting, and was about firing from an elephant's pad, when the elephant swerved, and threw him into the tiger's jaws. Medical aid arrived after an interval of twenty-four hours, but the Major died on March 22, after the amputation of a leg.

CHINA.

There is still much suffering in Shantung in consequence of the famine. Both the foreign and native communities in Hong-Kong and the Treaty Ports have subscribed liberally for the relief of the sufferers; among the native community alone in Hong-Kong over 20,000 dols. were subscribed. The Government of Hong-Kong had contributed 1000 taels to the same object.

The death of the "Ninth Prince," as the youngest of the four Imperial Princes was commonly called, is announced. His official designation was Prince of Fu. He was brother of the Prince of Ch'un (the "Seventh Prince" and father of the young Emperor), and was about thirty-five years of age.

Sir Brooke Robertson was slowly recovering from his illness.

About twenty-eight Chinese naval cadets had arrived at Hong-Kong on their way to England and France, where they are to be placed in naval colleges.

The *Academy* states that the Director of the Ducal Archives at Zurbet (Anhalt) has discovered the second part of Luther's Old Testament translation in the Reformer's own handwriting. It dates as far back as 1523, and on 216 quarto pages gives a translation of nearly the whole Bible text from Joshua to Esther, while Part I. contains the Pentateuch.

The tidal wave which lately caused so much destruction at Iquique extended to other portions of the western coast of South America, and a telegram from Valparaiso announces the total destruction of seventeen vessels on the Peruvian coast, while forty more have been more or less seriously damaged. Of these last fifteen are known to have been laden with guano, and it is probable that the remaining two were. The total loss of property is estimated at nearly £300,000.

THE CHURCH.

PREFEMENTS AND APPOINTMENTS.

Calley, J. H.; Organising Secretary, S.P.G., for the Archdeacon of Bristol. Griffiths, R. J.; Inspector of Schools in the diocese of Argyll and the Isles. Hudson, R.; Vicar of St. Mary, Wignehall. Rawdon, J. H.; Vicar of Preston. Scott, S. G.; Vicar of St. Saviour's, Battersea.—*Guardian*.

The Bishop of Oxford preached last Saturday at the re-opening of Cropredy church, near Banbury, after restoration at a cost of upwards of £2000.

The Company appointed for the revision of the Authorised Version of the Old Testament concluded their forty-fourth session yesterday week at the Jerusalem Chamber. The revision was continued as far as the end of 1 Chronicles xix.

Dean Stanley addressed a sermon, lasting about five minutes in the delivery, to a large number of children assembled at the afternoon service on Tuesday in Westminster Abbey, taking for his text 1 John iv. 11: "If God so loved us, we should also love one another."

The Bishop of London has removed from London House to Fulham Palace, but his Lordship will be at London House next Monday, the 28th inst., and each succeeding Monday, from eleven till two, to receive his clergy and others who wish to see him on business.

The Hon. Algernon Egerton, M.P., laid the foundation-stone of the new Church of St. Thomas, Dixon-green, Farnworth, last Saturday. Exclusive of the tower and spire, which it is not intended to erect at present, the new building will cost about £8000, of which £5200 has been subscribed. There will be accommodation for 600 worshippers.

On the 17th inst. the Bishop of Durham opened a new church at Great Stainton, near Darlington. The edifice, which has cost £1700, replaces one of great antiquity. At a luncheon which followed, Bishop Baring said that the question of disestablishment and disendowment depended upon the conduct of the clergy within the next two or three years.

The inhabitants of Barnstable, at a public meeting at the Guildhall on Wednesday—the Mayor presiding—presented to the Rev. G. I. Wallis, for seventeen years Vicar of the parish, his portrait (an excellent likeness, painted by Mr. J. Edgar Williams), on the occasion of his leaving them for the rectory of Shobrooke. Earl Fortescue took part in the proceedings.

At the eleventh anniversary meeting of the London Free and Open Church Association on Wednesday—presided over by Earl Nelson—it was reported that a striking advance had been made in the principles which the organisation advocated, particularly in country districts. Resolutions in support of the objects of the association were passed.

The Flower Sermon, annually preached on Whit Tuesday in the parish church of St. Katherine Cree, in the City, was delivered by the Rector, the Rev. Dr. Whittemore, who founded his discourse upon the text, "Although the fig-tree shall not blossom, yet I will rejoice in the Lord."—There has been a flower-service this Whitsuntide at St. Paul's, Goswell-road, also.

Dr. Vaughan will resume his public readings in the Greek Testament (2 Corinthians, x. to xlii.) on Tuesday next, May 29, at eight o'clock in the morning, in the lecture-room of the Middle Temple, and continue them on Tuesdays, Wednesdays, Thursdays, and Fridays, at the same hour. These lectures are open to any students of the Greek Testament, whether members of the Temple or not.

The Archbishop of Canterbury, speaking at the annual meeting of the Canterbury Diocesan Church Building Society on Wednesday, remarked that a peculiarity of the Established Church of England was that it was always apparently in the midst of its enemies and passing through a dangerous crisis. If difficulties now appeared in connection with the Church he was sure they would, like their predecessors, be got over.

The scheme suggested a few months ago to secure subscriptions to the amount of £24,000 for the purpose of erecting four new churches in the town of Barrow-in-Furness is likely to be carried into effect in the course of the present summer. The Duke of Devonshire contributed £12,000 and the Duke of Buccleuch £6000, and the balance has been provided by Sir James Ramsden, Mr. H. W. Schneider, and others associated with the Furness railway or with the trade of the district.

The investiture and installation of Dr. Claughton, now Bishop of Rochester, to the new see of St. Albans will take place in the Abbey on Tuesday, June 12. The Primate of All England will invest his Lordship, and Dr. Grant, Archdeacon, will enthrone him. On the day previous to the ceremony Bishop Claughton will have completed the tenth year of his episcopacy.—The Bishop of Rochester held a confirmation in St. Albans Abbey on the 17th inst., when there were 170 candidates to receive the rite.

The foundation-stone of a new school-chapel, in connection with St. George's Mission, St. George's-in-the-East, has been laid by Miss Agatha Hoare. It is situated in a corner of the district parish of St. Peter, London Docks, of which the Rev. C. F. Lowder is Vicar. It will be under the charge of the Rev. Robert Linklater, and is the result of a mission begun by that gentleman eight years ago, principally with a view of benefiting the very low class of boys and young men abounding in the neighbourhood.

On the 16th inst. the Church of St. John the Baptist, Ebbesbourne Wake, was reopened for Divine service, after restoration. The Archdeacon of Wilts preached the sermon at the morning service, and a good gathering of the neighbouring clergy and friends and contributors assembled on the occasion. The Earl of Pembroke, the principal landowner, has contributed largely, and also given a grant of land for the vicarage, completed last December. Two painted windows in the chancel have been erected by the churchwarden, Mr. John Rebbeck, who has been mainly instrumental in bringing this good work to a conclusion. The east window of stained glass is the gift of the lessee of the tithes, Mr. F. King.

A public meeting to promote the selection of Wakefield as the see for the new diocese of South Yorkshire was held on Wednesday afternoon in Wakefield Corn Exchange. Alderman Gill, the Mayor, presided. Among the speakers were Messrs. Stanhope and Starkey, the members for the South-West Riding, and Mr. Sanderson, the borough member. It was stated that a fund of £100,000 would be required in order to provide a salary of £3500 for the new Bishop, in addition to which the Bishop's palace would cost from £8000 to £10,000. Six gentlemen had promised to contribute £1000 each towards this, and many smaller amounts had been offered. It was unanimously resolved to support a memorial to the Lord President of the Council and to the Home Secretary praying that Wakefield might be selected as the cathedral city for the proposed new diocese.

THE UNIVERSITIES AND PUBLIC SCHOOLS

Mr. Symonds, of Magdalen College, and Mr. Courthope, of New College, are no longer candidates for the Poetry Professorship at Oxford. Of those whose names have been put forward, Principal Shairp, of St. Andrews, and Mr. Swayne,

of Corpus Christi College, are still in the field. The Enconia, or Commemoration of Founders, will take place on Wednesday, June 13. On the previous Monday there will be a morning concert in the Sheldonian Theatre; in the evening there will be the usual procession of the college boats, in the order of this year's racing. On Tuesday the Horticultural Society will hold its summer show in Trinity College gardens, and the band of the Coldstream Guards has been engaged for the occasion. The first public concert will take place on the Saturday. In addition, there will be several college concerts, with the usual balls and Masonic fête. Everything promises a brilliant Commemoration for 1877.

At Cambridge the Chancellor's medal for an English poem has been adjudged to E. W. Howson, scholar of King's, the subject being "The Heroism of the Arctic Expedition." The Porson Prize for translation into Greek verse has been adjudged to A. F. Chance, scholar of Trinity. The Powis medal for a poem in Latin Hexameters to A. H. Cooke, scholar of King's; subject, "Cadmus." Sir W. Browne's medals, that for a Greek ode, to A. H. Cooke; that for a Greek epigram, to H. H. West, scholar of Trinity. The medals for a Latin ode and Latin epigram have not been awarded. Mr. Hugh Godfray, M.A., the senior Esquire Bedell, died on Sunday last. The eight-oar boat-races were brought to a conclusion on Tuesday evening, when the Jesus College boat again headed the river, making the third year the crew of that college have maintained that much-coveted position. The result of the week's contest places the boats as follows:—Jesus, Caius, Lady Margaret, 1; Third Trinity, 1; Trinity Hall, 1; First Trinity, 1; First Trinity, 2; Sidney, Clare, 1; First Trinity, 3; Emmanuel, Caius, 2; Lady Margaret, 2; King's, Corpus.

Mr. Justice Denman distributed the prizes connected with the "Faculty of Medicine," at University College last week. The Dean of Faculty opened the proceedings by reading his annual address. His report of the progress of the medical school and the conduct of the students was everything that could be desired, the number of the latter having increased in ten years from 193 to 340, and the distinctions gained by them had been very numerous as compared with those carried off by other schools. Towards the conclusion of his address the Dean announced, amid much cheering, that the hon. treasurer of the institution, Sir F. H. Goldsmid, had offered £10,000 towards the enlargement and improvement of the hospital, provided £20,000 can be obtained from other contributors. In addition to this, Lady Goldsmid had promised £1000. The president of the day congratulated the institution on the remarkable progress it had made in so short a space of time as eleven years, as well as upon the fact that amongst the prize-winners were to be found natives of the most distant parts of the civilised world. Never, he believed, had the world seen a more cosmopolitan medical school. His Lordship, in conclusion, dwelt for a moment upon the topic of vivisection, and warmly praised the ability of the professors of University College. The prizes were then distributed. Amongst the successful students were several young Japanese, who were loudly cheered as they ascended the platform to receive their medals and certificates. On the motion of Lord Houghton, seconded by Mr. Booth, a warm vote of thanks was accorded to Mr. Justice Denman.

In accordance with the terms of the bequest of the late Dr. H. C. Barlow, the Council of University College, London, have resolved that a course of lectures on Dante's "Divina Commedia" shall be delivered in the College next spring. Professor Volpé will be the first lecturer, and the lectures will be given in Italian.

The winners of the volunteer Inter-Regimental match, in which sixty-eight corps in various parts of the United Kingdom recently competed, have been announced as follows:—First prize, £80, 2nd battalion Queen's Edinburgh; second, £60, 39th Middlesex; third, £50, 1st Notts (Robin Hoods); fourth, £40, London Rifle Brigade; fifth, £30, 1st battalion Queen's Edinburgh; sixth, £25, 1st Norfolk; and, seventh, £20, 1st Devon.

We are informed that the agricultural returns, which have hitherto been made up and collected on June 25, will, in accordance with a recent arrangement between the Board of Trade and the Inland Revenue Office, be this year made up and collected on June 4, with a view to the digest and publication of the results at a date considerably earlier than that at which they have been published in former years. The forms requisite for this purpose have already been distributed.

On Thursday the Earl of Galloway, the High Commissioner to the General Assembly of the Church of Scotland, held a levée in Holyrood Palace, which was largely attended. About twelve o'clock the usual procession from Holyrood to St. Giles's Cathedral, and afterwards to the General Assembly Hall, took place, and was witnessed by large crowds. The High Commissioner was accompanied by the Countess of Galloway and a distinguished party.

It is stated in several papers that the arrangements are almost completed for the purchase by her Majesty from Colonel Farquharson, Invercauld, of the Forest of Ballochfine, which adjoins the estate of Balmoral. The forest is on the estate of Invercauld, and comprises within its bounds the largest area of natural grown Scotch firs in Scotland. It is unequalled for the size, beauty, and symmetry of the trees. Ballochfine has been held by the Queen on lease for a number of years at an annual rent of £15,000 sterling.

The annual court of the Royal Cambridge Asylum for Soldiers' Widows was held on Wednesday. The Duke of Teck, who presided, said this institution was founded in 1851, when twenty-one widows were admitted, and the number increased annually until, in 1871, fifty-one were admitted. He was sorry to say there the number remained. The annual income from dividends was £1500, and the expenditure £2000, so that the secretary and committee had to raise £500 the best way they could.

On June 1 next the Empire of Japan will be admitted into the General Postal Union, and the rates of postage chargeable on correspondence addressed to that country will thenceforth be as follows:—By any route except via Brindisi—letters, 6d. per ½ oz.; post-cards, 3d. each; newspapers, 1d. per 4 oz.; other printed papers, legal and commercial documents, and patterns, 2d. per 2 oz.; via Brindisi—letters, 8d. per ½ oz.; post-cards, 4d. each; newspapers, 2d. per 4 oz.; other printed papers, legal and commercial documents, and patterns, 3d. per 2 oz. Unpaid letters from Japan will be charged on delivery with an additional rate of 3d. per half-ounce. Letters, post-cards, newspapers, legal and commercial documents, and patterns, addressed to any place in Japan, may be registered, the registration being in all cases 4d., which, in addition to the postage, must be prepaid. As no post-cards bearing impressed stamps of the value of 3d. and 4d. respectively have been issued, the ordinary or the foreign post-cards now in use must be employed when it is desired to send a post-card to Japan, adhesive stamps being affixed to the cards to make up the amount of postage required. Correspondence for Japan will be subject in every respect to the conditions of transmission applicable to correspondence addressed to countries of the Postal Union generally.

THE WAR: COSSACKS AT BRAILA CROSSING THE DANUBE, UNDER
FROM A SKETCH BY ONE

OVER OF A RUSSIAN BATTERY, TO DESTROY THE TURKISH POSTS.
OUR SPECIAL ARTISTS.

PARLIAMENT.

The House of Lords, roused into liveliness by the not very cheerful subject of interment of the dead, indulged in quite an animated debate prior to the adjournment for the Whitsuntide recess on Thursday week. Peers spiritual and temporal discussed the Government Burial Bill with as much relish, indeed, as if the funeral rites of a Ministry were under consideration. The seventy-fourth clause, embodying the suggestions of the Government for removing the grievances of Dissenters, was eventually withdrawn, greatly to the regret of the Archbishop of Canterbury, who thought that the bill would be simply a sanitary measure without it. Defending the Government bill pure and simple with the natural fluency and flourish of a son of Erin, the Bishop of Peterborough painted Dissenters in such dark colours that, as a mere matter of fair play, it might not have been undesirable that Mr. Spurgeon could have been present on the Bishops' benches to reply with equal vigour. The preliminary conversation over, the Primate, in Committee, moved a circumlocutory amendment to clause 73, with the object of providing a form of burial service for the use of curates where the regular Church formula could not be lawfully read, and also where the latter could be lawfully read but might not be desired by the relatives of a deceased person. His amendment, at the suggestion of Earl Stanhope, was divided into two clauses, the first of which was agreed to after a brief discussion, and the second of which, though opposed by the Government, was carried by 65 contents against 60 non-contents. A similarly diffusely worded amendment of the Archbishop of York—relieving from liability to penalty any curate declining to read the Church service in cases where "scandal and offence would be occasioned to the parishioners by the use of the said service"—was approved by the Primate but withdrawn after adverse comment on the part of the Duke of Richmond and Gordon, Earl Granville, and other noble Lords. Then came the amendment submitted by the Earl of Harrowby in lieu of Earl Granville's, and the gist of which, shorn of its chevaux-de-frise provisions, so to speak, ran thus:—

When the relative having charge of the funeral of a person dying in any parish shall signify in writing to the incumbent that it is his desire that the burial shall take place without the service of the Church of England, the said relative shall thereupon be at liberty to inter the deceased with such Christian and orderly religious services at the grave as he may think fit, or without any religious service.

Opposed by the Bishop of Lincoln and the Duke of Richmond and Gordon (who defended the seventy-fourth clause), and supported by Lord Stanley of Alderley and Lord Selborne, the amendment went to a division, when there were 102 contents and 102 non-contents. The Chairman gave his casting vote against the amendment, which was, accordingly, lost. When the excitement occasioned by the "tie" had subsided, the seventy-fourth clause was withdrawn, the remaining clauses were agreed to; and, when the Bankruptcy Law Amendment Bill had been formally read the third time and passed, the House adjourned till June 4.

The passage of arms on Thursday week, between the First Lord of the Admiralty (still suffering from rheumatic gout, we regret to hear) and Mr. Mitchell Henry, which ended so amicably, owing to the tact of Sir Stafford Northcote, was recorded in our last week's record of the Lower House. But we went to press too early to state that, after one or two divisions, considerable progress was made in Committee on the Oxford and Cambridge Universities Bill. Clause 57 was reached, and a new clause or so introduced, one by the gallant Mr. Balfour proposing that the Commissioners should have the right to confer degrees on women. Thereupon Mr. Beresford-Hope made fun of the idea of there being a degree of S.A.—Spinster of Arts. But progress was reported before any hon. member could cite, apropos of this delicate question, Tennyson's lines:—

Pretty were the sight
If our old halls could change their sex, and flaunt
With prudes for proctors, dowagers for deans,
And sweet girl-graduates in their golden hair.

Postponing the consideration of this clause for the Whitsuntide holidays, the House passed the Customs, Inland Revenue, and Savings Bank Bill through Committee, and then adjourned until Thursday, May 31, thus depriving itself of Sir Wilfrid Lawson's annual string of witticisms on the eve of the Derby.

METROPOLITAN NEWS.

The officers of the corps of Royal Engineers had their annual dinner last Saturday at Willis's Rooms, when the Duke of Cambridge, as Colonel of the corps, presided.

A fire broke out at an early hour on Monday morning in the Charing-cross Restaurant, Villiers-street, Strand, the premises being destroyed, and one person being burned to death. Two men who jumped from windows into the street were severely injured; of the remaining occupants some escaped over an adjoining roof, and some were rescued by the firemen.

An interesting course of lectures, being the third and last for this year of the Cantor series, has just been brought to a conclusion at the theatre of the Society of Arts. The subject was the Connection of Greek and Roman Art with the Teaching of the Classics, and the lecturer Mr. Sidney Colvin, M.A., Slade Professor of Fine Art in Cambridge University.

At the annual meeting of the Aborigines' Protection Society on Wednesday evening resolutions were carried protesting against any proposal to extend the authority of Egypt into the regions of Equatorial Africa, and expressing a hope that her Majesty's Government, in carrying out a policy of confederation in South Africa, will secure to educated natives equal civil and political rights.

On Tuesday night the sixty-first annual meeting of the Peace Society was held at the Finsbury Chapel, under the presidency of Mr. Pease, of Darlington, at which resolutions were passed calling upon her Majesty's Government to preserve absolute neutrality in regard to the present war, and protesting against all efforts to draw the nation into war for the further defence of Turkey on any pretext whatever.

The Rev. Henry Constable, M.A., Chaplain to the City of London Hospital, Victoria Park, writes to say that if anyone will forward to him periodicals for which they have no further use he will feel much obliged. Literature of a cheerful and healthy character is most gratefully received by those who, in hospital, and suffering from lingering disease, often find time hang heavily upon their hands. Mr. Constable assures all who may send him works of such a kind that he will make a good use of them among the numerous patients of every age in his hospital.

The anniversary festival on behalf of the Royal Hospital for Incubables, Putney-heath, was held yesterday week at Willis's Rooms. The Earl of Shaftesbury presided. In proposing the principal toast the chairman said the hospital had carried on its work of beneficence for twenty-one years, and there were at present 120 inmates and 390 pensioners alike helpless and incurable. Each received a money grant of £20 a year. A national institution, and not merely metropolitan, it appealed to the wealthy and benevolent throughout the land. Subscriptions amounting to about 1500 were announced.

In consequence of the Wednesday before the Derby being in Whitsun week, the first meet of the Four-in-Hand Club will take place at the Magazine, Hyde Park, on June 6.

The authorities of the Agricultural Hall have issued the prize-list for their fourteenth annual metropolitan horse show, which, as usual, is to begin on the Saturday after the Epsom Derby. The show will be divided into fifteen classes, including four for hunters, roadsters (weight carriers), riding horses, park hacks and ladies' horses, park cobs, harness horses (single and in pairs), and ponies; and a class for Oriental horses, for the Sir Salar Jung prize of £20. The aggregate value of the prizes to be awarded reaches considerably over £1000. The opening day and judging is fixed for Saturday, June 2, and it will continue open daily till Friday, the 8th, when it will close.

The weekly return of metropolitan pauperism shows that the total number of paupers at the end of last week (the second week of May) was 81,487, of whom 37,555 were in work-houses and 43,932 received outdoor relief. Compared with the corresponding week in 1876, these figures show a total increase of 1232, but, compared with 1875 and 1874, a decrease of 6587 and 15,701 respectively. In the number of indoor paupers there is an increase, compared with the corresponding weeks in 1876, 1875, and 1874, of 2935, 3772, and 3292 respectively. The number of vagrants relieved on the last day of the week was 719, of whom 459 were men, 204 women, and 56 children under sixteen.

At the annual meeting of the Royal Agricultural Society of England, which was held in Hanover-square on Tuesday, Colonel Kingscote, M.P., was elected president for the ensuing year. The cattle plague was the principal topic of discussion. In the report of the council details were given as to the manner in which the matter has been dealt with. In moving the adoption of the report, Mr. J. K. Fowler said that a dead-meat importer had contracted for the bringing into England during the next six months of 50,000 carcasses of sheep and 4000 carcasses of oxen from the Hungarian plains, and that the importation of meat from America showed that there was no necessity for shipping live stock to this country.

The Lord Mayor and Lady Mayoress will entertain her Majesty's Judges at dinner at the Mansion House on Wednesday, June 6; and the Archbishops and Bishops on Wednesday, July 4; and a ball in honour of the Mayors of the United Kingdom will be given on Thursday, June 21. The date of the annual banquet to her Majesty's Ministers has not yet been fixed, but it will probably be at the end of July. Other entertainments are also being arranged.—The Lord Mayor and Sheriffs have accepted Sir John Bennett's invitation to visit him in state at his country seat, The Banks, Sussex, on June 30. The Mayor and Corporation of Hastings and about 1000 guests are expected.

The general meeting of the Sanitary Institute of Great Britain was held last week at the Society of Arts—Mr. J. F. Ollard in the chair. The first business was to elect the council, consisting of twenty-four gentlemen recommended by the committee, one third retiring annually, but to be eligible for re-election. The corresponding members of the council were next chosen, provision being made for filling any vacancies which might arise. Dr. B. W. Richardson was elected chairman of the council, a distinction for which he briefly returned thanks. It was resolved that steps should be taken to hold the annual conversation of the institute, and to bring the claims of the organisation under the notice of the public, with a view to eliciting support on its behalf.

A bazaar, under the patronage of Princess Christian, on behalf of Mrs. Hilton's Crèche and branches, at the East-End, is to be held at the City Terminus Hotel, Cannon-street. It will be opened by the Lord Mayor and Lady Mayoress to-day (Saturday) at twelve o'clock (doors open at 11.45), and will continue open next Monday, Tuesday, and Wednesday from twelve to ten p.m. Mrs. Hilton will have some children in coats at the opening of the bazaar, and other children will sing a piece and afterwards sell flowers which they will have in little baskets. Mrs. Billington will read "The Little Hero," and Mr. Charles Warner will read a piece. A number of distinguished ladies will preside at stalls. The stock consists of a great variety of useful and ornamental articles, including contributions from Princess Christian, from France, the United States of America, and many parts of the United Kingdom.

Last week 2410 births and 1564 deaths were registered in London. Allowing for increase of population, the births exceeded by 91, and the deaths by 174, the average numbers in the corresponding week of the last ten years. The deaths included 70 from smallpox, 59 from measles, 20 from scarlet fever, 4 from diphtheria, 59 from whooping-cough, 12 from different forms of fever, and 22 from diarrhoea. These 246 deaths were 18 above the corrected average number from the same diseases in the corresponding week of the last ten years. The fatal cases from smallpox in the two preceding weeks had been 54 and 78. The deaths referred to diseases of the respiratory organs, which had been 327 and 355 in the two previous weeks, were 338 last week, and exceeded the corrected weekly average by 107: 200 resulted from bronchitis, and 98 from pneumonia.

The Metropolitan Board of Works has resolved on the following alterations in the names of streets within the metropolis:—"New King's-road, Fulham, will be called Broxholm-road; Loughborough-road North, North Brixton, will be renamed Akerman-road; King-street, Drury-lane, will be called Shelton-street. The names of Stanbury-road and Firbank-road have been sanctioned for new roads on an estate near Queen's-road railway station, Peckham, on the condition that no barriers be at any time erected, or other obstructions caused to the free use by the public of the said roads. The line of thoroughfare at Eltham (extending from the South-Eastern Railway to Court-yard) known by the several names of Chapel Farm-lane, Temple-lane, and Station-road will be renamed Eltham Court-road. The subsidiary names in Benwell-road, Islington, will be abolished and the houses renumbered. No alteration will be made in the name of Elm-park-terrace, Fulham-road, or the numbering of the houses. The line of thoroughfare from Alwyne-road, Islington, called Canonbury-place, will be renamed Alwyne-place. The street hitherto known by the several names of High-street, Shoreditch, Holywell, High-street, and Shoreditch will be renamed Shoreditch High-street.

Mr. Stansfeld, M.P., on Tuesday night distributed the certificates gained by the students of the Halifax Centre in connection with the local examinations instituted by the University of Cambridge. He urged the men of wealth, culture, leisure, and public spirit to do all they could without a day's delay in furtherance of the system of middle-class intermediate education. He believed the Cambridge local examinations were conducted in such a way that in the long run there was no possibility of cheating; that the scholars would not stand high unless the schools were conducted as a whole on a right system and right principles, and unless the scholars were generally really well grounded and well taught.

NATIONAL SPORTS.

The Manchester and Bath Meetings, although affording very fair sport, have scarcely done much to influence the complexion of future events. On the opening day of the former meeting Sir Joseph had little difficulty in reaching home before Satira, Nutboy, and six others in the Lancashire Two-year-old Plate; whilst the last race of the day, the De Trafford Cup, was carried off by Spiegelschiff, Somnus, who had previously squandered his nine opponents in the Palatine Welter Handicap, being beaten by half a length. On Wednesday, it is computed nearly 70,000 paid at the turnstiles, a greater number than had ever previously attended on a Cup Day. Although a capital day's sport had been provided, it was evident the pièce de résistance was the Manchester Cup, in which the Irish horse, Umpire, at length rewarded his party for the loss of their money in the Cesarewitch, where, it will be remembered, he finished fourth to Rosebery. On the present occasion he was attended home by Dalham and Stamfordham, although Whitebait might doubtless have secured the third place if ridden out. Umpire's victory, when carrying top weight, stamps him as a racehorse of high calibre, and it is evident if he had been allowed to start for the Chester Cup he would have played a prominent part in that race. The meeting was not concluded at the time of our going to press.

At Bath the falling off from the old days was, indeed, apparent. There was a time when one or more of the Epsom favourites was sure to put in an appearance at the meeting, and such horses as Caractacus, Macgregor, and Gamos will long be remembered as having figured at Lansdowne. But during the last few years all this has been altered, and we look now in vain for Epsom candidates of any note. Larissa, a daughter of King of the Forest, who won the first year of the Twenty-sixth Biennial by two lengths, did a good turn for old John Day, who has of late been quite out of luck. Strudwicke, ridden by Tom Cannon, won the Twenty-fifth Biennial by a length from Sugarloaf, who had 5 lbs. the worst of the weights. Cannon's followers, indeed, had a most successful day, as he won no fewer than five of the eight races comprising the card. Strudwicke followed up his success on the following day in the Somersetshire Stakes; but his two opponents were very moderate in quality. Miss Rovel and Larissa reversed positions in the Weston Stakes, the pull in the weights favouring the former. It is a great pity that the smart Lady Ronald is not entered for the Oaks. She had no difficulty in securing the double event of the Beaufort Handicap and the Badminton Stakes. The market for the ladies' race has hitherto been of a limited character, only Placida, Lady Golightly, and the French filly La Jonclère having been backed for money. Placida has not been out this season, but she won seven out of the nine races for which she started as a two-year-old, beating, amongst others, Chevron, Bruce, and Chamant, besides the speedy Tangible in the Gold Cup at Sandown Park; so that if she has made the necessary improvement from two to three years old, she is bound to play a leading part in the struggle on the Surrey Hills. La Jonclère won the French Oaks last Sunday, so she may be depended on to stay the distance at Epsom; and Lady Golightly is expected to improve upon her Thousand Guineas form, when she made a close fight with Belphebe and Lady Ronald. The sensational incident of the Derby betting has been the backing of Altire from extreme odds down to a comparatively short price since his runaway victories at the Newmarket Second Spring Meeting. The Guineas impostor, Morier, has been scratched, and his stable companion, Pellegrino, is now decidedly second favourite; but, despite all that is claimed for him in the way of improvement, it is difficult to believe in his ability to turn the tables on Chamant, considering that the magnificent son of Mortemer and Araucaria presented him with six pounds and a head beating over the severe course on which the race for the Middle Park Plate is run.

Appended is a list of the probable starters and jockeys for the great three-year-old event which takes place next Wednesday. It may be accepted as correct, so far as the principal competitors are concerned, though several outsiders may go to swell the field.

Horse.	Sire.	Dam.	Rider.
*Thunderstone	Thunderbolt	La Belle Jeanne	Morby.
Plunger	Adventurer	Lina	Parry.
Jagellon	Adventurer	Klarinaka	Griffiths.
Hadrian	Lord Clifden	Ceritha	C. Wood.
Silvio	Blair Athol	Silverhair	F. Archer.
*The Monk	Hermit	Thoraday	
Chamant	Mortemer	Araucaria	J. Gosker.
Brown Prince	Lexington	Britannia (by The Flying)	J. Osborne.
Pellegrino	The Palmer	Dutchman	
Hidalgo	Pero Gomez	Lady Audley (by Macaroni)	F. Webb.
Avonte	Distin	Nightingale	Luke.
Tantalus	Lord Lyon	Avondale	Chaloner.
Bob Roy	Blair Athol	Niobe	T. Osborne.
Lady Miller	Jove	Columba	Custance.
Touchet	Lord Lyon	Tott	Weston.
The Grey Friar	Blue Mantle	Lady Audley	Constable.
Altire	Blair Athol	Recluse (by Hermit)	J. Macdonald.
Covenanter	Blair Athol	Lovelace	T. Cannon.
		Aloesia	Hammer.

Marked thus * are doubtful starters.

The cricket-match at Lord's between North and South resulted on Tuesday in a victory for the South, with three wickets to spare. The scores were but small, with the exception of W. G. Grace's 17 and 58 and Lockwood's 45 and 12. North scored 83 and 88; and South, 80 and 93.

Sports were provided for holiday-makers at Lillie-bridge on Whit Monday, when Miles, of Brixton, who is matched to walk for four hours against Perkins, succeeded in covering fifteen miles in 20½ sec. under two hours.

At Stamford-bridge to-day an international meeting of English and Irish athletes takes place, under the auspices of the London Athletic Club. We fancy England should win the quarter, half, one mile, four miles, three miles walking, hurdles, and long jump; the other events seem pretty open.

The first summer meeting of the London Athletic Club will be held next Monday at their ground, Stamford-bridge.

In aquatics the great event on the tapis is the race for the championship between Higgins, of Shadwell, and Boyd, of Newcastle, which takes place next Monday.

The cross-Channel yacht-race from Holyhead to Kingstown took place on Tuesday, Mr. Jameson's new 20-ton cutter being the winner by time. The Enriqueta, Mr. Jameson's boat, also won a race at the Holyhead Regatta on the previous day, beating the Challenge.

The Royal Thames Yacht Club had the first sailing-matches of the season on Wednesday for first and second class cutters. In the former the Neva, Mr. Borwick, was the winner, in the run from Gravesend round the Mouse Lightship, by 50 sec. from Vol-au-Vent, which did the distance in 10 min. less time, but had to allow 10 min. and 50 sec. for difference of tonnage.

Henley-on-Thames Regatta is fixed for June 21 and 22.

The Duke of Westminster has subscribed £2000 towards the funds for meeting the deficit in the Wrexham Exhibition accounts, and the Lord Lieutenant of Denbighshire £500.

ROYAL ACADEMY EXHIBITION.

[FOURTH NOTICE.]

Artists have in all ages been more or less unjustly defamed as pre-eminently a *genus irritabile*; but if we modify into sensitivity a tendency towards being easily irritated, it might be found that both actors and artists are quite as thin-skinned as poets and prose writers are accused of being. Bearing this wholesome verity in mind, and being at all times reluctant to "vex the poet's soul"—or, for the matter of that, the painter's either—it is not without some nervous hesitation that we ask ourselves if three of the artists whose works are most sincerely to be admired in the present Exhibition of the Royal Academy—Messrs. G. D. Leslie, R.A., Marcus Stone, A.R.A., and G. H. Boughton—have put forth all the strength, as well as all the skill, with which we well know them to be endowed. There is not one word to be said in disparagement of the design or the execution of Mr. Leslie's "Coveilips" (101)—a pretty maiden sitting on a stile, with a smaller child behind the barrier, and a bigger girl in front thereof, the whole party revelling in the enjoyment of lapses of wild flowers. The entire work, indeed, is as redolent of coveilips—and, remotely so, of primroses, violets, and hawthorn—as is a ballad by one of Isaac Walton's milkmaids; the harmony of tone is exquisitely modulated, and the entire pastoral is full of grace and refinement. But is it a powerful picture? Does it show resolute progress and sustained effort? Is there sufficient puissance in Mr. Leslie's second contribution, "The Lass of Richmond Hill" (379)? Questions of an analogous kind are inevitable when we consider Mr. Marcus Stone's "Sacrifice" (51). There all that accurate drawing, skilful composition, and dexterous execution of details could effect have been lavished to bring about no more forcible result than is apparent in the symmetrically beautiful figure of a young lady, dressed after the fashions patronised by Amelia Osborne and Becky Sharp, when they were at school at Chiswick. The young lady is burning a piece of paper. The act of pyrocremation is performed in the presence of an elderly lady and gentleman, who seem deeply affected by the Sacrifice, the scene of which is the parlour of a country house, admirably painted. This is all. Is it enough, we deferentially ask, to expect from a painter who, years ago, has done such noble things as those achieved by Mr. Marcus Stone? Let it be likewise understood that we have no kind of quarrel with Mr. G. H. Boughton touching the inception or the execution of his truly charming work, "Snow in Spring" (640). The three female figures with the child who are taking refuge under some blossoming trees, which afford them but scanty shelter against an unseasonable fall of snow, are full of grace and delicacy. The dog, which partakes of his mistress's discomfort, is a triumph of sly humour; and the whole airy conceit is worked out with that cultivated taste which is apparent in every touch of Mr. Boughton's pencil. But is it a potent pencil this year? Is there not in the works of all the three excellent artists we have named something of a suspicion of lassitude and *laissez aller*, something of the nature of a complacent remark—"We could produce much more vigorous things than we liked; but the public are satisfied with our work; we have made our name, why should we strive to go in advance of the public demand?" We know what Queen Elizabeth wrote on the window-pane in reply to the ambitious courtier who had scribbled on the glass, "Fain would I climb, but that I fear to fall." Her Majesty bade him, if his heart failed him, never strive to climb at all; but Messrs. G. D. Leslie, Marcus Stone, and Boughton climb to a high altitude long ago, and our meek complaint is that they do not climb higher.

Disregard of the imperative mandate "Excelsior" cannot certainly be laid to the charge of Mr. Eyre Crowe, A.R.A., whose "Sanctuary" (9) we cursorily mentioned in our opening remarks on the Exhibition as manifesting a great advance in excellence. Maintaining this opinion, we recur for a moment to the picture in order to draw attention to that which has, we think, unjustly been urged as a defect in the composition of "Sanctuary." The scene represents a poor hunted woman who has taken refuge before the altar of the Virgin in that which is virtually the Lady chapel of a mediæval cathedral; and the place of her shelter is screened off laterally from the high altar, and transversely from the aisle, from neither of which points, the surging, howling crowd can molest the fugitive. Hypercriticism has accused Mr. Eyre Crowe of having left an immense space of his foreground utterly bare and devoid of anything more interesting than a stone pavement; but it may be pleaded in reply that the angular nature of the composition—the whole architectural vista being, as it were, on a bias, like one of the set scenes in the famous Shakspearean spectacles at the Princess's in Charles Kean's time—it was virtually impossible to crowd the foreground with objects without disturbing and confusing the angular lines of the perspective. The contrast, moreover, between the tumultuous mob at the barriers and the calm solitude of the haven in which the hunted woman has taken refuge is, in the highest degree, artistically impressive; and, finally, no technical solecism is committed by leaving so large a space untenanted, seeing that the painter has been careful, by the introduction of the altar in the right and of the brass candelabrum basket and drapery in the left hand corner of his foreground, not to allow the spectator's eye to wander out of the picture.

As a very skilfully balanced effect of light and shade we are glad to call attention to Miss Havers's "Darkness falls from the wings of Night" (69); and among the cattle, sheep, and deer pictures, of which there is a curiously pleasing variety this year, we notice Mr. E. Douglas's "Milking Time" (72), Mr. Tom Lloyd's "Pastoral" (139), Mr. R. Ansdell, R.A.'s, grandly impressive "Home of the Red Deer" (141), Mr. T. S. Cooper, R.A.'s "Cool Retreat" (244), Mr. H. W. B. Davis, A.R.A.'s, "Contentment" (591), a wondrously powerful study of sheep by a painter who constantly and resolutely improves; and Mr. A. Hopkins's "Plough" (630), remarkable for its excellent landscape background and for the vigorous handling of the old brown cart-horse. Of boating and semi-marine pictures there are also a number of meritorious examples, among which we may single out Mr. E. W. Cooke, R.A.'s, "Schevening Pink Preparing for Sea" (288), Mr. H. R. Robinson's "Rush Harvest on the Thames" (286), Mr. R. W. Allan's "The Sardine-Fishers" (1026), and Mr. R. W. Small's "After the Storm" (1022). Of a much more ambitious class, and altogether a work of deep thought and concentrated power, is Mr. J. E. Hodgson, A.R.A.'s, "Their Haven Under the Hill" (428), in which the simplest materials, manipulated with knowledge and vigour, assume an aspect of positive splendour. This exceptionally fine water-scape is fully worthy to be displayed as a pendant to Mr. Vicat Cole, R.A.'s, superb view of "Arundel" (432), a resplendent sunset effect, grand in arrangement, faultless in aerial perspective, and lustrous in colour, and which, in many respects, must be pronounced not only the finest excerpt of natural scenery in the Exhibition, but also ("The Heart of Surrey" alone excepted) the finest landscape that Mr. Vicat Cole has produced. Yet to another aquatic picture, "Life-Boat Returning: a Sea to Staboard" (438), by J. G. Naish, very warm praise must be

awarded. As a delightful transcript of rural beauty there is much to admire in Mr. G. Wells's "Way through the Wood" (563); and a pleasing amount of truthful effect and vivacity of colour distinguish Mr. J. T. Linnell's "Cherry Blossoms" (584). Dexterity and harmony in arrangement are carried to their utmost in Mr. E. H. Fahey's "Still Waters" (601); and Mr. J. M. MacWhirter's "The Source of a River" (656) is phenomenal in its elaboration of the study of creepers, brambles, and ferns.

An undeniably important and strikingly conscientious performance is "Serf Emancipation" (108), by Mr. E. Armitage, R.A. The dignity displayed in this work fully entitles it to the conspicuous position it occupies at the upper extremity of the Third Gallery—the *salon d'honneur* of the Academy. The scene represented is that of an Anglo-Saxon Thane in his last moments, surrounded by his family and his friends, performing certainly the noblest act that a dying man could undertake—that of setting his slaves free. The Cedric of Rotherwood, whom Mr. Armitage has so impressively depicted, was, it is to be feared, an exceptionally merciful master to his bond-servants. As a rule, the Anglo-Saxon nobles used their slaves with intolerable barbarity, and the Gurth, the swineherd, and Higg, the son of Snell, was rather grateful than otherwise when the Norman was substituted for the Saxon system of tenure, and the serf was converted into a "villein regardant." According to the Venerable Bede, the Saxon landholders of the Eastern counties used to breed slaves for exportation—just as Virginia used to "raise" negroes to be sold down south; and in the seventh century the Friesland merchants were wont to repair, at stated seasons of the year, to a great human cattle market held in London. So far from the Thanes, as a rule, emancipating their thralls on their death-beds, it is unhappily too notorious that, at an early period of Anglo-Saxon history, a certain number of slaves were, at the death of a great noble, slain to propitiate his manes, and their bodies were flung into his grave. In fact, the immolation of slaves at funerals was a common practice among the Teutonic races. In the Northern Edda, so dear to Herr Richard Wagner, when Brynhilda, like Dido, slays herself for the sake of her faithless lover, she orders that on her funeral pile the bodies of two slaughtered slaves shall be placed at her head and two at her feet. *Autres temps, autres mœurs*. Mr. Armitage's Cedric is a Christian gentleman, who "flourished" we should say at a period closely preceding the Conquest. He is making, emphatically, a good end of it. Beside him stands his heir, apparently acquiescing without a murmur in an act which will deprive him of a large quantity of human chattels, while in the left-hand corner of the picture is the crowd of slaves who are to be manumitted. The *mise en scène*—the courtyard of an old Saxon grange or manor house is drawn with very great ability, and with strict fidelity to the architecture of the period—witness the double arched Saxon gateway, of which an example is yet extant at Barnack, in Northamptonshire, although there are sceptics who declare the arch in question to be not a Saxon but a Roman one. Remark likewise the triangular-headed window, with pilasters, of which form of casement a specimen remains in the belfry of the church of Deerhurst, Gloucestershire. Mr. Armitage's Anglo-Saxon magnate must have been a very mighty Thane indeed—a kind of Earl Godwin in his way; since it is well known that towards the close of the tenth century the vast majority of English houses, and of English churches too, were built neither of stone nor of brick, but of timber. The cause thereof was twofold. In the first place, sixteen English counties had been devastated, "lock, stock, and barrel," in the renewed incursions of the Danes. In the next place, the Anglo-Saxons partook of the then general belief of Christendom, that the world would come to an end at the Millennium, A.D. 1000. Hence there was a universal lethargy; it was a bad time for the building trade; and the circumstance lends additional historical verisimilitude to Mr. Armitage's fine picture. The old nobleman's heir might well be indifferent to his father setting his slaves free; for, in a general cataclysm, of what use would such "property" be to him? Even in modern times, when a life-convict is manifestly in the last stage of an incurable disease, the Government give him a free pardon, and allow him to die unfettered. And, about the year 990, everybody thought that they, and the world into the bargain, were "marked for death."

We have dwelt at this length on this singularly grave and elevated work because it is one of the very few pictures in the Academy which can be said adequately to represent High Art in its historic aspect; and Mr. E. Armitage is to be sincerely congratulated on this last and eminently successful appearance in a field in which for many years he has laboured so earnestly. A parallel tribute of admiration and respect is obviously due to Sir John Gilbert, B.A., a painter of whom his countrymen are justifiably proud, not only on account of his rare genius and brilliant capacity, but through their knowledge that he is an artist who has never derogated by one hair's breadth from his original nobility of purpose. Sir John Gilbert has two pictures at Burlington House. "Doge and Senators of Venice in Council" (366) must be regarded less as a dramatic episode than as a splendid piece of decoration—as a reminiscence of Tintoretto, so to speak, affording the artist an ample opportunity to display all his wealth of colour and texture in depicting the sumptuous costumes of the Renaissance, and asserting all his mastery over broad masses of light and shade. Higher historical value must be attached to "Cardinal Wolsey at Leicester Abbey" (201). The Shakspearean text has in this stateliness production been scrupulously adhered to. We see, most vividly represented, "the old man broken with the storms of State," who comes to lay his weary bones in the quiet convent cloister, and who begs "a little earth for charity." No living English painter understands the clerical and monastic physiognomy—its habit, its type, its character in the middle ages—so thoroughly as does Sir John Gilbert. The Ritualists, even, might make much of him; for no illustrator of the "Manuale Clericorum" could paint mitres and crosiers, copes and chasubles, albs and dalmatics so deftly as he can. He drew such mediæval accessories wonderfully well in the year 1843; and in 1877 we see no signs of the hand losing its cunning or its firm and manly grip on every portion of the topic which it undertakes to treat. Sir John, as a colourist, was always rich and glowing—rich as the fruit, and plate, and tapestry in the pictures of his early instructor, Lance; but he has now a scheme of colour of his own, as opulent and brilliant as ever, but mellowed, chastened, and relieved often by powerful contrasts of darkest shadow. Of this later and more magisterial manner "Cardinal Wolsey at Leicester Abbey" is a grand example.

COUNT GLEICHEN'S STATUE OF ALFRED THE GREAT.

The colossal statue of Alfred the Great, executed by H.S.H. Count Gleichen, which is destined to adorn the marketplace of the town of Wantage, where, at an early date, it will be unveiled under the auspices of H.R.H. the Prince of Wales, is now completed, and during the last few days has been shown to a select gathering of critics and amateurs in the garden adjoining the studio of the distinguished sculptor, in Marl-

borough-court, St. James's Palace. The effigy of the greatest of our Saxon Kings is nine feet high, and when mounted on its plinth the entire monument will be seventeen feet in height. The task of composing a portrait-model of Alfred must have been no light one to the sculptor. There is virtually no trustworthy contemporary portrait of the victor of Ashdown extant, the first authoritative presentment of an English King being the impression from the Great Seal of Edward the Confessor. Count Gleichen's Alfred is not, however, by any means an arbitrary ideal. It is a laborious and appreciative compilation and resumé of all that the Saxon chroniclers can tell us of the personal guise of the great monarch; and from an illuminated MS. in the Cottonian Library we gather the form of the regal crown in England in the ninth century; and we know that the King wore his fair hair long and his beard and moustache full. The Saxons, indeed, were a most hirsute folk; and students will remember the absurd blunder made by the Saxon spies whom Harold sent to William the Conqueror's camp, who mistook the Norman soldiers for priests because they wore their hair short and shaved the upper lip. The error, however, was not more ridiculous than that of the modern archaeologists who maintain that the shaven-faced figure depicted on one side of the famous "Alfred jewel," found in 1693 at Newton Park, near the site of Ethelney Abbey, in Somersetshire, which bears the inscription, "Elfrid me hæst gewezcan" (Alfred had me wrought), represents the King. It is obviously intended as a similitude of St. Cuthbert, Alfred's patron saint. In the matter of regal costume Count Gleichen has found copious materials, and of those he has availed himself with consummate skill. The tunic, with its embroidered or embossed border, is frequently figured in the Cotton MSS., and is distinctly marked in the Bayeux tapestry as part of the dress of Harold, the last of the Saxon Kings; while the long mantle, clasped at the throat by a brooch, is to be found in the Benedictional of St. Ethelwold, where also may be traced the authority for the Royal half hose or buskins, bandaged from ankle to knee with "criss-cross" strips of cloth or leather. Shakspeare's Malvolio was similarly cross-gartered, and so, curiously enough, is the Greek *palikar* of the present day. It will thus be seen that Count Gleichen's labour has been not only æsthetic but archaeological to a very reconducive degree. Regarded from a plastic point of view, the statue of King Alfred must be pronounced a remarkably fine composition. The modelling presents an assemblage of firm, bold contours, favourable to the distribution of light and shade, in boldly contrasting masses; and the expression is replete with thoughtful dignity, as befits the effigy of a King whose magnanimity and prudence, whether as fugitive or as conqueror; whose attachment to arts and letters, whose unwearied zeal to promote the moral, social, and political progress of his subjects make the minutest details of his history of surpassing interest to all educated Englishmen. As a whole, this noble memorial must add greatly to the artistic repute of Count Gleichen, who, we may finally mention, must not in any way be considered as an illustrious amateur, but as a professional sculptor, frankly willing to wait his turn and take his chance with his brethren of the modelling tool and the chisel.

A superbly representative exhibition of Rembrandt's etchings in their various "states" has been arranged in the gallery of the Burlington Fine-Arts Club in Savile-row; and to this timely display, which presents several novel points of interest in the critical study of the chalcographic art, we shall recur next week.

In addition to the pictures already mentioned as having been purchased by the council of the Royal Academy from the funds of the Chantrey bequest, we have to record the acquisition of Mr. Yeames's powerful picture "Amy Robsart." The price paid was £1000. It is understood that this closes the purchases for the season.

Scarborough Aquarium was opened on Monday, with music and festival decorations; but there was a preliminary view on Saturday, to relieve the expected crush.

The Manchester Unity of Odd Fellows had before them at Oldham on Wednesday the directors' report, and the report of the sub-committee thereupon. The doings of the directors were, for the most part, approved, and the greater portion of their recommendations adopted.

Mr. Middlemore, of Birmingham, having lately purchased two valuable sites of freehold land at Spartbrooke and Edgbaston, the latter alone costing over £5000, has presented them to the trustees of the Cannon-street Chapel for the purpose of erecting two places of worship for the use of the Baptist denomination. The trustees have voted £9500 towards the erection of two chapels upon the respective sites.

On the occasion of laying the foundation-stone of an Established Church at Pollokshields, Glasgow, last week, Sir William Stirling Maxwell, M.P., remarked that the Church of Scotland held a paramount place in the affections of the people, occupying as it did ground common to most of the other sects. The policy of both Established Churches in this country was to connect that security and dignity which an endowment gave with that vigour which came from popular sympathy and voluntary support.

In reply to a deputation of ladies at Halifax on Wednesday afternoon, and to a memorial from 9000 women asking the borough members to vote for the second reading of the Permissive Bill, Mr. Stansfeld expressed himself in favour of conferring power on local authorities to impose certain restrictions on the issue of licenses. He condemned the principle of the Permissive Bill, and said that, having represented Halifax eighteen years and considered the question all that time, he was not likely to change his opinion and vote for the bill. Mr. Hutchinson replied in similar terms, and concurred in Mr. Stansfeld's suggestion that better facilities should be afforded to local authorities enabling them to restrict the sale of intoxicating liquors.

On Wednesday the fortieth anniversary of the Yorkshire Union of Mechanics' Institutes was held at Bradford. In the morning a conference was opened—Mr. Edward Baines, the president of the union, in the chair—among those present being Lord Frederick Cavendish, M.P., Sir C. Reed, Mr. Hutchinson, M.P., and the Mayor of Leeds. In his opening address the president alluded with satisfaction to the progress which had been made, and stated that 204 institutes were now connected with the union, while there were 37,600 members. He urged that the welfare of the nation was promoted by such efforts as those made by the union. The report, which was of a satisfactory nature, was adopted on the motion of Mr. Hutchinson, M.P., seconded by Mr. F. S. Powell. A number of institutes were received into the union, on the motion of Lord Frederick Cavendish, who spoke in high terms of the work carried on by the union. Mr. Baines was re-elected to the presidency. At a subsequent meeting Lord Coleridge (who was in the chair), Mr. Forster, M.P., and Sir Charles Reed were amongst the speakers.

THE WAR: THE MOUTH OF THE PRUTH.
FROM A SKETCH BY ONE OF OUR SPECIAL ARTISTS.

THE LATE EARL OF SHREWSBURY AND TALBOT.

THE REV. CANON THOROLD, BISHOP ELECT OF ROCHESTER.

THE NEW BISHOP OF ROCHESTER.

We announced two or three weeks ago that the see of Rochester, which has been made vacant by the translation of Bishop Oughton to the new diocese of St. Albans, will be supplied by the election of the Rev. Canon Thorold, Vicar of St. Pancras, Euston-square, upon the nomination of her Majesty's Government. The Rev. Anthony Wilson Thorold, in a singularly unassuming course of ministerial activity, scarcely ever presenting himself to general notice as a speaker or writer, beyond the spiritual care and instruction of his parochial flock, has yet won for himself, it

is said, a degree of affectionate confidence among the people of all classes in that part of London, seldom exceeded by clergymen in town or country at the present day. He is almost a stranger to the platform and the newspaper press, never having taken any share in the public discussion of ecclesiastical or political controversies; and his contributions to literature, so far as we know of any publications with his name, have been confined to a small volume entitled "The Presence of Christ," written during a time of ill-health which prevented him from preaching, and to a few essays on "Married Life," and sketches descriptive of a recent visit to Moscow, in some of the popular magazines. Canon Thorold is least of all a party man, or the

official champion of any particular school either in theology or in secular affairs and studies; but his own religious views, which are very clearly defined in his pulpit teachings, might be called "Liberal Evangelical" more appropriately than "Low Church" or "Broad Church," with both which estimated tendencies of modern thought he perhaps sympathises in a certain measure. The remarkable success of his labours, and the great influence he has obtained within the circle of those directly addressed by him, must be ascribed to the effect of manifest earnestness, depth and strength of conviction, an intense feeling of the reality of that which he is commissioned to proclaim, set off by a style of expression perfectly artless

SKETCHES IN THE TRANSVAAL: VIEW NEAR PILGRIM'S REST, WEST OF BLYDE RIVER.

and simple, though dignified, exact, and perspicuous, which is more impressive than any flights of rhetorical eloquence. Such is Canon Thorold as a preacher, while his direction and administration of the large parish, with its numerous institutions, missions, schools, and charities, under the Vicar's management, have been conducted with exemplary diligence, and with not less discretion, tact, and judgment, so as to avoid occasions of dispute and to conciliate all well-disposed persons. It is certainly to be expected that an experienced and well-versed clergyman of this character will prove an excellent Bishop; and the diocese of Rochester, in losing the valued services of Dr. Cloughton, should be consoled by the choice of a worthy successor. We have only to add, very briefly, some information respecting his personal and professional career. The Rev. Anthony Wilson Thorold was born in June, 1825. He is the son of a Lincolnshire clergyman, the late Rev. Edward Thorold, Rector of Hougham-cum-Marston, and cousin to Sir John Thorold, Bart., of Syston, near Grantham. The Thorolds of Marston are a very ancient English, or perhaps Danish, family, who were notable in that shire before the Norman Conquest. Canon Thorold was educated at Queen's College, Oxford, where he took his M.A. degree in 1850. He was at one time minister of Curzon Chapel, Mayfair, and previously, from 1857, was Rector of St. Giles's-in-the-Fields; but has held the vicarage of St. Pancras since 1869, with the office of Rural Dean in the diocese of London; he is also one of the examining Chaplains for the Archbishop of York, and a Canon of York Minster, residing at York two months in the year. He has been twice married, his present wife being a daughter of the late Mr. John Labouchere, and has several children. The Archbishop of Canterbury has appointed July 25 for the consecration of the new Bishop of Rochester, which will take place at Westminster Abbey. This diocese is now reduced to West Kent; but as it contains, besides the rural district of that county division, the south-eastern quarters of the metropolis, and the busy towns of Greenwich, Deptford, Woolwich, and Chatham, with their large working-class population, there is enough for the Church to do; and the clergy of those towns seem to be quite as energetic and effective as in London.

Our portrait of Canon Thorold is from a photograph by the London Stereoscopic Company.

THE LATE EARL OF SHREWSBURY.

The rather sudden death of this nobleman was recorded in our last. The Right Hon. Charles John Talbot, nineteenth Earl of Shrewsbury and fourth Earl Talbot, was the eldest of five sons of the eighteenth Earl of Shrewsbury, Henry John Chetwynd, G.C.B., an Admiral of the Royal Navy. The father had inherited the earldom of Talbot upon the demise of his own father in 1849, and had obtained the earldom of Shrewsbury in 1858, by a decision of the House of Lords, in consequence of the senior male line of the famous Talbot family becoming extinct by the death, in 1856, of Bertram Arthur Talbot, seventeenth Earl, leaving no issue. The Earl of Shrewsbury is Premier Earl in the Peerage of Great Britain, and Hereditary Grand Seneschal or Lord High Steward of Ireland. The deceased was also Earl and Baron Talbot, and Viscount Ingestre, in the English Peerage, and in the Irish Peerage he was Earl of Waterford. His mother was Lady Sarah Beresford, eldest daughter of the second Marquis of Waterford. He was born April 13, 1830, and was educated at Eton, and at Merton College, Oxford. He sat in the House of Commons, as M.P. for North Staffordshire, from 1859 to 1865, and for Stamford in 1868, and has latterly held the Court appointment of Captain of her Majesty's Gentlemen-at-Arms. His eldest sister, the late Marchioness of Lothian, died a few days ago at Rome; his other sisters are the Countess of Pembroke and Countess Brownlow. The late Earl himself married, in 1855, Anna, eldest daughter of the late Captain Cockerell, by Theresa, afterwards Countess of Eglington. He leaves issue an only son, Charles Viscount Ingestre, born in 1860, who succeeds his father as twentieth Earl of Shrewsbury and fifth Earl Talbot. He also leaves three daughters—Lady Theresa, married to Viscount Castlereagh; Lady Gwendolin, married, in January last, to Colonel Chaplin, M.P.; and Lady Muriel, married, in December last, to Viscount Helmsley. The portrait is from a photograph by Messrs. Lock and Whitfield.

THE TRANSVAAL.

The territory north of the Vaal River, in South Africa, which has lately passed from a condition of political independence, as a Republic of Dutch Boers or farmers, to become a province of the British colonial dominion, has been frequently described. It extends above 400 miles from south to north, and about 350 miles from west to east, containing a population of 40,000 people of European race, and 250,000 Kaffirs and other native people. This country is situated entirely inland, the sea being a hundred miles distant. It is adjacent, southward, to the Orange River Free State, another Republic of Dutch settlers who emigrated from the Cape Colony because they disliked being under British rule. On its north side, beyond the Limpopo river, the Transvaal province borders on the vast wilderness of the interior, where Dr. Moffatt and Dr. Livingstone prosecuted their missionary labours among the Bechuanas and other important tribes. Its

annexation will probably be made a step to the opening up of the Zambesi, a magnificent navigable river, with its fertile plains and salubrious highlands, to occupation by the colonists. The late accounts from the Transvaal are those which are forwarded by Governor Sir Bartle Frere, at Cape Town, to the Earl of Carnarvon at the Colonial Office in London, partly by the aid of the submarine telegraph from Madeira. There is telegraphic communication inland from Cape Town as far as Kimberley, in the province of Griqualand, which is four or five days' journey from Pretoria, the capital of the Transvaal. By this means we have the following news from Pretoria of about April 25:—"All danger of opposition has passed away. The great majority of the Boers welcome the change, being convinced of the impossibility of self-government. There has not been a single disturbance. The troops who have crossed the frontier are being conveyed in Boers' waggons. Along the line of route everywhere Boers are spectators, and seem pleased. The officials everywhere offer their services. Burgers and his family are coming to Cape Town. The military detachment is expected in Pretoria April 27." The Cape mail has also brought the text of Sir Theophilus Shepstone's proclamation announcing the annexation of the Transvaal, and of a friendly unofficial address which he issued to the burghers. Our illustrations of the scenery of this country are from sketches by Mr. Arthur D. Cooke. The scene presented in one given this week is in the neighbourhood of Pilgrim's Rest, a new township of the gold-fields in the Leydenburg district. A considerable English population has been gathered here into a flourishing community, with churches, banks, merchants' stores, and other civilised institutions. The Macmac river, the Blyde river, and other streams in this district, were found to be rich in alluvial deposits of gold.

The pageant of "Lady Godiva" will be revived this year in Coventry with unusual splendour. The date fixed is June 4.

We hear from Adelaide that the Emily Smith, from Albany, has been totally lost on Kangaroo Island, and thirty of the crew and passengers drowned. The Hadda, barque, has been wrecked in Champion Bay; crew saved.

The Archbishop of Canterbury took part on Monday afternoon in the opening of a local exhibition of art and industry at Ramsgate. In the course of his address his Grace alluded to the natural advantages which Ramsgate possessed as a healthful resort, and said it was probable that the town would become one of the most important places in the county.

The Manchester and Salford tramways, which run in a continuous line two miles and a half in length, traversing the two boroughs, were formally opened by the Corporations on Thursday week, and are open for public traffic. They have been constructed by the Corporations and leased to a private firm, and other lines are in progress. What has been done so far is to, a great extent experimental; and, should the experiment be successful, the system will be largely extended.

A banquet was given on Tuesday at the Star and Garter, Richmond, to Mr. Edward Morgan, of Brougham House, Willesden, by members of his family and a number of friends, on his completing his 106th year, the date being attested in a very old family Bible. The old gentleman, who was present in vigorous health, was born in Bristol on May 21, 1770. He was the founder of a well-known firm of coachbuilders in Long-acre, from which he retired a few years ago. His children, grandchildren, and great-grandchildren number 102, of whom sixty-seven assembled to wish him "many happy returns of the day."

EMBER OFFERINGS.—It is respectfully submitted for the consideration of Churchmen that Funds having for their object the supply of the Clergy have, of all others, the most legitimate and direct claim to Ember Offerings. Such sums are earnestly asked for:

I. THE ORDNATION CANDIDATES EXHIBITION FUND.
Chairman—Rev. Canon GREGORY.
OBJECT.—To assist in supplying the necessary University or College Education to suitable candidates for Holy Orders, who would otherwise be unable to obtain it.

II. THE SOCIETY FOR PROMOTING THE EMPLOYMENT OF ADDITIONAL CURATES.
Treasurers—The Right Hon. J. G. MURRAY, M.P.
OBJECT.—To send missionaries to labour among the masses in our great towns; to supply the incumbents of the smaller towns with such a staff of Assistant Curates as may enable them to take efficient care of the souls committed to them; to send the Gospel message and the means of grace into the remote hamlets and scattered cottages of our wide agricultural parishes; to make provision for the 250,000 souls which are annually added to the population of the country.

III.—THE ADDITIONAL HOME BISHOPS ENDOWMENT FUND.
Chairman—The Right Hon. the Earl of Devon.
OBJECT.—The extension of the Home Episcopate by the subdivision of the larger dioceses, and the endowment of the new sees to be thus created.

Contributions may be sent to the Rev. Arthur J. Ingram, Secretary, 7, Whitehall, London, S.W.

SOUTHEAST.—The Healthiest Town on the South Coast. Vide Registrar-General's Return. Southern Aspect. Mild Winter Seasons.
SOUTHEAST.—Fine Views of the Channel, Spithead, and the Isle of Wight—the summer residence of her Majesty the Queen.
SOUTHEAST.—Excellent Bathing and Boating. Good Hotels and Lodging Houses. Pronounced Fier, with Military Bands and Band Music. Constant steam service across the Solent. Direct communication with London by four lines of rail.

PARCELS FOR INDIA.—Lowest Rates per ANGLO-INDIAN PARCELS EXPRESS: Small Parcels, from 3s. 6d. each; Large Packages, 2s. per cubic foot. Full particulars apply Messrs. RHODES and CO., 34, Nicholas-lane, London, E.C.

ACCIDENTS BY FLOOD AND FIELD.
Accidents of all kinds may be provided against by a Policy of the RAILWAY PASSENGERS ASSURANCE COMPANY, the oldest and largest Accidental Assurance Company. Hon. A. Kinnaird, M.P., Chairman. Subscribed Capital, £1,000,000. £1 12s. 6d. have been paid as compensation. Apply to the Clerks at the Railway Stations, or 61, Cornhill, London.
WILLIAM J. VIAN, Secretary.

In Australia—Melbourne, Sydney, and Newcastle.
In Fiji—Levuka.
In New Zealand—Auckland, Christchurch, Dunedin, Wellington, Napier, Nelson, Invercargill, Pictou, and at seventy-five other towns and places throughout the Colony.
The Bank grants Drafts on all their Branches and Agencies, and transacts every description of banking business connected with New Zealand, Australia, and Fiji on the most favourable terms.
The London Office RECEIVES DEPOSITS of £50 and upwards for fixed periods of two to five years, bearing interest at 5 per cent per annum. The rate for shorter periods may be ascertained on application at the Office of the Bank.
F. LAMWORTHY, Managing Director.
No. 1, Queen Victoria-street, Mansion House, E.C.

LAND'S END.
THE FOLLOWING ESTATES will be SOLD BY AUCTION, at PENZANCE, on FRIDAY, JUNE 8 next:
THE MANSION HOUSE OF MAYON, with Gardens and Stables.
MAYON COTTAGE.
BOHUSTOW and CHYNALLS, 186 acres.
SENNEN COVE, with PUBLIC HOUSE and COTTAGES.
THREE FIELDS.
MAYON BARTON, upwards of 400 acres.
PART OF ESCALLS.
TREVELLY and PART OF TREVESEAN, 91 acres.
PART OF BOSANNE.
The whole of the above estates lie within two miles of the Land's End, and ten miles west of Penzance, with which place there is daily communication.
They include Mayon Cliff Castle, Pordennock Point, and Zawa Pig. There are on them several fine fishing-pools with shooting-beds. They afford excellent cock and snipe-shooting, and the village of Sennen, which lies in the midst of them, is a favourite resort for the "Western" Foxhounds.
For further particulars and conditions of sale, apply to
RODD and FORNALL, Solicitors, Penzance.

Three Guineas and Upwards.

NO. 50, NEW BOND-STREET.

CHAPPELL'S ENGLISH 20-GUINEA or

SCHOOL-ROOM PIANOFORTE, with Check Action, in Canadian Walnut or Mahogany. This instrument combines good quality of tone and accuracy of workmanship. Capable of enduring hard practice without going out of order. In Solid Oak or White Ash, 22 ga.; Rosewood or Walnut Case, 27 ga.

CHAPPELL and CO.'S ORIENTAL
MODEL PIANOFORTE, Iron Frame, Trichord throughout, Check Action, Seven Octaves, Solid Walnut Case, FIFTY-FIVE GUINEAS; or in Solid Mahogany or Black Walnut Case, and Check Action, FORTY-THREE GUINEAS; with Plain Action, THIRTY EIGHT GUINEAS.

Made expressly to withstand the heat and moisture of extreme climates. Every part is plated with silver and secured with screws. The felt on the hammers, &c., is fastened with pins. The back and the silk frame are lined with perforated zinc to keep out damp and insects; and every precaution taken that has been suggested by persons who have had many years' experience in the care of musical instruments in India and China.

Testimonials of the durability of these instruments can be seen at 50, New Bond-street.

The price includes—1. Packing-cases of tin and wood; 2. A suitable tuning hammer or key; 3. A tuning fork; 4. Some additional strings; 5. A Book on Tuning and Preserving the instrument; 6. And the Carriage to the Docks.

Show-rooms, 50, New Bond-street.
Factory, Chalk Farm-road.

CHAPPELL and CO.'S MIGNON
IRON GRANDS, with Transverse-String Bass, 25 ga. to 28 ga. The smallest Horizontal Piano made; length only 5 ft. 9 in.

THE OLD CHURCH CHIMES. Vocal Duet. Words by Fredk. E. Weatherly. Music by BRINLEY RICHARDS. Price 2s. net.

There is (so the story goes) not far from Llandudno, a ruined church at the bottom of the sea, not indeed built by the sea-fairies, but simply wrecked from the land by the encroachment of the tide. On a calm day, when the sun or moon is bright, the ruins are visible to one sitting in a boat and looking down through the waters.

FROM A SKETCH BY ONE OF OUR SPECIAL ARTISTS.

NEW BOOKS.

A book to rejoice the hearts of such readers as have in them the spirit of sport, combined with a certain hankering after natural history, but with little or no scientific knowledge of that fascinating subject, is *The Large and Small Game of Bengal and the North-Western Provinces of India*, by Captain J. H. Baldwin, F.G.S. (Henry S. King and Co.), a bigish volume, in which the author, evidently an intelligent observer as well as a keen sportsman, has recorded his many experiences with much vivacity of style. And the printed narrative is still further enlivened and embellished by the presence of numerous excellent illustrations. And then the author's arrangement is so good as to spare his readers the bewilderment which is sometimes caused by an intermingling of sports which might just as well have been kept separate, as he keeps them, under various heads. He, for the most part, devotes a chapter to each species of game; he passes from the tiger to the panther, to the leopard, to the snow-leopard, to the red lynx, to the cheetah, to the Indian black bear, to the Himalayan black bear, to the hyena, to the Indian wolf, to the wild dog, to the wild buffalo, to the Indian elephant, to the great Indian rhinoceros, to the wild boar, to the gerow or sambar, to the swamp deer, to the cheetah or spotted deer, to the pariah or hog deer, to the musk-deer. After that he deals, in separate chapters, with all manner of antelopes. From beasts he transfers his attention to birds; and discourses about all kinds of fowl, the very names of which will, in some cases, be new to most readers. One chapter he assigns to the Indian hare; and he concludes with a very useful chapter in which he gives his opinion, founded upon long personal experience, touching the requirements of the sportsman in India as regards "guns and sporting equipments, camp equipage and carriage." Among the anecdotes relating to tigers a very extraordinary incident is recorded. A tiger is said to have killed and partly eaten a bear. Unfortunately, the evidence is wholly circumstantial; the attack was not seen, and, though a post-mortem examination proved that the tiger had undoubtedly fed upon the bear's flesh, and though the bear had plainly been recently killed, there is no certainty about the amount of the tiger's share in the transaction, whether he did all the work or only a portion of it. As for the Indian panther and leopard, which high authorities have declared to be "simple varieties of the same species of cat," our author begs to differ, and gives his reasons why. He disposes of the popular error about the "bear's hug," which, like many other popular errors, has become proverbial; at any rate, he disposes of it, so far as the Indian black bear is concerned, declaring that "our bears in India certainly, to the best of my knowledge, never attempt such a thing. They strike with their forepaws, or draw a man towards them to bite him through the face or arm, but there is no squeezing or hugging." And he does not believe that the American bear is a whit more given to the amiable weakness of hugging, being confirmed in his unbelief by what he has heard from the hunters of Norway about the habits, manners, and customs of the Norwegian bear. A certain shamefacedness is exhibited by the author when he comes to talk of shooting the wild boar, for he is aware that "shooting a boar, in many parts of India, is considered a worse crime, if possible, than shooting a fox in England," and the latter, we all know, is an offence of so heinous a nature that parricide pales before it. Still, he pleads with much reason that "in the Himalayas," and other places where the legitimate "pig-sticking" is "impossible and out of the question," a sportsman may hope to be forgiven for shooting boars, even as Naaman hoped to be forgiven for bowing himself in the house of Rimmon. And certainly—on a fine day, at least—an Englishman would be expected by a Frenchman to shoot even a fox rather than kill nothing at all. The author supposes that the wild hog of Northern India—a very clean feeder, according to his experience—must be of a different species from the Cingalese wild hog, which, according to Sir Samuel Baker, will "feast on the carcasses of putrid elephants and other animals." Among the birds of which the author discourses a very bad character is given to the grey partridge, which is by most sportsmen "despised as unworthy of powder and shot;" for, although it when on the wing offers a fine shot, it "is a dirty feeder, prowling about at the backs of villages, and is such a skulking, running sneak that it will spoil the best and steadiest of dogs in a very short space of time." Of course no language is too severe to be employed against a bird which cannot see the propriety of adapting its movements to the requirements of the sportsman. About fish there is not much information in the book; but did anybody ever hear of fishing with "an extra tempting-looking fig" by way of bait? Yet by means of such bait the author in a very few minutes succeeded, one evening, in landing and transferring to the camp kettle a bonny six-pounder. It should be mentioned that the author has enhanced the value of his book by prefixing to very many chapters a minute description of the appearance presented by the creature about which he is about to discourse.

Although, as regards date of publication, the appellation of new book can scarcely be applied to *The Large Game and Natural History of South and South-East Africa*, from the journals of the Hon. W. H. Drummond (Edinburgh, Edmonston and Douglas), yet it is a volume which, whether we consider its information or its many striking illustrations, coloured and uncoloured, is not likely, for many years to come, to lose its interest and freshness. The author roundly pronounces the districts about which he has written to be "the finest game country in the world;" but he warns such of his readers as may take him for a guide that "day by day, almost hour by hour, and with ever-increasing rapidity, the game is being exterminated or driven further back." He gives a map of the countries of Amazulu, Amatonga, and Amaswazi, the districts in which, it is understood, he chiefly followed his adventurous pursuit. And how thoroughly he gave himself up to it may be gathered from his own words:—"The experiences upon which my book is founded," he says, "extended over a period of some five years, ending in 1872 (though one or two incidents belong to a prior period), during which time, to all intents and purposes, I lived amongst the natives and the game—rarely, except when visiting the colony to dispose of cattle or hides, and to lay in a fresh stock of goods, sleeping under other covering than that of heaven, with the distant muttering of the lion or the mournful howl of the prowling hyena as my lullaby." So seasoned a hunter would write with exceptional weight if he had nothing beyond his long and determined course of mingled toil and pleasure to recommend him; but when it is added that he could, from the very first, understand the language of the natives who were his chief or sole associates, and was "naturally able to undergo at least as much fatigue and hardship as they could," it will at once appear that he had a great advantage over the majority of Englishmen or Scotsmen who go a-hunting in outlandish places and print an account of their venture. He has acted faithfully up to his intention of adopting such a style of narrative "as would enable the untravelled reader to bring every occurrence vividly and truthfully before his mind's eye;" and he has introduced several touches of grim humour, such as, in his preface, he gives the

reader no reason to expect. For instance, he relates that his native hunters showed so much regard for his safety as to ask him what business he had to go rushing into danger when they were "there for the express purpose of doing so," the cause of their anxiety coming out gradually, when one coolly announced that it wouldn't so much matter to him as to them if he were killed, "because the white men on their return would hold them responsible;" and another remarked, half aloud, "besides you owe us a lot of wages, and who would pay us if you go and get killed?" Notwithstanding the style of narrative which the author has adopted and which very often leads to confusion as well as tends to increase the excitement, he has steered quite clear of that stumbling-block, having arranged his subjects conveniently under separate heads, such as buffalo, rhinoceros, eland, lions, and so on, in order. To birds he devotes comparatively few pages; but in their case, as well as in that of mammals, he has provided an appendix, in which he gives, in parallel columns, the English or common name, the Kaffir or native name, and the scientific name of each. This is an excellent example, well worthy of imitation; and, indeed, the whole book, both in matter and manner, has an indisputable air of superiority. It does not need a practical sportsman to enjoy it thoroughly; anybody, to whom field sports are not absolutely offensive, may derive entertainment, and even instruction, from it.

Continuations are, notoriously, very often, if not generally, failures, but there are exceptions; and it will not be astonishing if among those exceptions should have to be classed the two volumes entitled *My Life from 1815 to 1849*: by Charles Loftus, formerly of the Royal Navy, late of the Coldstream Guards (Hurst and Blackett), though the gallant autobiographer modestly disclaims any expectation that the success which attended his two volumes called "My Youth by Sea and Land" will be achieved by his supplemental publication. He commences his present work from the date at which, having had a severe fall, during his service at sea under Lord Exmouth, from the main rigging to the quarter-deck of his ship, he was recovering at home and debating whether he "should return to the Navy or join the Army;" but, with pardonable garrulity and discursiveness, he reaches the ninth page before he announces that the ultimate decision landed him among the officers of the Coldstream Guards, presumably in 1816. The recital ends, as the title indicates, at the date of 1849; for about that time a terrible misfortune befel the narrator, who, being at Nice in the autumn of 1848 and the following winter, suffered from inflammation of his right and only remaining eye, and, "under the bad management of the Italian doctors," gradually became totally blind. And this fearful visitation has darkened, if not embittered, his life even up to the present day, an interval of more than a quarter of a century. His gossip concerning that interval is such as was to be looked for in the case of a chatty old gentleman who, as long as his physical faculties allowed, saw men and cities and more or less memorable events, and saw them in good company. Captain Gronow and Lord Albemarle and Lord William Lennox have made us familiar with this kind of record, in which personal experience is mingled with opinions about all sorts of matters, and with anecdotes relating to illustrious, and other than illustrious, persons; the whole collection forming a literary composition far more agreeable, and perhaps not much less instructive, to read than many a more ambitious, pretentious, and scholarly production. Of course one of these writers differs from another in brilliancy as well as in worth, just as one star differs from another in glory; but they are all more or less interesting, and they all throw a modicum of light upon the period at which they may be said to have bloomed. In the present instance, the author's affliction, if it be borne in mind, gives a pathetic stamp to his tale of reminiscences; but his own tone is for the most part extremely cheerful, and, in a page or two there should be detected some slight tendency towards querulousness, let those who have never grumbled, and with less cause, first throw a stone at him. "Old men forget," it is said; but there are occasions when they "remember with advantages," and it is all the better for the reader if they exercise that faculty of over-remembering when they undertake the task of writing a book. The old gentleman whose autobiographical narrative is here under consideration may or may not possess the gift of second memory; but he has managed to put together some stories which, good as they are, have the true smack of genuine, personal remembrance. Politically he is a Tory of the old school; and one cannot help smiling at the simple sincerity with which he speaks out his mind, expressing his unfeigned astonishment that any honest man can find it in his heart to be a Liberal, and betraying a deep-seated conviction that an unrepentant Whig ought to be an object of horror, as execrable as the impudent thief. All this does but add pungency to the volumes he has written. In one respect, however, it would seem that even he has not been able to resist altogether the influence of Liberal ideas: he is "not so bigoted," he says, "at seventy-nine years of age as to think that, because a man does not belong to the Established Church, he is not worth speaking to, or that his ideas are not worthy of attention." Long life to him; and then, perhaps, in the twentieth century, he may be able to think upon even a Whig without a shudder.

In a very neat and even handsome volume, to say the least of it, entitled *Historical Records of the Second Royal Surrey, or Eleventh Regiment of Militia*, compiled by John Davis, Esq., Captain in the regiment (Marcus Ward and Co.), there is very satisfactory evidence of the pride with which our militiamen regard the corps they belong to, and without which it would be scarcely safe to depend upon them in the case of a sudden emergency. The 2nd Royal Surrey, as a regiment, "bears no proud names of battles inscribed on its colours; and, except the service in Ireland in 1811, and the draught sent with the first provisional battalion to France in 1814, has never been out of England;" but it has gained honourable distinction through individual members who have volunteered for the regular Army, and have subsequently done their country good service against the enemy. The author commences his work by sketching the early history of the militia prior to 1757, going as far back in his researches as the date of the Heptarchy; he traces the formation of the 2nd Royal Surrey to the year 1757; and he thence, with much detail, reviews the course of events, so far as the regiment was in any way connected with them, down to the "annual regimental dinner," at which "fourteen officers" displayed their prowess, in 1876. A portrait of the Earl of Lovelace, honorary Colonel of the regiment, adorns the frontispiece, and there are other interesting illustrations, including highly impressive representations of the regimental colours, in blue and red and white and yellow and green. In one of the appendices there is a biographical account of Captain Francis Grose, of antiquarian and jovial memory, who was not only an officer in the regiment, but was on intimate terms with, and has been immortalised by, Robert Burns. On the whole, the volume contains much that will be found interesting by everybody, more by everybody connected with the county of Surrey, and most by everybody concerned in the affairs of the 2nd Surrey Militia.

MUSIC.

ROYAL ITALIAN OPERA.

The return of Madame Adelina Patti has already been noticed. Yesterday (Friday) week the great singer made her second appearance this season, and repeated her well-known charming performance as Zerlina in "Don Giovanni." As on many past occasions, the arias "Batti, batti" and "Vedrai carino," and the duet with Don Giovanni, "La ci darem," were encored. The cast of the opera in other respects was the same as that recently commented on.

On Saturday another charming performance of past seasons—that of Mdlle. Albani in "Lucia di Lammermoor"—was repeated. Again the special refinement and intense pathos of the artist produced a powerful impression. Signor Gayarré was the Edgardo, for the first time here. His best effects, as usual, were produced in the more declamatory music, particularly in the duet, with Lucia, "Sulla tomba," and the passage, "Maledetto sia l'istante," in the contract scene. As before, Signor Graziani was Enrico, Signor Sabater Arturo, and Signor Capponi Raimondo.

The six performances of the present week began with "Martha," which was followed by "Rigoletto" on Tuesday, "Dinorah" on Wednesday, and "Il Flauto Magico" on Thursday, each given as recently. For yesterday (Friday) "Tannhäuser" was announced, for the first time this season.

Another brilliant attendance was gathered at the second of this year's concerts in the Floral Hall, attached to the Royal Italian Opera House. This took place last Saturday, when Madame Adelina Patti contributed to a programme of great interest and variety, in which other eminent members of the Opera company, and the chorus thereof, were also concerned. Madame Patti was encored in each of her three performances, the cavatina, "Ernani, involami," the "Shadow song" (from "Dinorah"), and the ballad, "Home, sweet home"—having substituted for the last the Scotch song, "Comin' thro' the rye." Sir J. Benedict, Signor Vianesi, and Signor Bevignani were the conductors.

The third concert takes place this (Saturday) afternoon.

HER MAJESTY'S THEATRE.

Last Saturday brought back Madame Trebelli-Bettini and M. Faure, besides having introduced a tenor singer new to the English public. The opera was "Lucrezia Borgia," and the two artists just named resumed their respective characters of Maffio Orsini (the page) and the Duke Alphonso, each performance having been a repetition of those high and special merits for which the singers have long been celebrated. The page's air, "Il segreto," obtained the usual encore. Signor Carrion, who made his debut as Gennaro, has a voice of somewhat light quality, with a good upper compass. He sings well in tune, and his cantabile phrasing is free from that excess of vibrato which is so frequent a vice with both tenors and sopranos. The gentleman referred to is apparently young, and will probably benefit by further experience as an actor. His reception was favourable; and he obtained an encore for his final (interpolated) aria. The Lucrezia of Mdlle. Titiens was the same grand impassioned performance as heretofore.

On Monday Madame Christine Nilsson repeated her charming performance as the heroine in "Lucia di Lammermoor," in which she had not been heard for three years; and Signor Gillandi, as Edgardo, made his first appearance this season. Signori Rota and Rinaldini were very efficient, respectively, as Enrico and Arturo. On Tuesday "Il Barbiere di Siviglia" was given, and included the fine singing of Madame Trebelli-Bettini as Rosina. Signor Carrion, as Almaviva, appeared to be labouring under the influence of a cold. Signor Del Puente, as Figaro, sang well; and the part of Basilio was filled, as in past seasons, by Signor Foli, who was warmly welcomed on his resumption of his operatic career. Madame Lablache was an efficient representative of Berta.

The production of "Robert le Diable" was postponed from Tuesday to Thursday, in order to allow time for the necessary stage preparations.

THE WAGNER FESTIVAL.

The sixth of the Wagner Concerts at the Royal Albert Hall took place on Saturday last, when the programme was again altered, Herr Carl Hill having been prevented by indisposition from appearing. The concert began with the march composed by Wagner for the Philadelphia Centennial Exhibition—a piece composed, apparently, in haste, and possessing but little interest or special character. After this came a selection from the opera "Die Meistersinger von Nürnberg," including the beautiful orchestral introduction to the third act, the overture, and Walther's "Master-Song."

Following these were extracts from "Tristan und Isolde"—the duet for the hero and heroine, in the second act, sung by Herr Unger and Madame Materna (this was encored); the prelude, closing march, and scene of Isolde's death.

The remaining portion of the concert consisted of the Rhine daughters' trio, from "Götterdämmerung;" Siegfried's death, the funeral march, and the closing scene of Brünnhilde's death, finely declaimed by Madame Materna, as on Wednesday. Other portions of the soprano solo music were sung by Mdlle. Sadler-Grün. Herr Wagner again conducted some of the pieces, others having been directed by Herr Richter.

After the close of Saturday's concert testimonials were presented by the members of the orchestra—an illuminated address to Wagner, a silver-mounted baton to Herr Richter, and a violin bow to Herr Wilhelm, the leading violinist.

Two extra concerts are to be given, at reduced prices, on Monday and Tuesday next.

M. Rivière's promenade concerts at the Queen's Theatre opened well on Saturday evening. An effective band played several pieces, including some operatic arrangements by M. Rivière and a march composed for these concerts. Madame Antoinette Sterling was to have been one of the vocalists, but was prevented by indisposition. Mesdames Edith Wynne and Zimier, Mdlles. Servais and Lafleur, Miss Cora Stuart, and Signor Bettini contributed to a varied selection of vocal music; and M. Cornelis, violinist, and Mdlle. Jeanne Douste, the infant pianist, performed solos with much success.
